

MOTION

Water seepage issues have been a long-standing issue along a segment of Temescal Canyon Road in Pacific Palisades. The City addressed roadway damage in 2023 after heavy rains through the construction of a system to divert water into a nearby storm drain (C.F. 23-0839). Unfortunately, water seepage issues were again occurring in mid-2024 and a new, critical situation occurred after the rains on January 25, 2025, approximately 100 feet south of the 2023 location.

The Bureau of Engineering must perform a hydrogeologic study to determine the quantity and movement of the groundwater that is causing the issue and prepare the necessary plans for a repair. Approval by the City Council and Mayor is required to appropriate the necessary funds for the study.

I THEREFORE MOVE that the Council, subject to approval of the Mayor, transfer \$100,000 within Capital Technology and Improvement Expenditure Program Fund No. 100/54 from Account No. 00V234 (Contingency for Construction) to Account No. 00A880 (Erosion Control for Hillside Damage) to perform a hydrogeologic study to address water seepage on a segment of Temescal Canyon Road.

I FURTHER MOVE that the City Administrative Officer be authorized to make any technical corrections or clarifications to the above fund transfer instructions in order to effectuate the intent of this Motion, including any corrections and changes to fund or account numbers.
