**Comments for Public Posting:** Los Angeles needs an e-bike subsidy program. E-bikes have the potential to replace a significant number of car trips if they receive robust city support. They are especially relevant to lower-income residents who are often unable to afford a car. E-bikes have the ability to help our city meet numerous goals for carbon reduction, equity, sustainability, car trip reduction and more. E-bike subsidy programs have proven popular and successful in other large cities, so let's fully exploit this timely technology by incentivizing it!
