**Comments for Public Posting:** As an LA resident who frequently walks and bikes to accomplish my daily tasks, I am frequently reminded of the danger I face when vehicles speed past me on the wide streets in our city. I support initiatives that reinforce the differences between roads (high-speed connections between locations) and streets (places for building wealth by engaging with shops, businesses, and other amenities). Speed tables seem like a sensible step (one of many) to signal to drivers that they are sharing space with other people and cause them to slow down. I support this motion with hopes that it enables our streets to be the wealth and place-building infrastructure needed to support a safe and prosperous city.

**Comments for Public Posting:** Speeding is the most common cause of traffic fatalities in Los Angeles and makes me feel totally terrorized whenever I have the urge to ride my bike, for example on a beautiful Spring day. And then I come to my senses and realize that cars, drivers and traffic are a total menace, and I put away any thought of riding my bike. The numbers bear this out. For every 10mph increase in speed, a person has lower and lower chances of survival if hit by a car. I don't want to become a statistic, I just really would like to be able to ride my bike safely. Anything that can be done needs to be done and here is a suggestion that could really help manage out of control driving. Speed tables can help lower speeds on arterial streets throughout the city, making neighborhoods much safer for the people living in them

**Comments for Public Posting:** I'm in favor of installing speed tables on our city streets in an effort to minimize speeding. Speeding is the most common cause of traffic fatalities on our streets. Reducing speeding makes a fatal crash less likely - studies prove that for every 10mph increase in speed, a person has significantly lower chances of survival if hit by a car. Additionally, speed tables are a great way to make our neighborhoods safer for our families.
