Comments for Public Posting: It is important for the city of Los Angeles to lead the way in environmental solutions such as planting drought tolerant plants. Also important is allowing rain water to seep into the aquifer and not using fake turf that will take fresh water to the ocean. Please pass this motion to implement this environmental solution.
Thanks!

Comments for Public Posting: There are so many reasons as to why we need to immediately stop using artificial turf, start pulling it out, and quickly replant with native plants in a widespread manner. Turf is toxic, hot, a barrier to water percolation, it does nothing for wildlife and is one more hideous petroleum product. We as residents are working to convert our lawns and yards to beneficial and native plants and the City must do the same. Please PASS this motion today!
