

OFFICE OF THE CITY ADMINISTRATIVE OFFICER

Date: May 23, 2025

CAO File No. 0150-11751-0005

Council File No.

Council District: 11

To: The Mayor

From: Matthew W. Szabo, City Administrative Officer

Reference: Correspondence from Los Angeles World Airports dated April 17, 2025 and April 22, 2025; referred by the Mayor for a report on April 25, 2025

Subject: **RESOLUTION NO. 28155 AND FIRST AMENDMENT TO DA-5609 BETWEEN LOS ANGELES WORLD AIRPORTS AND SKANSKA-FLATIRON, A JOINT VENTURE FOR PROGRESSIVE DESIGN-BUILD SERVICES FOR PHASE 2 OF THE AIRFIELD AND TERMINAL MODERNIZATION PROGRAM – ROADWAY IMPROVEMENTS PROJECT AT LOS ANGELES INTERNATIONAL AIRPORT**

RECOMMENDATION

That the Mayor:

1. Approve the Los Angeles World Airports (LAWA) Resolution No. 28155 authorizing a proposed First Amendment to Contract No. DA-5609 with Skanska-Flatiron, A Joint Venture, for projects related to Phase 2 of the Airfield and Terminal Modernization Program – Roadway Improvements at Los Angeles International Airport increasing the contract authority by \$1.298 billion from \$173.7 million to \$1.472 billion;
2. Adopt the April 22, 2025 Board of Airport Commissioners determination in Resolution No. 28155 that this action is exempt from the California Environmental Quality Act (CEQA) pursuant to Article II Section 2.i of the Los Angeles City CEQA Guidelines;
3. Authorize the Chief Executive Officer of the Los Angeles World Airports to execute the proposed agreement and return the Resolution to LAWA for further processing, including Council consideration.

SUMMARY

The Los Angeles World Airports (LAWA; Department) Board of Airport Commissioners (Board) requests approval to execute a proposed First Amendment (Amendment) to Contract No. DA-5609 (Contract) with Skanska-Flatiron, A Joint Venture (SFJV) to implement various design and construction initiatives for the multi-phased Airfield and Terminal Modernization Program (ATMP) – Roadway Improvements Project (Project) at Los Angeles International Airport (LAX). The initial

not-to-exceed funding approved for this phase was \$173.7 million. The proposed First Amendment increases the contract by \$1.298 billion to \$1.472 billion and authorizes work to proceed on portions of Phase 1 and 2 of the ATMP project. The term of the agreement remains unchanged and expires on May 29, 2030. In accordance with Charter Section 373, and Administrative Code Section 10.5(a), the Amendment requires Council approval because the total term of the Contract exceeds three years. The proposed contract is subject to City Attorney approval as to form. Our Office has reviewed and recommend approval.

BACKGROUND

The Airfield and Terminal Modernization Program or ATMP (Project) is one of many capital projects currently taking place at LAX. The Project is a comprehensive network of modernization developments that aim to mitigate airfield safety hazards, transform terminal designs, and improve the system of roadways. The Project, the largest and most comprehensive since the 1980s, will reconfigure roadways, both elevated and on-grade, to facilitate traffic flow in and around LAX.

Competitive Selection Process – On April 5, 2022, LAWA issued a draft Request for Proposals (RFP) for the progressive design-build of the Project. On August 17, 2022, three firms submitted proposals and were invited to participate in interviews. One firm was excluded from the process as they did not generate the minimum points required through the initial stages of the evaluation process. The remaining two firms were invited to submit cost proposals. The Department's evaluation panel determined that SFJV provided the best value procurement since the consultant demonstrated extensive knowledge, strong experience and expertise with similar airfield projects of such complexity and magnitude, as well as innovative thinking to timely deliver the project. Based on their determination, the panel deemed SFJV as the most qualified proposer to perform the scope of work described in the RFP.

Initial Contract – On January 19, 2023, the Board approved a LAWA staff report and request for approval to execute a seven year contract with SFJV to deliver the first of the two-phase progressive design-build Project. Phase 1 consists of mobilization, design, engineering, and pre-construction services, while Phase 2 addresses construction. At the conclusion of Phase 1, SFJV is to provide LAWA with numerous Component Guaranteed Maximum Price (CGMP)/Guaranteed Maximum Price (GMP) proposals for construction, commissioning, and closeout activities. Depending upon SFJV's performance on the first phase and the adequacy and cost of the construction proposals, LAWA could either negotiate the terms of the construction phase with SFJV and return to the Board for approval or solicit new bids for Phase 2 construction. The City Council subsequently approved the Contract on April 25, 2023 (C.F. 23-0394).

The Department and SFJV have since negotiated a not-to-exceed cost of construction and SFJV submitted their first Phase 2 CGMP package (CGMP1) to LAWA on February 14, 2025. The Department reviewed the package, negotiated with SFJV on the final CGMP1, and now requests approval of the Amendment that will incorporate the not-to-exceed cost for Phase 2 as well as the CGMP1 package into the Contract.

Proposed First Amendment – On April 17, 2025 and April 22, 2025, the Board approved a staff report requesting approval of a First Amendment to the Contract with SFJV. The Amendment establishes the not-to-exceed target value for design and construction of the Project and also includes the first CGMP package submitted under Phase 2. As part of Phase 1, the Department and SFJV negotiated the not-to-exceed cost of \$1.472 billion for the project based on estimates provided by SFJV and validated by LAWA. This new proposed not-to-exceed target is inclusive of both Phase 1 and Phase 2 costs. The increase of \$1.298 billion is the target value for construction activities under Phase 2 and includes the first CGMP package of \$429.9 million. The Board also approved a staff recommendation to appropriate funds in the amount of \$561.1 million. The request for an appropriation is not subject to approval by the Council and, therefore, not included in the recommendations of this report. There is no change to the term of the Contract which expires on May 29, 2030.

CGMPs – The Project is estimated to be completed in 2030. As state in the original Contract section above, SFJV will submit CGMP packages as part of Phase 2 for review and potential negotiation by the Department. Table 1 below details the anticipated CGMPs.

Table 1 – CGMP Packages

	Scope	Estimated Completion of Key Components	Cost (millions)
CGMP1	Early construction work including utility relocations, site demolition and preparation, drainage, retaining walls, temporary roadways, and piles and foundation for superstructure (bridge) construction.	May 2027	\$429.9
CGMP2	Superstructure, roadways, and associated ingress into the Central Terminal (CTA) Area	May 2028	TBD
CGMP3	Superstructure, roadways, and associated egress out of the CTA. Also includes landscaping and signal work associated with CGMP2.	May 2028 (CGMP2 elements) May 2030 (Egress elements)	TBD

The first package to be submitted under Phase 2 includes early construction work that will relocate utilities and prepare sites for future construction. Multiple design units were bid out with design completion at either 60 or 90 percent. SFJV held eight pre-bid meetings to solicit bids for work related to CGMP1. Based on the bids submitted at least 30 percent of the work will be performed by the local workforce. The Department reviewed the bids and negotiated with SFJV for the final cost of \$429.9 million.

Negative Traffic Impacts/Mitigation - The existing roadway system leading into and out of LAX's CTA will be reconfigured so commuters traveling in vehicles at LAX and the surrounding area of the airport may experience detours as a consequence of temporary lane and roadway closures during construction. SFJV and LAWA will coordinate with other agencies to develop detour plans

and work hour restrictions to safely perform the necessary construction and alleviate adverse effects to traffic circulation. As some of the work performed for CGMP3 occurs during the 2028 Olympic and Paralympic Games (LA 2028), Section SC-8 of the Amendment contains construction moratorium requirements that prohibits temporary lane closures or queuing on streets during that time. LAWA will continue to coordinate with stakeholders regarding this Project to ensure LAX, LA 2028, and construction operations are not impacted.

Alternatives Considered – There are no viable alternatives to the proposed Amendment. Approval of the Amendment is required to begin construction of the Project. Delaying approval or seeking another contractor to perform the work contained in the Amendment would result in Project components not being completed in time for LA 2028 and heavy congestion due to the anticipated increase in passengers arriving at LAX.

CITY COMPLIANCE

Small Business Enterprise (SBE), Local Business Enterprise (LBE), Local Small Business Enterprise (LSBE), and Disabled Veterans Business Enterprise (DVBE) Participation – The original contract contains language that establishes a 15 percent participation goal for DBEs. SFJV currently has a participation rate of 16.4 percent. In addition, SFJV has achieved a 47.1 percent local worker participation rate which exceeds the 30 percent goal set in the Project Labor Agreement for this project.

Charter Section 1022 – On December 16, 2021, the Board adopted the staff report which indicated that the contract was not subject to Charter Section 1022 provisions. The Department stated that given the complexity of the project, which includes bridge structures, as well as time constraints to deliver the project before LA 2028, City forces would not be able to perform the work required. In addition, Ordinance No. 187476 allows for the Department to use alternative project delivery methods for the ATMP and any related projects.

California Environmental Quality Act (CEQA) – Since the underlying project has previously been evaluated according to CEQA requirements, the approval of bids and execution of contracts are exempt from further review pursuant to Article II, Section 2.i of the Los Angeles CEQA Guidelines.

The proposed Amendment is subject to approval as to form by the City Attorney and includes provisions to ensure compliance with applicable City Ordinances, contracting, and insurance requirements. In accordance with Charter Section 373 and Administrative Code Section 10.5(a), the Amendment requires Council approval because the total term of the Contract exceeds three years. Our Office recommends approval.

FISCAL IMPACT STATEMENT

Approval of Resolution 28155 and the proposed First Amendment to Contract No. DA-5609 with Skanska-Flatiron, A Joint Venture to design and deliver the Airfield and Terminal Modernization Program – Roadway Improvements Project at Los Angeles International Airport for a total compensation not-to-exceed \$1,472,000,000, including the first Phase 2 Component Guaranteed

Maximum Price package of \$429,900,000, will have no impact on the City's General Fund. This project is partially grant funded by the Bipartisan Infrastructure Law grant funds from the Federal Aviation Administration (FAA) which has awarded \$129.3 million in grant funds. Funding for this project is programmed in LAWA's 2024-25 Capital Improvement Plan. The recommendations in this report comply with the Los Angeles World Airports' adopted Financial Policies.

Attachment 1 – Board of Airport Commissioners Report dated April 17, 2025 and April 22, 2025 Resolution No. 28155, and proposed First Amendment to DA-5609 with Skanska-Flatiron, A Joint Venture

RE: Request to adopt and approve the First Amendment to Contract DA-5609 with Skanska-Flatiron, A Joint Venture

In accordance with Executive Directive No. 4, we are transmitting a copy of the specified board report for the request to adopt the following report; to approve the First Amendment to Contract DA-5609 with Skanska-Flatiron, A Joint Venture, increasing the contract authority to an amount not-to-exceed \$1,472,000,000 for the Airfield Terminal Modernization Program – Roadway Improvements Project at Los Angeles International Airport; to approve the first Component Guaranteed Maximum Price for Phase 2 in the amount of \$429,900,000; and to appropriate capital funds in the not-to-exceed amount of \$561,100,000 for said phase of the project.

City Council approval is required pursuant to Section 373 of the Los Angeles City Charter.

Sincerely,

A handwritten signature in black ink that reads "Becca Doten". The signature is stylized with a large, looped "B" and a horizontal line extending from the end.

Becca Doten
Chief of Staff

SUBJECT

Request to adopt the following report; to approve the First Amendment to Contract DA-5609 with Skanska-Flatiron, A Joint Venture, increasing the contract authority to an amount not-to-exceed \$1,472,000,000 for the Airfield Terminal Modernization Program – Roadway Improvements Project at Los Angeles International Airport; to approve the first Component Guaranteed Maximum Price for Phase 2 in the amount of \$429,900,000; and to appropriate capital funds in the not-to-exceed amount of \$561,100,000 for said phase of the project.

DISCUSSION

1. Purpose

The proposed First Amendment and approval of the first Phase 2 Component Guaranteed Maximum Price (CGMP1) enables key procurement and construction activities that are critical to major roadway segments of the Airfield and Terminal Modernization Project (ATMP) - Roadway Improvements Project at Los Angeles International Airport (LAX), in advance of the 2028 Summer Olympic and Paralympic Games.

2. Prior Related Actions/History of Board Actions

- December 15, 2022 - Resolution No. 27655 (DA-5606)**

The Board of Airport Commissioners (Board) awarded a seven-year contract to HDR Engineering, Inc. in the not-to-exceed amount of \$138.5 million and appropriated \$83.5

million to provide Project Management and Construction Management services for Projects related to the ATMP Roadway Improvements Project at LAX.

- **January 19, 2023 - Resolution No. 27668 (DA-5609)**

The Board awarded a seven-year Progressive Design-Build (DB) contract to Skanska Flatiron, A Joint Venture (SFJV), in the not-to-exceed amount of \$173.7 million, for Phase 1 of the ATMP- Roadway Improvements Project at LAX, and appropriated capital funds in the amount of \$192.2 million.

- **February 15, 2024 - Resolution No. 27906**

The Board approved a cooperative agreement between Los Angeles World Airports (LAWA) and the California Department of Transportation, and appropriated capital funds in a not-to-exceed amount of \$12 million for support and dedicated staff services from various Authorities Having Jurisdiction over ATMP - Roadway Improvements Project at LAX.

- **January 16, 2025 - Resolution No. 28088**

The Board approved and appropriated capital funds in the not-to-exceed amount of \$14 million for the cost to relocate or remove third-party owned facilities in conflicts with the ATMP – Roadway Improvements Project at LAX. The Board also authorized the Chief Executive Officer, or designee, to enter into reservation of rights agreement(s), if necessary, with all third-party facility owners to relocate underground and above ground facilities in conflicts with the ATMP – Roadway Improvements Project at LAX.

3. Background

The ATMP consists of several primary elements, including airfield improvements that would enhance operational management and safety within the north airfield, new terminal facilities that would upgrade passenger processing capabilities and enhance the passenger experience, and an improved system of roadways to better access the Central Terminal Area (CTA) and reduce congestion in and around LAX.

This project will construct a comprehensive network of roadway systems that will separate and remove airport-related (i.e., CTA-related) traffic from the local roadway system (e.g., Sepulveda Boulevard), and improve access to the CTA, LAX Economy Parking, and new Ground Transportation Center that is linked to the new Automated People Mover system.

This project is the largest and most comprehensive roadway construction undertaken at LAX since the addition to the upper-level roadways, completed nearly 40 years ago in preparation for the 1984 Summer Olympics.

Inclusivity & Workforce Development

Los Angeles World Airports established a 15 percent Disadvantaged Business Enterprise (DBE) participation goal for this project. Skanska Flatiron, A Joint Venture, is currently at 16.4 percent based on dollars paid to date for authorized task orders. This level of participation is achieved through the participation of 22 DBE firms.

Skanska Flatiron, A Joint Venture, has achieved 47.12 percent local worker participation, exceeding the Project Labor Agreement (PLA) 30 percent local worker hiring goal required for pre-construction scope of work. Female workers performed 14.24 percent of total project hours, which far exceeds the approximate three percent regional participation average.

Skanska Flatiron, A Joint Venture, actively engages in DBE outreach by engaging in 145 outreach events with LAWA, other agencies, and business and trade organizations, including the National Association of Minority Contractors, National Association of Women in Construction, Regional Hispanic Chamber of Commerce, Women's Transportation Seminar, Associated General Contractors, United Contractors, and project specific events such as LAWA's industry forums and SFJV's DBE Open House events.

Eight pre-bid meetings were held to solicit bids for Phase 2 CGMP1 work, and SFJV is tracking to meet and exceed the 15 percent DBE participation. Based on the project schedule and anticipated craft work, SFJV estimated a total of 1.9 million work hours will be performed by SFJV and its subcontractors through the project term in the table below. Local workers will perform a minimum of 30 percent of the projected hours. Skanska Flatiron, A Joint Venture, actively participates in the monthly PLA Local Labor Inclusion meetings hosted by the PLA Administrator, and quarterly HireLAX Contractor Open House events to meet and interview HireLAX graduates to perform project work. Upon award of the Phase 2 CGMP1, SFJV will have assigned local worker coordinators to ensure compliance with the PLA and local worker hiring requirements for all subcontractor tiers.

Skanska Flatiron, a Joint Venture, participates in youth Science, Technology, Engineering, Art and Mathematics (STEAM) engagement activities to expose local youth to careers in aviation-related careers.. The SFJV team members participated in the ImpactLAX Youth Program events, including Youth Summer STEAM Program, and participated in National Engineers Week. They also plan to hire a summer intern from the high school Architecture, Construction, and Engineering Students Pathway Program.

Los Angeles World Airports' Economic Impact Team (EIT) meets monthly with SFJV to monitor compliance and outcomes associated with this project. Skanska Flatiron, A Joint Venture, is working on its Inclusivity and Workforce Development Plan and will submit it to EIT for review and approval prior to the award of Phase 2 CGMP1 project work. The inclusivity plan establishes the approach, schedule, and compliance methodology to achieve the contract requirements.

4. Current Action/Rationale

Phase 1 Design of the Progressive DB contract with SFJV established the base scope and sequence for the project components of the ATMP - Roadway Improvements Project.

The Notice to Proceed was issued in May 2023 to SFJV to start Phase 1 Design of the Roadway Improvements Project. During this phase, LAWA and SFJV collaborated with various stakeholders and Agencies Having Jurisdiction, developed and agreed on design criteria, developed various roadway alignments, and progressed the full design of the preferred roadway improvements alignment. The SFJV also developed a program schedule with subcontracting and procurement strategies to provide best value to LAWA and to deliver major new roadway components prior to the 2028 Summer Olympics. In addition, staff and SFJV continuously monitor the costs and risks with the design progression. Independent estimates of 30 percent, 60 percent, and 90 percent milestones, respectively, were prepared by staff and SFJV to support key decisions.

The First Amendment establishes a not-to-exceed target value to design and construct the ATMP – Roadway Improvements Project at LAX.

Additionally, this first Phase 2 CGMP1 package is critical to meeting LAWA's goal of starting construction on the project and meeting major construction milestones. Phase 2 CGMP1 comprises multiple design units/packages that were bid out with design completion at either 60 percent or 90 percent in accordance with contract requirements. All bids for the packages were received on or before February 4, 2025. The SFJV submitted their first CGMP1 proposal on February 14, 2025. Staff reviewed and validated all the bids, negotiated with SFJV for their performed work, and reached an agreement with SFJV on the final CGMP1, which is presented for Board approval.

Phase 2 CGMP1 Scope

Phase 2 CGMP1 includes demolition, excavations, utility relocations, construction of drainage, retaining walls, bridge abutments, cast-in-drilled hole (CIDH) piles, early procurement of materials, temporary roadways, etc. Multiple packages were designed, priced, and are ready to be constructed upon Board approval.

Project Cost

The cost for Phase 2 CGMP1 is \$429.9 million. This brings the total project cost for the ATMP - Roadway Improvements Project to \$862.8 million, which includes SFJV's contract costs, LAWA's owner's contingency, and LAWA owner's soft and other associated costs.

The anticipated NTP date for Phase 2 CGMP1 will allow for the advancement of the main roadway segments into LAX prior to the 2028 Summer Olympics. Staff will return to the Board and request approval for future CGMPs for roadway construction and for appropriation of additional owner associated funds after design development for the Main Works scope is completed and CGMPs are negotiated and finalized.

5. Fiscal Impact

This project is included in LAWA's overall 2024 Investment Plan and is programmed in the Capital Improvement Plan (CIP) with a budget of \$862.8 million for Phase 1 Design and

Phase 2 Construction, which includes hard and owner-carried costs, as well as owner's contingency. As this request is within the current plans, adoption of this item will not result in an increase in the CIP.

This project is partially grant-funded by the Federal Aviation Administration's (FAA) Airport Terminal Program and Airport Infrastructure Grant under the Bipartisan Infrastructure Law, also known as Infrastructure Investment and Jobs Act. Currently, LAWA has received grant commitments in the amount of \$129.3 million and has requested additional FAA grant funding for the Phase 2 construction work.

When the completed roadway improvements are put into service, those costs that are not grant-funded will be recovered through landing fees, terminal rates and charges, and non-aeronautical revenues.

6. Alternatives Considered

- ***Take No Action***

Taking no action is not recommended. Without the commencement of Phase 2 CGMP1 of the ATMP – Roadway Improvements Project, the anticipated completion of the advancement of new roadways will be delayed beyond the date Los Angeles welcomes the 2028 Summer Olympics. With the anticipated increase in airport traffic, the ingress and egress traffic to the airport will be heavily congested, creating an unwanted and unwelcoming experience for travelers and the community.

APPROPRIATIONS

Staff request that funds, in the not-to-exceed amount of \$561,100,000, be appropriated and allocated from LAX Revenue Fund to WBS Element 1.21.24A – 700 (ATMP Roadway Improvements).

STANDARD PROVISIONS

The Board is hereby requested to adopt staff's determination that this item, involving any activity (approval of bids, execution of contracts, allocation of funds, etc.) for which the underlying project has previously been evaluated for environmental significance and processed according to the requirements of California Environmental Quality Act (CEQA) is exempt from further review pursuant to Article II, Section 2.i of the Los Angeles City CEQA Guidelines. The Airfield and Terminal Modernization Project Environmental Impact Report (EIR) was certified by the Board of Airport Commissioners for this project on October 7, 2021 (Resolution 27351) and an Addendum to the EIR was completed December 2024.

The Board is hereby further requested to authorize the Chief Executive Officer, or designee, to execute said First Amendment with Skanska-Flatiron, A Joint Venture (SFJV) subject to approval by the Los Angeles City Council and approval as to form by the City Attorney.

The Board is hereby further authorize the Chief Executive Officer, or designee, to approve and execute change orders, provided that, for prior execution of any change order in excess of \$5,000,000, the Board of Airport Commissioners shall first have reviewed and authorized the

execution thereof, and such authorization shall become final pursuant to the Charter Section 245.

Actions taken on this item by the Board of Airport Commissioners will become final pursuant to the provisions of Los Angeles City Charter Section 373.

April 22, 2025

Enclosed for your consideration is the First Amendment to Contract DA-5609 with Skanska-Flatiron, a Joint Venture, that was approved by the Board of Airport Commissioners at its April 17, 2025 meeting. There is no impact to the General Fund.

RECOMMENDATIONS FOR CITY COUNCIL:

1. Concur with said Board's adoption of staff's determination that the item is exempt from California Environmental Quality Act (CEQA) requirements pursuant to Article II, Section 2.i of the Los Angeles City CEQA Guidelines; and
2. Approve the First Amendment to Contract DA-5609 with Skanska-Flatiron, a Joint Venture, to increase the contract authority to an amount not to exceed \$1,472,000,000, covering the Airfield Terminal Modernization Program – Roadway Improvements Project at Los Angeles International Airport; and
3. Further concur with said Board's action on April 17, 2025, by Resolution 28155, authorizing the Los Angeles World Airports Chief Executive Officer, or designee, to execute said First Amendment to Contract DA-5609 with Skanska-Flatiron, a Joint Venture.

This document and its attachments are advisory only and do not constitute a complete and official submittal to the City Council. The official submittal, including this document and its attachments, will be submitted electronically to the City Council and the Council File Management System pursuant to Charter Section 373 via the City Clerk's website when the file is complete.

Very truly yours,

Grace Miguel, Commission Executive Assistant II
BOARD OF AIRPORT COMMISSIONERS

Additionally, the first Component Guaranteed Maximum Price for Phase 2 (Phase 2 CGMP1) package is critical to meeting LAWA's goal of starting construction on the project and meeting major construction milestones. Phase 2 CGMP1 comprises multiple design units/packages that were bid out with design completion at either 60% or 90% in accordance with contract requirements; and

WHEREAS, Phase 2 CGMP1 includes demolition, excavations, utility relocations, construction of drainage, retaining walls, bridge abutments, cast-in-drilled hole piles, early procurement of materials, temporary roadways, etc. Multiple packages were designed, priced, and are ready to be constructed upon Board approval; and

WHEREAS, LAWA established a 15% Disadvantaged Business Enterprise (DBE) participation goal for the project. SFJV is currently at 16.4% based on dollars paid to date for authorized task orders. Said level of participation is achieved through the participation of 22 DBE firms; and

WHEREAS, SFJV has achieved 47.12% local worker participation, exceeding the Project Labor Agreement (PLA) 30% local worker hiring goal required for pre-construction scope of work. Female workers performed 14.24% of total project hours, which far exceeds the approximate 3% regional participation average; and

WHEREAS, eight (8) pre-bid meetings were held to solicit bids for the Phase 2 CGMP1 work, and SFJV is tracking to meet and exceed the 15% DBE participation. Based on the project schedule and anticipated craft work, SFJV estimated that a total of 1.9 million work hours will be performed by SFJV and its subcontractors through the project term in the following table:

	2025	2026	2027	2028	2029	2030	Totals	
Carpenter	4,927	72,227	174,205	44,772	32,004	6,539	334,674	PRIME
Cement Mason	2,210	13,089	26,072	7,191	7,548	4,914	61,023	
Laborer	35,223	122,204	158,038	108,886	103,439	79,666	607,457	
Operator	12,522	47,353	55,647	28,755	25,145	16,861	186,283	
Teamster	988	2,327	3,211	2,236	2,206	998	11,966	
Carpenter		7,065	7,065	7,065	7,065		28,259	SUBS
Laborer	66,656	66,656	66,656	66,656	66,656	66,656	399,938	
Operator	24,570	24,570	24,570	24,570	24,570	24,570	147,420	
Electrician		5,818	11,636	11,636	17,455		46,545	
Ironworker		20,418	20,418	20,418	20,418		81,672	
Teamster	3,520	10,138	10,138	10,138	10,138		44,070	
Totals	150,616	391,865	557,657	332,323	316,643	200,204	1,949,309	; and

WHEREAS, local workers will perform a minimum of 30% of the projected hours. SFJV actively participates in the monthly PLA Local Labor Inclusion meetings hosted by the PLA Administrator, and quarterly HireLAX Contractor Open House events to meet and interview HireLAX graduates to perform project work. Upon award of the Phase 2 CGMP1, SFJV will have assigned local worker coordinators to ensure compliance with the PLA and local worker hiring requirements for all subcontractor tiers; and

WHEREAS, LAWA's Economic Impact Team meets monthly with SFJV to monitor compliance and outcomes associated with the project. SFJV is working on and will submit its Inclusivity and Workforce Development Plan to EIT for review and approval prior to the award of Phase 2 CGMP1 project work. The inclusivity plan establishes the approach, schedule, and compliance methodology to achieve the contract requirements; and

WHEREAS, the cost for Phase 2 CGMP1 of \$429,900,000 brings the total project cost for the ATMP – Roadway Improvements Project to \$862.8 million, which includes SFJV's contract costs, LAWA's owner's contingency, and LAWA owner's soft and other associated costs; and

WHEREAS, the anticipated NTP date for Phase 2 CGMP1 will allow for the advancement of the main roadway segments into LAX prior to the 2028 Summer Olympics. Staff will return to the Board of Airport Commissioners (Board) and request approval for future CGMPs for roadway construction and for appropriation of additional owner associated funds after design development for the Main Works scope is completed and CGMPs are negotiated and finalized; and

WHEREAS, the ATMP Environmental Impact Report (EIR) was certified by the Board for the project on October 7, 2021 (Resolution 27351) and an Addendum to the EIR was completed in December 2024; and

WHEREAS, actions taken on this item by the Board will become final pursuant to the provisions of Los Angeles City Charter Section 373;

NOW, THEREFORE, BE IT RESOLVED that the Board of Airport Commissioners adopted the Staff Report; further adopted staff's determination that this item, involving any activity (approval of bids, execution of contracts, allocation of funds, etc.) for which the underlying project has previously been evaluated for environmental significance and processed according to the requirements of

California Environmental Quality Act (CEQA) is exempt from further review pursuant to Article II, Section 2.i of the Los Angeles City CEQA Guidelines; approved the First Amendment to Contract DA-5609 with Skanska-Flatiron, a Joint Venture, to increase the contract authority to an amount not to exceed \$1,472,000,000, covering the Airfield Terminal Modernization Program – Roadway Improvements Project at Los Angeles International Airport; further approved the first Component Guaranteed Maximum Price for Phase 2 of said project in the amount of \$429,900,000; further approved appropriation and allocation of not to exceed \$561,100,000, from LAX Revenue Fund to WBS Element 1.21.24A – 700 (ATMP Roadway Improvements), for said phase of the project; authorized the Chief Executive Officer, or designee, to execute said First Amendment to Contract DA-5609 with Skanska-Flatiron, a Joint Venture, subject to approval by the Los Angeles City Council and approval as to form by the City Attorney; and further authorized the Chief Executive Officer, or designee, to approve and execute change orders, provided that, prior to execution of any change order in excess of \$5,000,000, the Board of Airport Commissioners shall first have reviewed and authorized execution thereof and such authorization shall become final pursuant to the Charter Section 245.

o0o

I hereby certify that this Resolution No. 28155 is true and correct, as adopted by the Board of Airport Commissioners at its Special Meeting held on Thursday, April 17, 2025.

Grace Miguel – Secretary
BOARD OF AIRPORT COMMISSIONERS

**FIRST AMENDMENT TO DESIGN-BUILD CONTRACT NUMBER DA-5609
BETWEEN THE CITY OF LOS ANGELES AND SKANSKA-FLATIRON A JOINT VENTURE
FOR THE AIRFIELD AND TERMINAL MODERNIZATION PROGRAM (ATMP) LANDSIDE
IMPROVEMENTS PROJECT AT LOS ANGELES INTERNATIONAL AIRPORT**

THIS **FIRST AMENDMENT** TO CONTRACT NUMBER DA-5609 ("Contract Amendment") is made and entered into as of this ____ day of _____, 2025, by and between the **CITY OF LOS ANGELES** ("City"), a municipal corporation, acting by order of and through its Board of Airport Commissioners ("Board") of the Department of Airports (also known as Los Angeles World Airports or "LAWA"), and **SKANSKA-FLATIRON A JOINT VENTURE** ("Design-Builder"). The City and Design-Builder are collectively referred to herein as the "Parties."

RECITALS

WHEREAS, City and Design-Builder entered into Los Angeles World Airports Contract Number DA-5609 (the "Contract") for the design and construction of the project entitled "Airfield and Terminal Modernization Program ("ATMP") Landside Improvements" (or "ATMP Roadway Improvements") (hereinafter referred to as "Project") at Los Angeles International Airport ("Airport") on April 26, 2023; and

WHEREAS, the Contract, as drafted, requires Design-Builder to perform design/pre-construction and construction services for the Project under a two-phase Progressive Design-Build Delivery Method: (a) Phase 1 – Design and Pre-Construction Services, Mobilization, and Early Enabling Works, which includes the development and negotiation of a Guaranteed Maximum Price (GMP) or Component Guaranteed Maximum Price (cGMP) Proposals for Phase 2 (construction & activation) for each Project Component; and (b) Phase 2 – the Construction Documents and Construction Phase, consisting of design completion, final permitting, procurement of materials, construction, commissioning and closeout activities; and

WHEREAS, the Contract, as drafted, provides that during Phase 1: (a) Design-Builder will submit a Guaranteed Maximum Price (GMP) or Component Guaranteed Maximum Price (cGMP) Proposals for Phase 2 of the Project to City; (b) the Parties will negotiate and finalize the GMP or cGMP(s); (c) the finalized negotiated GMP or cGMP(s) will be submitted to the Board and City Council for approval in order to appropriate the required funds and execute Phase 2 of the Project; and (d) Section 4.0 of the Contract titled "Contract Price" will be amended to include the costs of Phase 2 once an agreed upon GMP or cGMP for that Phase has been negotiated; and

WHEREAS, Design-Builder has nearly completed design and pre-construction activities associated with Phase 1 of the Project; and

WHEREAS, the Parties wish to clarify that the preparation of Construction Documents and Permitting is a part of Phase 1 activities;

WHEREAS, the Parties wish to break down Phase 2 of the Project into three (3) components, that are generally broken up as follows: (a) Phase 2 – cGMP1: multiple utility relocations, project site work and demolition, temporary traffic configurations, bridge foundations, and substructure work; (b) Phase 2 – cGMP2: elevated roadway superstructures, pedestrian bridges superstructure and conveyance, and communication utilities; and (c) Phase 2 – cGMP3: finalization of structures and roadways, permanent traffic configurations, traffic signals, project site restoration, project landscaping, and close out of the Project; and

WHEREAS, City wishes to increase the total not-to-exceed amount from One Hundred Seventy-Three Million and Seven Hundred Thousand Dollars (\$173,700,000.00) to a not-to-exceed amount of One Billion Four Hundred Seventy-Two Million Dollars (\$1,472,000,000) to include the services to be provided under Phase 2 of the Project.

NOW, THEREFORE, in consideration of the premises, and of the terms, covenants and conditions hereinafter contained to be kept and performed by the respective parties hereto, the Parties do mutually agree that the Contract is HEREBY AMENDED AS FOLLOWS:

CONTRACT AMENDMENT

Amendment Section 1. Section 1 of the Contract shall be amended and restated in its entirety to read as follows:

It is expressly understood and agreed that this Contract, Cost Reimbursable Guidelines (Exhibit A), First Source Hiring Program (Exhibit B), General Conditions (Exhibit C), Project Requirements (Exhibit D), Plans and Specifications (Exhibit E - located in Electronic Data Room), Project Labor Agreement (Exhibit F), Special Conditions (Exhibit G), Fee Matrix (Exhibit H), cGMP Work Package 1 (Exhibit I), Federal Requirements, Administrative Requirements, Disadvantaged Business Enterprises commitments, and any document referenced in said documents, are

hereby incorporated by this reference as though specifically set forth herein and shall constitute, and are hereby made, a part of this Contract (hereinafter referred to as the "Contract Documents"), and each of the Parties does hereby expressly covenant and agree to carry out and fully perform each and all of the provisions of said documents upon its part to be performed. Any subsequent cGMP Work Package that the Parties negotiate and agree to shall be incorporated via Change Order into the Contract as a Contract Document and shall be marked with the next available exhibit letter. It is further expressly understood and agreed that LAWA's "Request for Proposals" ("RFP") (including its Administrative Requirements, Attachments, and Addendums) is, by this reference, incorporated into and made a material part of this Contract as though fully set forth herein. Design-Builder expressly acknowledges that this Contract is based upon the performance requirements contained in the RFP.

Amendment Section 2. Section 2.1 of the Contract shall be amended and restated in its entirety to read as follows:

Design-Builder agrees to furnish all labor, services, materials and equipment, and to perform all work required as outlined in the Contract Documents hereto, to provide Phase 1 Design and Pre-Construction Services, Mobilization, Early Enabling Works, Construction Documents, and Permitting ("Phase 1") and Phase 2 Construction ("Phase 2"), in a final and finished state, in strict compliance with the Contract Documents.

Amendment Section 3. Section 2.2 of the Contract shall be amended and restated in its entirety to read as follows:

Following the execution of this Contract, LAWA and Design-Builder shall negotiate and agree to one or more Task Orders under Section 5.0 below for Design-Builder to provide Phase 1 Design and Pre-Construction Services, Mobilization, Early Enabling Works, Construction Documents, and Permitting. Upon LAWA and Design-Builder agreeing in writing and signing any Task Order pursuant to Section 5.4 below, LAWA shall issue Design-Builder with a Notice to Proceed ("NTP") for Design-Builder to undertake the agreed scope of work. Thereafter, LAWA and Design-Builder may negotiate and agree to: (i) further Task Orders for additional

Phase 1 services; and/or (ii) one or more guaranteed maximum price work packages ("GMP Work Package") or Component Guaranteed Maximum Price ("cGMP Work Package") for Phase 2. Phase 2 will include construction and construction administration. Upon LAWA and Design-Builder agreeing in writing to a Contract amendment for Phase 2 cGMP Work, LAWA shall issue Design-Builder with an NTP for Design-Builder to undertake the agreed scope of work relating to Phase 2 – cGMP1. Upon finalizing negotiations for Phase 2 – cGMP2 and Phase 2 – cGMP3, and upon subsequent approval by the Board of the appropriation of funds for Phase 2 - cGMP2 and Phase 2 - cGMP3, respectively, LAWA shall issue NTP to the Design-Builder for Phase 2 – cGMP2 and Phase 2 – cGMP3 prior to Design-Builder undertaking the agreed scope of work relating to Phase 2 – cGMP2 and Phase 2 – cGMP3.

2.2(a) For the purposes of Section 2.2(b) below:

"Completed Design Work Product" means: (i) Design Work Product that has been signed and sealed with a professional engineer's stamp for and on behalf of Design-Builder; and (ii) all other Design Work Product that has been accepted and acknowledged by both parties in writing as having been fully performed as of the date of termination under GC-37; and

"Incomplete Design Work Product" means all Design Work Product other than Completed Design Work Product, including any work that remains in a state of partial completion as of the date of termination under GC-37.

2.2(b) If LAWA exercises its termination for convenience rights under GC-37 of the General Conditions for any existing Task Order then, without limiting GC-14 and GC-37 of the General Conditions:

- (i) LAWA may take possession of all Design Work Product created under the relevant Task Order;
- (ii) Design-Builder's liability for any use of the Completed Design Work Product after the date of

(such termination shall be as established by the terms of this Contract; and

(iii) Design-Builder shall have no liability, except for gross negligence, willful misconduct, fraud, or any other claim that cannot be limited under applicable law, for any use of any Incomplete Design Work Product after the date of such termination, including in circumstances where LAWA continues to make use of the Incomplete Design Work Products on the Project through engaging a consultant to finish the Phase 1 services and/or engaging a separate design-builder to undertake the Phase 2 services.

Amendment Section 4. Section 4.0 of the Contract shall be amended and restated in its entirety to read as follows:

(For all labor, all materials, all equipment and all services rendered, for all costs direct or indirect, and for all expenses incurred by Design-Builder pursuant to this Contract, and upon satisfactory completion of said Project in a final finished form consistent with the intent of the Contract Documents, the amount that LAWA may pay to the Design-Builder under the terms of this Contract, for Phase 1 Design and Pre-Construction Services, Mobilization, Early Enabling Works, Construction Documents, and Permitting and for Phase 2- cGMP1: Multiple Utility Relocations, Project Site Clearing and Demolition, Temporary Traffic Configurations, Bridge Foundations, and Substructure Work, Phase 2- cGMP2: Elevated Roadway Superstructures, Pedestrian Bridges, and Communication Utilities, and Phase 2 – cGMP3: Finalization of Permanent Traffic Configurations, Traffic Signals, Project Site Restoration, Project Landscaping, and Close Out of the Project is not-to-exceed One Billion Four Hundred Seventy-Two Million Dollars (\$1,472,000,000), pursuant to the Contract Documents.

(**Amendment Section 5.** Exhibit D – Project Requirements and Exhibit G – Special Conditions attached to the Contract are hereby deleted in their entirety and substituted with Exhibit D – R1 – Project Requirements and Exhibit G – R1 – Special Conditions attached hereto.

Amendment Section 6. Except as specifically provided herein, this Contract Amendment shall not, in any manner, alter, change, modify or affect any of the rights, privileges, duties or obligations of either of the parties hereto, under, or by reason of said Contract, as amended.

Execution. This Contract Amendment and any other document necessary for the consummation of the transaction contemplated by this Contract Amendment may be executed in counterparts, including counterparts that are manually executed and counterparts that are in the form of electronic records and are electronically executed. An electronic signature means a signature that is executed by symbol attached to or logically associated with a record and adopted by a party with the intent to sign such record, including facsimile or e-mail signatures. All executed counterparts shall constitute one Contract Amendment, and each counterpart shall be deemed an original. The Parties hereby acknowledge and agree that electronic records and electronic signatures, as well as facsimile signatures, may be used in connection with the execution of this Contract Amendment and electronic signatures, facsimile signatures or signatures transmitted by electronic mail in so-called PDF format shall be legal and binding and shall have the same full force and effect as if a paper original of this Contract Amendment had been delivered that had been signed using a handwritten signature. All parties to this Contract Amendment (i) agree that an electronic signature, whether digital or encrypted, of a party to this Contract Amendment is intended to authenticate this writing and to have the same force and effect as a manual signature; (ii) intended to be bound by the signatures (whether original, faxed, or electronic) on any document sent or delivered by facsimile or electronic mail or other electronic means; (iii) are aware that the other party(ies) will rely on such signatures; and, (iv) hereby waive any defenses to the enforcement of the terms of this Contract Amendment based on the foregoing forms of signature. If this Contract Amendment has been executed by electronic signature, all parties executing this document are expressly consenting, under the United States Federal Electronic Signatures in Global and National Commerce Act of 2000 ("E-SIGN") and the California Uniform Electronic Transactions Act ("UETA") (California Civil Code §1633.1 et seq.), that a signature by fax, e-mail, or other electronic means shall constitute an Electronic Signature to an Electronic Record under both E-SIGN and UETA with respect to this specific transaction.

[Remainder of this Page Intentionally Left Blank]

IN WITNESS WHEREOF, City has caused this Contract Amendment to be executed, by the Chief Executive Officer of LAWA, and Design-Builder has caused the same to be executed by its duly authorized officers and its corporate seal to be hereunto affixed, all as of the day and year first hereinabove written.

PR-01 SCOPE OF WORK

1. GENERAL

- A. DESIGN-BUILDER shall provide comprehensive Planning, Design, Preconstruction and Construction services, including the furnishing of all labor, materials, supervision, tools, equipment, services, and incidentals necessary to prescribe and provide for the complete and finished performance and accomplishment, in every respect, of the entire contemplated Work or improvements indicated by the Contract Documents. DESIGN-BUILDER shall be required to prepare design documents, including, but not limited to; plans, profiles, sections, elevations, details, schedules, diagrams, drawings, BIM Models, specifications, reports, calculations, traffic models, simulations, records, studies and other documents which, collectively, are needed to adequately and completely depict and record the detailed design of the Project. DESIGN-BUILDER shall further perform and execute all design, permitting, preconstruction, construction, activation, commissioning, and closeout activities in a thorough, satisfactory, and skillful manner in accordance the Contract Documents.
- B. The DESIGN-BUILDER shall maintain a team that is experienced and technically proficient to work collaboratively with Los Angeles World Airports (LAWA) and LAWA Project/Construction Management staff, other City departments, government agencies, municipalities, authorities having jurisdiction over the project, other contractors, consultants and third-party stakeholders.
- C. The DESIGN-BUILDER in undertaking the execution of all or any part of the Services and Work or improvement is required to perform, construct, and complete the same in a thorough, satisfactory, and skillful manner in accordance with the provisions of the Contract Documents.
- D. DESIGN-BUILDER shall provide electronic copies of all deliverables in both .pdf and editable native formats (.docx, .xlsx, .pptx, .mpp, .xer, .dwg, .dwf, .rvt, etc.), unless otherwise specified.

2. PROJECT DESCRIPTION

The following is only a general description of the Airfield and Terminal Modernization Projects (ATMP) Landside Improvements Project (referred to throughout this document as ATMP Landside Improvements or the Project). Refer to Volume 2 (Reference Documents) for additional information. The documents included in Volume 2 are criteria and scoping documents and are not designs warranted by LAWA.

A. Background

The Project consists of several primary elements, including airfield improvements that would enhance operational management and safety within the north airfield, new terminal facilities to upgrade passenger processing capabilities and enhance the passenger experience, and an improved system of roadways to better access the Central Terminal Area (CTA) and new facilities while reducing congestion.

The Project is one of several components of the Airfield & Terminal Modernization Project (Figure 1), and its purpose is to develop a comprehensive Ground Transportation System as further defined in Section B below. This Project is intended to be delivered as a Progressive

Design-Build Delivery method which shall comprise of at-grade and elevated roadways, and all corresponding elements from concept through activation.

LAWA has an approved and certified Environmental Impact Report (EIR) and Environmental Assessment (EA) for the overall ATMP (which includes the ATMP Landside Improvements project) in compliance with the requirements of the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA).

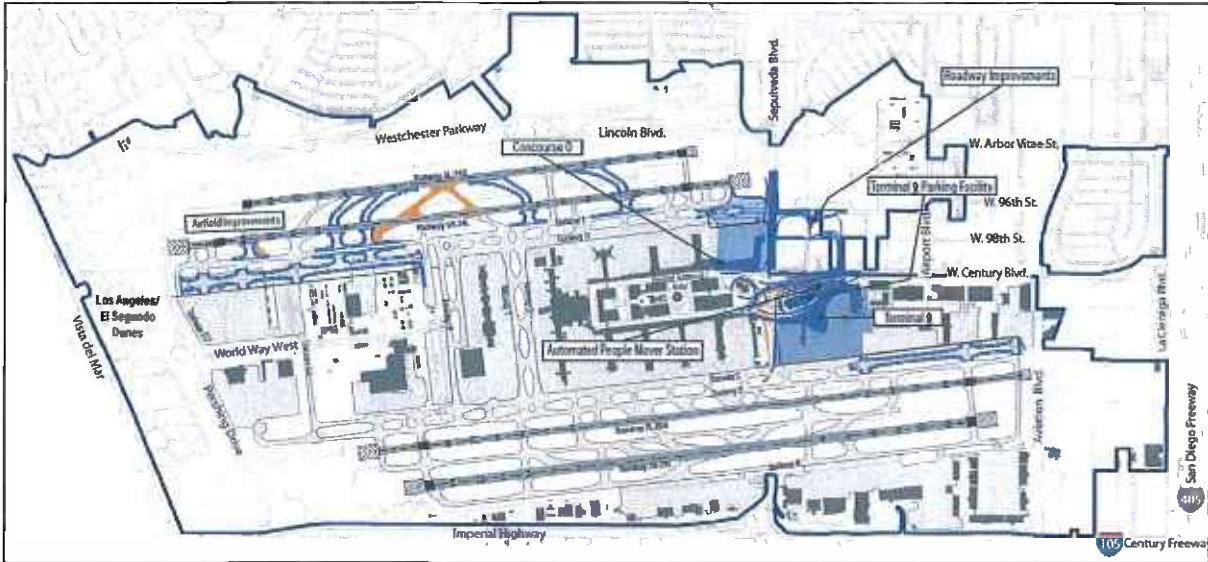

Figure 1 – ATMP Overview

B. ATMP Landside Improvements Project Overview

The Landside Improvements Project is an integral component to the ATMP and overall ground transportation system for LAX. The proposed landside improvements are located in proximity of Sepulveda Boulevard, Century Boulevard, Jetway Boulevard, and 96th Street (Figure 2).

Figure 2 – General ATMP Roadway and Landside Improvements

2. The purpose of these roadway improvements is to reduce airport related traffic congestion and back-ups in the Central Terminal Area and on public streets by consolidating access to the airport with a new dedicated roadway system that separates local traffic from airport traffic. Project goals include (but are not limited to):

A. Enhance the Safety & Efficiency of Ground Transportation Systems at LAX

- a) Provide safe & convenient access for motor vehicles, pedestrians, cyclists (where applicable), etc.
- b) Consolidate roadway access to and from the CTA
- c) Separate Airport Traffic from Local Traffic on roadway network

B. Enhance the User Experience of Ground Transportation Systems at LAX

- a) Reduce traffic congestion & queuing on local streets
- b) Increase throughput into and out of the CTA
- c) Enable Dynamic, Demand-Based Transportation Policies

C. Modernize the Transportation Technology Systems at LAX

- a) Integrate intelligent transportation technologies & systems

(GPS, Smart-Parking, Traffic-Monitoring, etc.)

3. This Project includes, but is not limited to, the following components. There are Primary Components that are intended to support the primary goal of the Project and there are Secondary Components that are either required to enable the primary scope or additional scope that was not identified in the EIR, but may become part of this Project. The order in which these components are to be designed and constructed will be established during the planning and design phases of the project.

Primary Components:

1. Roadways
2. Ramps & Bridges
3. Intersection Improvements
4. Traffic Signals & Controls
5. Traffic Monitoring & Management Equipment
6. Street Lighting
7. Signage & Striping
8. Landscaping & Sidewalks
9. Utilities & Infrastructure

Secondary / Enabling Components:

1. Demolition of Existing Roadways
Sky Way, Vicksburg Ave, 96th St, Alverstone Dr, Sepulveda Ramps & Bridges
2. Demolition of Existing Facilities
APD Building, APD Trailers, Billboards, LAX-it, Park One, SAAP 3, Utilities, Miscellaneous Fences & Gates
3. New Passenger Drop-off / Pickup Areas
aka Rotaries @ ITF West, ITF East, CONRAC
4. New Terminal 9 Circulation Roads
Roadways to and from T9 at Jetway Blvd and Century Blvd with CTA connection
5. Reconfiguration of LAX Gateway
Pylons & Signage, Landscaping, Lighting, Exterior Architecture
6. Temporary Improvements to Enable Construction Phasing
Temporary Roadways, Detours, etc. as required for MOT
7. Additional Roadway Improvements
Airport Blvd Widening (Phases 1 & 2)
93rd St Sidewalk Improvements
Arbor Vitae Striping for 3rd lane
Westchester Parkway Improvements
96th St. Cul-De-Sac and Street Improvements
Westchester Parkway & Jetway Intersection Improvements
Century Blvd Widening & Multi-Use Path
98th Street Widening
98th Street Improvements
98th Street Restripe
96th St Sidewalk Improvements
Alley Reconstruction around Lot 10 (Belford Ave))
New Tuskegee Way
111th St Widening

3. SCOPE OF WORK

A. Notices to Proceed (NTP)

Upon final signatures & approvals of the Contract, LAWA envisions issuing a Notice To Proceed (NTP) for the Contract.

Thereafter, LAWA envisions issuing a Notice to Proceed (NTP) for each Task Order for discrete scopes of work relating to Phase 1 of the Contract (design & preconstruction) in accordance with Section 5 of the Contract.

Thereafter, LAWA envisions issuing a Notice to Proceed (NTP) for each Component Guaranteed Maximum Price (CGMP) for discrete scopes of work relating to Phase 2 of the Contract (construction & activation) in accordance with PR-22.

LAWA envisions some components will advance to Phase 2, in parallel to completion of Phase 1 for the overall project.

B. Phase 1 – General Description

The primary objectives of Phase 1 of the Project are;

- Validate EIR Concept and Develop Basis of Design (BOD)
- Develop a Target Budget, which shall include all fees, bonds, insurance, taxes and contingencies
- Develop a Comprehensive Phasing & Delivery Plan for the entire Project
- Advance the Design of each Project Component through Design Development
- Secure Agency Approvals from the applicable AHJs for each Project component
- Secure Competitive Proposals from Subcontractors for each Project component
- Support LAWA in determining which affected Real Estate Properties should be considered for Acquisition and/or Easements, and developing & providing the supporting Construction Documents, including, but not limited to, technical & design documents.
- Develop Guaranteed Maximum Price (GMP)/Component Guaranteed Maximum Price (CGMP) Proposals for Phase 2 (construction & activation) for each Project component

LAWA and DESIGN-BUILDER will negotiate Task Orders to accomplish the objectives above based on Technical & Financial Proposals received. At a minimum, this will include comprehensive formal submittals for the Basis of Design (BOD), Schematic Design (SD), Design Development (DD), and Final Design milestones.

Each Submittal shall build upon the previous Submittals with increasing specificity, clarity, accuracy and comprehensiveness. This may include, but not be limited to;

- **Scope Validation Document** (BOD, 15% to 30% design, Goals & Objectives, Design Criteria, Drawings & Sketches, Innovation Possibilities, Narrative Reports, Preliminary Schedules and Target Budget, etc.)
- **Design Packages** (Drawings & Specifications, Calculations & Reports, etc.). DESIGN-BUILDER shall prepare a Design Packages submittal plan and include a matrix of items included in each 30%, 60%, 90% 100% and Issued for Construction (IFC) design submittal. Completion of all Design & Permitting of the ATMP Landside

Improvements.

- **Procurement Plan.** DESIGN-BUILDER shall prepare a procurement plan including a schedule for the Project trades. The procurement plan shall differentiate sub-contracted work from self-perform work. The procurement plan shall identify early or enabling works.
- **Site Investigations** (Topography & Utility Surveys, Property & Building Surveys, Geotechnical Investigations, Hazardous Materials Surveys, Photographs, Records-Research, Traffic-Counts & Observations, Potholing, Ground-Penetrating Radar, Entering & Auditing Maintenance Holes, Exploratory Excavations, Destructive-Testing, etc.)
- **Preconstruction Submittals** (Cost Estimates, Work Plans & Schedules, Constructability Reviews, Packaging & Delivery Plans, Phasing & Logistics Plans, Subcontractor Procurement Plans, Site Investigations Plans, Area Shutdown Requests, Utility Shutdown Requests, etc.)
- **Technical Reports & Studies** (Alternatives Analysis*, Code-Compliance Data, LEED Submittals, Traffic Modeling & Simulations, Supplemental Calculations, etc.)
- **AHJ Submittals** (CALTRANS, FAA, LABOE, LADBS, LADOT, LADPW, etc.)
- **Other Third-Party Submittals** (AT&T, LADWP, Southern California Gas Company, Spectrum, etc.)
- **Maintenance of Traffic Analysis**
- **Approach to Mitigation of Construction Impacts**
- **Innovation Concepts to be Considered**
- **Labor and Material Procurement Strategies**
- **Project Management & Coordination** (Stakeholder Meetings, Weekly Progress Meetings, Monthly Progress Reports, Project Management Plan, etc.)
- **Guaranteed Maximum Price (GMP)/Component Guaranteed Maximum Price (CGMP) Proposals**
- **Administrative Submittals** (Bonds, Insurance, etc.)

In support of the design & preconstruction efforts above, DESIGN-BUILDER shall develop & explore technical concepts and strategies to overcome some of the known challenges of the Project including, but not limited to;

- **Site Demolition** includes removal of all existing utilities, storm drainage facilities, pavements, curb and gutter, sidewalks, bridges, retaining walls, foundations, fencing, landscaping, irrigation, lighting, signage, traffic signals and other surface and subsurface elements in conflict with or within the footprint of the proposed construction. Existing facilities may not be removed, salvaged, reconstructed, abandoned, destroyed, modified, reset, relocated, or relayed until the facility is no longer needed or not being used.
- **Maintenance of Traffic (MOT):** LAWA is seeking to preserve a safe & efficient flow of traffic throughout all stages of construction. DESIGN-BUILDER shall develop detailed constructability & phasing plans, technical innovation concepts, and alternatives

analysis to balance this requirement with other needs & constraints.

Entry and exit access for all transportation modes including but not limited to private vehicles, mass transit, commercial vehicles, rideshare/app vehicles, vehicles-for-hire, pedestrians, bicycles, delivery vehicles, waste vehicles, and emergency vehicles to the CTA, parking/staging areas, and all Terminals must be maintained at all times. Easy, simple wayfinding strategies must be applied. Access must be maintained at a level of service comparable to that in-place prior to construction.

Terminal arrival/departure, commercial, and transit vehicle curbside operations must always be maintained. Operations must be maintained at a level of service comparable to that in-place prior to construction.

Parking entry and exit facilities and security, access, and revenue control systems must always be maintained in service when public access is allowed. Access must be maintained at a level of service comparable to that in-place prior to construction.

ADA and Code compliant pedestrian paths of travel and bicycle access must always be maintained.

Always allow entry and exit access to the public and private properties adjacent the Project Site. Access must be maintained at a level of service comparable to that in-place prior to construction.

- **Agency Approvals:** DESIGN-BUILDER shall conform to the applicable laws, codes, regulations, etc., and shall earn the support and approvals from each of the applicable Authorities Having Jurisdiction (CALTRANS, FAA, LADBS, LADOT, LADPW, etc.) for each project component. This includes Design-Builder obtaining all Authorities Having Jurisdiction required permits and approvals for work in public right-of-way and on private property. This further includes Design-Builder obtaining all Authorities Having Jurisdiction required permits and approvals for work on properties and facilities that are owned, operated and/or maintained by a combination of Los Angeles World Airports, the City of Los Angeles, and the State of California. Design-Builder shall bear: (i) the risk of any delay in obtaining such Authorities Having Jurisdiction required permits and approvals; and (ii) the risk of conditions imposed by the Authorities Having Jurisdiction on performance of the Work by granting such permits and approvals. Refer to PR-12 for additional Third Party Coordination requirements.
- **Program Schedule:** DESIGN-BUILDER shall develop & coordinate phasing plans with other related projects (as listed in Section 5) to ensure that various Project roadway segments can be successfully delivered & activated prior to the 2028 Olympic and Paralympic Games, and the remaining balance of roadway scope delivered & activated after the 2028 Olympic and Paralympic Games.
- **Environmental:** DESIGN-BUILDER shall fulfill all requirements identified in the Mitigation Monitoring and Reporting Program (MMRP) as well as requirements in the Environmental Impact Report (EIR) for the ATMP.
- **Stakeholder Engagement:** DESIGN-BUILDER shall prepare a stakeholder engagement plan and participate in a collaborative design & preconstruction effort with project and airport stakeholders. This will involve design workshops, BIM fly-through presentations, digital simulations, and formal design reviews with LAWA, LADOT, CALTRANS LADPW, LADBS, Airlines, Tenants, Operators, and other project stakeholders that may have an interest and/or influence on the Project. When

stakeholder needs and/or desires conflict with each other, or with other project constraints (budget, schedule, safety, quality, risk, etc.), DESIGN-BUILDER shall prepare & present an alternatives analysis to inform a final decision by LAWA.

- **Commissioning and Activation:** DESIGN-BUILDER shall prepare and implement a detailed Landside Commissioning and Activation Plan that facilitates a seamless phased turnover from the DESIGN-BUILDER to LAWA as the Project transitions from a construction-site into an operational facility, as described in PR-26.

LAWA and DESIGN-BUILDER will work together to develop and maintain a cohesive Project team and will frequently re-evaluate plans and/or methods that are not in alignment with the shared project objectives. The team will be encouraged to use innovative design & construction techniques to ensure the highest standards in safety, quality, schedule, budget, and risk. Major decisions for the Project will be based on a collaborative review of the challenges, benefits and risks of each viable option.

DESIGN-BUILDER shall clearly identify if those concepts succeed or fail to meet the Project Requirements described herein, and shall thoroughly evaluate & present the benefits, disadvantages, risks, costs, options, etc. in order for LAWA to review & consider each technical innovation concept.

LAWA and DESIGN-BUILDER will host progress meetings, workshops, page-turn reviews, etc. in order to facilitate meaningful discussion & debate throughout Phase 1 of the Contract.

See PR-02 through PR-27 for additional details and requirements regarding all the topics stated above and some that were not mentioned above but are a requirement of the Project.

C. Phase 1 – Detailed Description

LAWA will issue a Notice to Proceed (NTP 1) to the DESIGN-BUILDER for Phase 1 of the Contract. Upon receipt, DESIGN-BUILDER shall proceed with the activities described below:

1. Administrative Start

- a. DESIGN-BUILDER shall provide all remaining bonds, insurance, and other administrative documentation that was not already provided during the procurement stage.
- b. DESIGN-BUILDER shall provide their preliminary Project Management Plan (PR-02) and Preliminary Schedule (PR-04) for entire project within 30 days of the Phase 1 NTP.
- c. The DESIGN-BUILDER shall obtain a separate lease agreement with LAWA Commercial Development Group (CDG) prior to mobilization for any laydown and/or project management office spaces located on the LAX campus. The ATMP Landside Improvement Projects will be assigned laydown space on the LAX campus (square-footage and location to be provided; refer to PR-06 for details), however the DESIGN-BUILDER has the option of pursuing off-site (outside of LAX campus) laydown and/or project management office spaces outside of the LAX campus. If the DESIGN-BUILDER pursues off-site laydown and/or project management office spaces, DESIGN-BUILDER shall comply with all Contract requirements and include all costs as part of their proposal and/or Guaranteed Maximum Price (GMP) (PR-22).
- d. The DESIGN-BUILDER shall commence with mobilization of the necessary resources

to perform the Work of the Contract. This includes and is not limited to:

- 1) Relocation of key personnel, staff and office equipment and materials to the PMO
- 2) Recruitment and hiring of staff as necessary
- 3) Internal contractual commitments
- 4) Buyout of key sub-consultants and subcontractors
- 5) Development and implementation of management systems, procedural and electronic, for design, preconstruction and construction.

2. Basis of Design and Early Preconstruction

- a. DESIGN-BUILDER shall commence Stakeholder outreach with LAWA, AHJs, etc. upon receipt of the first NTP and begin developing the necessary professional relationships to inform the design of the project.
- b. DESIGN-BUILDER shall plan and perform **Site-Investigations** to identify the existing conditions of the project-site, and provide the resulting documentation to LAWA. This includes, but is not limited to:
 - 1) Topography and Utility Survey:
 - i. Advanced Utility Investigations (i.e. Ground-Penetrating Radar (GPR), pot-holing, entering and auditing manholes/vaults, etc.).
 - ii. Exploratory Investigations and Destructive Testing and the associated restorative work (i.e. limited excavation, material sampling and testing, environmental, etc.)
 - 2) Geotechnical Investigations
 - 3) Photographs/Videos
 - 4) Records Research: Design-Builder shall review previous planning & entitlement documents and other records relevant to the ATMP. This includes, but is not limited to:
 - i. Environmental Impact Report (EIR) for the ATMP
 - ii. ATMP Implementation Plan (Stage 1) – Final Report
 - iii. LAX Airport Operational Database (i.e. Flight Schedules, Traffic Data, etc.)
 - iv. Past Project Definition Booklets (PDBs) for Concourse 0 & Terminal 9
 - v. Record Drawings of Existing (Relevant) Structures, Roadways, Utilities, Property-Lines, etc.
 - 5) Stakeholder Interviews: Design-Builder shall prepare and administer a 1-on-1 interview (up to 90-minutes each) with LAWA's CEO, CDO, and up to **10** other key stakeholders (as identified by LAWA) to learn & understand client and stakeholder goals, limitations, and aspirations for the ATMP. Note that other stakeholders may include elected / appointed officials, agency representatives, etc.
 - 6) Pre-Design Property Survey: Design-Builder shall conduct a physical site-survey of the ATMP Roadways Project Site, and prepare a preliminary 3-dimensional model of the existing conditions. This includes surveying, traffic-monitoring,

geotechnical investigations, photographing and field-verifying the geospatial coordinates (latitude, longitude, elevation) of the following points & objects:

- i. Existing Buildings & Structures (*Exterior Corners*)
 - ii. Existing Roadways & Sidewalks (*i.e. Centerlines, Curbs & Gutters, Crosswalks, etc.*)
 - iii. Existing Visible Utilities (*Manholes, Junction-Boxes, Valves, Meters, Panels, Switchgear, etc.*)
 - iv. Other Relevant Visible Features (*i.e. Landscaping, Traffic Signals, Light Poles, etc.*)
- c. DESIGN-BUILDER shall prepare a **Preliminary Assessment Report** for the Project. This shall include but not limited to the following sections:
- 1) **Summary of Existing Conditions** (*i.e. Narrative, Photos, Plans, Inventory, Digital Model, etc.*)
 - 2) **Project Purpose** (*i.e. Mission & Vision Statement, Goals & Objectives, etc.*)
 - 3) **Performance Requirements** (*i.e. Minimum Capacities, System Requirements, etc.*)
 - 4) **Project Limits & Exclusions** (*i.e. Geographic Boundaries, Scope Limitations, etc.*)
 - 5) **Risk Register** (*i.e. Data-Gaps, External Influences, Unresolved Issues, etc.*)
 - 6) **Initial Findings** (*i.e. Areas of Concern, Challenges & Opportunities, etc.*)
- d. Building upon the results of the Preliminary Assessment activities, DESIGN-BUILDER shall prepare **three (3) conceptual design alternatives** for the ATMP Landside Improvements. This shall include a "Baseline" option that aligns most-closely with the EIR, and two alternatives that **each** adopt a menu of changes.
- e. DESIGN-BUILDER shall provide an **Alternatives Analysis Report** on the proposals received by LAWA during the competitive selection process, and present recommendations on each of the key differences between the proposals as it relates to cost, schedule, quality, risk, safety, and operational impacts. This includes, but is not limited to, the following services and deliverables for each of the three options:
- 1) Program Summaries & Scope Narrative: i.e. Narrative Descriptions of Project Scope Components & Enabling Projects, with preliminary indicative quantities for major scope components (i.e. lane-miles of new roadways, square feet of pavement, cubic yards of concrete, and other estimated quantities for utilities, traffic signals & controls, lighting, signage, striping, landscaping, resurfacing, demolition, detours & traffic-control, special systems, etc.)
 - 2) Preliminary Concept Drawings: i.e. Project Maps, Site Plans, Demolition Plans, Roadway Plans, Roadway Elevations, Typical Roadway Sections & Details, and indicative-drawings for other major scope-components (utilities, traffic signals & controls, property-acquisitions, etc.)
 - 3) Traffic Modeling & Simulations: i.e. Digital Model and Quantitative Analysis to demonstrate the capacity & performance of the roadway network. This shall include Key Performance Indicators (KPI) at major segments & intersections such

as throughput-capacity, queue-length, traffic-delay duration, etc.

- 4) Phasing & Delivery Strategy: i.e. Preliminary Phasing Plan, Packaging Strategy, and Delivery Schedule, clearly identifying the sequences, durations, and interdependencies between the various scope-components and subtasks (design, permitting, demolition, construction, activation, etc.)
 - 5) ROM Cost Estimate: i.e. ROM Cost Estimates for each scope-component based on estimated quantities and unit-costs of known scopes of work, and applicable allowances for "known unknowns".
 - 6) Comparative Analysis: i.e. Pros & Cons, Known Risks & Opportunities, and Ratings & Rankings against the Project Mission, Vision, Goals & Objectives, KPIs, etc.
- f. Building upon the results of the Alternative Analysis activities, LAWA will select a "Preferred Alternative," which may be a hybrid of – and/or spinoff from – the three (3) preliminary options. DESIGN-BUILDER shall provide a **Proof of Concept Report** for the "Preferred Alternative". This includes, but is not limited to, the following services and deliverables:
- 1) Basis of Design (BOD) Technical Report
 - a. **Executive Summary** (*Project Summary, Known Risks, Recommendations & Next Steps*)
 - b. **Project Description:**
 - i. Program Summary (*Narrative, Goals & Objectives, Cumulative Metrics, etc.*)
 - ii. Detailed Description of each Component (*Narrative, Diagrams, Metrics, etc.*)
 - iii. Additive & Deductive Alternates
 - iv. Prior Decisions, Assumptions, and Risks
 - c. **Code-Compliance & Applicable Standards**
 - i. Authorities Having Jurisdiction (AHJ)
 - ii. Applicable Codes & Standards
 - iii. Permitting Plan & AHJ-Strategy
 - iv. Outline Memorandum of Understanding (MOU) with key AHJs
 - v. LAWA Design & Construction Handbook (*Applicability, Exemption Requests, etc.*)
 - d. **Existing Conditions:**
 - i. Summary of Findings (*From Preliminary Assessment Activities*)
 - ii. Preliminary Reports (*Topography & Utility Surveys, Geotechnical Reports, Hazardous Materials Surveys, etc.*)
 - e. **Programming:**
 - i. Activity-Forecast (*Historical Data & Projections of Vehicles,*

Pedestrians, Mode-Splits, etc.)

- ii. Demand-Basis (*Peak-Hour-Average-Day-Peak-Month, etc.*)
- iii. Level of Service (LOS) & Capacity Requirements (*Roadways, Curb, etc.*)
- iv. Concept of Operations (*Flow Diagrams, Mode-Assignments, Description of Functional Processes, Description of Operational Resources Required, etc.*)

f. Performance Requirements:

- i. Transportation (*i.e. Roadways, Sidewalks, Bike Lanes, etc.*)
- ii. Architecture (*i.e. Walls & Façades, Finishes, Lighting, Landscaping, Art, etc.*)
- iii. Civil & Site Work (*i.e. Earthwork, Demolition, Grading, Paving, Fences & Gates, etc.*)
- iv. Site Utilities (*Sewer, Storm, Power, Water, Gas, Data, etc.*)
- v. Landscaping / Hardscaping (*Planting, Irrigation, Outdoor Furniture, etc.*)
- vi. Structural (*i.e. Substructure, Superstructure, Retaining Walls, Bridges, etc.*)
- vii. Wayfinding (*i.e. Static Signage, Digital Signage, Mobile-App & GPS-Integration, etc.*)
- viii. Security (*ACAMS, CCTV, Security-Perimeters, etc.*)
- ix. IT & Special Systems (*MPOEs, Traffic Monitoring & Reporting, ALPR, etc.*)
- x. Sustainability (*Energy & Water Conservation, VMT Reduction, etc.*)
- xi. Maintenance of Traffic (MOT)
- xii. Emergency Services (*i.e. Emergency Access Points, Shoulders, etc.*)

g. Preliminary Implementation Plan:

- i. Work Plan (*design, preconstruction, procurement, construction, activation, etc.*)
- ii. Baseline Schedule (*Identifying the sequences, durations, and interdependencies of tasks, milestones, deliverables, etc. in the Work Plan*)
- iii. Site Investigations Plan (*Survey, Geotech, HazMat, Potholing, Destructive Testing, etc.*)
- iv. Phasing & Packaging Plan (*Including Early Work Packages, Long-Lead Items, etc.*)
- v. Constructability Report (*Site-Access, Staging / Laydown Areas, Construction-Methods, Mobilization, Logistics, Quality Control Plan, Safety Plan, etc.*)

- vi. Project-Interface Coordination (*Concourse 0, Terminal 9, Auxiliary Curbs, Smart Parking, LAMP, TDIP, ADP, etc.*)

h. Concept Design Drawing Package:

- i. Dimensioned Site Plans & Project Maps
- ii. Dimensioned Roadway Plans & Elevations
- iii. Preliminary Roadway Sections & Details
- iv. Preliminary Flow Diagrams (*Vehicles, Pedestrians, etc.*)
- v. Preliminary Structural & Foundation Plans
- vi. Preliminary Utility Plans
- vii. Preliminary Signage & Striping Plans
- viii. Preliminary Landscaping Plans
- ix. Preliminary IT & Special Systems Plans
- x. Preliminary Phasing Plans
- xi. Preliminary Detour and MOT Plans

i. Detailed Cost Estimates:

- i. Base Cost Estimate (*Quantity Take-offs, Unit Pricing, General Conditions, Design, etc.*)
- ii. Proposed Allowances (*Known Risks, Additive Alternates, etc.*)
- iii. Proposed Markup Factors (*Contingencies, Escalation, etc.*)
- iv. Cost-Breakdowns (*By Trade, By Component, By Category, By Quarter, etc.*)

j. Appendices:

- i. Meetings Log & Library (*Agendas, Presentations, Handouts, Decisions, Minutes, etc.*)
- ii. Comment Logs with Responses (*See Section h., herein*)
- iii. Updated Risk Register
- iv. Refined Preliminary Assessment Report
- v. Refined Alternatives Analysis Report
- vi. Cost-Benefit Analysis for Additive & Deductive Alternates
- vii. Digital 3D Roadway Model and Traffic Simulation
- viii. Renderings and 3D Fly-Through Videos
- ix. Site Utilities Report (*Points-of-Connection, Preliminary Demands & Sizing, etc.*)

DESIGN-BUILDER shall provide **Proof of Concept Report** within 120 days of the Phase 1 NTP or unless otherwise directed by LAWA.

g. **MEETINGS & PRESENTATIONS**

LAWA will host Weekly Owner-Architect-Contractor (OAC) Meetings with Design-Builder throughout the duration of this Task to ensure meaningful progress and communications.

- 1) Design-Builder shall host design-workshops, executive briefings, and stakeholder meetings (at LAWA's discretion) in order to solicit input & feedback on key issues, and to demonstrate progress on their tasks & deliverables.
- 2) Design-Builder shall prepare meeting agendas, handouts, PowerPoint presentations, meeting notes, etc. for each meeting.

h. **DELIVERABLES**

- 1) Design-Builder shall provide a Draft & Final of each Deliverable described above, and host a briefing and/or page-turn meeting to initiate the review. LAWA will provide feedback on each deliverable within 2 weeks, and intends to use Bluebeam Revu for this review process.
- 2) Based on LAWA's feedback, Design-Builder shall provide a comment log, including a response to each prior comment, clearly identifying where & how each past comment was resolved & addressed within each updated Deliverable.
- 3) Each Deliverable shall build upon the previous Deliverables with increasing specificity, clarity, accuracy and comprehensiveness.
- 4) Design-Builder shall provide electronic copies of all deliverables in both .pdf and editable native formats (.docx, .xlsx, .pptx, .dwg, .dwf, .rvt, .jpg, etc.), unless otherwise specified.
- 5) Design-Builder shall provide a Monthly Progress Report throughout the duration of this Task in accordance with PR-01 and PR-24.

3. **Schematic Design (30%) and Preconstruction**

DESIGN-BUILDER shall provide a Schematic Design Package, which builds upon the Basis of Design package with increasing specificity, clarity, accuracy and comprehensiveness. This includes, but is not limited to, the following;

- a. DESIGN-BUILDER shall perform additional **Site-Investigations** to identify the existing conditions of the Project Site, and provide the resulting documentation. This includes, but is not limited to;
 - 1) Advanced Utility Investigations (i.e. Ground-Penetrating Radar (GPR), pot-holing, entering and auditing manholes/vaults, etc.)
 - 2) Exploratory Investigations and Destructive Testing and the associated restorative work (i.e. limited excavation, material sampling and testing, environmental, etc.)
- b. DESIGN-BUILDER shall provide a **Schematic Design Narrative**. The narrative shall address previous review-comments, design characteristics, code compliance issues, and how the design meets or differs from the requirements of the Contract. The narrative shall discuss the characteristics of selected materials, equipment and

fixtures, and considered alternates. The narrative also should identify issues that may have a long-term effect on the execution of the work, such as long-lead delivery items and other critical activities.

- c. DESIGN-BUILDER shall provide an updated **Model of Existing and Proposed Conditions** (PR-21).
- d. DESIGN-BUILDER shall provide a **Schematic Design Drawing Package** indicating the proposed improvements and limits of work. The package shall be presented in corresponding scale across all disciplines as determined between DESIGN-BUILDER, LAWA, and applicable Authorities Having Jurisdictions (AHJ) requirements.
- e. DESIGN-BUILDER shall provide an updated **Project Schedule** (PR-04).
- f. DESIGN-BUILDER shall provide updated **Phasing and Logistics Plans**. This shall include the identification of work areas, working hours, planned operational impacts, mitigation strategies, and proposed implementation and contingency plans in both narrative and graphical formats.
- g. DESIGN-BUILDER shall provide a **Cost Estimate** which will be used to verify compliance with the Design-To-Budget. Uniformat II, Level 3 should be minimum requirement. DESIGN-BUILDER and LAWA will collaboratively develop Cost Estimate framework.
- h. DESIGN-BUILDER shall provide Draft **Technical Specifications**, including a breakdown of the project systems and components in accordance with Uniformat II, Level 3 for the purposes of developing cost estimates and schedules. The Specifications shall include all applicable sections, and shall be developed using the most recent edition of MASTERSPEC®, using the standard LAWA page format and the most recent edition of the LAWA Design and Construction Handbook (DCH). LAWA will further advise the DESIGN-BUILDER on particular quality assurance and quality control issues that the DESIGN-BUILDER shall address.
- i. DESIGN-BUILDER shall provide **Calculations and Reports** that are sufficiently detailed to quantify individual elements of the systems, including determination of sizes, locations, grade/quality of materials and equipment, etc. (i.e. wall/floor thickness, column/beam/connection sizes, equipment sizes, spatial requirements, etc.).
- j. DESIGN-BUILDER shall provide an update of the proposed **Code-Requirements and Applicability Strategy** for each of the project components. DESIGN-BUILDER shall provide comparable written strategies for each Authority having Jurisdiction (LADBS, LADWP, LABOE, LABSS, LABSL, LABOS, FAA, Sempra Utilities, Caltrans etc.) as needed to complete the project. Refer to PR-12 for Third Party Coordination Requirements.
- k. DESIGN-BUILDER shall provide a list of **Schematic Design Decisions**, and an alternatives analysis for each decision regarding cost, schedule, quality, risk, safety, and operational impacts.
- l. DESIGN-BUILDER shall provide **Work Plans and Procedure Manuals**, a subset of Project Management Plan (PMP), to LAWA to demonstrate that the DESIGN-BUILDER is adequately prepared for the many challenges associated with performing construction in an active airport environment.
- m. DESIGN-BUILDER shall provide a formal **Constructability Review** to make certain that the work requirements are clear, the documents are coordinated, and that they

assist the DESIGN-BUILDER in bidding, construction and project administration to result in reduced impacts to the project.

- 1) DESIGN-BUILDER shall identify an individual to lead and coordinate the constructability review process. In addition to the Preconstruction Team, the DESIGN-BUILDER shall solicit outside reviewers to provide "fresh eyes" in the review. All reviewers shall be construction professionals with adequate experience and expertise.
- n. DESIGN-BUILDER shall submit an **Application for Airspace Determination (aka 7460-Application)** for each proposed new structure, and a separate request for proposed construction-equipment (i.e. cranes) that may adversely affect the airspace and/or line-of-sight for Air Traffic Controllers (PR-03 and PR-12). DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace.
4. Design Development (60%) and Advanced Preconstruction

DESIGN-BUILDER shall provide a **Detailed Design Package** which builds upon the Schematic Design package with increasing specificity, clarity, accuracy and comprehensiveness. This includes, but is not limited to, the following;

- a. DESIGN-BUILDER shall perform additional **Site-Investigations** to identify and verify the existing conditions of the Project Site, and provide the resulting documentation and data. This includes, but is not limited to, exploratory excavations, interior penetrations (walls, floors, ceiling, etc.), destructive-testing, and/or limited demolition and the associated restoration to return the affected areas to equal or better condition.
- b. DESIGN-BUILDER shall provide a **Detailed Design Narrative**. The narrative shall address previous review-comments, design characteristics, code compliance issues, and how the design meets or differs from the requirements of the Contract. The narrative shall discuss the characteristics of selected materials, equipment and fixtures, and considered alternates. The narrative also should identify issues that may have a long-term effect on the execution of the work, such as long-lead delivery items and other critical activities. The Design Narrative shall be in its final format and shall include, as a minimum, the following data:
 - 1) Executive Summary
 - 2) Existing Site Conditions
 - 3) Utilities
 - 4) Contractor Access and Facilities
 - 5) Material Descriptions and Properties
 - 6) Potential Coordination Conflicts / Phasing Issues of Overall Design
 - 7) Design Philosophy and Criteria by Disciplines
 - 8) Material Descriptions and Properties
 - 9) Equipment Description and Properties
 - 10) Coordination of Maintenance and Operational Issues
 - 11) Code Report and Compliance Issues
- c. DESIGN-BUILDER shall provide an updated **Model of Existing and Proposed**

Conditions (PR-21).

- d. DESIGN-BUILDER shall provide a **Detailed Design Drawing Package**. The package shall include all required sheets of the final construction working drawings defined by the drawing list, each at least to the 60% level of completion, with sufficient information included for the purpose of subcontractor procurement and preparation of a detailed cost estimate.
- e. DESIGN-BUILDER shall provide an updated **Project Schedule (PR-04)**.
- f. DESIGN-BUILDER shall provide **Detailed Phasing and Logistics Plans**. This shall include the identification of work areas, working hours, planned operational impacts, mitigation strategies, and proposed implementation and contingency plans in both narrative and graphical formats.
- g. DESIGN-BUILDER shall provide a **Detailed Cost Estimate**, which will be used to verify compliance with the Design-To-Budget. DESIGN-BUILDER may solicit bids & proposals from key trades prior to establishing a GMP/CGMP in order to validate the Project budget and schedule. Uniformat II, Level 4 should be minimum requirement. DESIGN-BUILDER and LAWA will collaboratively develop Cost Estimate framework.
- h. DESIGN-BUILDER shall provide **Detailed Technical Specifications**, including a breakdown of the Project systems and components in accordance with Uniformat II, Level 4 for the purposes of developing preliminary estimates and schedules. The specifications shall be in the most recent edition of MASTERSPEC®, shall be formatted using the most recent edition of Construction Specifications Institute (CSI) Master Format, and the most recent edition of the LAWA Design and Construction Handbook (DCH). Specifications shall address all applicable subdivisions, and shall contain adequate technical information to supplement the drawings to quantify sizes, capacities, and qualify grade, strength, workmanship finishes, and other characteristics of applicable materials and equipment.
- i. DESIGN-BUILDER shall provide **Calculations and Reports** for all disciplines, components and systems that are required to determine the final configuration of all parts of the project leading to satisfactory execution and completion of construction work.
- j. DESIGN-BUILDER shall provide an update of the proposed **Code-Requirements and Applicability Strategy** for each of the Project components. DESIGN-BUILDER shall provide comparable written strategies for each Authority having Jurisdiction (LADBS, LADWP, LABOE, LABSS, LABSL, LABOS, FAA, Sempra Utilities, Caltrans etc.) as needed to complete the project. Refer to PR-12 for Third Party Coordination Requirements.
- k. DESIGN-BUILDER shall provide a list of detailed **Design-Decisions**, and an alternatives analysis for each decision regarding cost, schedule, quality, risk, safety, and operational impacts.
- l. DESIGN-BUILDER shall provide **Work Plans and Procedures Manuals**, a subset of Project Management Plan (PMP), to LAWA to demonstrate that the DESIGN-BUILDER is adequately prepared for the many challenges associated with performing construction in an active airport environment.
- m. DESIGN-BUILDER shall provide a formal **Constructability Review** to make certain that the work requirements are clear, the documents are coordinated, and that they assist the DESIGN-BUILDER in bidding, construction and project administration to

minimize risk and uncertainty to the Project.

- 1) DESIGN-BUILDER shall identify a lead person to lead and coordinate the constructability review process. In addition to the Preconstruction Team, the DESIGN-BUILDER shall solicit outside reviewers to provide "fresh eyes" in the review of the documents. All reviewers shall be construction professionals with adequate experience and expertise.
- 2) DESIGN-BUILDER shall submit the finalized constructability review upon completion of all back-checked comments from the design team to LAWA.
- n. DESIGN-BUILDER shall provide a proposed Component Guaranteed Maximum Price (CGMP) Binder for the "**Early Work Package**," indicating the proposed scope, schedule, and budget for work that the DESIGN-BUILDER recommends performing prior to authorization of the complete Guaranteed Maximum Price (GMP)/ Component Guaranteed Maximum Price (CGMP) scope of work.
- o. DESIGN-BUILDER shall submit an **Application for Airspace Determination (aka 7460-Application)** for each proposed new structure, and a separate request for proposed construction-equipment (i.e. cranes) that may adversely affect the airspace and/or line-of-sight for Air Traffic Controllers (PR-03 and PR-12). DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace.
- p. DESIGN-BUILDER shall provide a list of all **Long-Lead Items** that may be required to be purchased in advance of the GMP/CGMP to meet the project schedule.
- q. DESIGN-BUILDER shall evaluate the needs for **Spare Parts** and coordinate the spare parts requirements with LAWA's Facilities Maintenance and Utilities Group. DESIGN-BUILDER shall provide a corresponding list of Spare Parts and the associated quantities, and prepare specifications to accomplish these requirements.
5. Guaranteed Maximum Price (GMP)/Component Guaranteed Maximum Price (CGMP) Development
 - a. Building upon the Design Packages described above, the DESIGN-BUILDER shall provide a complete design stage cost estimates for each 30%, 60%, and/or 90% Design Packages CGMP and/or GMP work packages. LAWA and DESIGN-BUILDER may choose to negotiate CGMP and/or GMP Proposals at a minimum 60% Design Package, unless otherwise directed by LAWA.
 - b. **CGMP / GMP Proposal Binder** shall be developed in accordance with PR-22.
 - c. If LAWA rejects the GMP or CGMP proposal, the proposal shall be deemed withdrawn and of no effect. In such event, LAWA and the DESIGN-BUILDER shall meet and confer as to how the Project or Work Package(s) will proceed, with LAWA having the following options:
 - 1) LAWA and the DESIGN-BUILDER may suggest modifications to the GMP or CGMP proposal and the DESIGN-BUILDER shall submit a revised GMP or CGMP proposal and the approval process will recommence; or
 - 2) LAWA may remove the Work Package from the scope and LAWA may procure and construct the Work Packages(s) independently of this Contract.
 - 3) LAWA may stop some or all of the associated work, and/or terminate the Contract entirely, in accordance with the General Conditions.

6. Final Design (90% & 100%)

DESIGN-BUILDER shall provide updated Design Packages at 90% Design Development and 100% Completion (Issued For Construction Ready), which build upon the previous Design Packages with increasing specificity, clarity, accuracy and comprehensiveness. Each Design Package Submittal shall include a written response to each comment from all previous Design Packages. The responses shall indicate how each comment was addressed, and where each correction and/or change is reflected in the updated Design Package.

a. DESIGN-BUILDER shall submit a **90% Design Package** that incorporates the comments and information from the previous Design Packages. The 90% Design Package shall be a comprehensive and complete pre-final construction document, suitable for procurement and construction. The documents shall essentially be 100% complete, pending any work for only minor corrections to resolve discrepancies discovered during the final review and for the incorporation of final LAWA comments. The 90% Design Package shall include, but not be limited to;

- 1) **Drawings:** The drawing set shall include all required construction working-drawing sheets completed to practically 100% level of completion.
- 2) **Specifications:** Specifications shall be complete, comprehensive, and fully coordinated for disciplinary requirements with the working drawings and Contract Documents.
- 3) **Calculations and Reports:** All calculations and reports shall be finalized; incorporating all resolved comments and corrections of the previous submittals.
- 4) **Cost Estimate:** The Cost Estimate accompanying the 90% Submittal shall consist of a detailed line item estimate with accurate unit costs and final quantities, in order to verify compliance with the Authorized Budget. Minimal contingency and allowances will be required. This estimate shall be of sufficient detail to adequately analyze the Contractor's Proposal Documents. A section of the Cost Estimate shall include a budget reconciliation detailing major variances between the total amount of the final proposal document estimate and that of the last estimate submittal.
- 5) **Schedule:** DESIGN-BUILDER shall provide an updated Level 4 construction schedule for the overall times of submittals, procurement, fabrication, delivery, installation, testing and activation of all components of the project, including consideration for phasing the construction work.
- 6) **Permits:** Upon completion of the 90% Design Package, the DESIGN-BUILDER shall obtain any and all permits required for construction in order to proceed with the preparation of the Issued For Construction (IFC) documents, unless otherwise directed by AHJs. Note that DESIGN-BUILDER may choose to apply for some Permits prior to the 90% Design Package. DESIGN-BUILDER shall begin the permitting process no later than the 90% Design Package. Refer to PR-12 for Third Party Coordination requirements.
- 7) **Additional Design Documents:** DESIGN-BUILDER shall provide an updated Design Narrative, Model of Existing and Proposed Conditions, Design Decisions, etc. These documents shall be finalized; incorporating all resolved comments and corrections of the previous submittals.
- 8) **Preconstruction Documents:** DESIGN-BUILDER shall provide updated Site

Investigations, Phasing and Logistics Plans, Work Plans and Procedures Manuals, a subset of Project Management Plan (PMP), Constructability Reviews, Airspace Determinations, Long-Lead Lists, etc. These documents shall be finalized; incorporating all resolved comments and corrections of the previous submittals.

- b. DESIGN-BUILDER shall provide a **100% Design Package** which incorporates the comments and information gained from the previous designs, with all outstanding actions and comments resolved. All drawings in the 100% Design Package shall be sealed and signed for final submittal by a Registered Professional Engineer, a Registered Architect, or a Registered Land Surveyor licensed in the State of California as appropriate. Work that is performed by professionals or trades that do not require a professional registration in the State of California may be exempt from this requirement subject to prior written approval of LAWA and/or applicable AHJs. The 100% Design Package shall include, but not be limited to;
 - 1) **Issued For Construction (IFC) Ready Drawings**
 - 2) **Issued For Construction (IFC) Ready Specifications**
 - 3) **Calculations and Reports**
 - 4) **Final Cost Estimate**
 - 5) **Final Construction Schedule**, including consideration for phasing and logistics, submittals, fabrication and delivery, testing and activation, etc.
 - 6) **Final Permits**, including a complete list of all drawings submitted for jurisdictional and/or code review. Refer to PR-12 for Third Party Coordination requirements.
 - 7) **Additional Design Documents**, including an updated Design Narrative, Model of Existing and Proposed Conditions, Design Decisions, etc. These documents shall be finalized; incorporating all resolved comments and corrections of the previous submittals.
 - 8) **Preconstruction Documents**, including updated Site Investigations, Phasing and Logistics Plans, Work Plans and Procedures Manuals, a subset of Project Management Plan (PMP), Constructability Reviews, Airspace Determinations, Long-Lead Lists, etc. These documents shall be finalized; incorporating all resolved comments and corrections of the previous submittals.
 - 9) An original letter signed and sealed by the DESIGN-BUILDER's Engineer of Record (EOR) and addressed to LAWA certifying that the design as submitted is in accordance with prevailing and applicable codes. The letter shall include a list of such codes used in the design. Refer to PR-12 for Third Party Coordination requirements.
 - 10) An original letter signed and sealed by the DESIGN-BUILDER and addressed to LAWA providing a list of the "Special Inspections" required by the Building Code for the proposed work. Refer to PR-12 for Third Party Coordination requirements.
 - 11) An original letter signed and sealed by the DESIGN-BUILDER and addressed to LAWA for the temporary Support of Excavation System (SOE) when applicable. Refer to PR-12 for Third Party Coordination requirements.
- c. DESIGN-BUILDER shall provide **Final Construction Documents**. Final Construction Documents shall be comprehensive, clear and suitable for the purposes of procurement, contracting and construction. The Final Construction Documents shall include, but not be limited to;

- 1) **Issued For Construction (IFC) Drawings**, including perforations and/or stamps of approval from the Authorities having Jurisdiction (LADBS, LADWP, LABOE, LABSS, LABSL, LABOS, FAA, Sempra Utilities, Caltrans etc.). Refer to PR-12 for Third Party Coordination requirements.
 - 2) **Issued For Construction (IFC) Specifications**
 - 3) **Final Issued For Construction (IFC) Permits**
- d. **Certification Requirements:** Final Construction Documents, including drawings, specifications, and calculations shall be sealed and signed by the appropriate California Professional Registered Architect, Engineer-of-Record or Land Surveyor. Plans and specifications prepared for asbestos abatement, hazardous materials remediation, wetland delineation or other environmental activities shall be signed and sealed in accordance with all federal and state regulations.
 - e. **Contractual Requirements:** DESIGN-BUILDER shall coordinate with LAWA's Procurement Services Division and Contracts Team to ensure that their Subcontractor Solicitation Documents do not conflict with LAWA's Contract Documents (Conformed Contract, General Conditions, Special Conditions, Project Requirements, etc.)
 - f. DESIGN-BUILDER shall submit an **Application for Airspace Determination (aka 7460-Application)** for each proposed new structure, and a separate request for proposed construction-equipment (i.e. cranes) that may adversely affect the airspace and/or line-of-sight for Air Traffic Controllers (PR-03 and PR-12). DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace.
 - g. DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace.

D. Phase 2 – General Description

The primary objectives of Phase 2 of the Project are;

- Procure, Onboard and Mobilize Trade Contractors
- Construct, Test, Commission, and Activate the ATMP Landside Improvements
- Provide Maintenance of Traffic (MOT) Analysis throughout all stages of the Project. Continue to participate in stakeholder engagement.
- Analyze and plan for the Mitigation of Construction Impacts
- Provide Environmental Mitigation, Monitoring & Reporting
- Obtain Third-Party Certifications for the ATMP Landside Improvements
- Provide Comprehensive Record Documents and Closeout Documents for the ATMP Landside Improvements

LAWA and DESIGN-BUILDER will negotiate Guaranteed Maximum Price (GMP)/ Component Guaranteed Maximum Price (CGMP) Packages for each component, or sum of components, during Phase 1 of the Contract, which will stipulate specific scopes, schedules, budgets, requirements, constraints, and other details for Phase 2.

E. Phase 2 – Detailed Description

LAWA will issue a Notice to Proceed (NTP 2) to the DESIGN-BUILDER for Phase 2 of the contract. Upon receipt, DESIGN-BUILDER shall proceed with the activities below:

1. Construction

- a. All Construction activities shall be performed in accordance with the Contract. LAWA will host a Preconstruction Conference (PR-22) with the DESIGN-BUILDER and other key stakeholders for each CGMP and/or GMP work package, upon issuance of a NTP for Construction.
- b. DESIGN-BUILDER shall obtain a final **Airspace Determination (aka 7460-Determination)** from the FAA for each proposed new structure, and a separate determination for the proposed construction-equipment (i.e. cranes) that may adversely affect the airspace and/or line-of-sight for Air Traffic Controllers (PR-03 and PR-12). DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace..
- c. DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace.
- d. The DESIGN-BUILDER shall Plan, develop and maintain a Project Management Office (PMO) for the co-located Project Team, including staff from LAWA, LAWA PM/CM, DESIGN-BUILDER, etc.
- e. The DESIGN-BUILDER shall obtain a separate lease agreement with LAWA Commercial Development Group (CDG) prior to mobilization for any laydown and/or project management office spaces located on the LAX campus. The ATMP Landside Improvement Projects will be assigned laydown space on the LAX campus (square-footage and location to be provided; refer to PR-6 for details), however the DESIGN-BUILDER has the option of pursuing off-site (outside of LAX campus) laydown and/or project management office spaces outside of the LAX campus. If the DESIGN-BUILDER pursues off-site laydown and/or project management office spaces, DESIGN-BUILDER shall comply with all Contract requirements and include all costs as part of their proposal and/or Guaranteed Maximum Price (GMP)/Component Guaranteed Maximum Price (GMP) (refer to PR-22).

2. Closeout

- f. All Closeout activities shall be performed in accordance with the Contract. LAWA will host a Closeout Meeting for each CGMP and/or GMP work package upon request from the DESIGN-BUILDER, or within 30 days of Substantial Completion (PR-27).

F. Other / Miscellaneous Scope

In addition to the scope described above, LAWA may (or may not) issue individual task orders for specific needs, to be funded by Owner Allowances as described in PR-05.

G. Early Work Packages

As identified in the Procurement Plan and throughout Phase 1 of the Contract, DESIGN-BUILDER may develop GMP/CGMP Proposals for select components of the Project to

advance to Phase 2 in accordance with PR-22. This may include procurement of long-lead items, utility-relocations, temporary roadways, and/or other early / enabling work prior to developing a GMP/CGMP Proposal for the full Project.

H. Subcontractor Procurement

DESIGN-BUILDER shall solicit competitive proposals from Subcontractors for multiple work packages in accordance with GC-9.

I. Off-Ramps

If LAWA and DESIGN-BUILDER fail to reach agreement on the BOD, SD, DD, and/or GMP/CGMP Proposal, then LAWA may choose not to proceed with remaining stages of the Contract for the associated scope of work.

LAWA may utilize the services & deliverables from DESIGN-BUILDER to solicit competitive proposals from other Designers, Contractors, Design-Builders, or other Contractors at any time, for any or all project components.

LAWA may terminate the Contract for convenience at any time in accordance with GC-37.

4. POLICIES AND PROCEDURES

A. Policies

DESIGN-BUILDER shall adhere to the following policies in the development of all design documents and supporting documentation for which LAWA has authorization for approval. Design services shall be performed by either a licensed California Professional Engineer or a licensed California Architect (dependent on the scope). All submitted and approved drawings need to be stamped and signed by said licensee. DESIGN-BUILDER shall be responsible for the development of design documents, supporting documentation and coordination that comply with third party agency design policies for the purpose of securing approval by these agencies. At a minimum, DESIGN-BUILDER's design activities and documents will provide the following

1. Compatibility with Aviation Operations

DESIGN-BUILDER shall develop all Project documents for design and construction in compliance with all applicable federal, state, regional, city and local laws and regulations, and consistent with accepted airport standards such as the LAWA Design and Construction Handbook (DCH), Authorities Having Jurisdiction (AHJ) and Third Parties including but not limited to LADBS, LABOE, LABOS, LABSS, LABSL, Caltrans, FAA, various utility companies, etc. Structures and facilities shall not pose a hazard to aircraft operations, interfere with established Federal Aviation Administration (FAA) ground or air control procedures, nor impede the safe flow of aircraft and/or ground service equipment (GSE). Construction safety and work plans shall be made with consideration and approval of the FAA where necessary and applicable. DESIGN-BUILDER shall identify the appropriate airport operations stakeholders to coordinate any required work or tasks to be performed in the Air Operations Area (AOA) throughout all stages of the project. Below are links to the DCH.:

<http://www.lawa.org/laxdev/Handbook.aspx>

2. Environmental Protection and Sustainability

DESIGN-BUILDER's design and construction documents and environmental efforts must conform to all applicable federal, state, regional, city and local laws and regulations. DESIGN-BUILDER shall also fulfill the Project-specific sustainability goals as described in PR-18 and PR-20.

3. Safety

Safety shall be an integral part of the DESIGN-BUILDER's delivery process throughout all stages of the Project. DESIGN-BUILDER shall perform all work in compliance with LAWA's Construction Safety Program Requirements and PR-15, and shall provide design and construction documents that support the LAWA objective of an accident-free Project. DESIGN-BUILDER shall work with LAWA's Safety Team in the development and approval of the DESIGN-BUILDER's Safety Plans.

4. Quality Assurance (QA) and Quality Control (QC)

DESIGN-BUILDER shall comply with quality assurance (QA) and quality control (QC) program requirements for their design, preconstruction, and construction activities and associated documents. The DESIGN-BUILDER's QA and QC plan shall be prepared and maintained in accordance with the Contract (PR-13 and PR-14). The QA and QC plan shall further reflect that the DESIGN-BUILDER is required to perform inspection and tests on many items of work, including that of subcontractors. The technical specifications shall specify all activities to be performed by the contractor as part of the QA and QC program.

5. Site Protection and Restoration

DESIGN-BUILDER shall take appropriate measures to protect all surrounding properties, utilities and facilities from damage. DESIGN-BUILDER shall restore all surrounding properties, utilities and facilities to equal or better condition prior to construction completion.

B. Project Management and Execution

1. Work Plans and Procedures Manuals (Project Management Plan (PMP))

a. DESIGN-BUILDER shall submit formal Work Plans and Procedures Manuals, a subset of Project Management Plan (PMP), to LAWA with each design package submittal (BOD, 30%, 60%, 90%, 100%), and on a quarterly basis during construction. Each submittal shall build upon the previous versions with increasing specificity, clarity, accuracy and comprehensiveness. This includes, but is not limited to:

- 1) Project Management Plan (PR-02 and PR-22)
- 2) Traffic Management Plan (TMP)
- 3) Construction Area Access, Phasing and Logistics Plan (PR-03)
- 4) Safety Plan (PR-15)
- 5) Security Plan (PR-03)
- 6) Work Plan & Schedule (PR-04)
- 7) Site Investigations Plan
- 8) Design Management Plan (PR-11)
- 9) Design Submittal Packaging Plan

- 10) Cost Management Plan
- 11) Project Controls Plan
- 12) Quality Control Plan (PR-14)
- 13) Virtual Design and Construction (VDC) and Building Information Modeling (BIM) Execution Plan (PR-21)
- 14) Risk Management Plan
- 15) Sustainability Plan
- 16) Airport Operational Readiness & Commissioning Plan (PR-26)
- 17) Storm Water Pollution Prevention Plan (SWPPP)
- 18) Hazardous Materials Management Plan (HMMP)
- 19) Environmental Monitoring and Control Plan (PR-18)
- 20) Permitting Plan
- 21) Third Party and Agency Coordination Plan (PR-12)
- 22) Communication Plan
- 23) Stakeholder Engagement and Management Plan
- 24) Procurement and Packaging Plan (including but not limited to self-perform, subcontracting, etc.)
- 25) Onboarding and Training/Familiarization Plan

LAWA envisions DESIGN-BUILDER will develop the PMP in stages, with increasing specificity, clarity, accuracy, and comprehensiveness as the project advances.

DESIGN-BUILDER shall provide a Monthly Progress Report throughout all stages of the Project, clearly describing & demonstrating the latest progress, challenges, developments, and key performance indicators (KPI) for each of the plans, attributes, and considerations above.

- b. Phasing and Logistics Plans shall include the identification of work areas, working hours, potential operational impacts, proposed mitigation strategies, and proposed implementation and contingency plans. The plans shall include graphical presentations of each phase of work, with supporting narrative descriptions of the potential impacts and mitigation-measures. This includes, but is not limited to;
 - 1) Work Areas (construction, offices, storage and laydown, employee parking, etc.)
 - 2) Site Access (haul-routes, delivery-hours, badging, AOA posts, etc.)
 - 3) Roadway / Traffic Impacts (i.e. lane-closures, etc.)
 - 4) Pedestrian Impacts (i.e. sidewalk closures, etc.)
 - 5) Airfield Impacts (i.e. Taxiway Closures, Gate-Closures, etc.). DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace.
 - 6) Environmental Impacts (i.e. noise, vibration, stormwater, etc.)
- c. DESIGN-BUILDER shall submit detailed construction work plans prior to starting each significant phase of construction (i.e. demolition, abatement and hazardous material

mitigation, civil and utilities, earthwork, foundations, structural, building envelope, building-systems, roadway, traffic, etc.), building upon the plans described above.

2. Stakeholder Management

- a. DESIGN-BUILDER shall engage with stakeholders as early as possible, and shall regularly and formally conduct stakeholder outreach efforts (workshops, document-reviews, site-visits, etc.) throughout all stages of the Project. DESIGN-BUILDER shall prepare and implement their Work Plans and Procedures Manuals, a subset of Project Management Plan (PMP), to complement LAWA's Airport Operational Readiness (AOR) Program and coordinate activities within the plans with the AOR Team.
- b. DESIGN-BUILDER shall create, maintain, and implement a Stakeholder Engagement and Management Plan that includes the processes required to identify the people, groups and organizations that could affect or be affected by the project, to analyze stakeholder expectations and their impact on the Project, and to develop appropriate strategies and tactics for effectively engaging stakeholders in a manner appropriate to the stakeholders' interest and involvement in the Project. The Stakeholder Engagement and Management Plan will include the following sections:
 - 1) Identification of Stakeholders – identify by name and title the people, groups, and organizations that have significant influence on Project direction and its success or who are significantly impacted by the Project.
 - 2) Plan for Stakeholder Management – identify the strategies and mechanisms that will be used to ensure appropriate stakeholder engagement is performed throughout the Project life cycle.
 - 3) Management of Stakeholder Engagement – outline the processes and steps that will be undertaken to carry out the planned strategies including any limitations, restrictions or risk.
 - 4) Control Stakeholder Engagement – describe the methods and efforts that will be used to monitor stakeholder engagement and maintain the appropriate levels of communication with each stakeholder.
- c. The DESIGN-BUILDER shall provide the necessary exhibits, drawings, presentations or other graphics as necessary for stakeholders to use to communicate to or solicit input from other stakeholders.
- d. DESIGN-BUILDER shall conduct all activities necessary to interface and coordinate with other organizations and third party jurisdictional agencies to secure approval of the design documents. DESIGN-BUILDER shall identify the authorizing agency (or agencies) with jurisdictional authority for approval, and shall coordinate with those agencies on LAWA's behalf to secure approval of the design documents. DESIGN-BUILDER shall coordinate with organizations including, but not limited to, the following:
 - 1) City of Los Angeles Department of Water and Power (LADWP)
 - 2) City of Los Angeles Bureau of Engineering (LABOE)
 - 3) City of Los Angeles Bureau of Street Lighting (LABSL)
 - 4) City of Los Angeles Bureau of Street Services (LABSS)
 - 5) City of Los Angeles Bureau of Sanitation (LABOS)
 - 6) City of Los Angeles Bureau of Contract Administration (CONAD)

- 7) City of Los Angeles Department of Building and Safety (LADBS)
- 8) Los Angeles World Airports (LAWA)
 - a) Airports Development Program (ADP)
 - b) Airport Operations and Emergency Management
 - c) Facilities Maintenance and Utilities Group
 - d) Information Management and Technology Group (IMTG)
 - e) Airport Security and Public Safety
 - f) Shutdown Control Center (SCC)
 - g) Coordination and Logistics Management (CALM)
 - h) Environmental Programs Group
- 9) City of Los Angeles Council District (CD) 11
- 10) South Coast Air Quality Management District (SCAQMD)
- 11) California Department of Transportation (Caltrans)
- 12) Federal Aviation Administration (FAA)
- 13) Environmental Protection Agency (EPA)
- 14) U.S. Customs and Border Protection (CBP)
- 15) U.S. Citizenship and Naturalization Services
- 16) U.S. Department of Agriculture
- 17) U.S. Public Health Service
- 18) Airport Tenants
- 19) Air Carriers
- 20) LAX Fuel System Management
- 21) Transportation Security Administration (TSA)
- 22) California Coastal Commission
- 23) Cultural Affairs Commission
- 24) Public Arts Commission
- 25) Private utility providers (Sempra Utilities, etc.)
- e. DESIGN-BUILDER shall coordinate their design with other projects and/or contractors that may affect this Project, and clearly reflect that coordination within each design package. DESIGN-BUILDER shall assure LAWA that all elements of its design and construction work, including that of its subcontractors, are fully coordinated with other projects and/or contractors.
3. Design Management (PR-11)
 - a. DESIGN-BUILDER shall identify third-party jurisdictional agencies which may have authority for approval over each Project component and design package in their Permitting Plans within each design package.
 - b. DESIGN-BUILDER shall be responsible for adhering to the requirements of LAWA and AHJ Design Requirements, as well as the requirements of third-party jurisdictional agencies for the approval of design documents.

- c. DESIGN-BUILDER shall submit each Design Package to the Jurisdiction having Authority and to LAWA. Upon receipt, LAWA will conduct a formal design review and provide written feedback to the DESIGN-BUILDER within 30 calendar days.
 - d. DESIGN-BUILDER shall reconcile all comments received from LAWA, and provide a written response to each comment in the follow-on design package. The responses shall indicate how each comment was addressed, and where each correction and/or change is reflected in the updated Design Package.
 - e. DESIGN-BUILDER is solely responsible for quality control of their design and construction documents, and for ensuring that all procedural requirements are fulfilled. DESIGN-BUILDER shall provide design submittals that are fully comprehensive and complete in accordance with PR-11.
 - f. DESIGN-BUILDER shall submit formal Design Packages to LAWA at the scheduled time of completion of the following design stages:
 - 1) Basis of Design (BOD) and Proof of Concepts
 - 2) Schematic Design (30%) Submittal
 - 3) Design Development (60%) Submittal
 - 4) Final Design (90%) Submittal
 - 5) Issue For Construction (IFC) Documents (100%) Submittal
 - 6) Record Documents
 - g. DESIGN-BUILDER shall coordinate design-priorities with the approved Procurement Plan and Project Schedule to ensure design-package submittals do not adversely affect the schedule.
 - h. Incomplete submittals will be rejected and returned for additional work and resubmittal. If a submittal is determined to be unacceptable by the Jurisdiction having Authority or by LAWA, the DESIGN-BUILDER will be notified accordingly. Delays and/or costs incurred by incomplete submittals and/or their associated rejection are the responsibility of the DESIGN-BUILDER, and no allowances will be made. Refer to PR-12 Third Party Coordination requirements.
4. Risk Management
- a. DESIGN-BUILDER shall be responsible for and lead the Risk Management effort for the Project. DESIGN-BUILDER shall provide a Risk Management Plan, identifying their process for risk identification, assessment, qualification, quantification and responses. It should follow a methodology recognized in the industry as appropriate to the Project scope.
 - b. DESIGN-BUILDER shall identify a staff member that will provide Risk Management services. That person will be responsible for implementation of the approved Risk Management Plan. Regular meetings shall be scheduled to update and improve the overall risk profile of the Project. DESIGN-BUILDER shall be responsible for creating and maintaining the Project Risk Register and associated documentation.
5. Utility Locating and Marking
- a. DESIGN-BUILDER shall verify the location, depth, alignment, size, function and condition of all existing utilities affected by and/or relevant to the Project in accordance with PR-07.

- b. DESIGN-BUILDER shall identify all existing and proposed utilities in their Design Documents, Construction Documents, and Model of Existing and Proposed Conditions.
- c. DESIGN-BUILDER shall physically mark the location of all identified existing utilities in the field prior to starting any construction that could adversely affect those utilities.
- d. DESIGN-BUILDER shall provide a complete LAWA Impact Request (LIR), Area Shutdown Requests (ASR) and or Utility Shutdown Requests (USR) to LAWA's Construction and Logistics Management (CALM) Team and/or LAWA's Shutdown Control Center (SCC) at least 30 days prior to any planned area and/or utility shutdown(s). (PR-03)
- e. DESIGN-BUILDER must retain a tribal monitor approved by the Gabrieleno Band of Mission Indians-Kizh Nation and will be present on-site during construction phases that involve any ground disturbing activities. Refer to PR-18, certified Environmental Impact Report (EIR), and National Environmental Policy Act (NEPA) Environmental Assessment (EA) for requirements. Also refer to PR-05 Allowances.
- f. DESIGN-BUILDER is required to coordinate with the FAA and LAWA Airport Operations for any work performed within the AOA and areas affecting aircraft airspace. Refer to PR-12 Third Party Coordination requirements.
- g. DESIGN-BUILDER is required to coordinate with Authorities Having Jurisdiction (AHJ) and Third Parties including but not limited to LADBS, LABOE, LABOS, LABSS, LABSL, Caltrans, FAA, various utility companies, etc. for any work performed within the AHJs and/or Third Parties rights-of-way and easements. Refer to PR-12 Third Party Coordination requirements.

C. Cost Management

1. DESIGN-BUILDER shall prepare and submit a construction cost estimate with all design submittals. All estimates shall be prepared by professionals skilled in construction cost estimating and are subject to approval by LAWA. DESIGN-BUILDER shall be responsible for reviewing and validating all costs whether prepared by the DESIGN-BUILDER or by others. DESIGN-BUILDER shall notify LAWA of any company engaged in construction work used for the preparation of estimates. DESIGN-BUILDER estimates shall be developed to the level of detail appropriate for the respective submittal as follows;

Uniformat II should be minimum requirement, however, DESIGN-BUILDER and LAWA will collaboratively develop Cost Estimate framework.

- a. Basis of Design: Uniformat II, Level 2 or above
 - b. Schematic Design: Uniformat II, Level 3 or above
 - c. Detailed Design: Uniformat II, Level 4 or above (including new CSI 48+ divisions)
 - d. Construction: Uniformat II, Level 4 or above (including new CSI 48+ divisions)
2. DESIGN-BUILDER shall present construction cost estimates in a legible format, in sufficient detail to reflect progress of design submission. DESIGN-BUILDER shall provide updated cost-estimates with each formal design package submittal (BOD, 30%, 60%, 90%, 100%, IFC). In addition to a complete project cost estimate, the DESIGN-BUILDER shall present separate cost-breakdowns for the various Project components progressed to the development of a CGMP/GMP.
 3. DESIGN-BUILDER shall include actual quantities and unit costs for each line item of

the designed portions of work. The unit costs shall address Labor Workhour Units, Labor Cost Units, Material Cost Units, and Construction Equipment Cost Units. The construction cost estimates shall include Quantity, Unit of Measure, Labor Hours, Labor Rates, Material Costs, Equipment Dollars and Total Dollars for each Level 4 line item and shall be rolled up by totals to Level 1 and Level 2. All labor rates shall have a breakdown that includes the actual raw rate and documented burdens, benefits, etc.

- a. DESIGN-BUILDER's Profit shall be identified as separate line item and taken on the cost of work. The estimates shall identify the escalation percentage, amount of escalation to mid-point included in the estimate (based on the construction schedule) as a line item and the estimate shall be totaled for all costs. For bid item estimates the escalation shall be included in each applicable bid item.
 - b. Mobilization shall be included as a separate line item.
 - c. A basis of estimate narrative describing the scope of the estimate, exclusion of what is not in the estimate, what the escalation to the midpoint of construction is based on, and identifying the construction duration used for the estimate shall accompany each estimate.
 - d. Approximate quantities and unit costs shall be developed for work not yet clearly defined. Allowances may be applied for work that is known, but not yet detailed.
 - e. Design/Builder Contingency to be jointly developed with the DESIGN-BUILDER and LAWA. The Design/Builder Contingency should not exceed the following target ranges: 10-20% during Basis of Design, 10-15% during Schematic Design, and 5-10% during Detailed Design, unless otherwise directed by LAWA.
 - f. A section of each estimate shall include a budget reconciliation detailing major variances between the current estimate and that of the previous design submittal.
4. Unit Prices shall be to the nearest cent. Total costs shall be rounded to the nearest dollar with comas and without the dollar (\$) sign. The dollar (\$) sign shall be used only at appropriate subtotals and totals.
 5. Contractor General Conditions: Contractor general conditions shall be a separate line item based on bottoms-up staffing plan and shown as a percentage of the construction cost, unless otherwise directed by LAWA.
 6. All Construction Pricing: All construction pricing shall be based on current costs, including escalation, at the time the estimate is prepared. The basis of such costs shall be clearly stated.
 7. For Specific Levels of Completion and Other Requirements: For specific levels of completion and other requirements, refer to specific submittal requirements.
 8. Estimate Shall Include: Estimate shall include submittal type or level, date and have title of drawings and specifications.
 9. Assumptions: All assumptions, allowances and risk related contingencies that affect the estimate shall be clearly identified and should decline as design progresses.
 10. Exclusions: Exclusions are potential cost items not currently addressed by the submittal documents; therefore, they cannot be assigned an accurate cost or allowance. They shall be clearly identified in the estimate and decline as design progresses.
 11. For Each Facility or Major Component of the Estimate: For each Facility or Major Component of the estimate, a summary level of aggregate man-hours and direct costs

shall be provided. The direct cost summation shall be further broken down by labor, material, equipment, subcontractor(s) and total cost.

12. For Project Summary: Provide a summation of aggregate man-hours and direct costs. Further break down direct cost summation by labor, material, equipment, subcontractors' costs, and total cost.
13. Comparative Tabulation: A separate comparative tabulation of direct costs for major components and/or types of work, markups and total Project construction cost shall be provided for the current estimate and the previous estimate.

D. Schedule Management

1. DESIGN-BUILDER shall provide a Preliminary Schedule in Precedence Diagram Method (PDM), Gantt chart or other acceptable presentation ten (10) days prior to the Project Kick-off Meeting for LAWA's review and approval and/or comment (PR-04). The preliminary schedule shall include all work activities for the first 120 days of the Project unless otherwise directed by LAWA.
2. Within sixty (60) days of Notice to Proceed, DESIGN-BUILDER shall submit the detailed Phase 1 portion and a Preliminary Level 3, Phase 2 portion of DESIGN-BUILDER's Baseline Project Schedule and Narrative.
3. DESIGN-BUILDER shall provide Monthly Schedule Updates on a monthly basis, and with each design review submission. Each updated schedule shall indicate the percentage complete for each activity, and the forecasted dates for all remaining activities and milestones. When, during the execution of design work, milestone dates appear to be in jeopardy, the DESIGN-BUILDER shall provide a written explanation of the delay or potential delay, and a written proposal of an alternative course of action to achieve schedule recovery. The DESIGN-BUILDER shall identify actions and/or decisions required by LAWA or others that may adversely affect the schedule. LAWA uses Primavera software and requires the DESIGN-BUILDER to prepare schedules that are compatible. Each submittal should include schedule information in hard copy and electronic formats (both ".PDF" and ".xer").
4. DESIGN-BUILDER shall identify other planned projects (current or future) that may have a bearing on any part of work included in the DESIGN-BUILDER's contract, and coordinate with other projects and/or contractors throughout all stages of the project to ensure timely completion of this project and other related projects.

E. Additional Services

1. In addition to the items listed above and as needed, the DESIGN-BUILDER shall have the ability to subcontract with specialized firms for additional services, including but not limited to construction materials testing, archeology and paleontology monitoring, noise monitoring, biotic resource monitoring, water quality testing, hazardous materials testing and remediation, Maintenance of Traffic (MOT) and other services.

F. Work By Others

1. DESIGN-BUILDER shall cooperate and coordinate with other projects' designers, contractors, tenants, operators, etc. as needed to ensure the successful delivery & implementation of the ATMP Landside Improvements and related projects. Related projects include, but are not limited to;
 - a. ATMP Airside Improvements
 - b. Concourse 0

- c. Terminal 9
- d. Cargo Redevelopment Program
- e. Airports Development Program (ADP)
- f. Landside Access Modernization Program (LAMP)
- g. Terminal Development & Improvement Program (TDIP)
- h. LAX Northside Development Plan
- i. Advanced Transportation System and Coordination (ATSAC) Hub Replacement
- j. Gateway Improvements

Various adjacent roadway and infrastructure projects

END OF PR-01 SCOPE OF WORK

PR-02 PROJECT MANAGEMENT AND COORDINATION

1. RESPONSIBILITIES

- A. LAWA maintains construction project manager software, web-based Meridian System Prolog. DESIGN-BUILDER shall coordinate with LAWA for transmitting and coordinating construction related documentation.
- B. DESIGN-BUILDER shall facilitate communications and the management of the construction design process. DESIGN-BUILDER is required to establish a local office for the duration of the project. Design work shall be performed consistent with the standards of professional care exercised by national design firms. The DESIGN-BUILDER is not required to produce the entire construction documents package in the local office; however, the DESIGN-BUILDER must provide a core design team permanently stationed at the local office to provide LAWA with the current status of the design documents and to address technical issues that may arise during the design process. The DESIGN-BUILDER is required to deliver to LAWA any and all design materials. These materials include, but are not limited to: calculations, preliminary drawings, construction drawings, shop drawings, samples, electronic media data, sketches, illustrations, specifications, descriptions, models, mock-ups, and other information DESIGN-BUILDER shall developed, prepared, furnished, or delivered in the prosecution of the design work.
- C. DESIGN-BUILDER shall designate a Third Party coordination team that has extensive experience successfully processing projects through all authorities having jurisdiction for all projects included in this Scope of Work. The Third Party Coordination manager shall be a registered Civil engineer with at least 5 years of permitting experience in the City of Los Angeles.

2. PHASING AND LOGISTICS

- A. The team must have recent, relevant experience with processing projects through all required Los Angeles City, County and Caltrans Departments and AHJ. The DESIGN-BUILDER shall provide and maintain phasing and logistics plans throughout all stages of the project as described in PR-01 and elsewhere in the contract documents.
- B. DESIGN-BUILDER shall coordinate the development of its phasing and logistics plans with the appropriate Stakeholders throughout all stages of the Project for review and approval to ensure that the development and execution of their Phasing and Logistics Plans accommodate Stakeholder needs and minimize the associated risks and impacts.
- C. DESIGN-BUILDER shall work closely with LAWA's CALM group throughout all stages of the project to ensure that all CALM and LAWA requirements are fulfilled as described in LAWA's Design and Construction Handbook (DCH) and properly coordinated with stakeholders.
- D. DESIGN-BUILDER shall attend the CALM weekly roadway coordination meeting to discuss and coordinate any potential roadway or lane closures prior to submitting an Area Shutdown Request (ASR), Utility Shutdown Request (USR), or LAWA Impact Request (LIR). DESIGN-BUILDER shall attend the CALM nightly huddle as appropriate but minimally on the night of any closure to discuss the safety-risks and operational-impacts of the closure, and the plans and procedures to mitigate those risks and impacts.
- E. DESIGN-BUILDER shall include complete Phasing & Logistics Plans in their GMP/CGMP Proposal. LAWA may establish specific Liquidated Damages for the Contract for planned or unplanned operational impacts that extend beyond their contractual/approved durations.

- F. The Phasing and Logistics Plans and associated Liquidated Damages shall be specifically identified in the ATMP Roadways GMP Contract Documents for "Phase 2" of the Contract. This section, PR-02, is subject to modification or replacement to update or these requirements for Phase 2.
- G. The Phasing and Logistics Plans shall cover and include all aspects of construction stages and sequencing to include all the items listed below, but not limited to:
- CALM and SCC (Shutdown Control Center)- Utility Shutdown Request (USR), Area Shutdown Request (ASR), LAWA Impact Request (LIR), etc.
 - Pedestrian/PAX Safety, accessibility, and wayfinding
 - Understanding of Project Constraints
 - Construction hours (by phase, package, etc.)
 - Site office, facilities, and storage – Ref. PR-06
 - Security (Landside, Airside and Secured Access Areas)- Ref. PR 3
 - Traffic management and control/LAPD coordination – Ref. PR 3
 - Haul routes, schedules, and constraints
 - Construction related parking
 - Dust control
 - Equipment operation, maintenance, safety, etc.
 - Hazardous materials controls
 - Site drainage, SWPPP and rain mitigation
 - Solid waste/recycling management
 - Crane use and constraints (FAA Approvals)
 - Site and material management

3. CONSTRUCTION DOCUMENTS PHASE

- A. Prepare the construction documents for the entire Project
1. Upon receipt of the NTP, the DESIGN-BUILDER shall instruct the Engineer of Record to commence the designs and the preparation of the construction documents. The construction documents shall provide information customarily necessary in documents for projects of similar size, complexity, and quality. The construction documents shall include all information required by the building trades to complete the construction of the project, other than such details customarily developed by others during construction. The DESIGN-BUILDER shall be responsible to design, prepare construction documents and coordinate all disciplines for the entire project including, but not limited to, all structural elements site work, landscaping and utilities. The project's design shall meet or exceed the design and performance criteria stipulated in the contract documents.
 2. LAWA's review of the construction documents shall be conducted in accordance with the approved DESIGN-BUILDER's baseline schedule with procedures set forth in progress schedules and reports. Such review shall not relieve the DESIGN-BUILDER from its responsibilities under the agreement. Such review shall not be deemed an approval or waiver by LAWA of any deviation from, or of the DESIGN-BUILDER's failure to comply with, any provision or requirement of the contract documents, unless such deviation or failure has been identified as such in writing in the document submitted by the DESIGN-BUILDER and explicitly approved by LAWA.
 3. However, it is acknowledged by the parties hereto that inherent in a Design-Build concept, bridging or otherwise, the production and review of construction documents may be a continuing process with portions thereof completed at different times. However, the

DESIGN-BUILDER will determine the number of design packages with LAWA and stipulate the number in the project management plan as required in contract. See also, management plan information and requirements, meetings and conferences.

4. The DESIGN-BUILDER shall submit completed packages of the construction documents for review by LAWA, LAWA Fire Marshal, and LAWA Engineer at the times indicated on the DESIGN-BUILDER's baseline schedule and as defined in contract requirements, "Submittal Procedures". The DESIGN-BUILDER shall schedule meetings with LAWA to review the construction document packages. Meetings shall be scheduled so as not to delay the work. After reviewing the construction documents package for conformance to the performance criteria, LAWA will issue a NTP for construction to the DESIGN-BUILDER.
5. DESIGN-BUILDER shall provide construction documents for hazardous and/or toxic abatement efforts and demolition activity and shall be of sufficient clarity and detail and submitted to LAWA for review.

B. Ownership of Design Materials

1. All materials and documents developed in the performance of this agreement are the property of LAWA. LAWA shall have unlimited rights, for the benefit of LAWA, to all drawings, CAD files, designs, specifications, notes, and other work developed in the performance of this agreement, including the right to use same on any other LAWA work at no additional cost to LAWA. DESIGN-BUILDER agrees to and does hereby grant to LAWA a royalty-free license to all such data that DESIGN-BUILDER may cover by copyright and to all designs as to which DESIGN-BUILDER may assert any rights or establish any claim under the patent or copyright laws. The DESIGN-BUILDER for a period of three (3) years after completion of the project agrees to furnish and to provide access to the originals or copies of all such materials upon the request of LAWA. LAWA agrees to make no demand on DESIGN-BUILDER for responsibility for LAWA's use of such materials for any other LAWA work that is not the subject of an agreement between LAWA and DESIGN-BUILDER for such use.
2. LAWA does not assume any obligation to employ the DESIGN-BUILDER's services or pay DESIGN-BUILDER royalties of any type as to future programs that may result from the work performed under this agreement.

C. Design Material Errors

1. The DESIGN-BUILDER shall be solely responsible for all design errors, including, but not limited to: errors, inconsistencies or omissions in the construction documents. The DESIGN-BUILDER shall take field measurements and verify field conditions and shall carefully compare such field conditions and other information known to the DESIGN-BUILDER from the contract documents before commencing activities. The DESIGN-BUILDER shall coordinate with all necessary agencies and receive construction permits before performing any affected work.

4. CONSTRUCTION PHASE RESPONSIBILITIES

- A. The DESIGN-BUILDER shall provide all labor, materials, equipment, temporary utility services and facilities necessary to construct the entire project as required by the contract documents, including, but not limited to:
 1. Prepare an existing conditions survey of the all surrounding and adjacent properties, including streets and observable utilities, prior to the start of construction. The survey shall

professionally document existing conditions of surrounding and adjacent properties using a professional video/filming service hired by the DESIGN-BUILDER and approved by LAWA prior to the start of work. Video shall be CD or DVD and contain detailed audio documentary describing property, location and existing conditions in areas of view. DESIGN-BUILDER shall be responsible for gaining access to properties. Submit five (5) copies of the CD or DVD's to LAWA ten (10) days prior to the start of construction.

2. Design, construct and maintain for the entire duration of the project all necessary improvements to be used as the field office (in the vicinity of the projects) for both the Design-Build and LAWAs' project management teams. All costs are to be paid as part of the stipulated sum, including, but not limited to: all office space, furniture, furnishings, equipment, utilities (including, but not limited to: water, power, sewer, broadband internet service, phone and fax lines), express mail, document reproduction, drinking water, and janitorial services as further described in Temporary Facilities.
3. Establish reasonable pre-qualification criteria and standards for sub-contractors.
4. DESIGN-BUILDER shall provide Paleontologist and Archeologist services on site during excavation activities as needed. Should there be archeological, prehistoric, historic or Native American findings on the project site, the DESIGN-BUILDER shall provide a security service at night to prevent looting of the site. Service(s) shall be in place until excavation activities are complete.
5. DESIGN-BUILDER shall provide continuous updates of the project record drawings.
6. DESIGN-BUILDER shall install, protect and maintain any new and existing security fencing in the construction area and in the vicinity of their operations. All openings in the security fence shall be supervised with a full-time security guard when unlocked during construction hours. The security plan shall be approved by LAWA.

5. COORDINATION

A. Coordination

1. DESIGN-BUILDER shall coordinate construction operations included in different sections of the specifications to ensure efficient and orderly installation, connection, and operation, of each part of the work.
2. DESIGN-BUILDER shall schedule construction operations in sequence required to obtain the best results where installation of one part of the work depends on installation of other components, before or after its own installation.
3. DESIGN-BUILDER shall coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair of all components.
4. DESIGN-BUILDER shall make adequate provisions to accommodate items scheduled for later installation.
5. Interpretations of Contract Documents:
 - a. Consult with LAWA to obtain any interpretation in accordance with the Contract Documents.
 - b. Assist in resolution of questions which arise.
 - c. Transmit written interpretations to concerned parties.

6. Coordination and attendance at weekly construction, quality control meetings, and safety meetings.

B. Memoranda

1. DESIGN-BUILDER shall prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.
2. DESIGN-BUILDER shall prepare similar memoranda for LAWA and separate sub-contractors if coordination of their work is required.

C. Administrative Procedures

1. DESIGN-BUILDER shall coordinate scheduling and timing of required administrative procedures with other construction activities and activities of other subcontractors to avoid conflicts and to ensure orderly progress of the work. Such administrative activities include, but are not limited to, the following:
 - a. Preparation of DESIGN-BUILDER's construction schedule.
 - b. Preparation of the schedule of values.
 - c. Installation and removal of temporary facilities and controls.
 - d. Delivery and processing of submittals.
 - e. Progress meetings.
 - f. Pre-installation conferences, if specified.
 - g. Startup and adjustment of systems.
 - h. Project closeout activities.
 - i. Payment application review meetings

D. Conservation

1. DESIGN-BUILDER shall coordinate construction activities to ensure that operations are carried out with consideration given to conservation of energy, water, and materials.
2. DESIGN-BUILDER shall salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. Refer to other sections for disposition of salvaged materials that are designated as LAWA's property.

6. SUBMITTALS

A. Key Personnel Names

1. Within a minimum of 10 working days prior to starting construction operations, the DESIGN-BUILDER shall submit a list of key personnel assignments, including superintendent and other personnel in attendance at project site. Identify individuals and their duties and responsibilities; list addresses and telephone numbers, including home and office telephone numbers. Provide names, addresses, and telephone numbers of individuals assigned as standbys in the absence of individuals assigned to project.
2. DESIGN-BUILDER shall post copies of list in project meeting room, in temporary field office, and by each temporary telephone. Keep list current at all times.

B. Daily Construction Reports

1. Prepare a daily construction report recording the following information concerning events at project site:
 - a. List of subcontractors at project site.
 - b. List of separate DESIGN-BUILDERS at project site.
 - c. Count of personnel with names at project site.
 - d. Equipment makes and model at project site.
 - e. Material deliveries.
 - f. High and low temperatures and general weather conditions.
 - g. Accidents.
 - h. Meetings and significant decisions.
 - i. Unusual events (refer to special reports).
 - j. Stoppages, delays, shortages, and losses, workday start and finish time.
 - k. Meter readings and similar recordings.
 - l. Emergency procedures.
 - m. Orders and requests of authorities having jurisdiction.
 - n. Change Orders received and implemented.
 - o. Construction Change Directives received and implemented.
 - p. Services connected and disconnected.
 - q. Equipment or system tests and startups.
 - r. Partial completions and occupancies.
 - s. Completions authorized.

2. DESIGN-BUILDER shall coordinate with LAWA to submit reports via Prolog system.

C. Material Location Reports:

1. At weekly intervals, prepare and submit two (2) copies of a comprehensive list of materials delivered to and stored at project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a LAWA statement of progress with delivery dates for materials or items of equipment fabricated or stored away from project site.

D. Field Condition Reports:

1. Immediately upon discovery of a difference between field conditions and the construction documents, prepare and submit two (2) copies of a detailed report at time of discovery of differing conditions.
2. Submit report with a request for interpretation. Include a detailed description of the differing conditions, together with recommendations for changing the construction documents.

E. Special Reports

1. General:
 - a. Prepare and submit two (2) copies of special reports directly to LAWA within one

day(s) of an occurrence. Distribute copies of report to parties affected by the occurrence. DESIGN-BUILDER shall coordinate with LAWA to submit reports via Prolog system.

2. Reporting Unusual Events:

- a. When an event of an unusual and significant nature occurs at project site, whether or not related directly to the work, prepare and submit two (2) copies of a special report. List chain of events, persons participating, and response by DESIGN-BUILDER's personnel, evaluation of results or effects, and similar pertinent information. Advise LAWA in advance when these events are known or predictable.

F. QA/QC Reports

1. See PR-13/14 "Quality Assurance/Quality Control"

G. Logs

1. Establish and maintain the following logs:

- a. Requests for Clarification Log
- b. Submittals Log
- c. Requests for Information Log
- d. Change Order Log

2. Form of Logs:

- a. Record items on a serial number basis.
- b. Assign individual numbers, in serial order, to each entry.
- c. Begin serial order with No. 1 and continue numerically uninterrupted.
- d. Review status of the above documentation in the Progress Meetings using the logs.
- e. Update logs after each meeting.

7. PROJECT MEETINGS

A. General:

1. DESIGN-BUILDER shall schedule and conduct coordination meetings and conferences at project site, unless otherwise required. DESIGN-BUILDERS fees shall include all required meetings with LAWA, AHJs and other stakeholders.
2. Attendees: DESIGN-BUILDER shall inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify LAWA of scheduled meeting dates and times.
3. Agenda: DESIGN-BUILDER shall prepare the meeting agenda with input from the attendees prior to the meeting. Distribute the agenda in the meeting and review the status of action items.
4. Minutes: DESIGN-BUILDER shall record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including LAWA within three working days of the meeting.

B. Project Kick-off Conference.

1. The objective of this meeting is to introduce the project team members, confirm

understandings, roles, responsibilities, schedules, emergency contacts, neighborhood awareness and outreach, and to review the procedural requirements of the project as established by the contract requirements and the Project Management Plan. LAWA will conduct the project kick-off conference within ten (10) calendar days after the NTP. It will be attended by the DESIGN-BUILDER, LAWA and others as appropriate. LAWA, with input from the DESIGN-BUILDER, will prepare the agenda as well as prepare and distribute the meeting minutes. LAWA shall be a participant in all meetings.

C. Design Coordination Meetings.

1. The objective of these meetings is to proactively facilitate the DESIGN-BUILDER's liaison with LAWA's Master Architect and sub consultants for the purposes of design discussion during construction document development. These meetings are to be held at a mutually agreed upon location in the vicinity of the project site. Attendees shall include appropriate members of the DESIGN-BUILDER, LAWA and others, as appropriate. DESIGN-BUILDER will prepare and distribute the agenda and minutes. Meetings will include an overview of the DESIGN-BUILDER's short-term schedule. Meeting minutes shall be distributed no later than 3 business days after such meeting is held.

D. Design Progress Meetings.

1. The objective of these meetings is to proactively facilitate the DESIGN-BUILDER's completion of the design and construction documents and to establish a mutually acceptable review procedure. The DESIGN-BUILDER will conduct regularly scheduled team meetings during the completion of the design development of the construction documents. These meetings are to be held at a mutually agreed upon location in the vicinity of the project site. Attendees shall include appropriate members of the DESIGN-BUILDER, LAWA and others, as appropriate. DESIGN-BUILDER will prepare and distribute the agenda and minutes. Meetings will include an overview of the DESIGN-BUILDER's short-term schedule. Meeting minutes shall be distributed no later than 3 business days after such meeting is held.

E. Construction Document Reviews.

1. During the development and at the completion of the DESIGN-BUILDER's construction documents, LAWA may require the performance of peer reviews and/or a code certification of the construction documents. The DESIGN-BUILDER shall cooperate and coordinate with LAWA in performance of these reviews and distribution of construction documents.

F. Preconstruction Conference:

1. DESIGN-BUILDER shall schedule a preconstruction conference before starting construction, at a time convenient to LAWA, but no later than 10 working days after completion of construction documents. DESIGN-BUILDER shall hold the conference at project site or another convenient location. DESIGN-BUILDER shall conduct the meeting to review responsibilities and personnel assignments.
2. Attendees: Authorized representatives of LAWA, DESIGN-BUILDER and its consultants, superintendent; major sub-DESIGN-BUILDERS; suppliers; and other concerned parties shall attend the conference. All participants at the conference shall be familiar with project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect progress, including the following:
 - a. Tentative construction schedule.
 - b. Phasing.

- c. Critical work sequencing and long-lead items.
 - d. Designation of key personnel and their duties.
 - e. Procedures for processing field decisions and Change Orders.
 - f. Procedures for requests for interpretations (RFIs).
 - g. Procedures for testing and inspecting.
 - h. Procedures for processing Applications for Payment.
 - i. Distribution of the construction documents.
 - j. Submittal procedures.
 - k. Preparation of Record Documents.
 - l. Use of the premises and protection of existing building.
 - m. Work restrictions.
 - n. LAWA's occupancy requirements.
 - o. Responsibility for temporary facilities and controls.
 - p. Construction waste management and recycling.
 - q. Parking availability.
 - r. Office, work, and storage areas.
 - s. Equipment deliveries and priorities.
 - t. First aid.
 - u. Security.
 - v. Progress cleaning.
 - w. Working hours.
4. Minutes: Meeting minutes shall be recorded by the DESIGN-BUILDER and shall be distributed no later than 3 business days after such meeting is held.

G. Progress Meetings & Reports:

- 1. LAWA shall conduct progress meetings at weekly intervals. The objective of these meetings is to review and monitor progress, procedures, issues, schedules, and other concerns of the project throughout the construction phase. These meetings will be held on a weekly basis at the site with representatives of the DESIGN-BUILDER, LAWA, and others as appropriate. LAWA will prepare and distribute the agenda and meeting minutes.
- 2. Agenda:
 - a. Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of project.
 - b. DESIGN-BUILDER's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to DESIGN-BUILDER's construction schedule. Determine how construction behind schedule will be expedited so as to recapture the required schedule; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the

Contract Time.

- c. Review schedule for next period.
- d. Review present and future needs of each entity present, including the following:
 - 1) Interface requirements.
 - 2) Sequence of operations.
 - 3) Status of submittals.
 - 4) Deliveries.
 - 5) Off-site fabrication.
 - 6) Access.
 - 7) Site utilization.
 - 8) Temporary facilities and controls.
 - 9) Work hours.
 - 10) Hazards and risks.
 - 11) Progress cleaning.
 - 12) Quality and work standards.
 - 13) Status of correction of deficient items.
 - 14) Field observations.
 - 15) Requests for information (RFIs).
 - 16) Status of proposal requests.
 - 17) Pending changes.
 - 18) Status of Change Orders.
 - 19) Pending claims and disputes.
 - 20) Documentation of information for payment requests.
3. Schedule Updating: DESIGN-BUILDER shall revise DESIGN-BUILDER's construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.
4. Weekly Report: Submit in accordance with the following –

H. Coordination Meetings:

1. DESIGN-BUILDER shall conduct project coordination meetings when coordination with separate subcontractors or LAWA is required. Project coordination meetings are in addition to specific meetings held for other purposes, such as progress meetings and pre-installation conferences.
2. Attendees: In addition to representatives of LAWA, each separate DESIGN-BUILDER,

supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the conference shall be familiar with project and authorized to conclude matters relating to the Work

3. Agenda:

- a. Review and correct or approve minutes of the previous coordination meeting, if any. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.
 - b. Combined DESIGN-BUILDER's Construction Schedule: DESIGN-BUILDER shall review schedule against separate sub-DESIGN-BUILDER's schedules. Determine whether each contract is on time, ahead of schedule, or behind schedule, in relation to DESIGN-BUILDER's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the contract time.
 - c. Schedule Updating: DESIGN-BUILDER shall revise DESIGN-BUILDER's construction schedule after each coordination meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.
 - d. DESIGN-BUILDER shall review present and future needs of each DESIGN-BUILDER present, including the following:
 - 1) Interface requirements.
 - 2) Sequence of operations.
 - 3) Status of submittals.
 - 4) Deliveries.
 - 5) Off-site fabrication.
 - 6) Access.
 - 7) Site utilization.
 - 8) Temporary facilities and controls.
 - 9) Work hours.
 - 10) Hazards and risks.
 - 11) Progress cleaning.
 - 12) Quality and work standards.
 - 13) Change Orders.
4. Reporting: DESIGN-BUILDER shall record meeting results and distribute copies to everyone in attendance and to others affected by decisions or actions resulting from each meeting. Meeting minutes shall be distributed no later than 3 business days after such meeting is held.

8. COORDINATION WITH WORK UNDER SEPARATE CONTRACTS**A. General:**

1. DESIGN-BUILDER shall cooperate and coordinate with LAWA's other DESIGN-BUILDERS and contractors so work on those contracts may be carried out smoothly, without interfering with or delaying work under this contract.
 - a. At the DESIGN-BUILDER's request, LAWA will provide the scope of its separately contracted work to enable the DESIGN-BUILDER to coordinate the work of this contract with work of LAWA's other DESIGN-BUILDERS and contractors.
 - b. The DESIGN-BUILDER shall coordinate construction operations that are mutually dependent for proper installation, connection, and operation, to ensure the efficient and orderly installation of the Work.
 - c. DESIGN-BUILDER shall schedule installation operations in the sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
 - d. DESIGN-BUILDER shall coordinate installation of components to ensure maximum accessibility for required maintenance, service, and repair.
 - e. DESIGN-BUILDER shall make provisions to accommodate items scheduled for later installation.
 - f. Where necessary, prepare memoranda for distribution to each entity involved, outlining special procedures required for coordination. Include such items as required notices, reports, and attendance at meetings.

B. Administrative Procedures:

1. DESIGN-BUILDER shall coordinate scheduling and timing of required administrative procedures with activities of other contracts to avoid conflicts and ensure orderly progress of the work. Such administrative activities include, but are not limited to, the following:
 - a. Preparation of schedules.
 - b. Delivery and processing of coordination submittals.
 - c. Progress meetings.
 - d. Project closeout activities.
2. Installation Coordination:
 - a. Coordinate with the activities of other DESIGN-BUILDERS to ensure efficient and orderly installation, connection, and operation.
 - b. Coordinate loading dock and elevator usage with LAWA.
 - c. Coordinate staging area with LAWA.
 - d. Coordinate connection of building utilities as required.

C. Pre-installation Conferences:

1. DESIGN-BUILDER shall conduct pre-installation conferences at the project site before each installation activity that requires coordination. Parties involved in, or affected by, installation shall attend meeting. Advise LAWA of scheduled meeting dates 14 days prior to the meeting.
2. DESIGN-BUILDER shall review progress of other work and preparation for installation,

including possible conflicts, time schedules, space and access limitations, and acceptability of substrates.

3. DESIGN-BUILDER shall record meeting minutes and distribute within 3 days of the meeting.

D. Coordination

The DESIGN-BUILDER shall coordinate and be aware of projects that are occurring in the vicinity of the ATMP Landside Improvements Project that will interface with its work. Construction logistics as well as sharing of haul routes and equipment movements within the affected areas will need to be coordinated with LAWA and other contractors. The DESIGN-BUILDER shall make itself aware of the status and progress of these projects and coordinate interface requirements.

Related Projects, but not limited to:

	Description	Start	Finish
1.	ATMP Project – Concourse 0	Q2 2023	Q3 2028
2.	ATMP Project – Terminal 9	Q2 2024	Q3 2028
3.	ATMP Project – Airfield Improvements	Q1 2023	Q4 2025

Additional Projects Consideration(s) that require additional coordination:

1. Demolition of Existing Roadways
Sky Way, Vicksburg Ave, 96th St, Alverstone Dr, Sepulveda Ramps & Bridges, etc.
2. Demolition of Existing Facilities
APD Building, APD Trailers, Billboards, LAX-it, Park One, SAAP 3, Utilities, Miscellaneous Fences & Gates, etc.
3. New Passenger Drop-off / Pickup Areas
aka Rotaries @ ITF West, ITF East, CONRAC, etc.
4. New Terminal 9 Circulation Roads
Roadways to and from T9 at Jetway Blvd and Century Blvd with CTA connection
5. Reconfiguration of LAX Gateway
Pylons & Signage, Landscaping, Lighting, Exterior Architecture, etc.
6. Temporary Improvements to Enable Construction Phasing
Temporary Roadways, Detours, etc. as required for MOT
7. Additional Roadway Improvements
Airport Blvd Widening (Phases 1 & 2)
93rd St Sidewalk Improvements
Arbor Vitae Striping for 3rd lane
Westchester Parkway Improvements
96th St. Cul-De-Sac and Street Improvements
Westchester Parkway & Jetway Intersection Improvements
Century Blvd Widening & Multi-Use Path
98th Street Widening
98th Street Improvements
98th Street Restripe
96th St Sidewalk Improvements
Alley Reconstruction around Lot 10 (Belford Ave))
New Tuskegee Way

111th St Widening

END OF SECTION PR 02 PROJECT MANAGEMENT AND COORDINATION

PR-03 TRAFFIC COORDINATION, CONSTRUCTION AREA ACCESS, AND SECURITY**1. GENERAL**

DESIGN-BUILDER shall conduct all operations in a manner that will cause no interference with the normal operation of the airport.

2. PUBLIC CONVENIENCE AND SAFETY**2.01 Traffic and Access**

- A. DESIGN-BUILDER shall comply with requirements set forth in the environmental mitigation and special construction requirements PR 18.
- B. DESIGN-BUILDER shall conduct all operations in a manner that will cause no interference with normal operation of the Airport. In all operations DESIGN-BUILDER shall be governed by the regulations and rules of LAWA, comply with FAA AC No. 150/5370-2F, Operational Safety on Airports during construction, and shall cooperate fully with LAWA and Airport Manager. All temporary blockages for the movement of construction materials or equipment shall be coordinated with and approved by LAWA, DOT, AHJ at least forty-eight (48) hours in advance of any closure.
- C. DESIGN-BUILDER shall
 - 1. Adopt and enforce workplace safety policies to decrease crashes caused by distracted drivers, including policies to ban text messaging while driving when performing any work for, or on behalf of LAWA.
 - 2. Conduct workplace safety initiatives in a manner commensurate with the size of the business, such as
 - a. Establishment of new rules and programs or re-evaluation of existing programs to prohibit text messaging while driving; and
 - b. Education, awareness, and other outreach to employees about the safety risks associated with texting while driving.
- D. DESIGN-BUILDER shall provide their Traffic Management Plan (TMP), including the location and types of signs to be used, at least 30 days prior to installation of the signs. Thereafter, and not later than fifteen (15) days prior to subsequent changes required by LAWA for said circulation, sign locations and types, DESIGN-BUILDER shall submit revised Plans to LAWA.
 - 1. For LAWA governed facilities: At least thirty (30) days prior to any requested closure of a LAWA roadway or facility, DESIGN-BUILDER shall submit an Area Shutdown Request (ASR) for LAWA's review and approval. DESIGN-BUILDER shall not begin implementation of any closure prior to receiving LAWA's written approval of the ASR.
 - a. For Federal Aviation Administration (FAA) governed facilities: At least thirty (30) days prior to any requested access to AOA (Air Operations Area), DESIGN-BUILDER shall coordinate through the CALM (Coordination and Logistics Management) team for LAWA's review and approval. DESIGN-BUILDER will not be granted access to any AOA prior to receiving LAWA's written approval.
- 2. For LAWA governed facilities: At least thirty (30) days prior to any requested closure of a LAWA roadway, site or facility, the DESIGN-BUILDER shall submit a LAWA Impact

- Request (LIR) for LAWA's review and approval. The DESIGN-BUILDER shall not begin implementation of any closure prior to receiving LAWA's written approval of the LIR.
3. For the City of Los Angeles governed facilities: DESIGN-BUILDER shall obtain all approvals and permits required by the city and submit documentation of these approvals to LAWA a minimum of ten (10) days prior to start of construction.
 4. For the Caltrans governed facilities: DESIGN-BUILDER shall obtain all approvals and permits required by Caltrans and submit documentation of these approvals to LAWA a minimum of ten (10) days prior to start of construction. The DESIGN-BUILDER shall submit a LIR (LIR) for LAWA's review and approval a minimum of thirty (30) days prior to start of construction.
 5. For the City of Inglewood governed facilities: DESIGN-BUILDER shall obtain all approvals and permits required by the city and submit documentation of these approvals to LAWA a minimum of ten (10) days prior to start of construction.
- E. DESIGN-BUILDER shall ensure its sub-DESIGN-BUILDERS, suppliers, etcetera, comply with this section.
1. Within ten (10) Days after the date of the Notice to Proceed for each work package in Phase 2 and before moving vehicles onto the Site, DESIGN-BUILDER shall submit to LAWA the proposed Plan for vehicular and pedestrian traffic circulation, including the location and types of signs to be used. Thereafter, and not later than fifteen (15) days prior to subsequent changes required by LAWA for said circulation, sign locations and types, DESIGN-BUILDER shall submit revised Plans to LAWA.
 2. LAWA ASR Application: At least thirty (30) days prior to any requested closure of LAWA roadway or facility, DESIGN-BUILDER shall submit an ASR and LIR application form. A sample of this form will be provided to DESIGN-BUILDER at the Pre-Construction Meeting.
- F. DESIGN-BUILDER shall provide and install steel plates to bridge any excavation in the public right-of-way. Such bridging shall be in accordance with the provisions of the latest edition of the Work Area Traffic Control Handbook (WATCH), and in addition, shall have a nonskid surface static coefficient of friction of 0.35 per California Test 342 for all steel plates within the traveled roadway of streets and alleys. When required by LAWA, DESIGN-BUILDER shall certify in writing to LAWA that steel plates to be used in the work meet the required static coefficient of friction. Also when required by LAWA, DESIGN-BUILDER shall have steel plates to be used in the Work tested in accordance with the above standards for the verification of required static coefficients of friction. Testing shall be done by an independent laboratory approved by LAWA. DESIGN-BUILDER shall pay for any costs associated with the testing of steel plates.
- G. DESIGN-BUILDER's operations shall cause no unnecessary inconvenience. The access rights of the public shall be considered at all times. Unless otherwise authorized, traffic shall be permitted to pass through the work areas, or an AHJ approved detour shall be provided.
- H. Safe and adequate pedestrian and vehicular access shall be provided and maintained to: fire hydrants; commercial and industrial establishments; churches, schools and parking lots; service stations and motels; hospitals; police and fire stations; and establishments of similar nature. Access to these facilities shall be continuous and unobstructed unless otherwise approved by LAWA.
- I. Safe and adequate pedestrian zones and public transportation stops, as well as pedestrian crossings of the Work at intervals not exceeding three hundred (300) feet, shall be maintained

unless otherwise approved by the AHJs.

- J. Vehicular access to residential driveways shall be maintained to the property line except when necessary construction precludes such access for reasonable periods of time. If backfill has been completed to the extent that safe access may be provided, and the street is opened to local traffic, DESIGN-BUILDER shall immediately clear the street and driveways and provide and maintain access.
- K. DESIGN-BUILDER shall cooperate with the various parties involved in the delivery of mail and the collection and removal of trash and garbage to maintain existing schedules for these services.
- L. Grading operations, roadway excavation and fill construction shall be conducted by DESIGN-BUILDER in a manner to provide a reasonably satisfactory surface for traffic. When rough grading is completed, the roadbed surface shall be brought to a smooth, even condition satisfactory for traffic.
- M. Unless otherwise authorized, work shall be performed in only one-half of active roadways at one time. Unless otherwise shown, at least one lane shall be kept open and unobstructed until the opposite side is ready for use. If only one-half of a roadway is improved, the other half shall be conditioned and maintained as a detour. Flaggers shall be provided continuously at each end of any single-lane operations.
- N. The DESIGN-BUILDER shall provide guards to secure its field offices, staging areas, and work zones as determined by the Design-Builder. Access gates to work zones must be locked during non-working hours. Unattended, open gates in active work areas outside AOA areas will be allowed. All worksites shall be secured with fencing and gawk screening.
- O. Adjacent Property Owner and Business Outreach - Design-Builder shall limit and mitigate impacts to adjacent properties and businesses during Construction Work. In the development of the activities specified by the Communication and Public Outreach Plan, Design-Builder shall include construction impact information, specific to impacted properties. Design-Builder shall reach out to all adjacent property owners to understand the impact of the Project on access, deliveries, parking, etc. and included appropriate mitigation for these impacts in the construction planning effort. Design-Builder shall provide signage, promotional materials and other similar efforts.

2.02 TEMPORARY SIGNAGE FOR BARRICADES

- A. DESIGN-BUILDER shall install and maintain all temporary signage and messaging at all construction barricade locations, access gates, work area access points, etc. as long as the barricades are in place to help direct traffic around work areas and to alternate paths of travel.

2.03 CONSTRUCTION FENCING GRAPHICS

- A. Construction Security Fence is required where work is adjacent to and open to the public right of way. This is a LAWA requirement for fences both inside and outside the Central Terminal Area. The DESIGN-BUILDER to provide an approved construction fencing graphic on the fences. The graphic signage material, when used on chain link fences, is to be 8 ounce mesh polyester scrim and coated with PVC. State of California Fire Rating certification and certificate to be provided to LAWA before installation. Each edge shall be hemmed, welded on all sides w/ grommets at 24"centers. No wind slits or flaps are permissible. Provide two layers of screening material: one layer of printed 70/30 mesh product with 30-35% air-flow

over one layer of AHJ approved mesh screen material. The DESIGN-BUILDER to submit, for LAWA review and acceptance, a separate Construction Fencing Graphics Location Exhibit for each project area. DESIGN-BUILDER shall comply with all applicable State, County, and City requirements for the Construction Fencing. See Appendix for "CONSTRUCTION FENCING GRAPHICS" for the LAWA provided 20', 40', and 60' long panel graphic designs. The panels are to be combined to completely cover the length of the fence. For DESIGN-BUILDER proposed security fence graphic banners for security fence materials/ types other than chain link fence; DESIGN-BUILDER follow PR-10 requirements for substitutions.

2.04 ROADWAY AND STREET CLOSURE, DETOURS, BARRICADES

- A. There shall be no closures or detours without the express written permission of the AHJs. DESIGN-BUILDER shall submit ASR and LIR form(s) which may be provided by LAWA at any time, at least thirty (30) days prior to the proposed shutdown time, for all LAWA or City/State roadways and facilities respectively.
- B. DESIGN-BUILDER shall comply with all applicable State, County, and City requirements for closure of streets and roadways. DESIGN-BUILDER shall provide barriers, guards, lights signs, temporary bridges, flag persons, and watch person. DESIGN-BUILDER shall be responsible for compliance with additional public safety requirements which may arise. DESIGN-BUILDER shall furnish and install signs and warning devices and promptly remove them upon completion of the work.
- C. All public street closures on City of Los Angeles facilities shall be approved in advance by the Board of Public Works (it is estimated that this approval process will take about 2 months). All such closures require an LADOT approved traffic control plan. Street work may be limited by Peak Hour Exemption (LAMC 62.61). The BOE (Construction permits) and BSS (Street use permits) have separate approval processes. Once approved DESIGN-BUILDER shall notify at least forty eight (48) hours in advance of closing, partially closing or reopening, any roadway, street, alley, or other public thoroughfare. DESIGN-BUILDER shall also notify the Police, Fire, Operations, Traffic and Engineering Departments, and comply with their requirements. Deviations must first be approved in writing by LAWA.
- D. K Rail barricades, both concrete barriers and water filled plastic barriers, shall be white. Orange water filled barriers are not allowed unless specifically required by an AHJ.
- E. Steel trench plates shall be secured to prevent slipping due to the braking and turning of heavy vehicles.
- F. All approved haul routes and moratoriums shall be observed.

2.05 Noise

- A. DESIGN-BUILDER shall submit and maintain a Noise Variance from the Los Angeles Police Commission for all night time work between the hours of 9:00pm to 7:00am. Special conditions may apply requiring sound monitoring and sound proofing. Limit all saw cutting, jack hammering and similar activities to daytime hours. The Police Commission advise that they require 6 weeks to approve a Noise Variance, schedule applications in accordance.
 1. Maintain on each work site a log of all activities performed under a variance. Include copies of: Copies of all approved variances, copies of extended variances.
 2. Maintain an office log to include but not limited to: A satellite image of the work areas with each location clearly defined and applicable to each variance. Copies of all applications

for variances, Copies of correspondences (include emails) with the Police Commission, Copies of correspondences and or communications with any residence or property owner adjacent Variance listed work areas. A schedule of planned Variance requirements for the next 6 months. A log of noise emission during night time activity.

3. Install sound monitoring adjacent noise sensitive structures. Log background noise including aircraft.

2.06 Sweeping Requirements

1. DESIGN-BUILDER at all times shall sweep and water to maintain on and off-airport haul roads, and airport pavements used for construction operations and haul in accordance with the plans, the requirements of environmental mitigation and special construction requirements PR 18, and other applicable specifications.
2. DESIGN-BUILDER shall staff and maintain a minimum of one (1) operational sweeper trucks and at least one (1) water truck per active project on site at all times during working and non-working hours.

2.07 LIR Program (LIR)

Airfield and Terminal Modernization Project Mitigation Plan

The LAWA Construction Traffic Task Force (LCTTF) was established as a mitigation measure for the Airfield and Terminal Modernization Project (ATMP), through the Mitigation Monitoring and Reporting Program (MMRP).

The objective of the Task Force is to ensure the contractor is meeting contract requirements for coordination and communications prior to any impacts or closure. The Task Force is comprised of primary stakeholders that will attend the regularly scheduled meetings to review that the overall impacts are identified and addressed by the contractor. Additional stakeholders will be added on an as needed basis as identified in the LAWA Construction Traffic Coordination Work Flow. (See Appendix 1.)

The Contractor is responsible for developing a phased plan of the project and providing a 3-week look-ahead schedule per phase. The contractor will complete the LAWA Impact Request Form (LIR) with any associated permits, traffic control plans and coordination efforts for each impact.

CALM LIR Workshops

CALM LIR Workshops are held weekly at the CALM Trailer 4 within the CTA on Wednesdays at 1:00 pm. The workshops provide the proper environment to discuss new LIRs, current status or issues for existing LIRs, coordination between projects and other agencies to mitigate impact to LAWA, permit issues, etc. Attendees include Project Teams, ATMP Project Managers, ATMP Construction Managers, LAWA Communications, LAWA Inspection, LAWA Landside Operations, Logistics, 3rd Party Coordination, and other City Agencies (BOE, LADOT, BSS, BCA Inspectors assigned to ATMP, etc.).

Executive Briefings

Executive Briefings are held monthly, on the last Tuesday via Teams and office location

TBD. The intent of this meeting is a high-level overview of LAWA Impact Requests (LIRs) and their cumulative impacts on the public right of ways east of Sepulveda Blvd. Each ATMP project team presents a look ahead of roadway impacts as well as a discussion of other projects (LAWA/LAWDWP/DOT) within the LAWA coordination area.

LAWA Impact Request (LIR)

The Airfield and Terminal Modernization Project (ATMP) will impact public areas, and properties not owned by LAX, such as streets, curbs, sidewalks, and business, etc.

The LAWA Impact Request (LIR) has been developed as a checklist to ensure all logistical coordination with other agencies, and LAX programs. This includes coordination and communication with all stakeholders to identify impacts to LAX operations as well as any public area or business. (See Appendix 2.)

LIR Submittal Process

The completed LIRs are submitted by the LAWA Project Manager to the CALM Group for processing and tracking. Once a submittal is received, it is distributed to the Task Force team to review for any additional coordination and logistical needs. The requests are tracked through the LAWA Shutdown Control Center tracking system.

Projects expected to have a large impact to stakeholders and other projects should plan on submitting a draft package which includes the LIR and a description of traffic lane closures to the CALM Group at least 30 days prior to expected implementation date. Some projects have been introduced at least 3-4 months in advance to allow for coordination and planning.

LIRs are approved prior to project implementation and a complete LIR package should be submitted at least 10 days prior to the expected start date. See Appendix 3 for information related to obtaining various permits through City of Los Angeles Agencies.

LIR Requirements

1. A separate Application is required for each area to be impacted.
2. Complete the application in its entirety and attach any Completed/Approved Required documentation. Incomplete applications may be delayed for processing.
3. This package will describe all details related to the submitted Phasing Plan, Logistical Work Plan, and logistical checklist and will be updated as needed to ensure stakeholders are informed of revisions.
4. The Contractor will submit an overall Phasing Plan with a baseline schedule.
5. Within the task specific phasing plan, the contractor will identify specific tasks, which will function as a sub phase to the overall Phasing Plan and schedule.
6. If a Task Specific Phase has separate logistical needs, the contractor will be required to complete a Logistical Work Plan for each of those Task Specific Phases.
7. The Logistical Work Plan will include the following: Scope and description of work, a Communications Plan, identification of coordination plans with all contractor construction activities in the area, and identification of all permits.

LIR Revisions

An LIR Revision will be submitted when an existing LIR when there is changes to the scope of work or dates are extended. For example – work will now be added to the project in a different location.

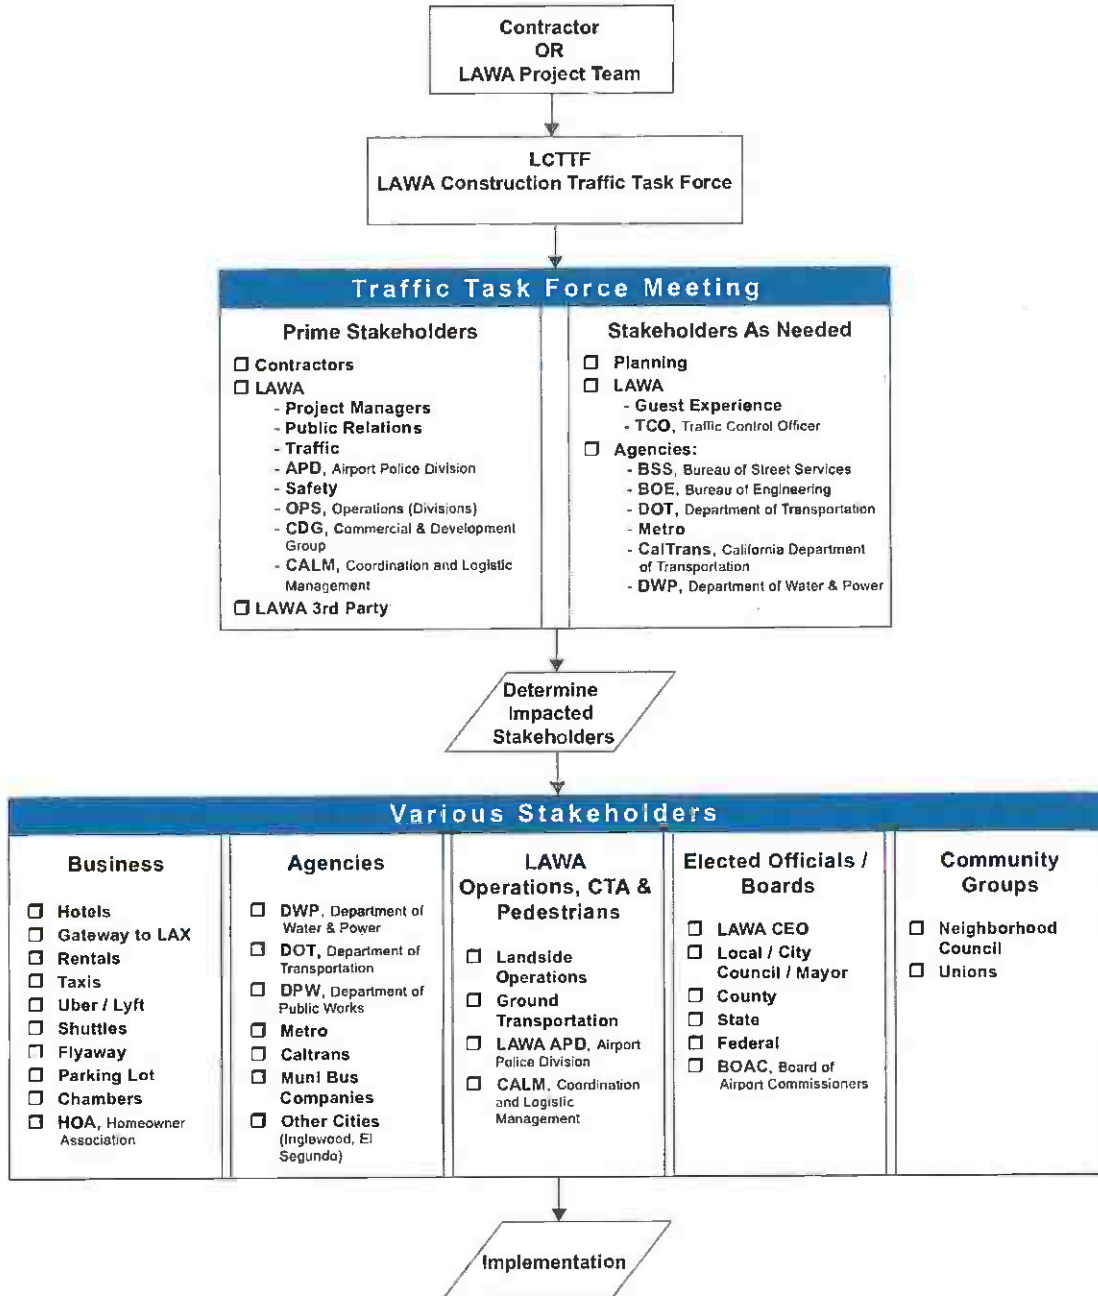

LIR Updates

An LIR Update will be disseminated when an existing LIR has additional work, but the scope of work does not change and neither do the dates. For example – night work is added if the schedule to complete the work by the given date, or a new permit is obtained, etc.

LIR Helpful Information

5/27/2022

Things to keep in mind for LIR approvals:

Peak Hour Exemption – Bureau of Engineering

- **LAMC 62.61 – Peak Hours. Jurisdiction: Board of Public Works, BOE or BSS**
 - “Peak Hour Exemption” is defined as Monday-Friday, 6 am to 9 am and 3:30 pm to 7 pm.
 - City Council District – Proof of concurrence or proof of outreach to them
 - Description of job (location and work being performed), length of job, TCP, and why exemption is needed
 - Exemptions are granted for a period of up to 2 months. Extensions are available. Apply for extension 2 weeks before expiration
- **LAMC 41.40 – Construction Noise. Jurisdiction: Board of Police Commissioners**
 - Monday-Friday: before 7 am and after 9 pm.
 - Saturday: before 8 am and after 6 pm
 - Sunday-All Day

Reference: BOE Special Order 02-0418:

City of Los Angeles Holiday Moratorium: Dates are usually published in the 3rd week of September.

http://eng2.lacity.org/holiday_moratorium/

LAX Holiday Moratorium

- Friday Before Thanksgiving – 0600 hours to Monday after Thanksgiving – 0600 hours
- Friday Before Christmas– 0600 hours to January 2nd – 0600 hours
 - Exemption Requests due by November 1st

No Parking - TANSAT

Contract Administration – 10 Day Notification

From the Brown Book Section 7-10.1 - “Traffic and Access” (which supersedes the Green Book specifications):
 “At least 10 days before the start of construction, the Contractor shall notify, in writing, abutting property occupants of the proposed construction start date. A copy of said written notification shall be provided to the Inspector for approval before distribution to the occupants of the abutting property.”

Permits, Bids, Insurance, and Business Certification

Engineering Permits:

- [A-Permits](#) - Minor street construction in the public right-of-way
- [B-Permits](#) - Major street construction
- [E-Permits](#) - Excavation
- [R-Permits](#) - Revocable permits to grant conditional encroachment of the public right-of-way by private parties
- [S-Permits](#) - Sewer and Storm Drain Permit
- [U-Permits](#) - Excavation or trenching in public right-of-way
- [Maintenance Hole Permit](#)
- [Permit & Procedure Manual for Department of Public Works, Bureau of Engineering](#)

Sidewalk or Building Materials Permits for (lanes and sidewalk closures) temporary construction activities, please contact Marsha Jackson at Street Services Investigation and Enforcement Division 213-847-6086, marsha.jackson@lacity.org.

CALM (Construction and Logistics Management) LIR Helpful Information

4. MINOR STREET CONSTRUCTION – The A-Permit

4.1 A-Permit Description and Purpose

The purpose of the A-Permit is to allow minor street construction in the public right-of-way. The public right-of-way generally consists of street easements that contain City streets, lanes, alleys, parkways, and sidewalks. The public right-of-way also includes public easements and unimproved streets. Construction within the public right-of-way is under the jurisdiction of the Department of Public Works, Bureau of Engineering (BOE).

Minor street construction consists of new driveway installation and repair, sidewalk installation and repair, curb and gutter repair, and installation of streetscape fixtures and street tree wells. It also includes installation of curb drains and street repairs for minor excavations in or near the street. It is further limited to work that will not alter an established flowline of a gutter or alter the existing grade of a sidewalk or street. The A-Permit is the City's process of ensuring that minor street construction meets the City's design and materials specifications and that construction work is properly inspected. The A-Permit process ensures that the applicant is receiving a quality construction product.

City's Authority for the A-Permit Los Angeles Municipal Code (LAMC), Section 62.105, requires a permit be obtained for construction in the public right-of-way.

Department of Transportation **Citywide Temporary Traffic Control**

The CTTC Division of the City of Los Angeles Department of Transportation reviews and oversees implementation of short-term (less than 72 hours) Temporary Traffic Control Plans. Our function is to ensure Contractor compliance with Federal and State principles and standards when implementing Temporary Traffic Controls (TTC) on City Right-of-Way. This is intended to provide for the safe and efficient movement of road users through and around TTC zones while reasonably protecting users, workers, and equipment in accordance with the California Manual of Uniform Traffic Control Devices, CAMUTCD, Part 6 (2016). This page provides guidance & information needed to submit Worksite Temporary Traffic Control Plans to the CTTC Division. These items will assist our team in understanding the nature of your work, and help us in providing a quick turn-around time for our review.

Please refer to our TCP Requirement flowchart to determine if a WTCP should be submitted. [Click here to view TCP requirement flowchart](http://basic.cityofla.acsinfo.org/sites/g/files/wph266/f/TCP%20Decision%20Matrix%202018Feb_1.pdf)
http://basic.cityofla.acsinfo.org/sites/g/files/wph266/f/TCP%20Decision%20Matrix%202018Feb_1.pdf

Important Note: Visit: <http://eng.lacity.org/permits/tctmc> and click on *TCTMC Streets of Significance Maps* to verify that no part of your Traffic Control set up is located on a Street of Significance within any Metro TCTMC impact Areas.

If your project falls within TCTMC jurisdiction, please forward a request to eng.tctmc@lacity.org for inclusion to the next available agenda.

CALM (Construction and Logistics Management) LIR Helpful Information

Requirements For Temporary Traffic Control Plans Submitted For Review

1. Cover letter on company letterhead, listing contact information, job location, approximate start and duration of work (for each Phase if applicable), City Agency Permit Log #, Company project #, and a brief description of project work. [Click Here for Sample of Cover Letter](#)
2. Construction Plan showing dimensions to property lines or other pertinent reference points. [Click Here for Sample of Construction Plan](#)
3. Copy of appropriate City Agency Permit Application, or Permit if already issued. [Click Here for Sample of Permit Application](#)
4. Worksite Traffic Control Plan (Conceptual) showing the following: [Click Here for Sample of Plan](#)
 - o Existing conditions of the worksite and roadway showing striping, lane widths, intersection & driveway locations, and signalization or Right-of-Way assignment controls. (field verification of existing conditions is required - include photos).
 - o Identify any major businesses and/or entities around the proposed work areas, such as schools, hospitals, stadiums, commercial centers, etc.
 - o Identify appropriate Pages from current WATCH Manual or Typical Applications from current CAMUTCD being implemented.

To initiate a review of your Worksite Traffic Control Plan, (WTCP) please [CLICK HERE](#) and provide ALL required project information listed above.

<https://docs.google.com/a/lacity.org/forms/d/e/1FAIpOLSdUAo3Zy4OF7w3CwruSI0bpcZhHcG91tbm8zPFoSMqE73Xc-w/viewform>

Note: Processing of your request will not begin until ALL of the following documents are submitted to:

ladot.cttc@lacity.org

- 1) Cover letter on Primary Contact Company letterhead
- 2) Copy of BSS/BOE Permit Application
- 3) Copy of Construction/Civil Plan
- 4) Copy of Worksite Traffic Control Plan (WTCP) showing the following:
 - Existing conditions at worksite Field Verified - include Photos
 - Appropriate Page No. from latest WATCH Manual or CAMUTCD
 - Identify major businesses and/or entities around the proposed work area such as schools, hospitals, commercial centers, etc.

Please address subject line of email as follows:

SUBJECT: Primary Contact Company, Job Location, BSS/BOE Permit/Reference Number

2.08 ASR Program (ASR)

Central Terminal Area (CTA) Construction Projects

The Central Terminal Area is managed by LAWA with a particular focus on traffic lane closures and pedestrian impacts. The following items are of vital importance with projects in the Central Terminal Area. Strict adherence to these items is required:

1. Design Review – Fully vetted by all LAWA stakeholders
2. Project must be tracked through the PERT Review Process (see below for details)
3. ASR Submittals (see below for details)
4. Commitment to schedule – projects must start and complete on time due to the space and time constraints in the CTA

Project Evaluation Response Team (PERT) Process

The PERT Process reviews, approves, and monitors lifecycle of Capital and Tenant projects at LAWA Facilities. It is a systematic approach to managing projects with input from all LAWA stakeholders. It protects LAWA assets and facilitates project quality and consistency. The projects are reviewed from Concept through design to construction completion. Contact Steve Shack (Tenant Program Administrator) at 424-646-5249 or sshack@lawa.org with any additional questions.

CALM CTA Roadway Coordination Meetings

CALM CTA Roadway Coordination meetings are held weekly at the CALM Trailer 4 within the CTA on Wednesdays at 9:30am. The coordination meetings provide the proper environment to discuss new ASRs, current status or issues for existing ASRs, coordination between projects and other contractors to mitigate impact to the Central Terminal Area Roadways. Attendees include Project Teams, Project Managers, Construction Managers, LAWA Communications, LAWA Inspection, LAWA Landside Operations, Airport Police, and Logistics. Contact Mark Henry (CALM Area Resident Manager – Roadways) at 424-646-7167 or mhenry@lawa.org with any additional questions.

CALM Pre-ASR Meetings

CALM Pre-ASR meetings are held weekly at the CALM Trailer 4 within the CTA on Wednesdays at 8:30am. This meeting is an opportunity for any Landside project to present ASRs prior to submitting to the Shutdown Control Center. At this meeting, the attendee should bring a draft of the ASR as well as supporting exhibits. Contact Mark Henry (CALM Area Resident Manager – Roadways) at 424-646-7167 or mhenry@lawa.org with any additional questions.

CALM CTA Nightly Huddle Meetings

For nightly coordination purposes, the contractor is required to attend the 11:30pm Nightly Huddle at 651 World Way South, Trailer 4. Contact Debbie Miller (CALM Night Area Resident Manager) at 424-646-6017 or dmiller@lawa.org with any additional questions.

Area Shutdown Requests (ASR)

The Area Shutdown Request (ASR) is a request to shutdown any traffic lane, restriction to public access, elevator/escalator, or restroom located on LAWA property that will cause an operational impact.

The ASR review includes the following:

1. Identify Impacts (Facilities, Stakeholders, Operations)
2. Gather Facts (Time, Duration, Purpose, Contacts)
3. Determine Area
4. Develop Mitigation Plan
5. Review Contractor Work Plan

ASR Submittal Process

The completed ASRs are submitted by the LAWA Project Manager to the Shutdown Control Center for processing and tracking. Once a submittal is received, it is distributed to the LAWA Review team to review for any additional coordination and logistical needs. The requests are tracked through the LAWA Shutdown Control Center tracking system.

To guarantee ASR approval for on-time implementation, projects expected to have a large impact to stakeholders and other projects should plan on submitting a draft package which includes the ASR and a traffic control plan to the Shutdown Control Center at least 30 days prior to expected implementation date. Some projects have been introduced at least 3-4 months in advance to allow for coordination and planning.

ASRs are approved prior to project implementation and a complete ASR package should be submitted at least 30 days prior to the expected start date. In addition, a site walk is typically completed 3 weeks prior to the ASR submittal to give a better understanding to Airport Operations, CALM (Wayfinding and Signage) and the Project Management team of all field conditions.

CALM / ASR Requirements

8. A separate ASR is required for each area to be impacted.
9. Complete the application in its entirety and attach any Completed/Approved Required documentation. Incomplete applications may be delayed for processing.
10. This package shall describe all details related to the submitted Phasing Plan, Logistical Work Plan, and logistical checklist and will be updated as needed to ensure stakeholders are informed of revisions.
11. The Contractor shall submit an overall Phasing Plan with a baseline schedule.
12. Within the task specific phasing plan, the contractor shall identify specific tasks, which will function as a sub phase to the overall Phasing Plan and schedule.
13. If a Task Specific Phase has separate logistical needs, the contractor will be required to complete a Logistical Work Plan for each of those Task Specific Phases.
14. The Logistical Work Plan shall include the following: Scope and description of work, a Communications Plan, identification of coordination plans with all contractor construction activities in the area, and identification of all permits.

ASR Revisions

An ASR Revision shall be submitted when an existing ASR changes in scope of work or dates are extended. For example – work will now be added to the project in a different location. Date extension requests shall be sent to the SCC at least one week prior to ASR expiration date.

ASR Updates

An ASR Update shall be disseminated when an existing ASR has additional work, but the scope of work does not change and neither do the dates. Contractor shall submit addendums to the ASR to the SCC for any changes that affect the work area or airport operations. The SCC shall be notified when work is completed.

Barricades and Wayfinding

Utilize blue screened fence panels to secure work areas. Screening at specific locations shall be omitted if it creates an unsafe condition. Barricades shall be maintained in like-new condition for the life of the project.

Construction activity can create very complex navigational challenges for the passenger. Temporary signs may be necessary to safely and efficiently move passengers through the airport environment in affected areas. The primary goal of the temporary signs is to maintain the integrity of the wayfinding system. It is important to have consistency between permanent and temporary signs. Temporary signs will be similar in appearance with the exception of fabrication materials and mounting methods. This process allows the signage system to maintain visual continuity, clear messaging, and a sense of permanence thus instilling confidence in the passengers as they find their way through the airport. The PDG Sign Shop will design and produce all temporary wayfinding signage necessary during construction and/or as a result of construction as an interim solution to a forthcoming permanent plan. The project is responsible for cost of design and production. Contact Angela Flores (CALM Sign Shop Manager) at 424-646-7086 or aflores@lawa.org with any additional questions. Temporary Barricade and Signage standards can be found in the Design and Construction Handbook as well.

Additional Information

Typical CTA Work Hours: 12am-8am (subject to change related to Airport Operational issues)

LAX Holiday Moratorium (dates subject to change year to year – below is example)

- Thanksgiving: Friday before Thanksgiving (0600) through Monday after Thanksgiving (2100)
- Christmas/New Year's: Friday before Christmas (0600) through January 2nd (2100)
- ASR Deadline is November 1st to Shutdown Control Center

Water Filled barricades shall be white in color.

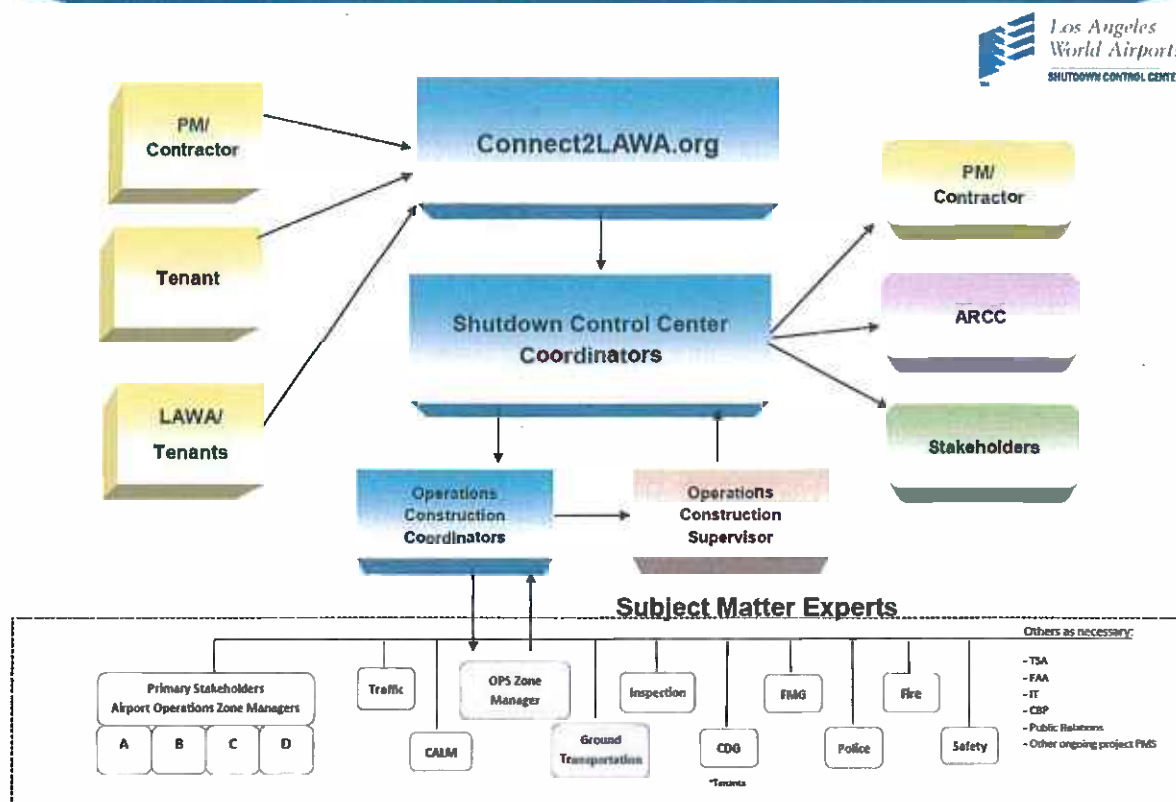

ADA compliant pedestrian paths shall be maintained at all times. Flagmen shall be provided to assist guests around work areas when work is taking place and/or it creates an unsafe condition to the guest along the designated path.

Only LAWA approved signage may be posted. No advertising allowed, including contractor branding.

Area Shutdown Request Application

AREA SHUTDOWN REQUEST Application

LAX Project No. _____ Contractor Tracking # _____ - _____ LAWA Tracking # _____ - _____
Construction Project: _____ LAWA Project Manager: _____

In Case of Emergency call 310-646-7911 at LAX

1. An application must be received 30 days prior to the area shutdown time - NO EXCEPTIONS
2. A separate application is required for each area to be shutdown. A USR may be required to coincide with the ASR if it impacts Airport Operation. Submit both applications at the same time for processing.
3. Complete the application in its entirety and attach any backup documentation. Incomplete applications may be delayed for processing.
4. The Contractor is RESPONSIBLE FOR CONTACTING the ARCC (Airport Response Coordination Center), 30 minutes prior and upon completion. (ARCC) 424-646-LAWA (5292), at prompt enter #4-shutdown, #1-shutdown. NOTE: Unexpected work that may delay restore time shall be reported immediately to the ARCC
5. Shutdown times may change without notice due to airport operational priorities.
6. Requests received on Saturday and Sunday or after 1:00 p.m. Monday through Friday will be marked as RECEIVED on the following business day.

SHUTDOWN TIMES MAY CHANGE WITHOUT NOTICE DUE TO AIRPORT OPERATIONAL PRIORITIES

2.09 AOA Access Process

AOA / Post Access Process

The LAX Development Program is experiencing an unprecedented amount of construction over the next few years. This construction activity will put a high amount of stress on the AOA Access points for construction and will necessitate the need to coordinate and plan all future construction activities with regards to access to the AOA (Air Operations Area). AOA Access for all projects must be coordinated through the CALM (Coordination and Logistics Management) team.

Post Access Coordination (PAC) Meeting

All project teams must attend the Post Access Coordination (PAC) meeting held weekly in order to obtain access to the Airfield at LAX. All projects must submit a 30/60/90 day lookahead delivery schedule in conjunction with attendance at the PAC meeting. All contractors must provide daily deployments of major trucking activities that will impact the adjacent roadways. The meeting is held every Monday at 10:30am at Trailer 5 Conference Room at 8100 Westchester Parkway. For additional information, please contact Kwok Su, Secured Access Manager (CALM) at ksu@lawa.org or 424-646-7155.

Construction Posts

There are only 2 posts available for construction. See below for details.

- **Post 23** This post is open 24 hours a day – 7 days a week. Post 23 is located at 8100 Westchester Parkway, Los Angeles, CA 90045
 - Lanes 1-2 (Heavy Deliveries), Lanes 3-5 (All Other Vehicles)

- **Post 236B** The Post will only be open M-F from 5:00AM- 1:30PM and will remain closed Saturday/ Sunday. Post 236B is located at 5579 West 104th Street, Los Angeles, CA 90045.

Mitigation Monitoring and Report Program (MMRP)

- No major construction trucking activities during MMRP hours and must be off the roadway during the hours of 7:00am- 9:00am & 4:30pm- 6:30pm unless a waiver was approved by LAWA PM/CALM/ Environmental. Holidays and Weekends are exempt.
- Trucking should be on approved haul routes only.
- Vehicles are not allowed to idle more than 5 minutes.

Vehicle & Driver Requirements: Visit LAWA RAD Program

- Vehicle Requirements: Beacon, Flag, Permanent Company Logo on the sides of the vehicle
- Badging is required: must have Restricted Area Driver (RAD) Icon.
- Escorting: Escort must have Escort Icon.
- One Escort Vehicle per Vehicle being Escorted.
- Do not drive on the Restricted Access Road at any time.
- Equipment to be delivered on truck beds.
- Escorts cannot escort drivers with a badge.
- Vehicle drivers without badge will need to know escort's name and company before entering the AOA.

END OF PR-03 TRAFFIC COORDINATION, AIRFIELD ACCESS, AND SECURITY

PR-04 SCHEDULING OF THE WORK

1. GENERAL

- A. The DESIGN-BUILDER shall plan and schedule the project and report progress to LAWA. The scheduling of the project shall be provided using a combination of the critical path method to track the project at the milestone level the Last Planner® System. LAWA's acceptance of any schedule, whether preliminary, baseline, update or revised, does not modify the contract or constitute endorsement or validation by LAWA of the DESIGN-BUILDER's logic, activity durations or assumptions in creating the schedule. By accepting the schedule, LAWA does not guaranty that the project can be performed or completed as scheduled.
- B. Schedules shall represent a practical plan to design, procure, construct and complete the work within the work completion time and shall convey the DESIGN-BUILDER's intent in the manner of prosecution and progress of the Work. Milestone schedules shall represent hard dates for major project milestones that will guide the DESIGN-BUILDER's Last Planner® teams in their phase planning and weekly work planning sessions. LAWA understands that the phase plans and weekly work plans are fluid and change weekly to most efficiently execute the project and will work collaboratively with the DESIGN-BUILDER to complete the Project as scheduled.
- C. Schedules shall be created using scheduling software appropriate for the work, subject to acceptance or approval by LAWA as described herein. The submittal of schedules shall be understood to be the DESIGN-BUILDER's representation that the schedule meets the requirements of the contract documents and that the work will be executed in the sequence and duration indicated in the schedule.

2. REQUIREMENTS

- A. General Schedule Requirements
 - 1. The DESIGN-BUILDER shall be responsible for planning the design and construction of the project and must consider the work to be performed, the contract time, the resources available, vendors, subcontractors, external constraints and all other factors affecting the successful completion of the work. The DESIGN-BUILDER shall plan and schedule the project and report progress.
 - 2. Schedules shall be consistent with the time and work requirements of the contract. DESIGN-BUILDER shall execute the work in the sequence indicated on the current approved schedule and shall provide appropriate updates to the Make-Ready Plan to permit LAWA and other stakeholders to coordinate and schedule its resources, inspections, consultants, and any other work accordingly. LAWA may in its discretion require that the schedule plan design and construction activities over the entire work completion time. The DESIGN-BUILDER shall have no claims if LAWA disallows the DESIGN-BUILDER from finishing early.
 - 3. The DESIGN-BUILDER shall involve and coordinate with all designers, trade contractors, third parties, stakeholders and material suppliers in the development and updating of schedules, phase plans and weekly work plans.
 - 4. Review, acceptance or approval of schedules by LAWA shall not waive any contract requirements and shall not relieve the DESIGN-BUILDER of any obligation or responsibility for submitting complete and accurate information.
 - 5. If after a schedule has been accepted or approved by LAWA, either the DESIGN-BUILDER or LAWA discovers that any aspect of the schedule has an error or omission,

DESIGN-BUILDER shall correct it on the next progress schedule.

6. Errors or omissions on schedules shall not relieve the DESIGN-BUILDER from finishing all work within the work completion time.
7. The DESIGN-BUILDER shall adjust, add to, or clarify any portion of a schedule which LAWA determines to be insufficient for monitoring the work or to be impractical for any reason.
8. Use of float suppression techniques such as preferential sequencing or logic, special lead/lag logic constraints and extended activity durations will be cause for rejection of schedule submittal.
9. The scheduling method to be used for the project schedule shall be the Critical Path Method (CPM) in the form of an activity on node Precedence Diagram Network (PDN) with capabilities of identifying the longest path/critical path and controlling operation. The principles and definitions of the terms used herein shall be as set forth in the Associated General Contractors of America (AGC) publication "Construction Planning and Scheduling," latest edition. To the extent there are any conflicts between the AGC publication and the contract documents, the contract documents shall govern.
10. The schedule shall include activities, regardless of responsibility, that directly or indirectly relate to or have influence over planning and executing the scope of work in strict accordance with the contract documents, and shall include but not be limited to all design and preconstruction activities, procurement, allowances defined in PR-05, the DESIGN-BUILDER's submittals and their forecast approval dates, fabrication, shipment and deliveries of material and equipment (by the DESIGN-BUILDER and by others), and all on-site activities including construction, safety activities, phasing activities, quality control/quality assurance inspections, commissioning and as-built models and drawings.
11. The DESIGN-BUILDER shall use the agreed-upon version of Primavera Project Management (P6 or later) for Windows, and a hardware system commensurate with the size of the project. This shall be referred to as the scheduling system. The system shall be capable of handling, processing, printing, and plotting data to satisfy all requirements of these contract documents. The DESIGN-BUILDER shall maintain the scheduling system, the schedule, and the scheduling staff on Site. The DESIGN-BUILDER shall keep the scheduling software maintenance agreement current for the project scheduling software over the life of the contract. All schedules submitted by the DESIGN-BUILDER or its subcontractors or suppliers of any tier shall be in ".xer" format.
12. The DESIGN-BUILDER may utilize an electronic tool, such as vPlanner, in conjunction with LPS, however this does not relieve the DESIGN-BUILDER from performing regular phase planning, weekly work planning and daily check-ins in person with the last planners.
13. It is expressly understood and agreed that the time of the beginning, the rate of progress, the interim contract milestones, and the time of the completion of the work are of the essence to this contract. The work shall be executed with such progress as required to prevent any delay to collateral work on the project site and the general completion of the contract.
 - a. The DESIGN-BUILDER has a contractual duty to take reasonable remedial action in the schedule, in the most economical manner, to mitigate any and all delays to any milestone or the completion date.
 - b. In all cases, when it is possible for the DESIGN-BUILDER to eliminate the time impact of a delay without added cost to itself, the DESIGN-BUILDER shall do so and shall not

be entitled for a time extension under such circumstances.

- c. The schedule shall be prepared to include the completion date for the total contract time and the longest path/critical path shall be identified, including critical paths for interim milestone dates. Scheduled start or completion dates for activities imposed on the schedule by the DESIGN-BUILDER shall be consistent with the contract milestone dates. Milestone events shall be the schedule dates specified in the contract and shall be prominently identified and connected to the appropriate element of the work, denoting its start or completion.
14. LAWA will review and return the DESIGN-BUILDER's schedule submittal and deliverables with a written response according to the following timeframes from the date of receipt from the DESIGN-BUILDER:
- a. Baseline schedule within fifteen (15) days or more as may be needed depending on the complexity of the submittal;
 - b. Monthly schedule update within fifteen (15) days or more as may be needed depending on the complexity of the submittal.
15. If the DESIGN-BUILDER does not agree with LAWA's comments, the DESIGN-BUILDER shall provide an itemized written notice of disagreement within five (5) days from the receipt of LAWA's comments. Resolution of any of LAWA's comments with which the DESIGN-BUILDER disagrees will occur in a meeting held for that purpose.

B. DESIGN-BUILDER's Project Scheduler

1. The project scheduler is required to attend all meetings pertaining to scheduling and progress of the work, including weekly progress meetings and weekly work plan meetings. The project scheduler shall be available full time and be available for any schedule related meeting at the request of LAWA. Failure to be available full time will constitute reason for termination of the project scheduler. If the project scheduler leaves the employ of the DESIGN-BUILDER, the DESIGN-BUILDER is required to fulfill the requirements of this subsection within thirty (30) days of the departure of the DESIGN-BUILDER's project scheduler.
2. The project scheduler is required to be completely familiar with the contract and have first-hand knowledge of the work from on-site periodic job walks and shall attend all meetings pertaining to scheduling and progress of work, including weekly jobsite meeting as requested by LAWA.
3. The project scheduler shall be required to fully understand the LPS and lead efforts to implement integrate LPS with the CPM requirements outlined herein. The project scheduler shall attend and facilitate (as assigned), meetings regarding the workflow schedule, phase planning, make-ready planning and weekly work planning.
4. The number of schedulers required for timely completion of schedule deliverables will be determined by the DESIGN-BUILDER. Any additional schedulers needed shall be hired by the DESIGN-BUILDER to ensure all scheduled deliverables are submitted on time.

C. Schedule Requirements – Phase 1 Design & Preconstruction

- a. Task Order Processing
 - a. Separate Task Orders will be awarded for each design process, including Basis of Design (BoD), Schematic Design (SD-30%), Design Development (DD-60%) and

Final to Issue for Construction Design (90%, 100%, IFC). LAWA and the DESIGN-BUILDER shall work collaboratively on Preliminary Schedule submittals for each Task Order to create an acceptable Baseline Schedule for each Task Order. LAWA and the DESIGN-BUILDER shall ensure the necessary resources and stakeholders are present to facilitate the work.

- b. Upon NTP for each Task Order, the detailed Preliminary Schedule for activities pertaining to each Task Order shall undergo Baseline Schedule approval, while Level 3 activities for future Task Orders and Construction shall remain preliminary. LAWA will use Preliminary Schedules for each Phase 1 Task Order to monitor progress until the Baseline Schedule for each Task Order is accepted.
- b. Preliminary & Baseline Schedule Submittals, Reviews & Revisions
- a. The DESIGN-BUILDER shall provide a draft Preliminary Schedule within fifteen (15) days of the NTP of the first Task Order (BoD) for LAWA's review and approval. This initial Preliminary Schedule submittal shall include all work activities for the first 180 days of the project. At least ten (10) days after the project kickoff meeting, the DESIGN-BUILDER shall schedule a workshop designed to work collaboratively with LAWA to develop the Preliminary Schedule for BoD.
 - b. The BoD Task Order Preliminary Schedule shall be completed within fifteen (15) days of the project kickoff meeting. Subsequent Phase 1 Task Order Preliminary Schedules shall be completed within fifteen (15) days of NTP for each Task Order.
 - c. If a preliminary schedule is deemed to be unacceptable by LAWA, the DESIGN-BUILDER shall address the reasons for LAWA's determination and resubmit the revised Preliminary Schedule no more than five (5) days after LAWA's determination. LAWA may withhold progress payments until the DESIGN-BUILDER submits the Preliminary Schedule.
 - d. The DESIGN-BUILDER shall provide monthly updated Preliminary Schedules until Baseline Schedules are approved by LAWA. The activities on the Preliminary Schedule shall correlate directly with the Schedule of Values (SOV), from which Progress payments will be based until the Baseline Schedule is approved.

D. Schedule Requirements – Phase 2 Construction

- a. Construction Procurement
 - a. Construction will be procured through various procurement packages (cGMP1, cGMP2, cGMP3) to expedite early and critical scopes of work. LAWA and the DESIGN-BUILDER shall work collaboratively on Preliminary Schedule submittals for each procurement package to create an acceptable Baseline Schedule for each package. LAWA and the DESIGN-BUILDER shall ensure the necessary resources and stakeholders are present to facilitate the work.
 - b. Upon NTP for each procurement package, the detailed Preliminary Schedule for activities pertaining to each procurement package shall undergo Baseline Schedule approval, while Level 3 activities for future procurement packages shall remain preliminary. LAWA will use Preliminary Schedules for each procurement package to monitor progress until the Baseline Schedule for each Task Order is accepted.
- b. Preliminary & Baseline Schedule Submittals, Reviews & Revisions
 - a. Within sixty (60) days of the NTP of each procurement package, the DESIGN-BUILDER shall submit for LAWA's approval the DESIGN-BUILDER's Contract

- compliant project schedule.
- b. The Contract compliant schedule shall include detailed activities as a Baseline Schedule for approved procurement packages plus preliminary Level 3 activities for future procurement packages.
 - c. The DESIGN-BUILDER shall provide monthly updated Preliminary Schedules until Baseline Schedules are approved by LAWA. The activities on the Preliminary Schedule shall correlate directly with the Schedule of Values (SOV), from which Progress payments will be based until the Baseline Schedule is approved. Both Preliminary and Baseline Schedules will be compared with future monthly update schedules.
 - d. The DESIGN-BUILDER shall work collaboratively with LAWA, stakeholders, AHJ, other contractors, suppliers, subcontractors, ~~labor unions~~ and others to develop the Phase 2 baseline schedule activities. The DESIGN-BUILDER shall work collaboratively with LAWA to establish appropriate milestones that best facilitate the implementation of the Last Planner® System.
 - e. The DESIGN-BUILDER's baseline project schedule shall show all work and the sequence of all activities needed for the orderly performance and completion of all work. The schedule shall reflect the DESIGN-BUILDER's true plans for performing the work. The DESIGN-BUILDER's baseline project schedule shall strictly follow all staging and/or phasing requirements and plans as identified in the Contract or developed as part of the project plan. Any schedule showing a project or milestone completion beyond the contract milestones will not be approved.
 - f. Failure to provide a Contract compliant baseline project schedule within 60 days of NTP will result in the assessment of liquidated damages in the amount stated in special conditions.
 - g. Design-Builder must complete the pre-Olympic scope of work within 931 Calendar Days (Tentatively July 15, 2025 to Feb. 1, 2028) subject to Liquidated Damages stipulated in this Contract. An excusable and compensable Weather days will be granted only if adverse weather causes delay to critical path activity. Adverse weather delays occurring during period of delays due to the Design Builder or concurrent delays are excusable but not compensable.
 - h. Baseline Schedule Narrative
 1. The DESIGN-BUILDER shall provide a written narrative accompanying the electronic version of the DESIGN-BUILDER's baseline project schedule submission. It shall also include a clear description of the longest path/critical path activities from beginning to end and describe anticipated crew sizes, production rates, equipment requirements and anticipated problems of major activities along the critical path. The development of the schedule narrative should be a collaborative discussion with the entire project team including LAWA and stakeholders.
 2. The narrative shall explain the overall plan to complete the project, including how the DESIGN-BUILDER plans to physically move through the project site and intends to manage batch size in certain areas to help optimize trade efficiency as well as where the work will begin and how the work and labor will move through the project. The narrative should clearly describe how simultaneous activities will be performed.
 3. In the written narrative, the DESIGN-BUILDER shall include the basis and assumptions (including activity duration basis), longest path/critical path analysis, historic project comparisons, productivity and installation rates, used to develop the project schedule. The DESIGN-BUILDER shall include management staffing, non-manual and manual labor for design, engineering,

preconstruction activities and construction, construction crew sizes, equipment requirements, and anticipated delivery dates; constraints; critical path activities; activities requiring overtime or additional shifts; holidays and other non-work calendar days; potential problem areas; permits; coordination required with LAWA and third party agencies; and long lead delivery items requiring more than thirty (30) days from order to delivery.

4. A report of activities, showing the early and late start and finishes, duration, and predecessor and successor relationship, sorted by early start. Show dependencies and logic between activities so that the effect of progress (or lack of progress) on related activities and the overall schedule can be monitored.
 5. Non-manual labor staffing plan by department/position showing start and finish date (month and year) and number of each position per month. Include histograms showing staffing (incremental by month and cumulative) over the life of the contract in terms of both headcount and job hours.
 6. Manual labor staffing plan by craft (including Subcontractors) showing start and finish dates (month and year) and number of crafts per month. Include histograms showing staffing (incremental by month and cumulative) over the life of the contract in terms of both headcount and job hours.
- i. The DESIGN-BUILDER shall develop the baseline schedule to the appropriate milestone and interim milestone level of detail to allow for satisfactory weekly work planning and execution in conjunction with the Last Planner® System. Failure to develop the baseline schedule to an appropriate level of detail will result in its disapproval.
 - j. Activity durations shall be the total number of days required to perform that activity. The overall activity duration will be determined by the type of calendar applied to the activity. The activities included in the DESIGN-BUILDER's baseline project schedule shall be analyzed in detail to determine activity time durations in units of calendar days. Durations shall be based on anticipated production rates for design and preconstruction activities, labor (crafts), equipment and materials required to perform each activity on a normal workday basis.
 - k. The first activity in the baseline schedule shall represent the NTP as a milestone and the data date of the baseline schedule shall be the contract "Notice to Proceed" date.
 - l. Include at least one (1) predecessor and one (1) successor for each activity excluding the project start and finish milestones.
 - m. Define one calendar to include the following twelve (12) holidays: New Year's Day, Martin Luther King Day, President's Day, César Chávez Day, Memorial Day, Independence Day, Labor Day, Columbus Day, Veterans Day, Thanksgiving Day, Day after Thanksgiving Day and Christmas Day. No activity impacting airport operations shall be performed on these days without written approval by LAWA.
 - n. The baseline schedule shall not contain negative total float or negative lag for any activity.
 - o. The critical path and number of critical activities shall be no more than thirty percent (30%) of the total activities in the DESIGN-BUILDER's baseline project schedule.
 - p. The project's critical path, for the purpose of acceptance of all schedule submittals shall be determined by the longest path analysis.
 - q. All durations shall be the result of definitive labor and resource planning by the DESIGN-BUILDER to perform the work according to the contract documents. The labor to be assigned by discipline, craft, definition, equipment, and bid item designation shall be shown for each construction activity for the network on a tabular listing. All disciplines or crafts necessary to execute an activity must be shown. No more than one (1) subcontractor may be assigned to a specific activity. If more

- disciplines or crafts are required, then the activity in question must be broken down into additional activities.
- r. Retained logic shall be the method of calculation and the "Retained Logic" setting shall be used.
 - s. All activity names shall be clearly and uniquely named with a description of work readily identifiable to inspection staff. Each Activity shall have a narrative description consisting at a minimum of one verb or work function (i.e. Submit, form, place, excavate, review, approve, cure, etc.), an object (i.e. Design calculations, slab, footing, wall, shop drawing, submittal, girder, etc.) and a location.
 - t. LAWA reserves the right to require that DESIGN-BUILDER modify, adjust, add to, or clarify any portion of the project baseline or progress schedule which may later be discovered to be insufficient or inaccurate for planning, monitoring or prosecuting the work (Schedule Adjustments). The first of each type of schedule or schedule report submitted by the DESIGN-BUILDER will be reviewed for format, as well as content. Once the format has been approved all subsequent project schedules shall be submitted in the approved format. LAWA may request format changes as the contract progresses. No additional compensation shall be provided for such modifications, adjustments, additions, or clarifications.
 - u. Lags shall be used at a minimum and shall not exceed ten (10) days in duration. A lag report will identify all lags used in the baseline schedule and a specific reason for its use will be provided for each. If it is determined that an activity or activities may take the place of the lag, LAWA reserves the right to request the activity be used in its place. Failure to do so may constitute grounds for rejection of the baseline.
 - v. The difference between the early completion date and the work completion Time is considered float. Float time shall not be for the exclusive benefit of either the Owner or the DESIGN-BUILDER. Float shall be a resource available to both parties.
 - w. Early Completion: The DESIGN-BUILDER may submit a baseline or progress schedule showing an early scheduled completion date provided that the requirements of the contract are met.
 - 1. LAWA is not required to accept or approve a schedule with an early completion date.
 - 2. DESIGN-BUILDER shall not be entitled to extra compensation in the event an agreement is reached on an early completion date and DESIGN-BUILDER completes the work, regardless of the reason, beyond the early completion date but within the work completion time.
 - x. A calendar report shall be included with the baseline schedule submittal. All calendars whether workday, seven day, six-day, etc. shall have a basis of and eight (8) hour shift unless otherwise needed. Any calendar using more than eight (8) hour shift shall be called out in the calendar report and a narrative explanation provided. The global calendar shall be seven (7) day / twenty-four (24) hour without any holidays or non-work days.
 - y. The detailed breakdown of project schedule activities may include:
 - a. Type of Work to be performed, the sequences, and the labor trades involved and LAWA approved WBS.
 - b. All purchase, submittal, submittal review and necessary re-review, manufacturing, test, installation activities for all major materials and equipment, and a separate list of all major material items or items of equipment for which the DESIGN-BUILDER intends to seek payment prior to installation.
 - c. Preparation, submittal, and approval of shop and/or working drawings, and material samples showing the minimum timeframes for LAWA's review of all

- submittals, or longer as identified in the contract.
- d. Resource loading for cost, labor, material, and equipment, including craft labor hours that add up to the total number of labor hours in the DESIGN-BUILDER's estimate and quantities of materials that reconcile with the "Contract Pricing."
 - e. All start up, testing, training, commissioning and assistance required under the Contract. (e.g. Punch list and final clean up).
 - f. Identification of any labor, material, or equipment restrictions, as well as any activity requiring unusual shift Work.
 - g. No activity shall have a duration of more than fourteen (14) calendar days except non-construction activities such as submittals, submittal reviews, procurement and delivery of materials or equipment, and concrete curing without approval from LAWA.
 - h. All construction activities shall be shown in their resource-loaded state to reflect labor, materials and equipment. All durations shall be the result of definitive labor and resource planning by the DESIGN-BUILDER to perform the work according to the contract documents.
 - i. Cost-Loading: The schedule is the basis for determining payment during each update period and therefore the amount of each application for payment. No activity should have a value over \$100,000, and the aggregate in-place value of all cost-loaded activities must equal the value of the application for payment. The total cost-loading for all activities for a given lump sum item shall equal the total amount listed in the GMP/CGMP or portion thereof. Cost loading must be reasonable and without front-end loading. The DESIGN-BUILDER shall demonstrate reasonableness if requested by LAWA.
 - j. All construction activities shall be loaded with all resources and costs required for the prosecution of the activity. These resources shall include labor, materials and equipment with their associated costs. All costs shall be entered as a resource.
 - k. Manpower availability shall not be allowed to drive the critical path at the sole discretion of the DESIGN-BUILDER. Manpower limitations must be verifiable in writing by the union's business agent before such resource-driven logic is incorporated into the DESIGN-BUILDER's baseline project schedule.
 - l. All major equipment valued over \$100,000 in capital cost to be used shall be identified in the DESIGN-BUILDER's baseline project schedule either as a resource or as a 'Level of Effort' (LOE) activity.
 - m. Pursuant to the float-sharing requirements of the contract, use of float suppression techniques such as preferential sequencing, special lead/lag logic constraints, extended activity times or imposed dates (mandatory Constraints) break the CPM rules and shall be cause for rejection of the DESIGN-BUILDER's Baseline project schedule and any revisions or updates. The use of "Start On or after" or "Start On or before" and "Finish On or after" or "Finish On or before" will be allowed. The use of float time disclosed or implied by the use of alternative float suppression techniques shall be shared as directed by LAWA.
 - n. DESIGN-BUILDER shall use base calendars which are appropriate with the work being performed. These should be tied into the requirements, restrictions and moratoriums of airport operations. Multiple calendars are acceptable for the schedule.
 - o. The timeframe for third party (e.g. Building and Safety, DWP, FAA, BOE and TSA) submittal review should be identified in the DESIGN-BUILDER's baseline project schedule. Third party reviews may require additional time and coordination beyond the standard review period allowed for LAWA review. If

necessary, additional time will be given to Building and Safety, DWP, FAA and TSA. The DESIGN-BUILDER shall allow sixty (60) days for review by these parties and any party which is not under the control of LAWA. The DESIGN-BUILDER shall be responsible for coordinating with third parties and determining the time required for third party submittal reviews.

- p. Submit with the baseline schedule, a statement on subcontractor's letterhead, certifying that subcontractor has reviewed and concurs with the baseline schedule and that subcontractor's related schedule has been reasonably incorporated, including activity duration.

E. Schedule Activity Codes

1. LAWA has implemented an airport-wide Activity Code Structure. The DESIGN-BUILDER is required to use this structure, which defines codes that uniquely categorize and identify each activity in a project schedule, and group activities in similar categories. The DESIGN-BUILDER shall integrate the activity code structure with LPS to the extent practicable. Within the activity code dictionary, the DESIGN-BUILDER shall classify all activities to a specific airport facility and element.

- a. The first code field shall designate the Airport Facility;

Value	Description	Order
01	Los Angeles International	1
03	Van Nuys	3
04	Palmdale Regional Airport	4

- b. The second code field shall designate the Element in the Airport Facility;

Value	Description	Order
01	Airside	1
02	Terminals	2
03	Landside	3
04	Midfield Satellite Concourse	4
05	LAMP	5

LAWA has defined the following code structure for airside projects. Examples are shown for reference only, as specific code values will vary by project. Coding structure and values will be addressed at the pre-scheduling conference. Final values and descriptions are subject to acceptance by LAWA, prior to their use in any schedule.

- c. The third code field shall identify the specific project;

Examples;

Value	Description
24LRSA	Runway 6R-24L RSA
25LREH	Runway 7R-25L Rehabilitation

- d. The forth code field shall identify the Deliverable;

Examples;

Value	Description
CM	Contract Milestones
SUB	Submittal
PRO	Procurement

- e. The fifth code field shall identify the construction phase (as per the phasing of work

identified in the contract documents). There shall be one (1) "PH" code for every phase and sub-phase.

- f. The sixth code field shall identify specific work class at the airport facility (the following are shown for reference only. The DESIGN-BUILDER shall provide final classifications after examination of contract documents. The values and descriptions are subject to final acceptance of LAWA;

Examples;

Value	Descriptions
AGR_	At-Grade Roadways
RAMP	Ramps to/from Bridges
EB	Elevated Bridges
PB_	Ped Bridges

- g. The seventh code field shall identify whose responsibility it is to perform the activity (e.g., LAWA, utility company, Design-Builder, subcontractor, etc.);
- h. The eighth code field shall identify all change orders and notices of non-compliance (CONNC) activities, as they occur throughout construction;
- i. The ninth code field shall identify all changes (activity additions and deletions) as they occur throughout construction;

Value	Description
ADD	Activity Additions
DEL	Activity Deletions

- j. The DESIGN-BUILDER shall reserve code fields' 10, 11 and 12 (approximately 8 to 16 characters) for LAWA's use.
- k. The DESIGN-BUILDER may use more codes as they deem necessary subject to the final acceptance by LAWA.

F. Baseline Schedule Submittal Review

- a. LAWA's approval of the DESIGN-BUILDER's baseline project schedule
- a. The DESIGN-BUILDER shall schedule a meeting to review the DESIGN-BUILDER's baseline schedule submittal no later than the first available day after LAWA's receipt of the baseline submittal. This meeting will serve as the DESIGN-BUILDER's meeting to review, explain and discuss the DESIGN-BUILDER's baseline schedule with LAWA. LAWA reserves the right to invite any LAWA staff deemed necessary for this meeting. Additional meetings may be held between LAWA, the DESIGN-BUILDER, stakeholders, project scheduler and all major subcontractors and suppliers to resolve any conflicts between the DESIGN-BUILDER's baseline project schedule and the intent of the contract.
- b. LAWA will review and make comments on the DESIGN-BUILDER's baseline project schedule. Comments made by LAWA on the DESIGN-BUILDER's baseline project schedule, during review, will not relieve the DESIGN-BUILDER from compliance with requirements of the contract documents. To the extent that there are any conflicts between the approved schedule and the requirements of the contract documents, the contract documents shall govern.
- c. The DESIGN-BUILDER, the DESIGN-BUILDER's project scheduler, and available major subcontractors and suppliers shall be required to participate in all meetings necessary to reach mutual agreement and approval of the DESIGN-BUILDER's

baseline project schedule.

- d. LAWA will approve or reject in writing the DESIGN-BUILDER's submission within ten (10) days. The DESIGN-BUILDER shall resubmit its revised baseline project schedule, if needed, within seven (7) days from receipt of LAWA's comments. The DESIGN-BUILDER's baseline project schedule, once approved, will be used for monitoring and evaluating all facets of contract performance, including but not limited to progress, changes, and delays.
- e. Upon successfully developing the DESIGN-BUILDER's baseline project schedule, the schedule will be accepted by LAWA. "Acceptance" means that LAWA is only acknowledging that the schedule conforms to the overall requirements of the scheduling specification. However, acceptance by LAWA does not relieve the DESIGN-BUILDER from correcting errors and omissions, float sequestering logic/duration or any other misrepresentation that may be included in the approved schedule.

G. Last Planner® System of Production Control (LPS)

- 1. The DESIGN-BUILDER shall use the LPS of production control for scheduling and planning the work activities of the project. All subcontractors, subconsultants, trade contractors and significant vendors shall fully participate in LPS to the extent required as facilitated by the DESIGN-BUILDER.
- 2. The DESIGN-BUILDER and LAWA shall work collaboratively to determine the appropriate integration of LPS with the CPM scheduling requirements herein.
- 3. The DESIGN-BUILDER shall validate the baseline schedule activities with a milestone schedule developed collaboratively with LAWA and the project stakeholders. The milestone schedule shall be developed by the project team and stakeholders and shall reflect the owner project requirements. Identified major milestones shall be broken down into manageable time frames. The work breakdown structure for the schedule should reflect this.
- 4. From the milestone schedule the DESIGN-BUILDER shall prepare a breakdown of the milestones into phases, which will be used to collaboratively plan the work activities with DESIGN-BUILDER's team.
- 5. The DESIGN-BUILDER shall collaborate with LAWA to identify all the tasks required to be completed to enable a milestone to be met. For each phase, the DESIGN-BUILDER shall facilitate a highly collaborative system of planning the work in the identified phases with the project team members that manage the day-to-day assignment of work for the phase. Project team members will include LAWA and all appropriate stakeholders.
- 6. The production plan for each phase will be created using the "pull" technique, starting with the milestone to be achieved and work toward the start of a particular phase, look-ahead plan or weekly work plan. The project team will work together to optimize the opportunity to design the production system or align the design of the production system with the BIM model.
- 7. As phase plans are developed, the DESIGN-BUILDER shall use the plans to build or validate the project schedule and transfer the plans to the project schedule as needed. This should be performed as soon as possible to ensure milestones dates are maintained and the schedule is current for monthly reporting.

H. Six Week Look Ahead Plan

1. The DESIGN-BUILDER will develop a six week look-ahead plan (or weekly work plan as referenced in the Last Planner® System) that identifies completed work items necessary so that assignments can be made and work can be completed as planned for each task and is to be submitted by the DESIGN-BUILDER on a weekly basis, prior to the weekly progress meeting. Each weekly work plan shall be derived from the corresponding phase plan.
 - a. The six-week look-ahead plan shall reflect the progress achieved in the previous week and forecast six weeks of planned progress. DESIGN-BUILDER must include in the six-week look-ahead at a minimum thirty (30) days' notice for upcoming ASR and Utility Shutdown Request (USR). DESIGN-BUILDER must also factor the LIR approval process as applicable.
 - b. The six week look-ahead plan activities shall be generated from the latest accepted current schedule update using Primavera Project Management. DESIGN-BUILDER shall use a spreadsheet format to further detail the look-ahead plan. The project superintendent may add additional activities not included in the latest accepted current CPM schedule update, using the given CPM Activity ID with additional descriptors and detail to improve planning and coordination of engineering and construction. All activities, in the look-ahead shall relate back to the current project CPM by Activity ID(s) even in the case where it may be for information only. Any additional detailed activities will have their activity ID's become an extension of the parent activity. As an example; an activity for Form/Reinforce/Place concrete may have the activity ID of FRP1400. This activity would then become FRP1400.10 Form Concrete and FRP1400.20 Reinforce Concrete and finally FRP1400.30 Place Concrete. Location characteristics would be applied for clarity and unique verification of the work to be performed. Necking of the activity bars will be used to clearly depict work days and non-workdays. The detail of this application and format is to be discussed with LAWA at the project kickoff scheduling meeting.
 - c. The inclusion of projected work for each day of the planned work and total float is required in the six week look-ahead plan for all forecasted and completed activities would be actualized with start and completion dates. Each activity should reflect the Activity ID, activity description and total float from the current accepted project schedule and planned/actual start and finish dates for every activity. Any change the current accepted schedule dates will be reported during the weekly coordination meeting.
 - d. The six week look-ahead shall include a safety risk assessment which identifies any potential hazards and include the activities necessary to ensure a hazard-free work environment.
 - e. The six week look-ahead shall be updated weekly by the DESIGN-BUILDER utilizing information from field supervisors and shall be used to validate the phase plans.
 - f. Creation of a six week look-ahead plan is mandatory for discussion during the weekly progress meetings. The DESIGN-BUILDER shall be prepared to discuss any changes to the completion dates as related to the phase plans, milestones and current (CPM) schedule. Discussion of activity delays and mitigation of any delays to project completion milestones will be mandatory. Six week look-ahead plans generated during a given month shall be used for updating the monthly (CPM) schedule update every month.
 - g. The six week look-ahead plans shall be transmitted to LAWA at least twenty-four

(24) hours in advance of the weekly progress meeting in PDF format.

I. Percent Plan Complete

1. The DESIGN-BUILDER shall maintain a log that tracks the percent complete of the planned activities. The DESIGN-BUILDER shall identify the root cause and re-plan the upcoming tasks to maintain the milestones dates.
2. The DESIGN-BUILDER shall share the percent plan complete log with LAWA as requested.
3. The DESIGN-BUILDER shall utilize the percent plan complete log and associated root cause analyses as a basis to enable a culture of continuous improvement throughout the design-build team.

J. Monthly Schedule Updates

1. Monthly Schedule Update Review

- a. No later than the 25th of each month, the DESIGN-BUILDER and LAWA shall meet to agree on the progress of the work performed and the DESIGN-BUILDER shall update the schedule accordingly. The DESIGN-BUILDER shall incorporate and submit the approved progress percent complete into the schedule. Upon review and verification of the progress percent completed, the DESIGN-BUILDER shall submit their monthly invoice with the updated schedule. Liquidated Damages, in the amount of \$1,000. Will be assessed for each day that the updated schedule is late.
- b. The processing time frame for the monthly schedule update will be fifteen (15) days or more as may be needed depending on the complexity of the submittal.

2. Monthly Schedule Update Submittals

- a. The DESIGN-BUILDER shall submit the monthly schedule update on or before the first (1st) day of each month. Following the DESIGN-BUILDER's submittal of the monthly schedule update, the DESIGN-BUILDER and LAWA will meet to discuss the monthly schedule update and reports. The DESIGN-BUILDER's monthly schedule update will consist of an editable electronic P6 file (.xer) Schedule file transmitted via Prolog, a written narrative and various schedule reports as listed below.
- b. Along with P6 schedule and reports, the DESIGN-BUILDER shall also submit electronic MS Excel copy of pay request for further validation of approved percentages and values.
- c. Late submittal of the monthly schedule update shall be subject to liquidated damages until such time that the DESIGN-BUILDER submits a contract compliant monthly schedule update.
- d. LAWA may call for more frequent contract schedule meetings at no additional cost to LAWA. If the DESIGN-BUILDER decides to work more than one shift, LAWA may require semi-monthly schedule updates to verify the DESIGN-BUILDER's progress at no additional cost to LAWA. Certain meetings may be required at the change of shifts in the instances that work is being performed during the

commissioning process.

- e. Out-of-sequence progress shall be addressed as a change in the DESIGN-BUILDER's planned schedule and shall be corrected to be as-built for each change as it occurs within the reported progress period. Out-of-sequence progress will be deemed to be at the discretion of the DESIGN-BUILDER unless directed in writing by the LAWA. The updating of logic for out-of-sequence progress to show the as-built logic is required. Any and all changes made to logic shall be detailed in the update narrative.
- f. The DESIGN-BUILDER's monthly schedule update narrative report shall contain all of the following elements in a format and layout which is clear, easy to read and consistent from month to month. The DESIGN-BUILDER's narrative shall include, but is not limited to the following:
 1. DESIGN-BUILDER's transmittal letter
 2. Description of problem areas
 3. Current and anticipated delays
 - a. Cause of the delay
 - b. Corrective action and schedule adjustments to correct the delay
 - c. Impact of the delay on other activities, milestones, and completion dates
 - d. A detailed listing and explanation of any and all schedule changes or revisions made since the last schedule submittal organized by work area or work grouping, to include:
 - i. Identification of logic changes
 - ii. Activity duration changes
 - iii. Activity additions or deletions
 - iv. Added or deleted constraints
 - v. Change in status reflecting progress decrease from previous schedule submittal
 - vi. All changes will be accompanied by a narrative of the reason for the change
 - vii. All corrected items requested by LAWA, itemized and explained in the next update narrative
 - e. Pending items and status thereof
 - viii. Permits
 - ix. Change orders
 - x. Time extensions
 - xi. Non-compliance notices

- xii. Status of any pending recovery schedules
- 4. Description of the work planned and the work completed in the last period and a comparison in the form of percent plan complete charts (format to be approved) for each Last Planner® team. Status report of the Phasing, Milestones and Contract Completion Date(s).
- 5. Other project or scheduling concerns including any unplanned shutdowns
- 6. The tabular reports shall include the following:
 - a. Actual start dates (actual start dates should be determined from DESIGN-BUILDER's daily field reports and confirmed with LAWA's daily report).
 - b. Actual completion dates (when an activity is deemed substantially complete by LAWA, then such activity will no longer be treated as an activity affecting the critical path or successor activities on the project).
 - c. Description of the critical path and near critical paths, including for each:
 - i. Critical path report sorted by early finish and with float values.
 - ii. Critical path Gantt chart report organized by phases, levels and other applicable activity codes with tabular information on the left containing activity ID, activity name, original duration, remaining duration, percentage complete, early start, early finish, late start, late finish, total float and budgeted cost columns.
 - iii. A description of the critical activities to be performed in the next progress period.
 - d. The graphic reports shall include the following:
 - 1. Gantt chart report organized by phases, levels and other applicable activity codes with Tabular information on the left containing activity ID, activity name, original duration, remaining duration, percent complete, early start, early finish, late start, late finish, total float and budgeted cost columns. The entire project time-scale shall be visible unless otherwise approved by LAWA.
 - 2. Updated histogram depicting the total project craft workforce by discipline or trade and the DESIGN-BUILDER's craft workforce for its own forces and for each of its subcontractors for each month. The histogram shall be based upon and shall be in substantive agreement with the number of shifts and crew sizes by craft in the detailed project schedule.
 - e. These schedule reports and narratives will be reviewed in a meeting between the DESIGN-BUILDER and LAWA at the

monthly schedule review meeting to be held the first day available after receipt of the monthly schedule update.

- f. Required revisions of the monthly schedule update are due within five (5) days of notice by LAWA that a revision is required. All revisions and additions to the monthly schedule update are subject to the review of LAWA. When the proposed monthly updated construction schedule or its required revision is accepted by LAWA, it then becomes the current schedule.
- g. Provide two (2) copies of the schedule narrative report, the monthly update schedule, the master summary schedule and the Gantt chart report, the histogram.
- h. The DESIGN-BUILDER shall provide the layouts used in organizing, viewing and reporting the baseline. The layouts shall be provided electronically as an exported (.plf) file to be included with the electronic baseline schedule file submittal (.xer).
- i. If the DESIGN-BUILDER fails to submit any of the update deliverables, or to meet any of the other updating requirements, for a period of thirty (30) days or more beyond the required submittal date, progress payments will be withheld until such time as the DESIGN-BUILDER submits the required update requirements.
- j. The LAWA review and acceptance of schedules does not waive any contract requirements and does not relieve the DESIGN-BUILDER of any obligation or responsibility for submitting complete and accurate information. Whereas, errors and/or omissions on schedules do not relieve the DESIGN-BUILDER from finishing all work within the time limit specified for completion of the contract. If, after a schedule has been accepted by LAWA, either the DESIGN-BUILDER or LAWA discovers that any aspect of the schedule has an error or omission, the DESIGN-BUILDER must correct it on the next updated schedule.

K. Recovery Schedule

- 1. A Recovery Schedule is required along with the submission of a monthly Progress Schedule Update if the monthly Progress Schedule Update shows a delay of more than two (2) weeks to the Contract Milestones. The Recovery Schedule will be a separate submittal from the monthly Progress Schedule Update. The separate submittal may be waived by LAWA if it has been determined that the current schedule is acceptable and/or only minor changes in the current schedule are necessary.
- 2. As part of this submittal, the DESIGN-BUILDER shall provide a written narrative explaining each action and schedule revision made to recapture the lost time.
- 3. If the revisions include sequence changes, provide a "fragnet" schedule diagram comparing the original sequence to the revised sequence of work.
- 4. Once accepted, the recovery revisions and the recovery schedule file will become the

current schedule. Receipt of an acceptable recovery schedule within ten (10) days of written notice by LAWA is a condition precedent for monthly progress payment.

5. If the revisions are not accepted by LAWA, LAWA's comments will form the basis for resubmission of the recovery schedule.

L. Time Impact Analysis (TIA)

1. The DESIGN-BUILDER shall submit a detailed Time Impact Analysis (TIA) to support any request for time extensions. The principles, definitions and terms used herein for a TIA shall be as set forth in the AACE International Recommended Practice No. 52R-06 publication "Time Impact - As Applied In Construction," October 19, 2006. Basis for evaluation of any time extension shall be made with the use of the current schedule or the current schedule accepted prior to the time period in review. The current schedule is the latest LAWA accepted schedule and must contain all corrections requested by LAWA. A current schedule that was accepted as noted cannot be used unless all items noted have been addressed. The DESIGN-BUILDER shall provide justification for the time extension in a change request. This request shall include a narrative explaining the analysis. This TIA will be supported by fragnets created to demonstrate the effect of specific delays to the current schedule critical path as they occur. Each fragnet will consist of a sequence of the new activities and/or network revisions that are proposed to be added to the existing Schedule to illustrate the effect and method for incorporating actual delays as they are encountered.
2. While preparing the TIA, the DESIGN-BUILDER shall make the best of efforts to follow industry best practices.
3. The contemporaneous TIA will be based on the current accepted schedule prior to the proposed delay event. The schedule shall include time extensions approved, existing job conditions, the degree of physical progress achieved at the time a delay occurs, the specific facts of the delay issue, and the availability of labor, equipment and material.
4. Each TIA package shall contain the following:
 - a. Narrative that includes:
 1. Description of whether the delay is excusable or compensable;
 2. Description of the merit of the delay based on the contract documents;
 3. When the delay was first encountered;
 4. Why the delay cannot be easily mitigated without added cost to the DESIGN-BUILDER and what are the approximate costs to mitigate the delay;
 5. How the delay affects the critical path;
 6. How the DESIGN-BUILDER plans to construct/perform the additional work;
 7. How the DESIGN-BUILDER determined the durations for delay activities.
 - b. Plot of the critical path with the inserted delay fragnet.
 - c. A TIA will be required for each delay as it occurs. If more than one (1) delay occurs during the progress period in question, all delays shall be analyzed for that period in one submittal package. Do not separate TIAs that occur in the same period as the proposed impacts must be addressed for concurrency.

LAWA reserves the right to reject the TIA package in the event the DESIGN-BUILDER does not comply with this section.

- d. The Schedule can be accepted when one or more of the following occur:
 - 1. When a change order affects the contract completion date or sequence of items of the work;
 - 2. When the DESIGN-BUILDER requests and LAWA accepts a sequence or duration change of work items affecting the critical path/controlling operation;
 - 3. When LAWA directs a change that affects the milestone date(s) specified in the contract or alters the length of a critical path;
- e. If an agreement cannot be reached on changes to the contract schedule or the DESIGN-BUILDER has failed to submit revisions to the network, the DESIGN-BUILDER's request will be denied.

M. Time Extensions

- 1. If the DESIGN-BUILDER is granted an extension for the time of completion of any milestone or DESIGN-BUILDER completion date under the provisions of the contract, the determination of the total number of calendar days of time extension will be based upon LAWA's analysis of the schedule and upon all data relevant to the extension including the DESIGN-BUILDER's TIA and percent plan complete log and variance reports. Such data shall be incorporated in the next monthly update of the schedule.
- 2. The DESIGN-BUILDER acknowledges and agrees that delays in work items which, according to LAWA's schedule analysis, do not affect any milestone dates or the contract completion date shown on the schedule at the time of the delay, will not be the basis for a contract extension.
- 3. Float is not the property of the DESIGN-BUILDER and shall be shared with LAWA as an expiring resource available to all parties as needed to meet the contract completion date. In the event that the schedule is forecasting a late completion date, and the critical path is showing negative float, only those activities with the largest negative float will be considered critical (controlling) and constitute the critical path. Where two (2) or more concurrent activities each have negative float, the activity with less critical float will not be considered to be on the critical path.
- 4. The most current accepted schedule update will be the basis of evaluating concurrent delays on the critical path. A non-compensable time extension will only be granted when it is determined that concurrent delays have occurred on the critical path (the longest path). No time extension shall be granted for any concurrent delay that is not on the critical path in the current update.

N. As Built Schedule and Documentation

- 1. Prior to final release of retention, and after all contract work items are completed, the DESIGN-BUILDER shall submit an "as-built" contract schedule (Schedule Data Disks, Reports, and Plots) showing actual start and finish dates and actual logic used for all milestones, and actual expenditures of labor and costs.
- 2. The "As-Built Schedule" will be accompanied by a narrative report titled "Final Schedule Report" which provides an overview of the schedule and LPS process, provides the history of changes to the schedule and the resulting changes to milestone dates, discusses major schedule variances (including labor and cost variances), and

identifies any outstanding schedule issues.

3. DESIGN-BUILDER to transmit As-Built schedule package via Prolog.
4. The DESIGN-BUILDER shall support the "As-Built Schedule" and "Final Schedule Report" with a letter on the DESIGN-BUILDER letter head that confirms all information in the "As-Built Schedule" is truthful and accurate pertaining to start and finish dates, as-built logic, cost and resource loading and final schedule report. The accompanying letter shall be signed by an officer of the managing entity of the DESIGN-BUILDER.

O. Other Schedule Submittal Requirements

1. The DESIGN-BUILDER shall coordinate schedule submittals to avoid concurrent submittals to maximum extent possible. Where concurrent schedule submittals cannot be avoided, the DESIGN-BUILDER shall increase review time as required, to allow for LAWA's review.
2. Where submittal is concurrent with or overlaps submittals currently being reviewed, the DESIGN-BUILDER shall indicate priority of each outstanding submittal.
3. Following corrections resulting from LAWA's response to its initial submittal, the DESIGN-BUILDER shall print and distribute copies to LAWA, subcontractors, and other parties required to comply with submittal dates indicated.
4. The DESIGN-BUILDER shall post copies of the current milestone schedule in the project meeting room and temporary field office.
5. When revisions are made, the DESIGN-BUILDER shall distribute to the same parties. Parties shall be deleted from distribution when they have completed their assigned part of work and are no longer involved in construction activities.

END OF PR-04 SCHEDULING OF THE WORK

PR-05 ALLOWANCES

1. GENERAL

- A. Allowances have been set aside for certain services and/or materials that may be required by LAWA to complete the Project, but for which definitive scopes cannot be determined until a later time or where a specific LAWA-selected vendor or consultant may be required to perform specialized work. The stipulated Allowance amounts included in the Contract will be used, as authorized by LAWA, to pay for these certain services and/or materials as they become defined through discovery or design. LAWA reserves the right at its sole discretion to authorize, make changes or modifications to the scope of work described herein and to proceed with all or only some of them. DESIGN-BUILDER shall not assume use or access to any allowance.
- B. LAWA may request the DESIGN-BUILDER to prepare and submit Proposals (including a proposed scope, schedule, and budget) to provide additional services and/or materials, to be funded by these Allowances. If the Proposals are acceptable, in whole or in part, LAWA may issue Task Orders to DESIGN-BUILDER to provide those additional services and/or materials, to be paid out of these Allowances.
- C. LAWA may choose to use some of these Allowances to directly fund one or more third parties (i.e. other City Departments, other Contractors, Utility Companies, etc.). All allowances used to directly fund a third-party shall remain outside of the Contract Value, and the DESIGN-BUILDER shall not be entitled to any costs, fees, markups, or any other form of payment whatsoever for these Allowances.
- D. LAWA may choose to not use these Allowances, in whole or in part. All unused allowances shall remain outside of the Contract Value, and DESIGN-BUILDER shall not be entitled to any costs, fees, markups, or any other form of payment whatsoever for these unused allowances.
- E. The Allowance will also be used to reimburse the DESIGN-BUILDER for the actual cost of the scope of work as identified below.
 - 1. All price quotes are for the scopes of work requested by LAWA for each allowance item of work shall be provided to and approved by LAWA prior to the DESIGN-BUILDER proceeding with the work. The DESIGN-BUILDER shall provide price quotes within twenty-one (21) days of receipt of request by LAWA.
 - 2. Price quotes shall be provided in a format that clearly itemizes all design fees, labor quantities and labor rates, material quantities and material rates and equipment costs to perform the work of the allowance. Any work performed by subcontractors to the DESIGN-BUILDER shall also be itemized as above. Price quotes shall be obtained from LAWA-approved contractors and/or vendors by the DESIGN-BUILDER in a format that clearly itemizes all design fees, preconstruction services, labor quantities and labor rates, material quantities and material rates and equipment costs to perform the allowance scope of work. Any work performed by DESIGN-BUILDERS to LAWA selected contractor and/or vendor shall also be itemized as above.

3. LAWA will approve all allowance items of work by issuance of a task order prior to the DESIGN-BUILDER proceeding. The task order will clearly define the allowance item scope and agreed to amount. In the case where time is of the essence or the price quote provided by the DESIGN-BUILDER is unacceptable to LAWA; LAWA may direct the DESIGN-BUILDER to proceed with the allowance work by issuance of a task order on a Time and material basis, as prescribed in general condition, payment procedures.
4. If approved in writing by LAWA, stipulated amounts for an individual allowance line item may be utilized to fund an increase in the stipulated amount of different individual allowance line items.

2. ALLOWANCE - SCOPE

- A. Agency Permits: This allowance covers the costs for the DESIGN-BUILDER to procure all required permits, approvals, and licenses prior to the commencement of the related Work. The allowance covers the actual cost of the permits and plan check fees from regulatory agencies only.
 1. Under this Allowance item, the DESIGN-BUILDER shall be compensated only for the actual permit fees for procuring of all building and construction permits required by the City of Los Angeles and other agencies. All costs associated with any administrative work to fill out and/or to process said permits and copies will not be compensated for under this Allowance and shall be considered incidental. Payment under "Permit Allowance" item will be made only for the actual permit fee and invoice paid for by the DESIGN-BUILDER for work associated with this project. The DESIGN-BUILDER shall provide proof of payment for all permit fees.
- B. Differing Conditions: This allowance provides payment for changes in the various work area / phases or scope of work as directed by LAWA to mitigate differing field conditions. The scope of this work under this allowance includes, but is not limited to: additional demolition, mitigation of unforeseen utilities, relocation and construction of necessary infrastructure to mitigate miscellaneous unforeseen conditions as directed by LAWA. This allowances also includes additional potholing and site investigations that may be necessary and unless otherwise has not been identified in the DESIGN-BUILDER's contract documents and are not already included as part of the DESIGN-BUILDER's base scope of work and GMP/CGMP.
- C. Environmental and Hazardous Materials Mitigation: This allowance provides for payment for procurement of a qualified hazardous material subcontractor and/or contaminated soil remediation subcontractor for testing, removal and abatement as necessary and as directed by LAWA. This allowance may be utilized for testing and treating of potentially hazardous materials, contaminated soil and asbestos containing material that may be encountered during construction which have not been identified in the DESIGN-BUILDER contract documents and already included as part of the DESIGN-BUILDER's base scope of work. This allowance may also be utilized for procurement of specific LAWA selected vendors or consultants for testing and monitoring services.
- D. Additional Traffic Control Measures including Traffic Flagging: This allowance provides for payment to the DESIGN-BUILDER for additional LAWA directed traffic measures beyond those required by the approved traffic control plan or by the AHJs, and unless otherwise has not been identified in the DESIGN-BUILDER's contract documents and are not already

included as part of the DESIGN-BUILDER's base scope of work and GMP/CGMP. This allowance also includes additional sweeping found to be needed.

- E. Additional Signage: This allowance is for payment of additional new signs and/or modifications to existing signs, both permanent and interim in nature deemed necessary by LAWA, at its sole discretion, and unless otherwise has not been identified in the DESIGN-BUILDER contract documents and are not already included as part of the DESIGN-BUILDER's base scope of work and GMP/CGMP. These signs include but are not limited to signs needed for pedestrian and vehicular wayfinding, signs needed to support operational flexibility, communicate identity, status of airport conditions and directional information, regulatory information or any other information determined by LAWA to be necessary. Signage paid for from this allowance may include, but is not limited to static, dynamic, and digital sign types, such as large format overhead roadway signs, pedestrian wayfinding pylons, monument signs and any other sign types determined necessary and appropriate by LAWA. This allowance may be used for payment of sign support structures, structural supports, foundations, power and data infrastructure and any other miscellaneous work which may be required for the installation and operation of new and/or existing signs.
- F. Replacement of Unsuitable Paving Subgrade: This allowance provides for the excavation and replacement of sub-grade materials that may include soils not complying with the compaction and other soil tests specified by the AHJ during execution of the work and unless otherwise has not been identified in the DESIGN-BUILDER's contract documents and are not already included as part of the DESIGN-BUILDER's base scope of work and GMP/CGMP.
- G. Partnering:
 - a. This allowance provides for payment for the DESIGN-BUILDER to engage LAWA approved professional facilitator(s) to conduct training sessions related to project partnership and advanced management techniques such as Lean Construction methods. The cost of a professional facilitator and associated training sessions and subsequent workshops, excluding DESIGN-BUILDER staff labor charges and travel expenses, will be shared between the DESIGN-BUILDER and LAWA and paid from this allowance.
 - b. No DESIGN-BUILDER overhead and fee mark-ups shall be added to the cost. The DESIGN-BUILDER shall provide LAWA with an initial estimate of the cost of the training sessions, excluding DESIGN-BUILDER staff labor charges and travel expenses. Upon authorization from LAWA, Design /Builder will commence with the training and review session activities and will provide LAWA with receipts for all eligible allowance costs.
- H. Project Management Office (PMO): This allowance provides for payment of costs associated with the construction, furnishing, and maintenance of the Project Management Office (PMO) for the Design-Builders/LAWA/City Staff, Project Site Field Office, etc. unless otherwise has not been identified in the DESIGN-BUILDER's contract documents and are not already included as part of the DESIGN-BUILDER's base scope of work and GMP/CGMP.
- I. Laydown Area Rental: This allowance provides for payment of laydown area rental costs for the Project which have otherwise not been identified in the DESIGN-BUILDER's contract documents and are not already included as part of the DESIGN-BUILDER's base scope of work and GMP/CGMP.
- J. Enabling: This allowance provides payment for the DESIGN-BUILDER to complete enabling work necessary to procure long-lead items, utility-relocations, install temporary roadways, and/or other early / enabling work, etc. prior to developing a future GMP/CGMP Proposal.

- K. Insurance: This allowance provides payment for fixed premiums for Project insurance with coverage, limits, and deductibles as approved by LAWA.
- L. Schedule Allowance: The Schedule Allowance includes (30) days of contract time and associated General Conditions costs and may be utilized at the sole discretion of LAWA.
- M. Additional Relocation of Functional Operations: Work associated with this allowance includes additional relocation of LAWA and/or tenant operations, concessions, airlines, tenants and other functional operations as required by LAWA. This includes, but is not limited to planning, design, preconstruction and construction services related to the work.
- N. Cultural Monitoring: This allowance provides for payment for procurement of qualified Archeological and/or Paleontological monitors as required under the Archeological Treatment Plan (ATP) and the Paleontological Management Treatment Plan (PMTTP), and Tribal Monitor Contractor for monitoring of earthwork operations as required for excavations that are 5' below grade and 10' below for paved surface and as necessary and as directed by LAWA. This allowance may also be utilized for procurement of specific LAWA selected Cultural/Paleontological/Archeologist/Tribal Monitors or consultants for inspection, escort services, and monitoring services.

ALLOWANCE TABLE		
Item	Allowance Type	Amount
A	Agency Permits	\$200,000
B	Differing Conditions	\$6,000,000
C	Environmental and Hazardous Materials Mitigation	\$6,000,000
D	Additional Traffic Control Measures including Traffic Flagging	\$5,000,000
E	Additional Signage	\$500,000
F	Replacement of Unsuitable Paving Subgrade	\$500,000
G	Partnering	\$250,000
H	Project Management Office (PMO)	\$6,799,013
I	Laydown Area Rentals	\$3,850,000
J	Enabling	\$6,000,000

K	Insurance	\$23,200,000
L	Schedule Allowance	\$8,000,000
M	Additional Relocation of Functional Operations	\$500,000
N	Cultural Monitoring	\$950,000
	Total Allowances	\$67,749,013

END OF PR-05 ALLOWANCES

PR-06 CONSTRUCTION SITE OFFICES/FIELD FACILITIES AND LAYDOWN AREA**1. GENERAL SITE RESPONSIBILITIES**

- A. DESIGN-BUILDER shall assume sole and complete responsibility for the project site in accordance with the contract (GC-40). This includes full responsibility for safety, security, cleanliness, FOD-control, dust-control, Storm Water Pollution Prevention, maintenance, etc. at all construction sites, offices, storage and laydown areas, airside haul routes, employee parking areas, etc.
- B. DESIGN-BUILDER shall identify all necessary and available areas required for the project in its phasing and logistics plans (PR-02 Project Management and Coordination) prior to establishing any CGMP or GMP. This includes, but is not limited to, the size and location of these areas, start and end dates of their use, haul routes, access plans, work schedules, etc.
- C. DESIGN-BUILDER shall submit an Area Shutdown Request (ASR) to LAWA's Shutdown Control Center (SCC) at least 30 days in advance of moving into - and/or working within - any area on LAWA property.
- D. LAWA will issue a "Site Turnover" letter to notify the DESIGN-BUILDER when responsibility for an area is transferred from LAWA to the DESIGN-BUILDER. These responsibilities will remain in effect during working-hours and non-working hours, unless otherwise specified by LAWA.
- E. DESIGN-BUILDER shall provide graffiti and vandalism control throughout all stages of the project. DESIGN-BUILDER shall keep all equipment, offices, storage facilities, and other facilities at the site free of graffiti and vandalism. Graffiti shall be painted over, masked, or cleaned off within twenty-four (24) hours after discovery and/or notification by LAWA.
- F. DESIGN-BUILDER shall restore all areas of the Site to a condition equal to or better than the condition of the areas prior to the start of construction.

2. DESIGN-BUILDER'S CONSTRUCTION FIELD OFFICE

- A. The DESIGN-BUILDER shall provide a construction field office in the DESIGN-BUILDER's staging and laydown area for LAWA's sole use. Any other construction site field offices needed by the DESIGN-BUILDER for his/her use shall be supplied by the DESIGN-BUILDER however, they shall be located within the staging and laydown area site.
- B. The Construction site field office shall be located in the DESIGN-BUILDER's staging and laydown area. Installation of the construction field office, including all permit, furnishings, equipment, and utilities shall be completed by the DESIGN-BUILDER within sixty (60) days of the NTP, or unless otherwise directed by LAWA, and shall be maintained by the DESIGN-BUILDER through the duration of the project. The DESIGN-BUILDER is responsible for the installation and maintenance, including any direct or incidental expenses related to power and telecommunications line between field office(s) and point of service as well as the maintenance, use, and upkeep for the duration of the project. The DESIGN-BUILDER is responsible for temporary power and telecommunications service being installed and operational within sixty (60) days from the NTP, or unless otherwise directed by LAWA. The DESIGN-BUILDER is responsible for ensuring that the construction site field office(s) are properly permitted (including but not limited to plumbing permits).
- C. The DESIGN-BUILDER's staging and laydown area and access thereto shall be kept neat

and orderly throughout construction and all deficiencies in the maintenance of this area shall be promptly corrected by the DESIGN-BUILDER. The site shall be restored to a condition equal to the condition prior to the start of construction and equal to the condition of areas adjacent to the site and as approved by LAWA. Stockpiling of any material in this area will not be permitted without prior approval of LAWA.

- D. The Construction Field Offices for LAWA use shall remain on-site and available to LAWA throughout construction, and through project closeout. Windows shall be provided with security bars. All doors and windows shall be provided with screens, blinds, and locks. All exterior doors shall have a smart key card entry system.
- E. The DESIGN-BUILDER shall work directly with utility-providers to provide connections, meters, and service for electrical, telecommunications, internet, water, sewer, storm drain, and other utilities required for the Construction site field office.
- F. Electric power shall be provided to include a minimum of four (4) 110-volt a/c duplex electric convenience outlets. At least one such outlet shall be located on each wall. The electrical distribution panel shall provide not less than two (2) circuits providing 110-volt, 60-Hertz service.
- G. Lighting shall be provided for office to provide illumination at the tables and desk at a level of 100-foot candles. An outdoor lighting fixture shall be provided at each door at level of 1000-foot candles.
- H. Heating and air conditioning of sufficient capacity shall be provided at no expense to LAWA to adequately control the temperature at all times.
- I. The DESIGN-BUILDER shall provide integral sanitary facilities within office for the sole use of office personnel. Sanitary facilities shall include a water closet and washbasin with hot and cold potable running water. DESIGN-BUILDER to obtain sanitary sewer permit and provide connection to sanitary sewer or equip trailers with holding tanks that will be maintained daily. Each restroom shall be provided with liquid soap and dispensers, toilet paper and dispenser, toilet seat covers and dispenser, paper towels and dispenser, waste baskets, industrial first aid kits with eye washers, and continuous on-going supply of all disposable goods.
- J. Extended area, non-coin-operated telephone service shall be provided within the office area. DESIGN-BUILDER shall be responsible for telephone service installation and installation fees. The installation shall include sufficient extension cord to serve the plan table and desk. Telephone system shall include voice mail accessible from outside phone line and shall accommodate keying in sufficient number of digits to allow access to outside voice mail by name or by number. System specifications must be submitted for LAWA review and approval, including connection fees, usage fees, and full maintenance.
- K. Construction field offices for LAWA and city standards personnel shall be equipped with the furniture, services, and equipment listed below. All furniture, services, cleaning, and equipment will be maintained by the DESIGN-BUILDER upon issuance of the NTP and continue through the duration of the project at no additional expense to LAWA.

Furniture, Services and Equipment⁵	LAWA Inspection	LAWA CM	City Standards	Conference Room/ Shared Area
Quantity				
Minimum square feet of floor area ¹	3,513 SF	12,101 SF	2,766 SF	4,926 SF
Full height partitioned office ² with lockable door. (120 SF minimum)	7	12	2	-
Commercial Internet Service Access Point: Design-Builder shall provide a minimum of 1000 Mbps (1 Gbps) of symmetric data throughput, with the capability to scale up to 2000 Mbps (2 Gbps) or higher based on provider availability and future needs. Equipment to be provided (e.g., antennas, modems) shall support Wi-Fi 6 or Wi-Fi 6E standards to optimize internal network performance.	-	-	-	2
New Printer/Copier/Scanner machine (plain paper) with stand, Model RICOH IM C4500 or approved equal. The DESIGN-BUILDER shall pay for all costs including supplies, staples, hole punching, activation and service fees for duration of the Project	1	2	1	-
New Plotter machine. The plotter shall be a Model HP XL 4100, or approved equal. The DESIGN-BUILDER shall pay all costs, including supplies, activation and service fees for duration the Project	-	1	-	-

Notes:

1. Reference Exhibit PR-06.1: City Bus Lot Concept drawing for layout and floor plans.
2. All Offices shall have a locking door and include the following furniture: desk with 3 drawers, adjustable chair (Herman Miller Aeron or approved equal), telephone service, internet service connection, power outlets, lighting, waste basket, bookshelf, and dry erase board. Phones shall be Cisco model CP-8851-K9.
3. All cubicles shall include the following furniture: desk with 3 drawers, adjustable chair (Herman Miller Aeron or approved equal), telephone service, internet service connection, waste basket, reading lamp, and dry erase board. Phones shall be Cisco model CP-8851-K9.
4. EV Charging Stations shall be Enphase Model HCS-40R-C17-L25-A141-170-2 or approved equal. Quantity includes charging stations for DESIGN-BUILDER office staff.
5. All equipment, services and items are subject to change and shall be submitted to LAWA for review and approval prior to purchase. Site Field Office design plans and specifications shall be submitted to LAWA for review and approval prior to construction.

3. CONSTRUCTION SITES AND TEMPORARY FACILITIES

- A. DESIGN-BUILDER shall provide and maintain all necessary fences and barricades to ensure the safety and security of the Site, and to contain and/or mitigate impacts to the surrounding operations (noise, vibration, dust, debris, storm water, etc.)
- B. DESIGN-BUILDER shall control and monitor all persons, vehicles, and equipment entering and exiting their construction sites at all times.
- C. DESIGN-BUILDER shall not deliver equipment and/or materials to the construction site until they are ready for installation and/or use. Equipment and materials located on the site, but not being used, shall be left in the work area or at locations to be designated by LAWA. All equipment and material that is no longer needed shall be removed immediately from the site.
- D. DESIGN-BUILDER shall provide and maintain enclosed toilets for the use of employees engaged in the Work. These accommodations shall be maintained in a neat and sanitary condition, and regularly maintained.

4. DESIGN-BUILDER'S EQUIPMENT AND FACILITIES

- A. The DESIGN-BUILDER shall furnish and maintain in good condition all equipment and facilities as required for the proper execution of the work.
- B. The DESIGN-BUILDER shall provide and maintain enclosed toilets for the use of employees engaged in the work. These accommodations shall be maintained in a neat and sanitary condition and regularly pumped out if holding tanks are used.
- C. Storage of equipment and materials left overnight shall be in the DESIGN-BUILDER's staging area or the area designated by LAWA. Areas adjacent to the construction may be made available for temporary use by the DESIGN-BUILDER without cost whenever such use will not interfere with other purposes. Designated areas may be used only for equipment and materials specifically for the use of the Project. The DESIGN-BUILDER shall be liable for any damage caused to such premises or areas. The DESIGN-BUILDER will be responsible for properly securing and safeguarding all equipment and materials stored.
- D. The DESIGN-BUILDER shall restore the operations and storage Yard and adjacent areas to their original or an improved condition prior to final acceptance of the project, or at the discretion/option of LAWA and any AHJ, left in place at completion of the project and ownership shall thereupon be vested to the city.

- E. Equipment and materials shall be stored off the Site or on site locations provided by LAWA until they are to be used on the project. Equipment and materials located on the Site, but not being used, shall be left in the work area or at locations to be designated by LAWA. All equipment that is no longer needed shall be removed immediately from the Site. All other operations of the DESIGN-BUILDER shall be confined to the areas authorized or approved by LAWA.
- F. Graffiti and vandalism control. Throughout all phases of work, including suspension of work, and until final acceptance, the DESIGN-BUILDER, at its sole expense, shall keep all equipment, field offices, storage facilities, and other facilities at the Site free of graffiti and vandalism. Graffiti shall be painted over, masked, or cleaned off within twenty-four (24) hours after notification by LAWA.

5. TEMPORARY UTILITIES

A. Electrical Service

- 1. Provide lighting and power for field offices, storage facilities and other construction facilities and areas.
- 2. Provide power centers for electrically operated and controlled construction facilities including tools, equipment, testing equipment, interior construction lighting, heating, cooling and ventilation equipment.
- 3. Provide night security lighting at secured areas within construction limits at offices, storage facilities, temporary facilities and excavated areas.
- 4. Provide battery operated or equivalent emergency lighting facilities at construction areas where normal light failures would cause employees to be subjected to hazardous conditions. Test such facilities monthly and maintain a record of these tests for the project manager's review.
- 5. Bear all costs of temporary electric and water service permits, fees and deposits required by the governing authorities, and connection charges and temporary easements including installation, maintenance and removal of equipment.

B. Water Service

- 1. The DESIGN-BUILDER shall make all connections and extensions required and shall make use of water in direct support of the work. The DESIGN-BUILDER shall install an approved water department tap at the wye's water source prior to obtaining any water. The DESIGN-BUILDER shall arrange and pay for its supply/distribution system from the city's point of connection. The location and alignment of the DESIGN-BUILDER's temporary supply/distribution system must be approved by the project manager prior to its installation. The DESIGN-BUILDER shall leave in place all above ground and underground water distribution facilities unless otherwise directed by the project manager.
- 2. The DESIGN-BUILDER shall not use in place fire hydrants or standpipes as sources for construction water or potable water.

C. Fire Protection

- 1. Furnish, install and maintain temporary portable fire protection equipment throughout the construction period at all buildings (including the project site), maintenance shops, and fuel storage on all large construction equipment and at the location of any flammable materials or construction materials.

2. Fire Water

- A. The DESIGN-BUILDER shall implement construction phasing to maintain access to and operation of the existing fire hydrants and fire -water supply system until the new fire- water system is completed, tested, and accepted by LAWA, Los Angeles Fire Department (LAFD) and AHJ's
- B. Prior to the start of Construction, the DESIGN-BUILDER shall complete flow and pressure tests at existing fire hydrants that serve the Project Site Offices and Laydown Areas and submit these test results to LAWA. The flow tests shall be coordinated with and witnessed by a designated LAFD field representative.
- C. Any revisions to the existing fire hydrants and fire water supply systems shall be coordinated with and approved by LAWA, LAFD and AHJ's.

3. Fire Water Hydrant Access

- a) The DESIGN-BUILDER shall maintain a standard LAFD truck access to all active existing and new fire hydrants during construction. Any revisions to the access shall be coordinated and approved by LAWA and the LAFD prior to de -activating any existing fire -hydrants.
- b) A minimum width of 20' shall be maintained for LAFD truck access during construction.

6. **ATMP LANDSIDE IMPROVEMENTS LAYDOWN AREA**

- A. Unless otherwise identified in the Contract Documents, Design-Builders shall request Laydown space through LAWA's Coordination and Logistics Management (CALM) team if renting LAWA properties. Requests should be submitted according to the Logistical Work Plan section of the Design and Construction Handbook, CALM requirements in the Construction subsection:
 - 1. Cost = \$10.17/SQFT – yearly (subject to change based on periodic adjustments to fair market value).
 - 2. Contact information: John Gruendl (jgruendl@lawa.org) – 424-646-7448 or Mark Henry (mhenry@lawa.org) – 424-646-7167
- B. The monthly lease cost will be treated as a pass-through cost with no mark-up.
- C. DESIGN-BUILDER shall maintain all parking, storage and laydown areas in a neat and orderly manner throughout all stages of the Project. If LAWA reports any deficiency in the maintenance and/or condition of the areas, then the DESIGN-BUILDER shall promptly correct the issue within 24 hours. Any deficiency regarding safety and/or security shall be corrected immediately. All material and equipment shall be stored, cared for and maintained in accordance with the material or equipment manufacturer's requirements.
- D. DESIGN-BUILDER shall provide and maintain standard green mesh and fencing around the perimeter of their parking, storage and laydown areas, unless otherwise directed by LAWA.
- E. DESIGN-BUILDER shall provide sufficient off-site storage areas (i.e. not on LAWA property) procured by the DESIGN-BUILDER prior to the date in which it will be constructed and/or installed at the Project Site.
- F. LAWA is providing sites/parcels available as Laydown Areas for ATMP project as shown in Exhibit PR-06.2. The DESIGN-BUILDER shall determine the most cost-effective means to meet the project needs for laydown areas based on each phase, scope elements, and schedule.

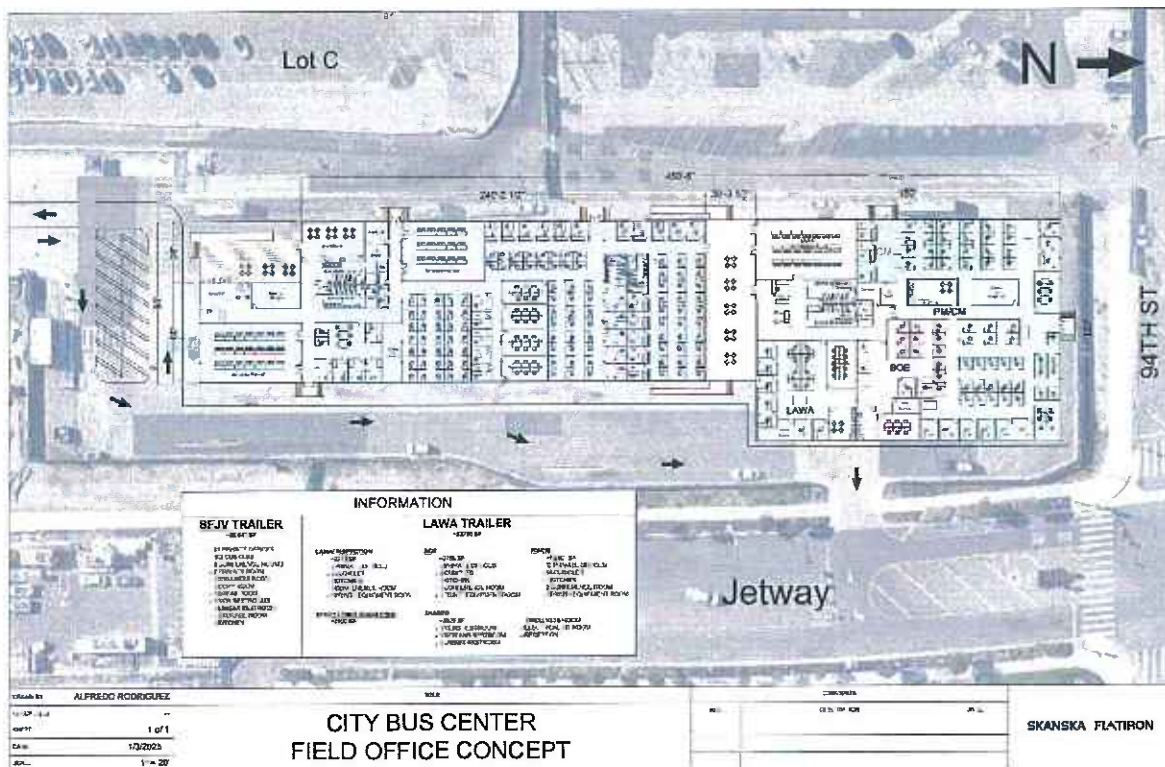

Exhibit PR-06.1: City Bus Center Field Office Concept_1-3-25

END OF PR 06 CONSTRUCTION SITE OFFICES/FIELD FACILITIES AND LAYDOWN AREA

PR-7 UTILITIES

1. GENERAL

- A. It is imperative that the DESIGN-BUILDER establishes close coordination with LAWA, and other organizations for all construction activities and for utilities system cutovers and shutdown of equipment and systems.
- B. In advance of the pre-final design submittals, DESIGN-BUILDER shall take actions necessary to establish the existence, type, exact location, and size of utilities, including service lines. DESIGN-BUILDER shall also determine existing utility material type, size, and condition of pipe at connection point, where applicable, for design purposes and as required by approving utility owner. DESIGN-BUILDER shall consider necessary appurtenances to each Utility (including utility source, guide poles, feeder service lines, supports, pull boxes, and wire loops) as part of a utility.

2. REQUIREMENTS

- A. The DESIGN-BUILDER shall avoid impacting stakeholder operations during their normal working hours. Some construction activities, including system cutovers and temporary shutdowns, will be restricted to short five (5) hour work windows scheduled between the hours of 12:01 AM and 5:00 AM (Actual shutdown times will vary due to specific system availability). DESIGN-BUILDER shall use available times efficiently, consistent with the phasing requirements of the contract, and shall include contingency and recovery plans to return systems to operation if the scheduled cutovers/shutdown work cannot be completed within the allotted time.
- B. Tasks for which the DESIGN-BUILDER will be required to complete will include, but will not be limited to:
 - 1. Review of as-builts, Navigate LA utility maps, LAWA's Airport Engineering GIS (AEGIS), system making diligent inquiries at the offices of utility providers and operators, testing, GPR and other investigative tasks as needed to identify type, route, ownership, users, and operational status of the service.
 - 2. Coordinate with, and obtain required approval from utility owners, governmental persons, authority, and other applicable third parties as necessary, for all utility work
 - 3. Dewatering of existing utility structures, as required for investigations and modifications.
 - 4. Coordination with owning and/or operating agencies and users regarding outages.
 - 5. Providing and installing or adjusting as necessary replacement ducts, cables, pipes, or other utility infrastructure if the service is to remain functional.
 - 6. Safely abandoning in place, or removing, as required by LAWA, any utility services.
 - 7. All necessary permitting or other administrative tasks as needed to safely remove and relocate the service, if operational, or to safely remove and abandon the services, if currently non-operational.
 - 8. All work shall be done in conformance with the owning agencies requirements, with these specifications, and with local, state, and federal standards.
 - 9. Provide detailed survey, including horizontal and vertical coordinates, and description of any existing utilities exposed during performance of the work in accordance with LAWA's LAX Survey Control Network 2018, located in the Design and Construction Handbook,

BIM Standards Chapter 10, under LAWA's Survey Standards.

10. All proposed utilities and exposed existing condition utilities shall be modeled and documented in accordance to VOL-2 LAWA BIM Requirements, located the Design and Construction Handbook. (See PR-21). The DESIGN-BUILDER shall provide a final Record Model at the end of the project based on field-verified (actual) conditions.
- C. The DESIGN-BUILDER shall assume full responsibility for verifying and documenting the existing conditions, to be included in design services as described in the project requirements. This includes, but is not limited to, verifying the location, depth, alignment, size, function, and condition of all existing utilities affected by and/or relevant to the proposed project. Documentation of the condition of all affected utilities shall include electronic (photographs and video) and hard copies upon request. LAWA file naming convention shall be utilized to name the electronic files. The DESIGN-BUILDER shall perform public records research, field-investigations, surveying, and other verification methods to provide thorough and accurate records of existing conditions.
- D. The DESIGN-BUILDER shall utilize the services of a Professional Land Surveyor licensed in the State of California and a subsurface utility engineering (SUE) experience person with expertise in providing utility mapping, utility coordination and utility relocation. As part of the SUE effort, the DESIGN-BUILDER shall provide surveying services to map, locate and collect data associated with subsurface and overhead utilities. In all cases, data shall be collected and depicted in accordance with LAWA Survey Standards and ASCE 38-02 Standard Guidelines for the collection and depiction of Existing Subsurface Utility Data.
- E. The DESIGN-BUILDER shall justify to LAWA where advanced technologies are required. The DESIGN-BUILDER shall perform advanced technology investigations as soon as practicable, a sufficient time in advance of 60% design to avoid possible delays to the DESIGN-BUILDER's work.
- F. The DESIGN-BUILDER shall be required to conduct exploratory excavations and potholing as required to support design. The DESIGN-BUILDER shall perform the necessary potholing and exploratory excavations as soon as practicable, to avoid possible delays to the DESIGN-BUILDER's Work.
- G. The DESIGN-BUILDER shall create and provide to LAWA a BIM model that includes all existing and proposed conditions, in accordance to PR-21 Building Information Model (BIM) and VDC Coordination.
- H. The DESIGN-BUILDER shall bring to LAWA's attention the existence of certain underground facilities that may require special precautions be taken by the DESIGN-BUILDER to protect the health, safety, and welfare of workers and of the public. Facilities requiring special precautions include, but are not limited to: fire protection systems including fire hydrants and associated underground utilities to remain in service; underground electric supply system conductors or cables, with the potential to ground more than 300 V, either directly buried or in duct or conduit which do not have concentric grounded or other effectively grounded metal shields or sheaths.

3. **AUTHORITY FURNISHED UTILITY INVESTIGATION DATA**

- A. The Authority has performed investigations of existing utilities and has provided composite existing utility drawings. The accuracy of the existing utility information and the tolerances that apply are described below.
- B. A utility shall be considered identified with "reasonable accuracy" to the extent that:

1. The utility's actual location (position) is within five feet on either side of the outside face of the existing underground utilities as depicted in Volume 2 Composite Utility Drawings. There is no limitation on vertical location;
2. The facility's actual size does not differ by more than 35 percent of the size indicated in Volume 2 Composite Utility Drawings; provided, however, that if the sizes indicated in the contract documents differ for any reason, the size closer to the actual size shall be used for this calculation:
 - a. Actual size criteria shall be measured using the utility's inside diameter (ID) measurements;
 - b. Where multi-conduit/duct or encased Utilities are encountered, the actual size shall be compared to the dimension required for encasement per the standards and criteria of the utility owner and jurisdictional governmental agencies; and
 - c. Where a duct or dry utility conduit has been identified in the contract documents with no reference to conduit size and quantity, DESIGN-BUILDER shall assume the dimension of duct/encased conduit to be a minimum of 24 inches wide by 18 inches tall;
3. The utility material is not materially different than that indicated in the composite existing utility drawings; and
4. It could have been determined based on a surface investigation of the site.
5. Notwithstanding the foregoing, DESIGN-BUILDER acknowledges and agrees that:
 - a. Existing utility information in Volume 2 composite utility drawings may not identify all Utilities within the project limits.
 - b. The existing utility information in Volume 2-Composite Utility Drawings may not show the identified utilities at their correct locations or depth or indicate their correct sizes or type; and
 - c. The Authority has performed pothole and manhole investigations of certain existing utilities and this information has been provided to DESIGN-BUILDER solely for information purposes only.

4. UTILITY LOCATION AND IDENTIFICATION GUIDELINES

- A. Attempts have been made to identify existing utilities in the various work areas of the project and to indicate existing utilities on the utility composite plan. Verification of the utilities shown on the utility composite plan shall be verified by the DESIGN-BUILDER. Due to the age of the facility, and the variety of utility agencies operating at the airport, there may be utility services discovered during construction that are not shown or differ from information shown on the utility composite plan. It will be the responsibility of the DESIGN-BUILDER to report such findings to LAWA immediately.
- B. Pursuant to Section 4216 of the Government Code, at least 2 days prior to commencing any excavation, the DESIGN-BUILDER shall contact the regional notification center (Underground Service Alert of Southern California) and obtain an inquiry identification number.
- C. In instances when working in the vicinity of state highways, the DESIGN-BUILDER shall contact CALTRANS directly for the location of its subsurface installations.
- D. The DESIGN-BUILDER shall contact utility providers after the I.D. number is obtained from

the Underground Service Alert [USA] (1-800-227-2600) but not less than fourteen (14) days before any excavation work is started, to mark or identify existing utilities. If the utility is owned by the City of Los Angeles, or the City of Ontario a confirmation number indicating that these cities have been notified shall be obtained by USA and/or the DESIGN-BUILDER from the appropriate city departments. The I.D. number together with the date acquired shall be reported to the inspector when calling for inspection.

- E. The DESIGN-BUILDER shall mark all Federal Aviation Administration (FAA), LAW A, L o s Angeles Department of Water and Power (LADWP), communication, and fiber-optic lines prior to any work in a given area, after demolition of pavements. Marking shall consist of a 36-inch high lathe, placed ten (10) feet on center, or other approved markings. Lathe shall be marked with the words "DANGER – FAA" or equivalent, and shall be affixed with red or orange surveyor tape to enhance visibility.
- F. The DESIGN-BUILDER shall determine the location and depth of all utilities, including service connections.
- G. The DESIGN-BUILDER shall expose and verify by survey, the depth and alignment of all underground utilities at the site, prior to commencing excavation. The basis of survey must tie into LAW A's LAX Survey Control Network. The DESIGN-BUILDER shall pothole and survey all utilities prior to excavation. All such exploratory excavations shall be performed as soon as practicable after the NTP for each task order and in any event, a sufficient time in advance of construction to avoid possible delays to the DESIGN-BUILDER's work. When such exploratory excavations show the utility location as indicated on the drawings to be different, the DESIGN-BUILDER shall immediately notify LAW A and shall note utilities on As-Built construction plans in accordance with all applicable standards, as required by LAW A and provide a complete Existing Conditions Model to LAW A in accordance to the LAW A BIM Standards (PR-21). The DESIGN-BUILDER should not rely upon plan designation of location of underground utilities. The number of exploratory excavations and extent of potholing required shall be that number which is sufficient to determine the alignment and grade of the utility.
- H. The DESIGN-BUILDER shall identify all existing, proposed and newly abandoned utilities in their Design Documents, Construction Documents, and BIM Models. Refer to LAW A BIM Requirements, for utilities, located in the Design and Construction Handbook. The DESIGN-BUILDER shall maintain each of those deliverables as the verification and/or construction of utilities progresses, and shall assume full responsibility for ensuring their accuracy and completeness..

5. POTHOLING

- A. DESIGN-BUILDER shall provide qualified personnel, equipment, permits, traffic control measures, and other items as required to conduct a safe and accurate field excavation to expose any existing Utility by method of potholing. **DESIGN-BUILDER acknowledges that such work is a prerequisite to completing all Utility Work design.**
- B. Potholing shall be performed at locations (i.) determined by DESIGN-BUILDER, (ii.) where required by Utility Owners and/or Governmental Persons, and (iii.) as directed by the Authority. Potholing shall include accurate survey data collection for each pothole taken. Potholing data shall be added to the design and as-built drawings prepared by DESIGN-BUILDER. At a minimum, pothole data shall include the horizontal and vertical location and size of the Utility. Where discernable, the material type of the Utility shall also be indicated. DESIGN-BUILDER shall submit to the Authority for record a log of all pothole data that is obtained, including a CAD file with all the pothole data points, per the LAW A BIM Standards,

as well as all backup information (e.g., survey measurements, notes, or sketches) that provides verification of the individual potholes.

6. NOTIFICATIONS BY THE DESIGN-BUILDER

- A. Prior to excavation in the vicinity of existing underground facilities, the DESIGN-BUILDER shall notify LAWA, and the respective authorities representing the owners and agencies responsible for such facilities, not less than three (3) days and not more than five (5) days, prior to excavation so that a representative of the owners or agencies can be present if they so desire.
- B. DESIGN-BUILDER shall notify LAWA in writing at least six (6) weeks prior to the expected started date of utility system installation or modification.
- C. DESIGN-BUILDER shall notify LAWA, in writing, at least fifteen (15) days in advance of taking any existing utility line out of service. Arrangements satisfactory to LAWA must be made prior to taking any existing utility line out of service for any purpose. The DESIGN-BUILDER shall confirm with LAWA twenty-four (24) hours prior to disconnect.
- D. The DESIGN-BUILDER shall notify LAWA, in writing, at least thirty (30) days in advance of any proposed connection and shall notify LAWA twenty-four (24) hours prior to the actual connection to any existing utility.
- E. The following includes a list of utility companies whose facilities may be impacted by this project. Inclusion on this list does not imply that the agency listed has a facility affected by the project, nor does the absence of an agency on the list imply that they do not have a facility affected by the project.

Airport Police Department (APD)		(424) 646-7911
Airport Response Coordination Center (ARCC)		(424) 646-5292

The table above is a collection of the latest known agency contact names and phone numbers. It will be the DESIGN-BUILDER's responsibility to verify this information.

7. SCHEDULE COORDINATION

Coordination of work between various utility agencies and work by the DESIGN-BUILDER shall be the sole responsibility of the DESIGN-BUILDER. Delays to the schedule due to utility agency coordination issues that, in the opinion of LAWA, could have been prevented by timely intervention and coordination on the part of the DESIGN-BUILDER will not be credited to the DESIGN-BUILDER's contract schedule requirements.

8. DEWATERING

DESIGN-BUILDER shall dewater existing utility structures as needed for utility investigations and/or completion of the work, including existing electrical and communications structures. Dewatering shall be completed in accordance with state and local requirements, and the environmental requirements of these contract documents. Refer also to PR 18.

9. UTILITY COORDINATION AND SHUTDOWN PROCEDURES AT LAWA

A. USR and ASR and LIR Procedures at LAX

1. The SCC manages all aspects of utility and area shutdowns for the LAX campus. The SCC was instituted to manage and centralize the numerous amounts of expected utility shutdowns and public disruptions due to the planned construction projects taking place throughout LAX. A utility shutdown is defined as a disruption of operations to the facility's normal utility for a set period of time. An area shutdown is defined as a disruption of operations to the facility's operational space for a set period of time. The utility shutdowns cover the following systems: electrical, water, natural gas, fuel, fire alarm, security/ACAMS, sewer, communications, HVAC and sprinklers. The area shutdowns include all landside, airside, and terminal areas which require any traffic closure, restriction to public access, elevator/escalator, restroom closures, and gate/taxiway closures. The DESIGN-BUILDER is responsible for submitting a USR or ASR to LAWA for all scheduled shutdowns. The DESIGN-BUILDER is responsible for reviewing, scheduling and coordinating all aspects of the shutdown, preferably early on with LAWA. Once submitted to the SCC, the USR or ASR is processed and approved by the SCC and the DESIGN-BUILDER is subsequently notified. A contingency plan will need to be put in place by the DESIGN-BUILDER to facilitate the disruption. The DESIGN-BUILDER will identify all actions necessary to mitigate disruptions, maintain operational readiness and execute the plan.
2. USR: The USR **must be submitted 30 days prior** to the proposed shutdown. The DESIGN-BUILDER shall submit all USR forms, including the Application, Impact Analysis and Impact Analysis Checklist. These forms will enable the primary stakeholders to be notified of the time and date of shutdown, the type of shutdown, specific location, affected systems, point of contacts, proposed work and mitigation plans. The DESIGN-BUILDER must field verify all existing conditions prior to the start of the utility shutdown. The DESIGN-BUILDER should be aware of LAWA blackout days during holiday construction restriction periods. Only LAWA is permitted to disrupt or disconnect any utility system. The DESIGN-BUILDER is responsible for contacting the Airport Response Coordination Center (ARCC) thirty (30) minutes prior to the actual utility shutdown and immediately following the utility restart.
3. ASR: The ASR **must be submitted 30 days prior** to the proposed shutdown. The DESIGN-BUILDER shall submit all ASR forms, including the Application, Impact

Analysis and Impact Analysis Checklist. These forms will enable the primary stakeholders to be notified of the time and date of shutdown, the type of shutdown, specific location and operational zone, affected parties and facilities, points of contact, proposed work and mitigation plans. The DESIGN-BUILDER must field verify all existing conditions prior to the start of the area shutdown. The DESIGN-BUILDER should be aware of LAWA blackout days during holiday construction restriction periods. The DESIGN-BUILDER is responsible for contacting the ARCC thirty (30) minutes prior to the actual shutdown and immediately following the restoration of operations. The required forms are attached hereto. Please note that the DESIGN-BUILDER must use the most current form.

4. LAWA will provide the successful bidder with the latest copies of the USR and ASR forms that shall be used for this project.
5. LIR; DESIGN-BUILDER may also be required to obtain approved LIR through LAWA CALM group.

9. PROTECTION

- A. All utilities encountered along the line of the work shall be maintained continuously in service during all the operations under the contract, unless otherwise agreed to by the utility and LAWA. Utilities shall include, but not be limited to, all above or below ground conduit, pipes, wet wells, ducts, cables, and appurtenances associated with oil, gas, water, steam, irrigation, sewer, storm drain, wastewater, air, electrical, power, instrumentation, communication, telephone, TV, and lighting systems, whether or not owned by the city. All valves, switches, vaults, and meters shall be maintained readily accessible for emergency shutoff.
- B. Where protection is required to ensure support of existing utilities, the DESIGN-BUILDER shall, unless otherwise provided, furnish and place the necessary protection at its expense.
- C. Upon learning of the existence and location of any utility omitted from or shown inaccurately on the plans, the DESIGN-BUILDER shall immediately notify LAWA in writing.
- D. Fire and police call boxes and conduits shall be protected by the DESIGN-BUILDER. Should any of these facilities be damaged by the DESIGN-BUILDER's operations, immediate notification shall be given to LAWA. Damaged facilities will be replaced by LAWA at the DESIGN-BUILDER's expense.
- E. When placing concrete around or contiguous to any non-metallic utility installation, the DESIGN-BUILDER shall:
 1. Furnish and install a 2-inch cushion of expansion joint material or other similar resilient material; or
 2. Provide a sleeve or other opening which will result in a 2-inch minimum-clear annular space between the concrete and the utility; or
 3. Provide other acceptable means to prevent embedment in or bonding to the concrete.
- F. Where concrete is used for backfill or for structures which would result in embedment, or partial embedment of a metallic utility installation; or where the coating, bedding or other cathodic protection system is exposed or damaged by the DESIGN-BUILDER's operations, the DESIGN-BUILDER shall notify LAWA and arrange to secure the advice of the affected utility regarding the procedures required to maintain or restore the integrity of the system.

- G. All new underground utility conduits shall have a minimum cover of eighteen (18) inches and shall have identifying detectable tape placed in the trench above the conduit. The detection tape shall be made of metalized foil laminated between two layers of inert plastic film, six (6) inches wide and a minimum of 4.5 mils thick, as described here:
 - 1. Safety Red = Electric and lighting conduit and cables.
 - 2. Safety Yellow = Gas, oil, steam, petroleum or gaseous materials.
 - 3. Safety Orange = Telephone, alarm, or signal cables and conduit.
 - 4. Safety Blue = Potable water or irrigation.
 - 5. Safety Green = Sewer or drain lines.
- H. The detection tape shall be placed directly above and reasonably horizontal for the full length of the conduit. For conduits with less than four (4) feet of cover, install tape four (4) to eighteen (18) inches below the subgrade surface and at least twelve (12) inches above the conduit. For conduits with more than four (4) feet of cover, install tape at least three (3) feet above the conduit.
- I. Upon completion of the Work, the DESIGN-BUILDER shall remove all enclosures or protective coverings and leave the work area in a finished condition.

10. DAMAGE TO EXISTING UTILITIES AND IMPROVEMENTS

- A. The DESIGN-BUILDER shall protect all existing utilities and improvements not designated for removal. Physical protection of utilities in proximity of pavement sections shall be provided by the DESIGN-BUILDER in all cases. Except where noted on the plans, encasement protection of utilities in proximity of pavement sections shall require prior approval of LAWA. Protection of utilities shall be as indicated on the plans or as required for DESIGN-BUILDER's operations.
- B. Any utility or improvement that is damaged by the DESIGN-BUILDER shall be immediately reported in writing to LAWA and immediately repaired to a condition equal to or better than the condition they were in prior to such damage. Repair Work shall be continuous until the utility or improvement is placed back in service.
- C. The provisions of this Subsection shall not be abated even in the event such damage occurs after backfilling or is not discovered until after completion of the backfilling.
- D. All repairs to a damaged utility or improvement shall be inspected and approved by an authorized representative of the utility or improvement before being concealed by backfill or other Work.
- E. In case of damage, which in the opinion of LAWA threatens the safety of persons or property, the DESIGN-BUILDER shall immediately make all repairs necessary for removal of the hazard. Should the DESIGN-BUILDER fail to take prompt action to this end, LAWA has the option to remove any hazard resulting from damages caused by the DESIGN-BUILDER without waiving any other rights LAWA may have, and costs will be charged to the DESIGN-BUILDER.
- F. If an existing utility or substructure was not shown in the original contract documents, but has been made known to the DESIGN-BUILDER prior to excavation, the utility or substructure shall be considered as an existing known condition. Under these circumstances, the DESIGN-BUILDER shall be responsible for protecting the utility. Damage

to a utility, which has been made known to the DESIGN-BUILDER, shall be repaired by the DESIGN-BUILDER. The DESIGN-BUILDER shall, at its own expense, satisfactorily repair damage to any known pipeline, sewer, conduit, utility, or other underground structure which may result from its operations or negligence. If it is necessary for LAWA to repair such damage, the DESIGN-BUILDER shall be billed for and shall pay the actual cost to LAWA for labor and materials plus fifteen percent (15%) administrative costs.

- G. All materials, labor, supervision and incidentals necessary to construct protections as detailed on the plans or as needed for DESIGN-BUILDER's operations will be considered incidental to the related bid items in the project.

11. REMOVAL

- A. Unless otherwise specified, the DESIGN-BUILDER shall remove all interfering portions of utilities shown on the plans as "abandoned" or "to be abandoned in place". Before starting removal operations, the DESIGN-BUILDER shall ascertain from LAWA whether the abandonment is complete. If abandoned in-place, the DESIGN-BUILDER shall identify and record all utilities. Abandonments must be done in accordance to the applicable codes and specifications.
- B. The DESIGN-BUILDER shall remove all wire from an electrical duct bank that is being abandoned and disconnect same from servicing panel. Such wire shall be disposed of at LAWA's discretion.

12. AVOIDING RELOCATIONS AND MINIMIZING OWNER COSTS

- A. In finalizing the design of the project, DESIGN-BUILDER shall consider the location of utilities and potential impact of utility work, and make good faith efforts to:
1. Avoid impacts on utilities to the extent practicable;
 2. Protect in place to the extent practicable;
 3. Minimize relocations to the extent practicable; and
 4. Minimize the potential costs and delays relating to utility work to the extent practicable.

13. RELOCATION

- A. Where the proper completion of the work requires the temporary or permanent relocation and/or removal of an existing utility or other improvement which is shown on the plans, and in coordination with the construction phasing requirements, the DESIGN-BUILDER shall at its own expense and without unnecessary delay, temporarily or permanently relocate or replace such utility or improvement in a manner satisfactory to LAWA and the owner of the utility. All cases of such temporary relocation, removal, or restoration shall be accomplished by the DESIGN-BUILDER in a manner that will restore or replace the utility or improvement, as nearly as possible to its former location, and to as good or better condition than found prior to removal.
- B. All existing utilities relocated by the DESIGN-BUILDER shall not be out of service for more than one continuous four (4) hour period, unless otherwise specified. This four (4) hour shutdown period for switch-over shall be performed at night.

- C. All relocated utilities shall be surveyed and mapped in accordance with LAWA utility as-built survey standards, data collection and recording requirements for new utility infrastructure.

14. DESIGN-BUILDER'S RESPONSIBILITY

- A. The DESIGN-BUILDER shall be responsible for performing the work without regard to any of the following:
1. Whether or not the utility was indicated on the composite utility drawings, or is indicated, whether or not the utility was identified with "reasonable accuracy" therein;
 2. Any additions or modifications that may have been made to the utility service since the proposal date
 3. The accuracy or inaccuracy of any of any other information provided by the Authority concerning the utility

END OF PR-7 UTILITIES

PR-08 REQUESTS FOR INFORMATION

1. GENERAL

This Section covers general requirements for both the DESIGN-BUILDER's and Owner's Requests for Information (RFI).

2. REQUIREMENTS

- A. The DESIGN-BUILDER shall prepare and transmit all RFIs and associated documents promptly and in conformance with the approved project schedule so as not to delay the progress of the work.
- B. The DESIGN-BUILDER shall transmit all RFIs and associated documents to LAWA electronically using LAWA's Prolog database or other LAWA project manager software.
- C. The DESIGN-BUILDER shall continue all work necessary to maintain project progress while waiting for LAWA to reply to a RFI, unless otherwise directed by LAWA in writing.

3. DESIGN-BUILDER'S REQUESTS FOR INFORMATION

- A. The DESIGN-BUILDER's Engineer of Record (EOR) shall be the primary reviewer and responder of RFIs from the DESIGN-BUILDER's construction staff and/or their subcontractors.
- B. The DESIGN-BUILDER shall review and sign all RFIs and responses prior to submitting to LAWA to verify conformance to the contract.
- C. The DESIGN-BUILDER shall log all RFIs and responses into LAWA's Prolog database or other LAWA project manager software within three (3) working days of receipt of the RFI or response.
- D. LAWA will review the RFIs and responses for informational purposes only, and shall have no responsibility for RFI content, responses or approval of RFIs between the DESIGN-BUILDER and their Designers and/or Subcontractors.
- E. The DESIGN-BUILDER shall submit RFIs to LAWA for LAWA's response when one or more of the following conditions apply:
 - 1. The DESIGN-BUILDER requires formal clarification of the content and/or requirements in one or more of the contract documents and/or reference documents provided by LAWA.
 - 2. The DESIGN-BUILDER would like to formally propose a clarification to their plans and/or specifications after the associated CGMP or GMP has been established, and/or changes that have the potential to affect their conformance to the contract documents.
 - 3. An unforeseen condition or constructability issue arises requiring LAWA's input.
- F. The DESIGN-BUILDER and their subcontractors shall submit all RFIs in a timely manner so as not to interfere with or impede the progress of the work.
- G. The DESIGN-BUILDER shall submit any RFI requiring LAWA's response as follows:
 - 1. Submit a legible written request on a form provided by LAWA or on a form approved in advance by LAWA. Include the following information:

- a. Project Name (including GMP and/or CGMP package number)
 - b. Date of submittal to LAWA.
 - c. Date that the DESIGN-BUILDER identified the condition requiring the RFI.
 - d. Name, address, telephone, and email address of the DESIGN-BUILDER.
 - e. Contract and/or reference documents (i.e. Specification section and/or page numbers, drawing sheet numbers, detail numbers, etc.).
 - f. Clear, concise explanation of information or clarification requested.
 - g. Desired response date.
 - h. Proposed solution.
2. Each page of each attachment to the RFI shall bear the project title and RFI number in the lower right corner.
 3. Each RFI shall be identified by sequential numbering. Multiple questions within a single RFI shall be numbered sequentially within.
 4. DESIGN-BUILDER shall allow a minimum of five (5) working days for LAWA's response to each RFI.

4. LAWA'S REQUEST FOR INFORMATION

- A. LAWA may choose to issue RFIs to the DESIGN-BUILDER to obtain formal clarification of the content and/or requirements in one or more of the contract documents and/or reference Documents provided by the DESIGN-BUILDER, or to obtain a formal explanation for an action taken by the DESIGN-BUILDER.
- B. LAWA will issue RFIs to the DESIGN-BUILDER in writing through LAWA's Prolog database or other LAWA project manager software, and DESIGN-BUILDER shall provide written responses within the same database and software.
- C. The DESIGN-BUILDER shall provide a written response to all LAWA RFI within five (5) working days of issuance. DESIGN-BUILDER may request in writing a specified time extension to the RFIs response and provide reasonable justification for the requested time extension subject to LAWA's approval.

5. THIRD PARTY REQUEST FOR INFORMATION

DESIGN-BUILDER shall be solely responsible for all coordination and submission to AHJ's/Third parties. All RFI's to/from AHJ/third party's shall be copied to LAWA.

6. QUALITY ASSURANCE

- A. The DESIGN-BUILDER shall carefully review the contract documents, and incorporate those requirements into their RFIs and responses.
- B. The DESIGN-BUILDER shall not use a RFI for the following purpose:
 1. To request approval of submittals (see PR-09).
 2. To request approval of substitutions (see PR-10).
 3. To request changes to the contract documents.

- C. LAWA's responses to RFIs shall not be construed as approvals to perform extra work or to change the requirements of the contract documents. If the DESIGN-BUILDER believes that a response to an RFI may result in a change to the contract price and/or time, then DESIGN-BUILDER shall notify LAWA, in accordance with the change provisions of the contract. If DESIGN-BUILDER believes that a LAWA response to an RFI results in a change the DESIGN-BUILDER is to submit a CPCN to LAWA within 7 days.

END OF PR-08 REQUEST FOR INFORMATION

PR-09 SUBMITTAL PROCEDURES

1. GENERAL

This section includes administrative & procedural requirements for submitting shop drawings, product data, samples, quality control reports, and other submittals as identified in the technical specifications, project requirements, contract documents, and scoping documents. For submittals related to CADD and or BIM modeling, refer to Project Requirements (PR-21) for Building Information Model (BIM) and VDC Coordination. For additional requirements for pre-construction/ design phase submittals; comply with PR-01 and PR-11.

2. SUBMITTALS SCHEDULE

A. The DESIGN-BUILDER shall submit a submittal schedule no later than twenty one (21) days after the Notice to Proceed (NTP), arranged in chronological order by dates required by the project schedule. The DESIGN-BUILDER shall include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates, and include additional time required for making corrections or modifications to submittals noted by LAWA and additional time for handling and reviewing submittals required by those corrections.

1. The DESIGN-BUILDER shall coordinate their submittal schedule with their subcontractors, schedule of values, and the project schedule.
2. The DESIGN-BUILDER shall provide an initial submittal schedule within their proposal. The initial submittal schedule shall include all submittals required during the first 60 days of construction, and key submittals required to maintain orderly progress of the Work, such as submittals for items with long lead times for fabrication and/or delivery.
3. The DESIGN-BUILDER shall provide a final submittal schedule not later than 21 days after the NTP.
4. The DESIGN-BUILDER shall provide their submittal schedule in tabular format with the following information:
 - a. Scheduled date for first submittal
 - b. Specification section number and title
 - c. Submittal category: "Action", "Informational"
 - d. Description of the work covered
 - e. Scheduled date for LAWA's final release or approval
 - f. Scheduled dates for purchasing
 - g. Scheduled dates for installation
 - h. Activity or event number

3. Submittal packaging REQUIREMENTS

A. The DESIGN-BUILDER shall prepare and provide all submittal items required for each specification section concurrently. However, the DESIGN-BUILDER shall provide "Action" submittals and "Informational" submittals required by the same Specification section as separate packages under separate transmittals in Prolog or other LAWA project management

software.

- B. DESIGN-BUILDER shall identify any and all related submittals requiring coordination on each submittal transmittal.
- C. DESIGN-BUILDER shall coordinate different types of submittals for related parts of the work so that processing will not be delayed because of the need to review submittals concurrently for coordination. LAWA reserves the right to withhold action on a submittal requiring coordination with other submittals until all related submittals are received. LAWA's review period will not begin until all related submittals are received by LAWA.

4. SUBMITTAL ADMINISTRATIVE REQUIREMENTS

- A. DESIGN-BUILDER shall prepare and transmit all project related documents and submittals in conformance with the project schedule so as not to delay the progress of the work. Any delay in procurement and/or construction associated with submittals and/or resubmittals is solely the responsibility of the DESIGN-BUILDER, and no additional time nor compensation shall be granted by LAWA.
- B. DESIGN-BUILDER shall provide 3 hard copies and 2 electronic copies of all submittals. Electronic copies shall be provided in both .pdf and editable native formats (.docx, .xlsx, .pptx, .mpp, .xer, .dwg, .dwf, etc.), unless otherwise specified. See PR-21 for BIM and VDC requirements.
- C. DESIGN-BUILDER shall transmit electronic copies of all submittals to LAWA using LAWA's submittal transmittal form in LAWA's Prolog database or other LAWA project manager software, as well as on a flash drive, hard drive, or CD.
- D. Submittals received from sources other than the DESIGN-BUILDER (i.e. subcontractors, material suppliers, etc.) will be returned by LAWA with no action taken.

5. SUBMITTAL PROCEDURES

- A. DESIGN-BUILDER shall prepare, review, approve, and transmit all required submittals and any necessary re-submittals.
- B. DESIGN-BUILDER shall provide a complete review by their Engineer of Record (EOR) of all submittals, prior to transmitting the submittal to LAWA. DESIGN-BUILDER shall provide a stamp of "Approval" from the EOR - as well any conditions of the approval - on the cover sheet of each submittal. The "Approval" from the EOR shall clearly demonstrate that the submittal has been confirmed to be in conformance with the contract documents.
- C. DESIGN-BUILDER shall further provide an independent review to ensure that the submittal is clear, accurate, organized, complete, and in conformance with the contract. This review is particularly important for submittals that were prepared by the EOR (such as design-package submittals).
- D. DESIGN-BUILDER shall coordinate preparation and processing of submittals with performance of construction activities (purchasing, fabrication, testing, delivery, installation, quality-control, predecessor & successor activities, etc.).
- E. DESIGN-BUILDER shall identify each submittal as an "Action" Submittal or "Informational" submittal.
- F. DESIGN-BUILDER shall submit all shop drawings, product data and samples in accordance

with the contract documents and approved schedule. Time for review shall commence on LAWA's receipt of the complete submittal package.

1. LAWA review period shall be twenty one (21) calendar days unless otherwise modified by the contract documents. Allow additional time if processing must be delayed to allow for coordination with subsequent submittals. LAWA will advise DESIGN-BUILDER when a submittal being processed must be delayed for coordination. Delaying submittal to facilitate coordination between submittals shall not constitute a delay of the work nor shall it be the basis for an extension of time or compensation.
 2. If resubmittal is necessary, process it in the same manner as original submittal and clearly identify as a resubmittal. For resubmittal, the DESIGN-BUILDER shall reference the original submittal.
 3. Number of days for processing each resubmittal shall be the same duration as the original review period for submittals.
 4. No extension of the contract time will be authorized because of the DESIGN-BUILDER's failure to transmit submittals enough in advance of the Work to permit processing.
- G. DESIGN-BUILDER shall place a permanent label or title block on each submittal for identification.
1. Indicate name of firm or entity that prepared each submittal on label or title block.
 2. Include the following information on label for processing and recording action taken:
 - a. Project name
 - b. Date
 - c. Terminal or project site (if applicable)
 - d. Name and address of LAWA project manager
 - e. Name and address of DESIGN-BUILDER
 - f. Name and address of subcontractor
 - g. Name and address of supplier
 - h. Name and address of manufacturer/fabricator
 - i. Unique identifier (Submittal #), including revision number.
 - j. Number and title of appropriate specification Section
 - k. Drawing number and detail references, as appropriate
 - l. Other necessary identification
 - m. Response to comments and/or revisions from previous submittals
 - n. Specifically identify, by itemizing in a list on the transmittal, any deviations from the contract documents
 - o. Identify a list of other related submittals that require coordination.
 - p. DESIGN-BUILDER's signature
- E. DESIGN-BUILDER shall clearly identify all deviations from the contract documents by either highlight, encircle, and/or itemize deviations on submittals.
- F. DESIGN-BUILDER shall indicate if they are providing third-party shop-inspection for each

submittal, and/or if they are requesting shop-inspection to be provided by LAWA. LAWA reserves the right to perform shop-inspection at their own discretion, and will make this determination for each product based on the location of fabrication, the complexity and sensitivity of the fabrication process, the criticality of the product, and other factors as needed.

- G. When required, updated submittals shall be provided by the DESIGN-BUILDER in the same manner as the original submittal, but with a sequential revision number. original submittals shall be considered Revision 0.
- H. DESIGN-BUILDER shall furnish copies of final submittals, including responses from LAWA and the EOR, to manufacturers, subcontractors, suppliers, fabricators, installers, AHJ and others as necessary for performance of construction activities.
- I. DESIGN-BUILDER shall use only the final version of submittals for construction, including the complete responses from LAWA and the EOR.
- J. Substitution requests are not allowed in the form of submittals. Review and acceptance of a submittal does not constitute approval of a substitution. See PR-10 for additional information regarding substitution requests.

6. SUBMITTAL TYPES

A. Product Data

- 1. DESIGN-BUILDER shall collect product data into a submittal package for each element of construction or system. Product data includes printed information such as manufacturer's installation instructions, catalog cuts, standard color charts, roughing-in diagrams and templates, standard wiring diagrams and performance curves. Where product data must be specially prepared because standard printed data is not suitable for use, DESIGN-BUILDER shall submit as "Shop Drawings."
- 2. DESIGN-BUILDER shall clearly mark each copy to indicate the applicable choices and options to be provided, and demonstrate that the proposed selections are in conformance with the contract. This includes, but is not limited to, model number, type, size, color, quantity, supplemental options and/or accessories, etc.
- 3. DESIGN-BUILDER shall clearly markup product data sheets to delete information that is not applicable to the work, and highlight the applicable information only.
- 4. LAWA will return product data sheets that are submitted with extraneous information not deleted and/or modified to the DESIGN-BUILDER without review.
- 5. DESIGN-BUILDER shall include the following information:
 - a. Manufacturer's written recommendations
 - b. Manufacturer's product specifications
 - c. Manufacturer's installation instructions
 - d. Manufacturer's catalog cuts
 - e. Standard color charts, if any
 - f. Wiring diagrams showing factory-installed wiring
 - g. Printed performance curves
 - h. Operational range diagrams

- i. Operations and Maintenance (O&M) manuals
- j. Compliance with recognized trade association standards and/or testing standards
- k. Testing and/or quality control measures for the product
- l. Notation of dimensions verified by field measurement
- m. Notation of location and/or coordination requirements

B. Shop Drawings

1. Shop drawings are drawings, diagrams, illustrations, schedules, performance charts, brochures, and other data which are prepared by the DESIGN-BUILDER or any their subcontractors, manufacturers, suppliers, or distributors and which illustrates some portion of the work.
2. All shop drawings shall include plans, profiles, sections and details that clearly demonstrate the size, orientation, dimensions, etc. of all components; the arrangement and construction of all connections and joints; all holes, straps, and other fittings required for attaching work; and other pertinent details. When required, engineering computations prepared by a registered engineer, licensed by the State of California, Board of Professional Engineers and Land Surveyors, shall be submitted.
3. Shop drawing submittals shall include a list of drawings submitted, and a list of the sheets and/or specification sections related to the items.
4. DESIGN-BUILDER may proceed with fabrication at their own risk at any time in order to maintain project schedule. Any fabrication or other work performed in advance of the receipt of accepted submittals shall be entirely at the DESIGN-BUILDER's risk and expense. Any duplicative and/or corrective actions resulting from such work shall be performed at no cost to LAWA; no additional time nor compensation shall be granted.
5. Preparation: Include the following information, as applicable:
 - a. Dimensions
 - b. Identification of products
 - c. Fabrication and installation drawings
 - d. Roughing-in and setting diagrams
 - e. Wiring diagrams showing field-installed wiring, including power, signal, and control wiring
 - f. Shopwork manufacturing instructions
 - g. Templates and patterns
 - h. Schedules
 - i. Design calculations
 - j. Compliance with specified standards
 - k. Notation of location requirements
 - l. Notation of dimensions established by field measurement
 - m. Wiring Diagrams: Differentiate between manufacturer-installed and field-installed wiring

- C. Samples: Comply with the contract documents as follows and prepare physical units of materials or products, including the following:
1. Submit full-size units or samples of size indicated, prepared from the same material to be used for the work, cured, and finished in manner specified, and physically identical with the product proposed for use, and that show full range of color variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; cables showing color; color range sets; and components used for independent testing and inspection.
 2. Preparation: Mount, display, or package samples in manner specified to facilitate review of qualities indicated. Prepare samples to match LAWA's sample where so indicated. Attach label on unexposed side that includes the following:
 - a. Generic description of sample.
 - b. Product name or name of manufacturer.
 - c. Sample source.
 3. Submit samples for review of kind and color for a final check of these characteristics with other elements and for a comparison of these characteristics between final submittal and actual component as delivered and installed. LAWA shall have twenty one (21) days to review a sample. If the sample is rejected, LAWA shall have the same review period as the original sample. It is the DESIGN-BUILDER's responsibility to submit the required samples in a timely manner such that the re-approval, purchase, and delivery of the material do not delay the contract.
 - a. If variation in color or other characteristic is inherent in the product represented by a sample, submit at least three sets of samples that show the range of variations.
 - b. Refer to individual specification sections for requirements for samples that illustrate workmanship, fabrication techniques, and details of assembly, connections, operation, and similar construction characteristics.
 - c. Samples shall be identified per these project requirements and the contract documents.
 4. Number of samples: Submit seven (7) sets of samples. LAWA will retain five (5) sample sets; two will be returned to the DESIGN-BUILDER.
 - a. Submit a single sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
 5. Systems Submittals: Identify submittals for systems on the transmittal and act upon the system singularly as a combined submittal. If resubmission is required, resubmit entire system submittal.
 6. Disposition: Maintain sets of approved samples at project site, available for quality control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
 - a. Samples that may be incorporated into the Work are indicated in individual specification sections. Such samples must be in an undamaged condition at time of use.
 - b. Samples not incorporated into the work, or otherwise designated as the LAWA's property, are the property of the DESIGN-BUILDER.

- D. Product Certificates: Prepare written statements on manufacturer's letterhead certifying that product complies with requirements.
- E. Installer Certificates: Prepare written statements on manufacturer's letterhead certifying that Installer complies with requirements and, where required, is authorized for this specific project.
- F. Manufacturer Certificates: Prepare written statements on manufacturer's letterhead certifying that manufacturer complies with requirements. Include evidence of manufacturing experience where required.
- G. Material Certificates: Prepare written statements on manufacturer's letterhead certifying that material complies with requirements.
- H. Material Test Reports: Prepare reports written by a qualified testing firm /agency approved by LAWA, on LAWA's standard testing form, indicating and interpreting test results of material for compliance with requirements.
- I. Preconstruction Test Reports: Prepare reports written by a qualified testing agency, approved by LAWA, on testing agency's standard form, indicating, and interpreting results of tests performed before installation of product, for compliance with performance requirements.
- J. Compatibility Test Reports: Prepare reports written by a qualified testing agency approved by LAWA, on testing agency's standard form, indicating, and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.
- K. Field Test Reports: Prepare reports written by a qualified testing firm /agency approved by LAWA, on LAWA's standard testing form, indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements.
- L. Product Test Reports: Prepare written reports indicating current product produced by manufacturer complies with contract requirements. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- M. Final Test Results: Prepare written reports indicating current product produced by manufacturer complies with requirements. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
- N. Research/Evaluation Reports: Prepare written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:
 - 1. Name of evaluation organization
 - 2. Date of evaluation
 - 3. Time period when report is in effect
 - 4. Product and manufacturers' names
 - 5. Description of product
 - 6. Test procedures and results
 - 7. Limitations of use
- O. Design Data: Prepare written and graphic information, including, but not limited to,

performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions, other performance and design criteria, and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

- P. Manufacturer's Instructions: Prepare written or published information that documents manufacturer's recommendations, guidelines, and procedures for installing or operating a product or equipment. Include name of product and name, address, and telephone number of manufacturer. Include the following, as applicable:
1. Sequence of installation or erection
 2. Required installation tolerances
 3. Required adjustments
 4. Recommendations for cleaning and protection
- Q. Manufacturer's Field Reports: Prepare written information documenting factory-authorized service representative's tests and inspections. Include the following, as applicable:
1. Name, address, and telephone number of factory authorized service representative making report.
 2. Statement that products at project site comply with requirements.
 3. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
 4. Results of operational and other tests and a statement of whether observed performance complies with requirements.
 5. Statement whether conditions, products, and installation will affect warranty.
 6. Other required items indicated in individual specification sections.

7. **LAWA'S ACTION**

- A. LAWA will not review submittals that do meet the requirements herein. If received, LAWA will return those submittals to the DESIGN-BUILDER without action.
- B. LAWA's review of submittals is only of general conformance with the design concept of the project, and general compliance with the contract documents. LAWA's review shall not relieve the DESIGN-BUILDER of the full responsibility for providing materials, equipment, and Work required by the contract; the proper fitting and construction of the Work; the accuracy and completeness of the submittals; selecting fabrication processes and techniques of construction; and performing the Work in a safe manner.
- C. LAWA will review each properly executed submittal, make marks to indicate corrections or modifications required, and return them to the DESIGN-BUILDER. LAWA will mark each submittal as follows:
1. NO EXCEPTION TAKEN (A). No further review of submittal required. Fabrication, manufacture, or construction may proceed.
 2. Exceptions As Noted (B). Update submittal and resubmit. Fabrication, manufacture, or construction may proceed, provided submittal complies with LAWA's notations and contract documents. If the DESIGN-BUILDER cannot comply with the notations, make revisions and resubmit as described for submittals marked "C" action.

3. NO Exceptions taken, Resubmit with complete group submittal. Individual item as submitted appears to meet requirements of contract documents. Final determination will be based on complete submittal of group that interfaces together. Resubmittal required.
 4. REVISE AND RESUBMIT (C). Update submittal and resubmit. Fabrication, manufacture, or construction may NOT proceed; submittal did not demonstrate full extent of all conditions, details, and coordination with other surrounding work and therefore requires additional information and record as noted. Do not fabricate, manufacture, or construct specific areas requiring additional information prior to re-submittal.
 5. REJECTED/RESUBMITTAL REQUIRED (D). Submittal does not comply with the design intent of the contract documents. Make revisions and resubmit.
 6. INFORMATION RECEIVED (E). No further action is required. This submittal is classified as "Informational", and will not be reviewed by LAWA. The DESIGN-BUILDER's Designer of Record (DOR) is responsible for validating conformance to the contract documents.
- D. Submittals not required by the contract documents will not be reviewed and returned to the DESIGN-BUILDER.

8. COORDINATION DRAWINGS

- A. DESIGN-BUILDER shall produce coordination drawings in collaboration with their subcontractors to show the inter-relationships, constraints and sequencing of work by the various trades.
- B. DESIGN-BUILDER shall submit one (1) electronic copy of all submittals approved by the Authority having Jurisdiction other than LAWA.
- C. DESIGN-BUILDER shall submit one (1) electronic copy of all trade-coordination drawings developed by the DESIGN-BUILDER and/or their subcontractors.

9. OTHER SUBMITTALS

All other submittals not specifically defined in this section shall be in compliance with the contract documents and requirements of this section for submittals.

END OF PR-09 SUBMITTAL PROCEDURES

PR-10 PRODUCTS, MATERIAL, AND EQUIPMENT SUBSTITUTIONS

1. GENERAL

This Section includes administrative and procedural requirements governing DESIGN-BUILDER's selection of products, materials, and equipment for use in the project.

2. REQUIREMENTS

- A. Request for changes in products, materials, equipment, and methods of construction required by contract documents proposed by DESIGN-BUILDER after award of the contract are considered "substitutions." All such substitution requests shall be submitted to LAWA no later than forty five (45) days prior to procurement/order. Refer to this section for the procedures to request substitution. Product, material, and equipment substitution form will be provided to the successful bidder at the pre-construction meeting. The following are NOT considered to be requests for substitutions:
 1. Substitutions requested during the bid period, and accepted by addendum into the contract documents prior to submission of bids.
 2. Revisions to contract documents requested by LAWA.
 3. Specified options of products and construction methods included in the contract documents.
 4. DESIGN-BUILDER's determination of, and compliance with, governing regulations and orders Issued by governing authorities.
- B. Available products, materials, equipment, and methods of construction that may be incorporated in work are indicated and specified in the contract documents. Use of catalog numbers, and specific requirements set forth in the drawings and specifications, are not intended to preclude use of other acceptable manufacturer's products or procedures which may be equivalent, but are given the purpose of establishing standard of quality for materials, construction, and workmanship.
- C. Equivalent products of manufacturers named as acceptable manufacturers may be submitted for approval. Equivalent products of manufacturers not named as acceptable manufacturers are subject to submittal requirements for substitutions specified in this section.
- D. Determination of equivalent products, materials, equipment, and method of construction equal in quality and maintainability, functionally and aesthetically equal to the product specified as the basis for design is LAWA's sole judgement.
- E. In agreeing to the terms and conditions of the contract, DESIGN-BUILDER has accepted the responsibility to schedule and verify that the specified products will be available when needed to comply with the accepted construction schedule, and to place orders for all required materials in a timely manner to meet the accepted construction schedule, without delay in the work.

Exception: When product numbers or models specified have been discontinued or changed by the specified manufacturer(s) prior to issuance of NTP or signing of the agreement.
- F. It is the intent of the contract documents that products incorporated into the project comply with the contract documents. These products shall be:

1. New and undamaged.
 2. Best of their respective kind.
 3. Furnished in a timely manner, in ample quantities to facilitate proper and timely execution of the work.
 4. From one manufacturer for each specific purpose, insofar as practicable.
 5. Complete with all accessories, trim finish, safety guards and other devices and details needed for a complete installation and for the intended use and effect.
 6. Wherever possible, similar types that have been produced and used successfully in similar situations on other projects or in LAWA facilities.
- G. Minimum quantities or quality levels: In every instance the quantity or quality level shown or specified is the minimum to be provided or performed.
1. Within specified tolerances, the actual installation may comply exactly with the minimum quantity or quality specified, or may exceed that minimum within reasonable limits.
 2. In complying with these requirements, indicated numeric values are minimum or maximum values, as noted, or appropriate for the context of the requirements.
 3. Refer instances of uncertainty through the RFI process to LAWA for a decision before proceeding.
- H. Compatibility of options: When DESIGN-BUILDER is given the option of selecting between two (2) or more products for use on the project, DESIGN-BUILDER shall verify that product selected will be compatible with the products previously selected, even if previously selected products were also options.
- I. Nameplates: Except for required labels and operating data, do not attach or imprint manufacturers or producer's nameplates or trademarks on exposed surfaces of products that will be exposed to view.
1. Labels: Locate required product labels and stamps on a concealed surface or, where required for observation after installation, on an accessible surface that is inconspicuous.
 2. Equipment nameplates:
 - a. Provide a permanent nameplate on each item of service-connected or power-operated equipment.
 - b. Locate on an easily accessible surface that is inconspicuous in occupied spaces.
 - c. The nameplate shall contain the following information and other essential operating data:
 - 1) Name of product and manufacturer.
 - 2) Model and serial number.
 - 3) Capacity.
 - 4) Speed.
 - 5) Ratings.
 - d. For additional labeling instructions, refer to the technical specifications of the contract.
- J. Hazardous Material: Notify LAWA and request LAWA's written permission, before incorporating into the project any materials specified by the contract documents which

DESIGN-BUILDER knows or has reason to believe are contaminated by asbestos, radioactive waste, hazardous waste or any materials detrimental to human health and which do not or may not conform to all codes for health, safety, ADA or environmental regulations.

3. **DESIGN-BUILDER's OPTIONS**

- A. Product selection is governed by the contract documents and governing regulations.
 - 1. Where catalog numbers and specific brands or trade names are not followed by the designation "or equal" or "or approved equal" in conjunction with material or equipment required by the Specifications, no substitutions will be approved.
 - 2. For products specified only by reference standards, select any product meeting standards, by any manufacturer. The product specifications may be subject to review.
 - 3. Where more than one manufacturer's product is specified, the first-named product is the basis for the design used in the Work and the use of alternative-name manufacturer's products or substitutes may require modifications in that design. If such alternatives are proposed by DESIGN-BUILDER and are approved by LAWA, DESIGN-BUILDER shall assume all costs required to make necessary revisions and modifications to the design, including additional costs to LAWA for evaluation of revisions and modifications of the design resulting from the substitutions submitted by DESIGN-BUILDER to LAWA.
 - 4. For products specified by naming one or more products, but indicating the option of selecting equivalent products by stating "or equal," "equal to," "or approved equal," "equivalent to" before or after a specified product and a product substitution is needed, submit a request, as required for a substitution, for that product.

4. **SUBSTITUTION REQUESTS**

- A. DESIGN-BUILDER shall explicitly identify any deviations from LAWA's requirements, the latest drawings or specifications, or any other contract documents, and shall submit a "Request for Substitution Submittal" to LAWA for review and concurrence with the proposed substitution(s). This includes, but is not limited to, alternative products, systems, materials, equipment, or methods of construction.
- B. The submittal shall contain, as appropriate, detailed product data sheets for the specified items in the substitution. Samples and shop drawings shall also be submitted of the substitution as applicable. The submittal shall contain all the data required to be submitted for acceptance of the originally specified item or process.
- C. DESIGN-BUILDER shall provide a detailed explanation and justification for each proposed substitution, including a comparative analysis of the alternatives considered (including the baseline requirement and/or contract document) with respect to cost, schedule, quality, risk, safety, life expectancy, durability, reliability, ability to be upgraded, ease of interacting with other systems or components, availability of replacement parts, established history of use in similar environments, warranty, performance, maintenance, and operational impacts.
- D. At the request of LAWA, the following information may be requested as part of the substitution Submittal:
 - 1. Utility connections including electrical, plumbing, HVAC, fire protection and controls.
 - 2. Projected energy consumption for one year.

3. Name of the local organization is certified to maintain the item.
 4. Performance characteristics and production rates.
 5. A list of any license fees or royalties that must be paid.
 6. A list of all variations for the item or method specified.
 7. A list of at least three other projects of similar nature to this contract where the products or methods have been in use for at least one year including telephone number and name of the person to contact at these other projects.
 8. An analysis of the effect of the substitution on the schedule and contract cost and on the overall project as it relates to adjoining work.
- E. For any proposed substitution, DESIGN-BUILDER shall accept sole responsibility to ensure that;
1. All minimum quantity and quality levels are achieved,
 2. All necessary products, materials, equipment, and labor are readily available,
 3. All aspects of the substitution are fully compatible with all other products/components,
 4. All necessary permits and/or approvals are obtained by the DESIGN-BUILDER from the AHJ,
 5. All necessary testing and quality-control inspections are provided by the DESIGN-BUILDER,
 6. All related documents (drawings, specifications, submittals, BIM model, etc.) are updated and maintained based on the substitution,
 7. All deviations from LAWA requirements and/or other contract requirements are clearly specified in the request, and
 8. All work can be completed in accordance with all other contract requirements with no additional time nor compensation
- F. DESIGN-BUILDER shall maintain a log of all proposed substitutions, and provide the log to LAWA with each design package submittal (Conceptual, 30%, 60%, 90%, 100%, Record).
- G. LAWA's approval, concurrence or acceptance of any design-package submittal, product submittal, or any submittal other an explicit "Request for Substitution Submittal," shall not be construed as approval for any proposed substitution. All substitution requests must be provided as separate submittals, complete with all information described herein.
- H. As a condition for submitting a request for substitution the DESIGN-BUILDER waives all rights to claim for extra cost or change in contract time other than those outlined in the request and approved by LAWA. The DESIGN-BUILDER, by submitting a request for substitution, also accepts all liability for cost and scheduling impact on other contractors or the city due to the substitution.

END OF PR-10 PRODUCTS, MATERIAL, AND EQUIPMENT SUBSTITUTIONS

PR-11 DESIGN MANAGEMENT**1. GENERAL**

This section includes administrative & procedural requirements for design management.

2. DESIGN DELIVERABLES

- A. DESIGN-BUILDER shall prepare, maintain and provide to LAWA all design packages throughout all stages of the project as described in PR-01. This includes, but is not limited to,
 - 1. Drawings
 - 2. Technical specifications
 - 3. Calculations and reports (narratives, calculations, code-requirements and strategy, alternatives analysis, design decisions, etc.)
 - 4. Model of existing and proposed conditions (PR-21)
 - 5. Cost estimates
 - 6. Schedules
- B. DESIGN-BUILDER shall provide a comprehensive design package for each individual project/task with each formal design submittal. Refer to Volume 2 of the ATMP Landside Improvement Project RFP Document for each task. The documents included in Volume 2 are criteria and scoping documents and are not designs warranted by LAWA.

3. PRECONSTRUCTION DELIVERABLES IN SUPPORT OF DESIGN

- A. DESIGN-BUILDER shall prepare, maintain and provide to LAWA all preconstruction deliverables in support of the design throughout all stages of the project as described in PR-01. This includes, but is not limited to,
 - 1. Site Investigations
 - 2. Phasing and logistics plans
 - a. See the Appendix for "PHASING AND LOGISTICS PLAN EXHIBITS" for graphic examples of the types of information including plan drawings/ diagrams required by LAWA.
 - 3. Work plans and procedures manuals
 - 4. Constructability reviews
 - 5. Long-Lead and Spare Parts Lists
- B. The primary purpose of Preconstruction Services is for the DESIGN-BUILDER to mitigate its risks of preparing inaccurate or incomplete schedules, phasing plans, work plans, and other tools for successfully planning & executing the Work.
- C. DESIGN-BUILDER shall provide a comprehensive preconstruction package for each project with each formal design submittal.

4. DESIGN SERVICES

- A. Specific design requirements may be provided through stakeholder outreach. In the event of any conflicts, the DESIGN-BUILDER shall ensure the highest level of quality is provided in the Project design.
- B. DESIGN-BUILDER shall prepare, maintain and provide all the deliverables at all the design stages described in PR-01. DESIGN-BUILDER shall provide updated drawings with each formal design submittal, and shall keep all drawings up to date as the work progresses.
 - 1. At each design submittal, the DESIGN-BUILDER shall provide both electronic and hard copies in formats and sizes acceptable to the AHJs. The electronic copies shall be provided in both .PDF and native formats (i.e. DWG, DWF, DGN, etc.).
- C. DESIGN-BUILDER shall prepare, maintain, and provide to LAWA all technical specifications as described in PR-01. DESIGN-BUILDER shall provide updated technical specifications with each formal design submittal, and shall keep all technical specifications up to date as the work progresses.
 - 1. DESIGN-BUILDER shall select and edit all technical specification sections for specific project requirements.
 - 2. DESIGN-BUILDER shall investigate and specify the use of locally available construction materials, techniques, and building equipment when practical and appropriate.
- D. DESIGN-BUILDER shall prepare, maintain and provide to LAWA all calculations and reports as described in PR-01. DESIGN-BUILDER shall provide updated calculations and reports with each formal design submittal, and shall keep all calculations and reports up to date as the work progresses.
- E. DESIGN-BUILDER shall prepare, and submit a Notice of Design Change as required by the permitting agency.
 - 1. DESIGN-BUILDER shall provide the Notice of Design Change complete with all affected drawings, specifications, calculations and reports, and other affected design documents, with a corresponding cover page, index and table of contents.
 - 2. DESIGN-BUILDER shall provide the Notice of Design Change to LAWA at the same time they are issued to permitting agencies, and shall provide a monthly summary of the Notice of Design Changes in each monthly report.

5. DESIGN QUALITY

- A. The major activities for implementing the DESIGN-BUILDER's design quality control program shall include as a minimum the following:
 - 1. Identification of project requirements via the design-build criteria and scoping packages included in Volume 2.
 - 2. Identification of project deliverables list and scope.
 - 3. A process for controlling adherence to standardized design procedures and development of specifications, by each responsible engineering discipline.
 - 4. Completion of conformance and compliance checklists by each responsible design/engineering discipline.
 - 5. Checking of design documents for accuracy and completeness.

6. Control of design documentation and format using configuration management plans and design procedures.
 7. Review of upcoming design milestone submittals, including inter-discipline and interface checking/management.
 8. Verification of design review comment resolution and incorporation into design documents.
- B. Each technical design discipline of the DESIGN-BUILDER shall provide objective evidence of checking of the design documents that it develops. The objective evidence, as a minimum, shall include the marked-up and signed checked copies of the final design drawings, models, calculations, and specifications at each design milestone, as applicable.

6. DESIGN REVIEWS

- A. General: The DESIGN-BUILDER shall adhere to the requirements contained herein for the design documents requiring the approval of LAWA for work within LAWA's jurisdiction. DESIGN-BUILDER shall also be responsible for adhering to the requirements of third party jurisdictional agencies having authorization for the approval of its design documents. At the conclusion of each required stage of design, the DESIGN-BUILDER is required to submit its work to LAWA for review, approval, and/or comments, or at a minimum, for informational purposes where LAWA has no approval authority. This should be defined in the permit plan.
- B. Responsibilities: The DESIGN-BUILDER is solely responsible for providing design submittals that are fully comprehensive and complete for the development phase. Incomplete submittals will be rejected and returned for additional work. Any delays or costs incurred resulting from submittals that are not complete to the appropriate level of development as defined by the authorities having jurisdiction, are the responsibility of the DESIGN-BUILDER. It is the responsibility of DESIGN-BUILDER to assure that submittal procedural requirements are met for all design documents and that they meet the requirements of the authorities having jurisdiction.
- C. Procedures: The DESIGN-BUILDER shall submit the required and appropriately developed design document deliverables to the AHJ and LAWA in the prescribed quantities and utilizing the required media. The DESIGN-BUILDER will reconcile comments and provide written responses to all design document comments. The DESIGN-BUILDER will then incorporate the required changes to the design documents, if any, in the next submittal. If the submittal is determined to be unacceptable by AHJ or LAWA, the DESIGN-BUILDER will be notified accordingly. Delays incurred by rejection of the submittal are the responsibility of the DESIGN-BUILDER and no allowances will be made.

7. DRAWING, DATA AND CONFIGURATION MANAGEMENT

- A. DESIGN-BUILDER shall prepare & maintain all drawings in the most recent version of AutoCAD, and any additional CAD format required by the AHJs, and in accordance with the BIM execution plan and the project requirements (PR-21). This includes drawing organization, appearance, presentation, naming conventions, numbering conventions, layering and other CAD related standards.
- B. DESIGN-BUILDER shall prepare drawings for Third Party jurisdictional approval following the latest applicable standard for that agency.

- C. DESIGN-BUILDER shall prepare & maintain all BIM files in accordance with LAWA's latest BIM standards.
- D. DESIGN-BUILDER shall prepare & implement a BIM execution plan and a model of existing and proposed conditions in accordance with the contract (PR-21).
- E. The DESIGN-BUILDER shall develop configuration management and document control procedures, which once reviewed and accepted by LAWA, govern the DESIGN-BUILDER's work. The procedures include provisions and methods for document development and maintenance. The consultant shall adhere to these configuration management and document control procedures throughout the life of the contract.
- F. Any person developing design correspondence, calculations, drawings, specifications and/or reports is responsible for adhering to the approved configuration management and document control requirements and plans.
- G. The DESIGN-BUILDER shall designate a staff member (or members) to be responsible, at a minimum, for the following activities:
 - 1. Recommending documents to be controlled and the individuals, positions and interrelationships necessary for preparation, review, approval, issue, revision, and maintenance of such documents
 - 2. Reviewing documents for adequacy, completeness, and correctness before approval and issue
 - 3. Assisting and providing information to groups responsible for change control
 - 4. Implementing applicable controls of design, procurement, inspection, and testing documents
 - 5. Identifying documents with approval status such as matching the requirements of the contract with design deliverables
 - 6. Dispositioning design review comments
 - 7. Updating baseline documents
 - 8. Where applicable, the configuration management plan must be consistent with the BIM execution plan's (BxP's) stated configuration management requirements.
- H. DESIGN-BUILDERS formal configuration control of documents will begin prior to the preliminary design (60%) milestone.

4. STANDARDS AND CODES

- A. DESIGN-BUILDER shall comply with the following:
 - 1) Verify the applicability of all latest standards and codes that are referenced in their contract documents (drawings, technical specifications, calculations & reports, etc.).
 - 2) Provide a summary list of all standards and codes that are referenced in their contract documents.
 - 3) Be in possession of all standards and codes referenced in their contract documents.
 - 4) Be familiar with all standards and codes referenced in their contract documents, and shall provide excerpts and/or specific sections to LAWA upon request.
 - 5) When design standards which are developed by agencies or organizations independent

of LAWA (LADWP, DOT, CALTRANS, FAA, LABOE, etc.), the design standards are to be incorporated into the project design. All necessary information and details regarding these standards must be included in the design and construction documents in the required format, and may not be included by reference only.

- 6) When design standards are developed by LAWA (for instance standards included in the LAWA DCH (Design and Construction Handbook)) the design standards are to be incorporated into the project design. All necessary information and details regarding these standards must be included in the design and construction documents in the required format, and may not be included by reference only. Only Projects in the CTA, AOA, or on LAWA property; such as LAWA Employee Lot South shall comply with the LAWA DCH.

5. CHECKLISTS

DESIGN-BUILDER shall complete documentation in accordance with each applicable agency checklist. Checklists shall be completed prior to submittal to the agency and transmitted to all City and State Agencies as well as LAWA. The Appendix includes checklists provided from most (but not necessarily all AHJ's). DESIGN-BUILDER to obtain checklists from any other agency that may have jurisdiction.

END OF PR-11 DESIGN MANAGEMENT

PR-12 THIRD PARTY COORDINATION

The DESIGN-BUILDER shall provide coordination of the work with third parties per the requirements of the contract documents and as indicated herein.

1. GENERAL REQUIREMENTS

- A. Except as otherwise required by the contract documents, the DESIGN-BUILDER shall coordinate directly with each third party to identify, collaborate and resolve all items and issues that impact the project in a timely manner. The DESIGN-BUILDER shall invite LAWA to participate in third party coordination. This includes, but is not limited to, the responsibility to setup meetings, obtain permits and approvals from AHJs, design, purchase / acquisition of equipment and materials, construction and inspection. The DESIGN-BUILDER shall copy the LAWA Third Party team on all correspondence with third parties. LAWA and/or the third party (agency or utility) will be inspecting and/or providing oversight to the DESIGN-BUILDER's construction and compliance with their QA/QC requirements, accepted implementation plans and testing. The third party agency inspection / oversight is not intended to replace the DESIGN-BUILDER's primary role for QC and QA of the work, but to oversee compliance to requirements of the contract documents and third party agreements.
- B. Additional information and requirements on utility relocations, protection, and new services is included in PR-07, "Utilities" and Construction General Conditions.
- C. The DESIGN-BUILDER shall coordinate and resolve all third-party items and issues throughout the term, whether or not:
- D. LAWA has had previous discussion with a third party;
- E. LAWA has executed an agreement and/or a memorandum of understanding with a third party; or
- F. LAWA has or has not identified a third party.

2. THIRD PARTY COORDINATION WORK PLAN

- A. The DESIGN-BUILDER's third party coordination work plan shall include, but not be limited to, the following:
 - 1. A third party coordination manager who shall be assigned exclusively to the project and shall function as the primary contact between the DESIGN-BUILDER and the third parties.
 - 2. A third-party coordination manager whose role and responsibility shall remain active and in force until final completion.
 - 3. Identification of each third party, by contact, type, schedule, and resolution status.
 - 4. Identification of the party responsible for the design, construction, inspection, acceptance and cost of work in accordance with the contract documents.
 - 5. Notification to LAWA of requested betterments.
 - 6. Third-Party-specific coordination meetings from financial close to final completion including the DESIGN-BUILDER and the third party;
 - 7. Creation, maintenance and update on a monthly basis of a report of third party coordination activities.

8. Establishment of the DESIGN-BUILDER's design and construction procedures, processes and schedule for third party work and methodology for ensuring that all third-party work is completed in accordance with the Third-Party coordination work plan.
9. Detailed monthly third-party design submittal schedule and forecast for review with LAWA third party team and third-party agencies.
10. Participation and coordination with LAWA third party team in the bi-weekly City of Los Angeles Single Point of Contact Meeting.

3. PROJECT EXECUTION PLAN

In connection with any third party agreement, the DESIGN-BUILDER shall prepare a project execution plan in accordance with the requirements of the contract.

4. THIRD PARTY AND AGENCY COORDINATION CONTACTS

Contact between City and State agencies, LA Metro and the DESIGN-BUILDER shall be per the procedures set forth in the cooperation agreements and/or Memorandum of Understanding. For third parties not covered by these agreements, the DESIGN-BUILDER is responsible for all coordination activities including identifying and maintaining updated contacts lists.

END OF PR-12 THIRD PARTY COORDINATION

PR-13 QUALITY ASSURANCE

1 GENERAL

- A. LAWA is responsible for establishing and implementing a Quality Assurance Program (QA Program) that will provide adequate confidence that the phasing, materials, components and facilities provided or constructed by the Design-Builder conform to the requirements of the contract documents and the appropriate codes, procedures and standards. Quality Assurance activities will be performed by or for LAWA to verify and document implementation and performance of the Design-Builder's Quality Control Program.
- B. Quality assurance is, in essence, an oversight and verification mechanism that ensures quality control programs produce the desired result, i.e., finished products meet specified quality standards. Design-Builder shall provide quality control of its own work in accordance with contract requirements.

2 PRECONSTRUCTION QUALITY ASSURANCE

- A. During the Design & Preconstruction Phase of the project and in addition to specific design-related activities, LAWA will perform Quality Assurance reviews and audits of Preconstruction activities performed by the Design-Builder.
- B. Preconstruction activities include those elements of the Work performed prior to the start of construction or a phase of construction that supports the design effort and prepares the Design-Build Team for the Construction Phase. Preconstruction activities include, but are not limited to:
 - 1. Site Investigations and Surveys
 - 2. Utility Shutdown Planning
 - 3. Construction Logistics Planning
 - 4. Work Breakdown Structure (WBS) Development
 - 5. Cost Estimating and Scheduling
 - 6. Constructability and Maintainability Review
 - 7. Value Engineering
 - 8. Temporary Utilities & Facilities Planning
 - 9. Early Work Package Development
- C. Quality Assurance for Preconstruction activities encompass those reviews and audits required to assure LAWA that the Design-Builder adequately coordinates, communicates and maintains compliance with its Design & Preconstruction Quality Control Plan. In addition to reviews and audits, these assurances are achieved through such program management processes as training, document control, change control, plan validations & verifications, logistics reviews, engineering reviews, constructability and maintainability reviews, etc. that affects the quality of the construction planning process and documents.
- D. LAWA will periodically perform reviews and audits of various Preconstruction activities

to assure the Design-Builder maintains compliance with the approved Design and Preconstruction Quality Control Plan and the Contract Documents.

3 CONSTRUCTION QUALITY ASSURANCE

- A. Through Construction QA inspections, submittal reviews and audits, LAWA provides quality assurance via QC Plan approval, material receipt and installation inspections, supplemental material tests, statistical analyses of the Design-Builder's quality control program, review of its construction operations and of its procedures.
- B. The Work is subject to inspection and approval by LAWA. The Design-Builder shall notify LAWA before noon of the working day before inspection is required. LAWA and any authorized representatives shall at all times have access to the Work during its construction at shops and yards and while in storage, as well as to the Work site. The Design-Builder shall provide every reasonable facility for ascertaining that the materials and workmanship are in accordance with these Specifications. Inspection of the Work shall not relieve the Design-Builder of the obligation to fulfill all requirements of the Contract.
- C. LAWA is authorized to enforce compliance with the Contract Documents and to determine the acceptability of materials and the quality of Work. LAWA is authorized to sample and test all materials to be incorporated into the Work. LAWA may delegate the authority to sample materials for construction and request the Los Angeles Department of General Services, Standards Laboratory, or an approved private testing laboratory to perform any necessary tests.
- D. Unless otherwise authorized, Work shall be performed only in the presence of LAWA and under the general observation of LAWA to ensure compliance with the requirements of the Contract Documents and as approved by LAWA. Any Work done without proper inspection will be subject to rejection. Such inspection may include mill, plant, and shop or field inspection, as required. LAWA shall be permitted access to all parts of the Work, including plants where materials or items are manufactured or fabricated. All materials and fabricated items furnished by the Design-Builder shall be subject to inspection, and no materials or fabricated items shall be used in the Work until they have been inspected and accepted by LAWA. The presence of LAWA shall not relieve the Design-Builder of the responsibility for the proper execution of the Work in accordance with all requirements of the Contract Documents.
- E. No Work shall be backfilled, buried, cast in concrete, hidden or otherwise covered until it has been inspected by LAWA and other Agencies for which a permit is required. Should the Design-Builder attempt to cover or conceal any item of Work prior to its approval and acceptance, LAWA may cause the activity to be stopped and require said Work to be exposed, if determined necessary by LAWA, so that proper inspection may take place. All costs for exposing such Work, including premium costs resulting from alternate means of inspection, time delays, and impacts resulting on other portions of the Work, shall be borne by the Design-Builder. All costs of such delays, including its effect upon other portions of the Work, shall be borne by the Design-Builder. Where Work that was done without inspection cannot be uncovered, such as in concrete cast over reinforcing steel, all such Work shall be subject to demolition, removal, and reconstruction under proper inspection, and no additional payment will be allowed, therefore.

- F. General inspection by LAWA personnel will be provided at no additional cost to the Design-Builder, except as specified elsewhere in the Contract Documents.
- G. Special inspections as required under Section 1700 of the Los Angeles Building Code will be provided by LAWA at no cost to the Design-Builder, except as provided elsewhere in the Contract Documents.

4 FAULTY AND UNAUTHORIZED WORK

- A. Unauthorized Work shall be remedied or removed and replaced by the Design-Builder in an acceptable manner, and no added compensation will be allowed for such removal, replacement, or remedial Work. If the Design-Builder chooses to propose repair of non-conforming Work, a repair procedure is required for non-conforming Work and shall be submitted to LAWA for review and approval prior to any corrective action taking place. Work done beyond the areas indicated or established by LAWA, or any "work" done without written authority from LAWA will be considered to be unauthorized work. Work shall be corrected, removed or replaced at the Design-Builder's expense. If the Design-Builder fails to replace any defective or damaged Work or material after reasonable notice, LAWA may cause such Work or materials to be remedied, removed, or replaced, and the cost thereof to be deducted from any moneys due or which may become due to the Design-Builder.
- B. Except as set forth in this Subsection or elsewhere in these Specifications, all non-conforming Work and materials, in place or not, shall be removed immediately from the Site or corrected to conform to all requirements of the Contract Documents, by the Design-Builder, at the sole expense of the Design-Builder. If the Design-Builder chooses to propose repair of non-conforming Work, a repair procedure is required for non-conforming work and shall be submitted to LAWA for review and approval prior to any corrective action taking place. If the Design-Builder fails to remove, replace, or correct any non-conforming Work or materials within seventy-two (72) hours of discovery, LAWA may cause such Work or materials to be removed and replaced. Such removal and replacement shall be at the sole expense of the Design-Builder and all such cost shall be deducted from any money that is due or may become due to the Design-Builder. Otherwise, the Design-Builder shall pay LAWA if there remains an insufficient amount or no amount to be paid by LAWA to the Design-Builder.
- C. Any delays or impacts arising on the Work as a result of construction or delivery of non-conforming Work or materials shall be at the Design-Builder's sole expense, regardless of whether the Work ultimately becomes the subject of a Change Order, and no time extension shall be allowed to the Design-Builder.
- D. Failure of LAWA to notify the Design-Builder of any non-conforming Work shall not constitute acceptance of any non-conforming Work. The Design-Builder's obligation to remove, replace or correct any non-conforming Work, whenever discovered, shall continue to the end of the warranty period specified in the Contract Documents. LAWA reserves and retains all rights and remedies at law against the Design-Builder and its Surety for correction of any and all latent defects discovered after the warranty period.
- E. In case of a dispute between the Design-Builder and LAWA, the latter is authorized to reject materials or suspend the subsequent Work at the location until any questions at issue can be referred to and decided by LAWA.

5 MATERIALS AND WORKMANSHIP

- A. Work that has been rejected by LAWA shall be remedied or removed and replaced by the Design-Builder in an acceptable manner, and no added compensation will be allowed for such removal, replacement, or remedial Work. If the Design-Builder chooses to propose repair of non-conforming Work, a repair procedure is required for non-conforming Work and shall be submitted to LAWA for review and approval prior to any corrective action taking place. Work done beyond the areas indicated or established by LAWA, or any "work" done without written authority will be considered to be unauthorized work. Work shall be corrected, removed or replaced at the Design-Builder's expense. Upon failure of the Design-Builder to comply with an order under this Subsection, LAWA will cause rejected or unauthorized work to be remedied, removed, or replaced, and the cost to do so shall be deducted from any money due or to become due to the Design-Builder.
- B. If the Design-Builder shall join Work with that of any other Design-Builder, or with any Work in place, and if such joint is not made in a skillful manner, or is not otherwise in conformity with provisions of the Contract, then such joint or Work shall be deemed and construed to be faulty workmanship and such materials shall be deemed and construed to be defective materials.
- C. Any delays or impacts arising on the Work as a result of construction or delivery of non-conforming Work or materials shall be at the Design-Builder's sole expense, regardless of whether the Work ultimately becomes the subject of a Change Order, and no time extension shall be allowed to the Design-Builder.
- D. Workers and installers shall be skilled, trained and experienced in the necessary crafts and shall be completely familiar with the specific requirements and methods needed for proper performance and completion of the Work.
- E. Fabricators shall be licensed by the City of Los Angeles. All structural welding within City jurisdiction shall be performed by welders certified and licensed by the City of Los Angeles, Department of Building and Safety.
- F. No product containing asbestos shall be used for any purpose. When removing asbestos products, the Design-Builder shall comply with the requirements of Title 8, CCR, General Industry Safety Orders and Construction Safety Orders.
- G. All references to specifications of national organizations and trade associations related to building industry such as, but not limited to, American Society for Testing and Materials, American Institute of Steel Construction, American Concrete Institute, Prestressed Concrete Institute, Post-Tensioning Institute, and the National Board of Fire Underwriters. Refer to the latest revision of such specifications except as otherwise noted in the Contract Documents.
- H. All materials, parts, and equipment furnished by the Design-Builder in the Work shall be new, high grade, and free from defects with the exception of recycled materials. Used or secondhand materials, parts, and equipment may be used only, if so specified in the contract documents.
- I. The quality of materials and workmanship shall be subject to approval by LAWA. Materials and workmanship of quality not conforming to the requirements of the Contract Documents shall be considered defective and will be subject to rejection. Defective Work or material, whether in place or not, shall be removed immediately from the Work site by the Design-Builder, at its expenses, when so directed by LAWA.
- J. If the Design-Builder fails to replace any defective or damaged Work or material after reasonable notice, LAWA may cause such Work or materials to be replaced. The

replacement expense will be deducted from the amount to be paid to the Design-Builder.

- K. Refer to the "Faulty and Unauthorized Work" section elsewhere in this PR for additional requirements.

6 SHOP AND SOURCE INSPECTION REQUIREMENTS

- A. All materials, products, equipment and fabricated articles required by the Contract Documents and furnished by the Design-Builder are subject to the quality requirements provided in the Contract Documents.
- B. The Design-Builder shall coordinate and provide all inspections and testing as necessary and as required in the Project Requirement for "Design-Builder Quality Control Program", to ensure all materials, products, equipment and/or other items meet the Contract Document requirements for quality and workmanship.
- C. All permanent materials and fabricated items shall be manufactured or fabricated from Shop Drawings that have been reviewed for conformance to the Contract Documents and approved by LAWA. The Design-Builder shall ensure that legible copies of the approved submittals, shop drawings, approved mix designs, and the corresponding Contract Specifications are provided to its fabricators or suppliers, and that said documents are available to LAWA and the personnel performing Quality Assurance and/or Quality Control inspections and testing. Fabrication or manufacturing of materials or items cannot and will not take place without the specified documents.
- D. The Design-Builder shall produce and submit to LAWA a schedule of all materials, equipment, and other items, as required by the Contract Documents, that are intended to be produced or manufactured at offsite fabrication or manufacturing facilities. This list shall include at a minimum:
 - 1. Specific Item (i.e. material, equipment, or custom fabricated item).
 - 2. Facility Location with Contact Information.
 - 3. Anticipated start of Fabrication or manufacture.
 - 4. QC staff assigned.
- E. The Design-Builder shall provide LAWA with as much notification, but no less than one (1) week notice of the start of fabrications or manufacture of materials, equipment or other items, as required by the Contract Documents.
- F. Any material or fabricated item which does not meet the quality requirements under the Contract is subject to rejection by LAWA and may be required to be removed from the Site by the Design-Builder at the Design-Builder's sole expense.
- G. All materials, products, equipment or other custom fabricated or manufactured items are subject to inspection by LAWA at the source of production. The Design-Builder shall provide access to the site of material fabrication for supplemental inspection or observation if required by LAWA.
- H. The Quality of materials, equipment, products and other fabricated items provided by the Design-Builder and produced at offsite fabrication or manufacturing facilities, as required by the Contract, is the sole responsibility of the Design-Builder. Inspection or

observation by LAWA does not relieve the Design-Builder from complying with the Contract Documents.

7 PROTECTION OF WORK AND MATERIALS

- A. The Design-Builder shall provide and maintain storage facilities and employ such measures as will preserve the specified quality of materials to be used in the Work. Stored materials shall be reasonably accessible for inspection. The Design-Builder shall also adequately protect new and existing Work and all items of equipment for the duration of the Contract.
- B. The Design-Builder shall not, without LAWA's consent, assign, sell, mortgage, hypothecate, or remove equipment or materials intended for permanent use on the Project which have been installed or delivered and which may be necessary for the completion of the Work.
- C. Access to Work and Materials. The Design-Builder shall provide access at any time to the Work and materials wherever same are stored, being fabricated, erected or installed, when requested to do so by a representative of LAWA or other regulatory subdivisions having jurisdiction.
- D. Facilities and Labor. The Design-Builder shall provide sufficient, safe, and proper facilities and labor necessary to move, take and prepare samples for testing of materials, and shall provide the same for purposes of additional testing when ordered to do so by any of LAWA's representatives.

8 TEST OF MATERIALS

- A. Before incorporation into the Work, the Design-Builder shall submit samples of materials, as required by the approved design with the necessary testing frequency to meet the Project plan and specification requirements, at no cost to LAWA. The Design-Builder, at its expense, shall deliver the materials for testing to the place and at the time designated by LAWA. Unless otherwise specified, all initial testing and reasonable amount of retesting will be performed under the direction of LAWA, and at no expense to the Design-Builder. If the Design-Builder is to provide and pay for testing, it will be so specified.
- B. The Design-Builder shall notify LAWA in writing, at least 15 days in advance, of its intention to use materials for which tests are specified, to allow sufficient time to perform the tests. The notice shall name the proposed supplier and source of material.
- C. If the notice of intent to use is sent before the materials are available for testing or inspection, or is sent so far in advance that the materials on hand at the time will not last but will be replaced by a new lot prior to use on the Work, it will be the Design-Builder's responsibility to re-notify LAWA when samples which are representative may be obtained.
- D. **Testing by LAWA**
 - 1. In addition to any other inspection or Quality Assurance provisions that may be specified, LAWA shall have the right to independently select, test, and analyze, at the expense of LAWA, additional test specimens of any or all of the materials to be

used. Whenever any portion of the Work fails to meet the requirements of the Contract Documents as shown by the results of independent testing or investigation by LAWA, all costs of such independent inspection and investigation, and all costs of removal, correction, and reconstruction or repair of any such Work shall be borne by the Design-Builder.

E. Testing by Approved Testing Laboratory

1. When the manufacturer, fabricator, or supplier provides the results of tests from samples taken at the mill, factory, or warehouse, LAWA will accept the test reports provided the following conditions are met:
 - The Testing Laboratory was approved by LAWA prior to performing the tests, and all necessary certifications were valid at the time the tests were performed.
 - The tests were performed in conformance with the Contract Documents for the specified material or item.
 - The reports are made in the form of an affidavit, as specified below.
 - Tests performed by an approved Testing Laboratory are subject to be monitored by LAWA.

F. Whenever the approved Testing Laboratory takes samples of materials other than at the Site, the deliveries to the Site of materials represented by such samples shall be identified as specified for the specific material. The results of such tests shall be reported to the LAWA's Materials Control Inspector in the form of affidavits attested to by the Testing Laboratory. Such affidavits shall furnish the following information with respect to the material sampled:

1. Manufacturer's name and brand.
2. Place of sampling.
3. Sufficient information to identify the lot, group, bin, or silo from which the samples were taken.
4. Amount of material in the lot sampled.
5. Statement that the material has passed the requirements.
6. Signature and title of the person creating the affidavit and the date of execution of the affidavit.

9 CERTIFICATION

- A. LAWA may waive the materials testing requirements of the Contract Documents and accept the manufacturer's written certificate of compliance that the materials to be supplied meet those requirements. Materials test data may be required by LAWA to be included with the submittal.
- B. A Certificate of Compliance in triplicate shall be furnished prior to the use of materials for which the Contract Documents require that such a certificate be furnished. LAWA may permit the use of certain materials or assemblies prior to the sampling and testing if accompanied by a Certificate of Compliance. The certificate shall be signed by the manufacturer of the material or the manufacturer of assembled materials and the

Design-Builder and shall state that the materials involved comply in all respects with the requirements of the specifications. A Certificate of Compliance shall be furnished with each lot of materials delivered to the Work, and the lot so certified shall be clearly identified on the certificate. The form of the Certificate of Compliance and its disposition shall be as directed by LAWA.

- C. Materials used on the basis of a Certificate of Compliance may be sampled and tested at any time. The fact that material is used on the basis of a Certificate of Compliance shall not relieve the Design-Builder of responsibility for incorporating material in the Work which conforms to the requirements of the Contract Documents and such material not conforming to such requirements will be subject to rejection whether in place or not.
- D. LAWA reserves the right to refuse to permit the use of material notwithstanding the submittal of a Certificate of Compliance.

10 TRADE NAMES OR EQUALS

- A. The Design-Builder may supply any of the materials specified or offer an equivalent. LAWA will determine whether the material offered is equivalent to that specified. Adequate time shall be allowed for LAWA to make this determination.
- B. A listing of materials is not intended to be comprehensive, or in order of preference. The Design-Builder may offer any material, process, or equipment considered to be equivalent to that indicated. The substantiation of offers shall be submitted as provided in the Contract Documents.
- C. The Design-Builder shall, at its expense, furnish data concerning items offered by it as equivalent to those specified. The Design-Builder shall have the material tested as required by LAWA to determine that the quality, strength, physical, chemical, or other characteristics, including durability, finish, efficiency, dimensions, service, and suitability are such that the item will fulfill its intended function.
- D. Test methods shall be subject to the approval of LAWA. Test results shall be reported promptly to LAWA that will evaluate the results and determine if the substitute item is equivalent. LAWA's findings shall be final. Installation and use of a substitute item shall not be made until approved by LAWA.
- E. If a substitute offered by the Design-Builder is not found to be equal to the specified material, the Design-Builder shall furnish and install the specified material.
- F. The specified Contract completion time shall not be affected by any circumstance developing from the provisions of this subsection.

11 WEIGHING AND METERING EQUIPMENT

- A. Scales and metering equipment used for proportioning materials shall be inspected for accuracy and certified within the past 12 months by the State of California Bureau of Weights and Measures, by the County Director or Sealer of Weights and Measures, or by a scale mechanic registered with or licensed by the County.
- B. The accuracy of the Work of a scale service, except as stated herein, shall meet the standards of the Business and Professions Code and the Code of Regulations pertaining to weighing devices. A Certificate of Compliance shall be presented, prior to operation,

to LAWA for approval and shall be renewed whenever required by LAWA at no cost to LAWA.

- C. Scales shall be arranged so they may be read easily from the operator's platform or area. They shall indicate the true net weight without the application of any factor. The figures of the scales should be clearly legible. Scales shall be accurate to within 1 percent when tested with the plant shut down. Weighing equipment shall be so insulated against vibration or moving of other operating equipment in the plant area that the error in weighing with the entire plant running will not exceed 2 percent for any setting or 1.5 percent for any batch.

12 CALIBRATION OF TESTING EQUIPMENT

Testing equipment, such as, but not limited to pressure gages, metering devices, hydraulic systems, force (load) measuring instruments, and strain-measuring devices shall be calibrated by a testing laboratory acceptable to LAWA at intervals not to exceed 12 months and following repairs, modification, or relocation of the equipment. Calibration certificates shall be provided when requested by LAWA.

13 CONSTRUCTION MATERIALS DISPUTE RESOLUTION

In the interest of safety and public value, whenever credible evidence arises to contradict the test values of materials, LAWA and the Design-Builder will initiate an immediate and cooperative investigation into such contradiction. Test values of materials are results of the materials' tests, as defined by the Contract Documents, required for accepting the Work. Credible evidence is process observations or test values gathered using industry accepted practices. A contradiction exists whenever test values or process observations of the same or similar materials are diverse enough such that the Work acceptance or performance becomes suspect. The investigation shall have access to all test results, procedures, and facilities relevant to the conflicting results and consider all available information and, when necessary, gather new and additional information in an attempt to determine the validity, the cause, and if necessary, the remedy to the contradiction. If LAWA and Design-Builder agree upon any resolution mechanism, the contradiction shall be resolved with such resolution mechanism and the cooperative investigation shall be deemed concluded.

Whenever the cooperative investigation is unable to reach resolution, the investigation will continue by using a third-party laboratory acceptable to both parties.

The final resolution of the third-party laboratory report should be in writing, stamped and signed by a Professional Engineer licensed in the state of CA. The report should to the extent possible identify the issue of discrepancies and recommend a course of action to avoid such discrepancies. LAWA and Design Builder agree to follow such third-party laboratory recommended course of action.

Unless otherwise agreed, each party will bear 50% of the cost of the third-party cost.

14 PRE-FINAL & FINAL ACCEPTANCE INSPECTION

At the completion of Work, after completion of all corrections, the Inspector, LAWA, the Design-Builder and the Design-Builder's design professionals shall make final inspections, as applicable in accordance with the Project Requirements "DESIGN-BUILDER'S QUALITY CONTROL PROGRAM" and "PROJECT CLOSEOUT". The LAWA Inspector will provide a

Final Inspection Correction List(s) itemizing all Work necessary to complete the Project satisfactorily.

15 COMMISSIONING AND CLOSEOUT QUALITY ASSURANCE

- A. During the Commissioning and Closeout Phases of the project, LAWA will perform Quality Assurance reviews and audits of the Commissioning and Closeout activities performed by the Design-Builder.
- B. Commissioning and Closeout activities include those elements of the Work performed after construction is essentially complete and prior to the contract being closed out. Commissioning and Closeout activities include, but are not limited to:
 - 1. Development and approval of the Designer/Builder's Commissioning Plan
 - 2. Development and approval of the pre-functional test plans, procedures and checklists
 - 3. Development and approval of the functional test plans, procedures and checklists.
 - 4. Submittal of O&M documentation
 - 5. Submittal of Training Plans and proof of the subsequent training(s)
 - 6. Submittal of Warranty information
 - 7. Final Test reports for all pre-functional and functional tests
 - 8. Preparation and maintenance of Issues Log and Report(s)
 - 9. Final Commissioning Report
 - 10. Request for Substantial Completion
 - 11. Certification process for Life Safety systems and equipment
 - 12. Initiation, management and closeout of Final Inspection Correction List(s)
 - 13. Final Completion process
 - 14. Final Record documents
 - 15. Training Records
 - 16. Attic stock
 - 17. Final Inspection
 - 18. Final Payment
 - 19. Final approved Warranties, O&M Manuals, Testing Record Documents, As-Built

Drawings, As-Built Models, etc.

- C. Quality Assurance for Commissioning and Closeout activities encompasses those reviews and audits required to assure LAWA that the Design-Builder adequately coordinates, communicates and maintains compliance with all of its quality control processes and documents that relate to Commissioning and Closeout. In addition to reviews and audits, these assurances are achieved through such program management processes as training, document control, change control, validations & verifications, logistics reviews, engineering reviews, testing reviews, etc. that affects the quality of the Commissioning and Closeout planning process and documents.
- D. LAWA will periodically perform reviews and audits of Commissioning and Closeout activities to assure the Design-Builder maintains compliance with the approved processes and documents that relate to Commissioning and Closeout.

END OF PR-13 QUALITY ASSURANCE

PR-14 QUALITY CONTROL PROGRAM

1 GENERAL

- A. The Design-Builder shall adopt a Quality Control Program to accomplish the work. As the cornerstone of the Quality Control Program, the Design-Builder shall develop, submit, implement and maintain an effective Quality Control Plan that details the methods, procedures and resources that will be engaged to control the quality of the Work during the Preconstruction and Construction phases as required to ensure conformance to the Contract Documents.

The intent of this Project Requirement is to establish the requirements for the Design-Builder to develop and implement a Quality Control Program with an adequate level of control that will:

1. Adequately provide for the establishment of acceptable Preconstruction and Construction quality management and oversight.
 2. Provide sufficient information to assure both the Design-Builder and LAWA that the requirement of the contract plans and specifications will be met.
 3. Allow the Design-Builder to have as much latitude as possible to develop its own standard of control per the Contract requirements.
- B. Generally, the Quality Control Plan shall be divided into a Preconstruction Quality Control Plan and a Construction Quality Control Plan that shall consist of the following requirements covering both on-site and off-site Work:
1. The Design-Builder shall develop and submit to LAWA a Preconstruction Quality Control Plan specifically for this Project. The Preconstruction Quality Control Plan shall be comprehensive and include specifically or by reference the incorporation of Quality Control Plans by each manufacturer, supplier, vendor, and subcontractor.
 2. Prior to the start of construction, the Design-Builder shall develop and submit to LAWA a Construction Quality Control Plan specifically for this Project. The Construction Quality Control Plan shall be comprehensive and include quality requirements for all materials and complete construction required by this contract to conform to contract plans, technical specifications and other requirements, whether manufactured by the Design-Builder, or procured by Subcontractors or vendors, in all subcontracts throughout the life of the Project.
 3. Although guidelines are established and certain minimum requirements are specified herein and elsewhere in the contract technical specifications, the Design-Builder shall assume full responsibility for performing the Work in compliance with the Contract Documents.

- C. The Design-Builder shall be prepared to discuss and present, at the preconstruction conference, its understanding of the quality control requirements. The Design-Builder shall not begin any Preconstruction or Construction activities or production of materials to be incorporated into the completed work until the Quality Control Plan for construction as appropriate has been reviewed and approved by LAWA. No partial payment will be made for Design, Preconstruction or Construction subject to specific quality control requirements until the Quality Control Plan has been approved by LAWA.
- D. The Design-Builder shall develop and implement the quality control program to comply with specific quality assurance and control requirements for Construction activities required on this Project. The Design-Builder shall incorporate the quality requirements of the appropriate sections of LAWA's Design & Construction Handbook (DCH) that apply to those activities as part of the Design or Construction Quality Control Plan. Requirements specified in those sections may also cover production of standard products.
- E. The quality control requirements contained in this section and elsewhere in the Contract technical specifications are in addition to and separate from the acceptance testing requirements. Acceptance testing requirements are the responsibility of LAWA Conflicting Requirements: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, Design-Builder shall comply with the most stringent requirement. Design-Builder shall refer uncertainties and requirements that are different, but apparently equal, to LAWA for a decision before proceeding.
- F. A chart showing the QC organizational structure and its relationship to the production side of the Design-Builder shall be furnished to LAWA. The QC team shall be distinct and separate from the design and construction production teams. The QC plan shall define the minimum qualifications of quality staff inclusive of education, previous experience and training requirements. Design/Builder shall furnish the following;
1. Names and qualifications, in resume format, for each person in the QC organization.
 2. Duties, responsibilities and authorities of each person in the QC organization.
 3. Documentation procedures, including proposed report formats for all reports required herein.
- G. A letter signed by an officer of the firm appointing the QC manager stating that he/she is responsible for managing and implementing the QC program as described herein, and that the QC Manager reports to an officer of the firm, someone other than Design-Builder's Project Manager. Included in this letter is the QC Manager's authority to direct the stopping, removal and replacement of non-conforming Work.
- H. In developing the procedures for reviewing, approving and managing submittals, Design-Builder shall provide the name(s) of the person(s) in the QC organization authorized to review and certify submittals prior to approval.
- I. QC plan shall include procedures to control and verify the design in order to ensure that design criteria and requirements of applicable government entities, third parties, and utility owners are met. Design control includes ensuring design requirements are understood,

execution of design verification activities occur, and controlling design changes through final completion are all established processes and are being utilized. Design control shall be applied to computer programs, design tables and all other products that produce analytical results which are used to develop or check designs.

J. Testing laboratory information requirements:

1. A testing plan and log that includes the tests required, referenced by the specification paragraph number requiring the test, test procedures, the frequency, schedule activity number and the person responsible for each test.
2. Procedures to identify, record, track and complete rework items, including schedule activity numbers.
3. A listing of outside organizations such as architectural and consulting engineering firms that will be employed by Design-Builder and a description of the services and resumes of personnel these firms will provide.
4. A list of the definable features of work. A definable feature of work is a task that is separate and distinct from other tasks and requires separate control requirements. As a minimum, unless otherwise approved by LAWA, consider each section of the specifications as a definable feature of work. However, there may be more than one definable feature of work in each section of the specifications.
5. A personnel matrix showing, for each section of the specification, who will review and approve submittals, who will perform and document the three phases of control (prepare, review, and approval) and finally transmit the approval. All technicians performing material testing must be certified for the particular test they are performing and approved by LAWA.

2 DESCRIPTION OF THE PRECONSTRUCTION QUALITY CONTROL PROGRAM

The Preconstruction Quality Control Program will be guided by the Preconstruction Quality Control Plan that will include, as a minimum, the following:

- A. A General Overview of the Preconstruction approach, management and resources required to perform this phase of the Project. As a minimum, include the following:
 1. The Design-Builder's commitment to following the Preconstruction Quality Control Plan.
 2. A policy statement from the Preconstruction team that demonstrates the Design-Builder's intention and commitment to comply with the contractual requirements.
- B. Identification, management endorsement and empowerment of the Preconstruction Quality Control Manager(s).
- C. Description of how management expects projects (generically) to be executed within the firm's organizational structure, established protocols, processes and procedures, including Consultants, Subcontractors and Vendors.

1. Identification of key management personnel responsible for quality control within each discipline within the Preconstruction team.
- D. Preconstruction quality control requirements, policies and procedures that guide the Design-Builder's management and employees in the performance of Preconstruction services include but are not limited to:
- 1) Programming
 - 2) Planning
 - 3) Site Investigations and Surveys
 - 4) Early Work Package Development
 - 5) Owner Purchased Equipment Specifications
 - 6) Preconstruction Coordination and Phasing Documents
 - 7) Construction Logistics Plans
 - 8) Constructability and Maintainability Review Documents
 - 9) Permit, Bidding and Construction Documents
 - 10) Technical Specifications
 - 11) Cost Estimates
 - 12) RFI's, Submittals and Shop Drawings
 - 13) Site Observation and other Construction phase design support services.
 - 14) Commissioning (see Project Requirement for Commissioning)
- E. Organizational chart showing responsibilities for Preconstruction services and quality control checks.
- F. Project Preconstruction Quality Assurance measures shall include:
1. Verify that quality control methods, procedures and resources identified in the Preconstruction Quality Control Plan are being utilized and effective
 2. Evaluate the overall quality of the products being produced
 3. Identify deficiencies and take corrective action as warranted.
- G. Assurance that quality control checks shall be conducted by an independent person qualified in and familiar with the specific area of review who is not directly associated with the development of the project.
- H. A communications plan outlining the protocol for all communications related to the Preconstruction Quality Control Plan.
- I. The format and schedule for checking drawings and specifications.
- J. Format and procedure for documenting that all requirements of the QC Plan have been met and that all comments and issues have been resolved to the satisfaction of LAWA.

Uniform Traffic Control Devices (MUTCD) as required by the relevant municipality. The WTCPs will be based on lane requirements and other special requirements defined by the Los Angeles City Department of Transportation (LADOT), the affected municipalities for construction within their city and from other appropriate agencies for construction in those jurisdictions. The WTCP's shall be designed to maintain designated safe routes to school wherever possible during times of the year when nearby schools are in session. The WTCP's shall be reviewed and coordinated with the LAMP Project Task Force 30 days in advance of any restriction or closure, or with as much notice as technically feasible.

4. Traffic Maintenance during Construction. The following shall be implemented during construction when the LAMP Project Task Force and appropriate city departments or local jurisdictions deem necessary:
 - a. Deliveries and pick-ups of construction materials shall be scheduled during non-peak travel periods to the degree possible and coordinated to reduce the potential of trucks waiting to load or unload for protracted periods of time.
 - b. Access shall remain unobstructed, or equivalent alternate access provided, for land uses in proximity to the project site during construction.
 - c. Unless otherwise specified in the WTCP, DESIGN-BUILDER shall maintain access to businesses, parking and pedestrian access during construction. If it is necessary to temporarily restrict access to a business, DESIGN-BUILDER shall provide the facility advance notice of restrictions. Unless otherwise specified in the WTCP, DESIGN-BUILDER shall schedule access restrictions to off-peak hours or during times when the business is closed and shall not fully restrict access for the total hours of operation of business on any given day of operation.
 - d. Relative to maintaining access to businesses, construction activities shall be sequenced to minimize the temporary removal of multiple blocks of on-street parking at one time unless otherwise specified by the WTCP.
 - e. DESIGN-BUILDER shall use temporary special signage to inform the public of closure information in advance of temporary closures. Signage shall also provide special access directions, if warranted.
 - f. Notice of closure will be prepared by DESIGN-BUILDER with legible maps and reviewed prior to dissemination by the LAMP Project Task Force.
 - g. A construction management plan accepted by LAWA shall be developed by DESIGN-BUILDER and will be implemented during construction, to include the following:
 - 1) Establish requirements for the loading, unloading, and storage of materials on the Project site
 - 2) Coordinate with the City and emergency and safety service providers to ensure adequate access is maintained to the project site and neighboring businesses.
5. Construction Traffic Staging: Construction operations, including, but not limited to, staging of construction traffic, shall be located as far from noise sensitive uses as feasible.
6. Maintenance of Haul Routes. DESIGN-BUILDER shall be responsible for maintenance of haul routes used, including both on- and off-airport roadways. The haul routes shall be maintained periodically and shall comply with City of Los Angeles or other AHJ requirements for maintenance. All on- and off-airport haul roads used by the DESIGN-BUILDER shall be restored to their original condition, or better, at the completion of construction.

changes, detours, or traffic signal modifications. The WTCP, TTS, and haul routes will require input from the LAX LAMP Project Task Force as well as all other AHJs. The DESIGN-BUILDER shall implement and comply with the following TMP measures to reduce construction-related traffic impacts associated with projects at LAX, including:

- 1) Designated Truck Delivery Hours: To the extent possible, truck deliveries of bulk materials such as aggregate, bulk cement, dirt, etc. to the project site, and hauling of material from the project site, shall be scheduled during off-peak hours to avoid the peak commuter and airport traffic periods on designated haul routes. Peak commuter traffic periods are between 7:00 a.m. to 9:00 a.m. and 4:30 p.m. to 6:30 p.m. Monday through Friday. Deviations to this requirement can be requested in writing by DESIGN-BUILDER (i.e., truck delivery waiver request) at least 72-hours in advance, but require LAWA's review and approval, including approval by CALM and by the LAWA MMRP Monitor assigned to the project, prior to actual site deliveries. Peak airport traffic periods occur throughout most of the day, therefore, to the extent possible, truck delivery hours shall be limited to overnight hours from 1:00 a.m. to 7:00 a.m.
 - 2) Designated Truck Routes: For dirt, aggregate, bulk cement, and all other materials and equipment, truck deliveries would be on designated routes only (freeways and non-residential streets). Designated truck routes are limited to:
 - a) Aviation Boulevard (Imperial Highway to Manchester Boulevard)
 - b) Manchester Boulevard (Aviation Boulevard to I-405)
 - c) Florence Avenue (Aviation Boulevard to I-405)
 - d) La Cienega Boulevard (north of Imperial Highway)
 - e) Pershing Drive (Westchester Parkway to Imperial Highway)
 - f) Westchester Parkway (Pershing Drive to Sepulveda Boulevard)
 - g) Century Boulevard (Sepulveda Boulevard to Aviation Boulevard)
 - h) Sepulveda Boulevard (Westchester Parkway to Imperial Highway)
 - i) Imperial Highway (Pershing Drive to I-405)
 - j) I-405
 - k) I-105; and
 - l) 98th Street (Sepulveda Boulevard to La Cienega Boulevard)
 - 3) Stockpile Locations: All stockpile locations must be pre-approved by LAWA. Stockpile locations/laydown/staging areas shall be accessed by construction vehicles with minimal disruption near residential neighborhoods.
2. Maintenance of Traffic. To ensure that continued vehicular access to community facilities is maintained, DESIGN-BUILDER shall provide at least one lane of traffic in each direction on access cross streets that are not going to be dead-ended during construction. If one lane of traffic cannot be maintained, the contractor shall provide a detour route for motorists.
 3. Worksite Traffic Control Plans. Before the start of construction, WTCP and Traffic Circulation plans, including identification of detour requirements, will be formulated by the DESIGN-BUILDER in cooperation with the affected municipalities and other jurisdictions (County, State) in accordance with the WATCH manual and the California Manual on

PR-18 ENVIRONMENTAL

1. GENERAL

- A. This section covers environmental mitigation requirements for the project that include, but are not limited to, traffic, air quality, noise, water quality, recycling and waste disposal, material stockpiles, excavation including potential to encounter archaeological or paleontological resources, hazardous materials, and other environmental considerations.
- B. Compliance with this section does not exempt the DESIGN-BUILDER from compliance with other applicable permits, approvals, requirements, codes, rules and regulations of other agencies with jurisdiction over their respective aspects and components of the project.
- C. DESIGN-BUILDER's design documents and environmental engineering design efforts must conform to federal, state, regional, and local environmental laws and regulations as well as environmental management policies and sustainability as mandated in the LAWA Sustainable Design and Construction Requirements dated August 4, 2017 or latest version; all mitigation measures and/or standard control measures adopted by LAWA and/or the FAA in connection with the Airfield and Terminal Modernization Project (ATMP) pursuant to the California Environmental Quality Act (CEQA), the National Environmental Policy Act (NEPA) and other applicable laws; and for Master Plan projects the requirements of the 2004 Master Plan Mitigation Monitoring and Reporting Program (MMRP) and other agreements. In addition, where applicable, designs must comply with California Green Building Code and be designed to meet LEED Version 3 Standards. DESIGN-BUILDER is required to inquire with LAWA concerning specific environmental policies that apply to design document development.

2. REQUIREMENTS

- A. DESIGN-BUILDER shall fulfill all requirements identified in the MMRP and other documents contained within the ATMP Environmental Impact Report (EIR) and National Environmental Policy Act (NEPA) Environmental Assessment (EA).
- B. DESIGN-BUILDER shall fulfill all requirements identified by the Los Angeles Green Building Code (LAGBC) to achieve "Tier 1" certification.
- C. DESIGN-BUILDER shall fulfill all requirements identified by the City of Los Angeles' Low Impact Development Ordinance (LID), or unless otherwise directed by AHJ.

3. TRAFFIC

- A. DESIGN-BUILDER shall comply with the following traffic requirements:

1. Traffic Management Plan

- a. Prior to initiation of construction, a Traffic Management Plan (TMP) shall be completed by the DESIGN-BUILDER and accepted by the AHJs. The TMP shall include, but not be limited to, associated haul routes and Worksite Traffic Control Plans (WTCP), as well as Temporary Traffic Signal (TTS) Plans and Temporary Street Lighting (TSL) Plans, if TTS and TSL plans are needed. The TMP shall be prepared in accordance with the TMP guidelines published by Caltrans and shall establish a clear protocol; to address traffic issues, emergencies, incidents, special events, and contingency plans during construction. The TMP shall be developed in coordination with LAWA, the City of Los Angeles, and Caltrans. The TMP shall include a description of how the contractor will manage all construction-related traffic, deliveries, shift hours, parking locations, haul routes, and modifications to shuttle system operations, if any. The WTCP shall detail the locations for any variable message and other signs, lane striping

5. Batch plant and crusher production combined are limited by EQN (1) below,

$$197.9 = 0.00753 \times B + 0.00175 \times C \quad \text{EQN (1)}$$

Where:

B = Batch Plant production in cubic yards per month

C = Crusher production in short tons per month

4. **RECORDKEEPING**

The DESIGN-BUILDER shall provide recordkeeping in accordance with the Permit. At a minimum, the DESIGN-BUILDER shall supply daily operational and emission quantities, requirements of both the concrete batch plant and crusher, for all items listed in the Permit. Prior to installation of the concrete batch plant or crusher, the DESIGN-BUILDER shall coordinate with LAWA to confirm the format of, and process and schedule for, records submittal to LAWA.

END OF PR 17 PORTABLE CONCRETE BATCH PLANT AND CRUSHER

PR-17 PORTABLE CONCRETE BATCH PLANT AND CRUSHER

1. GENERAL

- A. It is anticipated that concrete and crusher plants are not required for this project. However other LAWA projects may provide those services and potentially be made available through special circumstances. Here are the requirements for operation of an on-site concrete batch plant and crusher that should be considered when coordinating with another project.
1. LAWA has obtained a Facility Permit to Operate (Permit) from the SCAQMD to operate an on-site concrete batch plant and crusher.
 2. A Permit issued by the SCAQMD is appended to this section. Included in conjunction with the Permit are certain project limitations as described in Section 3 herein. All provisions and requirements of the Permit apply to the project, with the exception of those specific to Process 9, System 1: Concrete Batch Plant(s) and Control Equipment "A" as defined in the Permit.
 3. If the DESIGN-BUILDER chooses to utilize an on-site concrete batch plant and/or crusher, the DESIGN-BUILDER will be responsible for design, installation and permits for temporary utilities, installation, etc.

2. STANDARDS FOR COMPLIANCE

The DESIGN-BUILDER shall comply with all local, state or federal requirements for installation and operation of a concrete batch plant and crusher. The DESIGN-BUILDER shall also comply with the SCAQMD permit.

3. PROJECT LIMITATIONS

- A. The batch plant and crusher operations shall have certain limitations in their respective operations which include the following:
1. With the exception of front loaders, all equipment associated with the batch plant and crusher facility shall be electric-powered with power provided from the LADWP grid. Front loaders equipment shall comply with PR-18 mitigation requirements and special construction.
 2. Total monthly fuel consumption shall not exceed 4,000 gallons for the loaders combined (onsite use), unless specifically authorized in writing by LAWA.
 3. The total concrete production for the concrete batch plant will not exceed 26,000 cubic yards per month, unless specifically authorized in writing by LAWA.
 4. The total crushing production for the crusher will not exceed 30,000 short tons per month, unless specifically authorized in writing by LAWA. The material that will be crushed onsite shall be reused for onsite construction, or if unused become property of LAWA; any excess materials that will not be crushed shall be hauled off airport property.

Continued on next page

record and note deviations that are accepted and not corrected.

2. On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare survey, certified as required for final property survey dimensions, locations, angles, and elevations of construction and site work.
- B. Site Improvements: Locate and lay out site improvements, including pavements, stakes for grading, fill and topsoil placements, utility slopes, and invert elevations.
- C. Building Lines and Levels: Locate and lay out batter boards for structures, building foundations, column grids and locations, floor levels, and control lines and levels required for mechanical and electrical work.
- D. Final Property Survey: Prepare final property survey showing significant features (real property) for Project. Include on survey certifications, signed by surveyor, that principal metes, bounds, lines, and levels of Project are accurately positioned as shown on survey. At Substantial Completion, DESIGN-BUILDER shall have final property survey recorded by or with local governing authorities as official "property survey."

9. RECORD DOCUMENTS

- A. The DESIGN-BUILDER shall ensure that all survey-data collected is directly incorporated into the latest Design and Construction Documents, (Design Management PR-11) throughout all stages of the project.
- B. The DESIGN-BUILDER shall ensure that all survey-data collected is directly incorporated into the Model of Existing and Proposed Conditions (PR-21 Building Information Model (BIM) and VDC Coordination) throughout all stages of the project.
- C. The DESIGN-BUILDER shall ensure that all survey-data collected is directly incorporated into the Project Record Documents (PR-25) prior to submitting to LAWA.

END OF PR-16 SURVEYING

grades, grade changes or angle points, curbs, building corners, utilities, etc.

- C. The DESIGN-BUILDER shall establish the building baseline, building corners, and an elevation benchmark for building construction. The DESIGN-BUILDER's Surveyor shall lay out the building construction and all Work, set grades, lines, levels and positions throughout, including the inverts or lines and grades, elevations, and measurements of constructed Work for the purposes of determining any construction errors or deficiencies and for the record data collection.
- D. DESIGN-BUILDER shall provide post-installation surveying of all construction and installations (foundations, buildings, structures, utilities, interior features, exterior features, topography, paving, etc.). DESIGN-BUILDER shall incorporate all survey-data directly into their Model of Existing & Proposed Conditions (PR-21), and shall update their Record Documents accordingly (plans, profiles, elevations, etc.).
- E. DESIGN-BUILDER shall provide a Light Detection and Ranging (LIDAR) Survey of all interior and exterior spaces upon Substantial Completion.
- F. DESIGN-BUILDER shall provide an available Licensed Surveyor during all hours of construction for setting grade stakes, monitoring construction, verifying locations and dimensions, and preparing Record Documents. The DESIGN-BUILDER's Surveyor shall survey the elevation and alignment of the critical structural steel connection points of the elevated pedestrian walkways. LAWA may direct the DESIGN-BUILDER to perform additional survey Work as deemed necessary to verify accuracy of construction Work. Any delay due to the unavailability of the Surveyor to perform Work as requested shall be the sole responsibility of the DESIGN-BUILDER.
- G. DESIGN-BUILDER shall provide a complete survey deliverable of all construction and installations (foundations, buildings, structures, utilities, property limits, lease limits, interior features, exterior features, topography, paving, etc.) upon Substantial Completion, signed and sealed by the Licensed Surveyor.

7. LINE AND GRADE

- A. The DESIGN-BUILDER shall ensure that all construction and installations of structures, utilities, pavement, equipment, and all other project components conform to the lines, elevations, and grades shown on the DESIGN-BUILDER's Construction Documents. DESIGN-BUILDER shall record any deviation from the required lines and levels, and advise LAWA when deviations that exceed indicated or recognized tolerances are detected. DESIGN-BUILDER shall clearly reflect any and all deviations that are accepted and not corrected on the Project Record Drawings (PR-25).
- B. The DESIGN-BUILDER shall survey three (3) consecutive points set on the same slope of any line analyzed together so that any variation from a straight line can be detected. Any such variation shall be reported to LAWA. In the absence of such report, DESIGN-BUILDER shall be responsible for any error in the grade of the Work.

8. PERFORMANCE

- A. Surveyor's Log: Maintain Surveyor's log control and other survey work. Make log available for reference.
 - 1. Record deviation from required lines and levels, and advise LAWA when deviations that exceed indicated or recognized tolerances are detected. On the Project Record Drawings,

4. DESIGN AND PRECONSTRUCTION SURVEY SERVICES

- A. The DESIGN-BUILDER shall provide surveying to support all stages of design and preconstruction. This includes, but is not limited to, confirming the dimensions and locations of property lines, streets, sidewalks, buildings, structures, utilities, interior features, exterior features, topography, etc.
- B. The DESIGN-BUILDER shall provide extensive surveying services in support of subsurface utility investigations, locating, mapping, modeling, etc. (PR-07). The DESIGN-BUILDER shall provide utility as-built information in accordance with the LAWA Utility As-Built Survey Standards.
- C. The DESIGN-BUILDER shall provide a complete topographical survey, and shall use that data in providing cost and schedule estimates relating to excavation quantities.
- D. The DESIGN-BUILDER shall provide surveying services to confirm the locations of all tie-in points between existing and proposed utilities, structures, surfaces, etc.

5. EXAMINATION OF EXISTING CONDITIONS

- A. Identification: Identify existing LAWA control network points and verify control to the LAWA Central Terminal Area monument located on the south side of the Theme Building.
- B. Verify layout information indicated in relation to property survey and existing benchmarks before proceeding to lay out Work. Locate and protect existing benchmarks and control points. Preserve permanent reference points during construction.
 - 1. Do not change or relocate LAWA benchmarks or control points without prior written approval of LAWA. Promptly report lost or destroyed reference points or requirements to relocate reference points because of necessary changes in grades or locations.
 - 2. Promptly replace lost or destroyed Project control points. Base replacements on original survey control points.
 - 3. Record benchmark locations, with horizontal and vertical data, on Project Record Documents and Datasets.
- C. Existing Subsurface Utilities and Equipment: Existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning site work, investigate and verify existence and location of underground utilities and other construction. Document all subsurface utilities in accordance with LAWA Utility As-Built Survey Standards attached to this PR.
- D. Prior to construction, verify location and invert elevation at points of connection.

6. CONSTRUCTION SURVEY SERVICES

- A. The DESIGN-BUILDER shall provide extensive surveying services to support all phases of design, construction and inspection. This includes, but is not limited to, confirming the dimensions and locations of buildings, structures, utilities, interior features, exterior features, topography, paving, etc.
- B. The DESIGN-BUILDER shall provide and preserve all necessary survey-stakes necessary for construction and inspection. Survey stakes shall be set and stationed for finished and rough

PR-16 SURVEYING

1. General

Unless otherwise specified, the DESIGN-BUILDER shall perform and be responsible for the accuracy of surveying necessary to adequately construct the Project in accordance with the Contract Documents. All Work under this section shall be accomplished by or under the direct supervision of a Surveyor with a current California Professional Land Surveyor License.

Refer to the Project Requirements (PR-21) – Building Information Model (BIM) and VDC Coordination for survey deliverables related to existing condition models.

2. Surveying Responsibilities and Standards

- A. DESIGN-BUILDER shall be solely responsible for the performance and accuracy of all surveying necessary to adequately perform site-investigations, design, preconstruction, construction, and closeout, and prepare all associated documentation and modeling in accordance with the Contract.
- B. DESIGN-BUILDER shall provide all Latitude & Longitude and Northing & Easting coordinates based on the North American Datum of 1983 (NAD83).
- C. DESIGN-BUILDER shall provide all elevation coordinates based on the North American Vertical Datum of 1988 (NAVD88).
- D. The DESIGN-BUILDER shall utilize and adhere to the LAX Survey Control Network 2018: Consolidated LAX Campus: Landside Survey Control – Central Terminal Area as well as the LAWA LAX Central Terminal Area Top of Slab Survey Data as well as the accompanying Civil3D files.
- E. All surveying shall be performed by a Surveyor with a current California Land Surveyor License. All survey deliverables shall be signed and sealed by the Licensed Surveyor.
- F. All surveying shall be performed and documented in accordance with LAX Survey Control Network 2018, found in LAWA's Design and Construction Handbook.

3. PERMANENT SURVEY MARKERS

- A. The DESIGN-BUILDER shall preserve all existing survey benchmarks and monuments, and shall provide and maintain all additional survey monuments, benchmarks, and other survey markers necessary for the performance and inspection of the work. DESIGN-BUILDER shall request permission from LAWA at least 7 days prior to removing any survey marker. Lost or disturbed monuments shall be replaced at the DESIGN-BUILDER's expense by a California Licensed Land Surveyor.
- B. At least seven (7) days before the start of construction, the DESIGN-BUILDER shall provide Pre-Construction Survey Tie Notes, indicating the Latitude, Longitude, Elevation, and description of all existing survey monuments, benchmarks, and other survey markers prior to starting construction.
- C. DESIGN-BUILDER shall provide Post-Construction Survey Tie Notes, indicating the Latitude, Longitude, Elevation, and description of all remaining survey monuments, benchmarks, and other survey markers. DESIGN-BUILDER shall incorporate and include in the Post-Construction Survey Tie Notes into the Project Record Documents.

5 EMERGENCIES

In an emergency affecting the safety of persons or property, DESIGN-BUILDER shall act, at DESIGN-BUILDER's sole discretion, to prevent any threatened damage, injury or loss. Additional compensation or extension of contract time claimed by DESIGN-BUILDER because of an emergency will be reviewed as changes in the work. The DESIGN-BUILDER shall develop and implement an airport specific Incident Response Plan (IRP). The DESIGN-BUILDER's IRP will be utilized as a project-wide standard operating procedure and comply with LAWA Construction Safety Program requirements. See Appendix for the "LAWA Construction Safety Program requirements." The DESIGN-BUILDER shall provide a preliminary written notification within 1 hour of an incident, regardless of the severity and comply with LAWA Construction Safety Program requirements. The DESIGN-BUILDER shall provide within 24 hours of an incident a complete and thorough incident investigation, and provide the report to the LAWA Project Manager, LAWA Program Safety Manager, and the LAWA Inspection Team. The report must comply with LAWA Construction Safety Program requirements.

6 DRUG FREE WORK PLACE

- A. By signing the agreement, DESIGN-BUILDER certifies, under penalty of perjury under the laws of the State of California, that DESIGN-BUILDER will comply with the requirements of the Drug-Free Workplace Act of 1990 (Government Code, Section 8350 et seq.), and will provide a drug-free workplace by taking the following actions:
- B. Publish a statement notifying employees that unlawful manufacture, distribution, dispensation, possession, or use of a controlled substance is prohibited and specifying actions to be taken against employees for violations.
- C. Establish a drug-free awareness program to inform employees about:
 - 1. The dangers of drug abuse in the workplace
 - 2. The person's or company's policy of maintaining a drug-free workplace
 - 3. Any available counseling, rehabilitation, and employee assistance programs
 - 4. Penalties that may be imposed upon employees for drug abuse violations
- D. Provide, as required by Government Code, Section 8355(c), that every employee who works under the contract will:
 - 1. Receive a copy of the company's drug-free workplace policy statement
 - 2. Agree to abide by the terms of the company's statement as a condition of employment

END OF PR-15 SAFETY

- B. The DESIGN-BUILDER shall designate a safety officer within its organization who will be responsible for all aspects of the safety programs for the project.
- C. The DESIGN-BUILDER shall provide a site specific safety plan for the project including the process and procedures for initiating, maintaining, and supervising all safety precautions and programs in connection with the Work. Processes and procedures shall include coordination with and adherence to LAWA safety personnel.
- D. The site specific safety plan shall contain the location of safety equipment including but not limited to defibrillators, fire blankets, extinguishers, fall harnesses, lanyards, and first aid kits.
- E. The site specific safety plan shall include but not limited to: locations of ingress and egress to work sites, gates and fences, work hours, route to nearest emergency facility (hospital), contact numbers for: DESIGN-BUILDER safety officer, LAWA safety, ambulance, hospital, police, fire department and other emergency response teams should a breach of a utility or injury occur.
- F. The DESIGN-BUILDER shall provide a site specific safety manual for the needs of this Project and shall be maintained at the site and available for review upon request.
- G. The site specific safety manual shall outline the policies and procedures to be followed for this project by both the DESIGN-BUILDER and its subcontractors.
- H. The final site specific safety plan and manual shall be provided in an organized and coordinated manner with the plan title, project name, DESIGN-BUILDERS name, State project/work order number, and date of issuance located on the cover. The finalized safety plan and manual shall be bound and issued to LAWA thirty (30) days prior to the start of construction. The DESIGN-BUILDER shall submit ten (10) copies to LAWA for informational purposes only.
- I. A copy of the site specific safety manual shall be given to each worker at the time of safety orientation. Each worker will sign the manual as confirmation of attendance and understanding of the project safety orientation.

4 WEEKLY SAFETY REPORT

- A. The DESIGN-BUILDER safety manager shall present a cumulative statistics of safety at each weekly owner meeting. The report shall include but not limited to:
 - 1. Head count of each sub-project
 - 2. Number of incidents and summary details of each
 - 3. Number of near misses and summary details of each
 - 4. Number of attendees in safety orientation
 - 5. Summary list of safety topics discussed with workers during safety meeting prior to work commencing.
 - 6. Number of site safety inspections
 - 7. List of permits issued for: hot work, confined space, lock out tag out, procedures in place
 - 8. List of ASR and USR closed, pending and operating.

- C. DESIGN-BUILDER shall be solely responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the performance of the Work. LAWA shall have no responsibility for initiating, maintaining and supervising the safety of persons and property.
- D. Contractor shall comply in all respects with the minimum safety standards and requirements. The provision or omission of safety and/or health services by LAWA to DESIGN-BUILDER shall not be deemed to transfer responsibility to LAWA, or their acceptance or assumption of responsibility, in whole or in part, for safety on the project site(s).
- E. DESIGN-BUILDER shall take precautions for safety and provide protection to prevent damage, injury or loss to:
 - 1. Employees working under the contract and other persons who may be affected thereby.
 - 2. The work and materials and equipment to be incorporated therein, whether in storage on or off the project site, under care, custody or control of DESIGN-BUILDER or DESIGN-BUILDER's subcontractors or sub-subcontractors.
 - 3. Other property at the project site, or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures and utilities not designated for removal, relocation or replacement during the course of construction.
- F. DESIGN-BUILDER shall comply with all applicable laws, ordinances, rules, regulations and lawful orders of public authorities bearing on the safety of persons or property, or their protection from damage, injury or loss.
- G. DESIGN-BUILDER shall erect and maintain, as required by existing conditions and performance of the contract documents, safeguards for safety and protection, including posting danger signs and other warnings against hazards, promulgating safety regulations and notifying LAWA, other owners and users of adjacent sites and utilities.
- H. DESIGN-BUILDER shall comply with all applicable laws, ordinances, rules, regulations and lawful orders of public authorities regarding the storage and/or use of explosives or other hazardous materials or equipment necessary for execution of Work. DESIGN-BUILDER shall employ properly qualified personnel for supervision of same.
- I. DESIGN-BUILDER shall remedy damage and loss to property caused in whole or in part by DESIGN-BUILDER, a subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which DESIGN-BUILDER is responsible under.
- J. DESIGN-BUILDER shall not permit any part of the Work or Project site to be loaded so as to endanger its safety.
- K. When conditions of the work, in the judgment of LAWA, present unreasonable risk of injury or death to persons or property damage, LAWA, may direct DESIGN-BUILDER, at DESIGN-BUILDER's sole expense, to close down the work and not commence work again until dangerous conditions are eliminated.
- L. DESIGN-BUILDER, at DESIGN-BUILDER's own cost, shall rebuild, repair, restore and make good any and all damages to any portion of the work affected by such causes before acceptance of the work.

3 SAFETY PLAN & MANUAL

- A. The objective is to eliminate all injuries to persons and damage to property.

PR-15 SAFETY

1 GENERAL

- A. The objective is for the DESIGN-BUILDER to eliminate all injuries to persons and damage to property.
- B. The DESIGN-BUILDER shall perform all work in compliance with LAWA's Construction Safety Program Requirements, dated April 1, 2022, for construction safety program requirements, (attached to the contract documents). LAWA may withhold payment to DESIGN-BUILDER until such time these requirements are met.
- C. Submittals: The DESIGN-BUILDER shall submit and comply with all required safety plans (for each CGMP and or task order), such as but not limited to, incident prevention plan, incident response plan, Injury and Illness Prevention Plan (IIPP), and Site Specific Safety Plan (SSSP) as required in LAWA's construction safety program requirements. All required safety plans are to comply with LAWA's construction safety program. Safety plans must be submitted for approval within 30 days after NTP.
- D. Qualified Safety Personnel: DESIGN-BUILDER shall have competent and qualified safety staff present at work site at all times during working hours as detailed in LAWA's construction safety program requirements. All DESIGN-BUILDER safety staff shall meet or exceed the qualifications set forth in LAWA's construction safety program requirements. Safety staff are subject to approval by LAWA.
- E. Forms: DESIGN-BUILDER shall properly complete and submit in a timely manner, and as required by LAWA, the forms defined in LAWA's construction safety program requirements.

2 PRACTICES, REGULATIONS, AND STANDARDS

- A. DESIGN-BUILDER shall comply with LAWA's Construction Safety Program Requirements, Cal/OSHA safe practices and regulations, FAA rules and other LAWA safety requirements throughout all phases of the project.
- B. In addition to the requirements specified in other sections of the Contract Documents, the following Safety Requirements shall also apply to DESIGN-BUILDER's activities:
 - 1. Traffic Control - DESIGN-BUILDER shall furnish all required traffic control to protect workers, airport operations, and the public inside and outside of the work area.
 - 2. Violations - In the event an employee of DESIGN-BUILDER violates a safety provision, they shall be prohibited from returning to work in the work area pending an investigation and first attending another orientation class and approval of LAWA. Violations will be deemed as just and sufficient cause to demand the employee be permanently removed from the job site. DESIGN-BUILDER shall be responsible for all costs and delays caused by safety violations.
 - 3. DESIGN-BUILDER shall designate a responsible representative who will be personally available on a twenty-four (24) hour basis. DESIGN-BUILDER shall advise LAWA of the representative's name and telephone number (the telephone shall not be connected to an answering machine). In the event the DESIGN-BUILDER's designated representative is not available due to illness or approved time off, DESIGN-BUILDER shall designate an alternate, who will assume all duties of the DESIGN-BUILDER's designated representative and shall be available on a twenty-four (24) hour basis.

END OF PR-14 QUALITY CONTROL PROGRAM

Exhibit 2. Colored Plan and Matrix Rev. 5

Clarification of Defined Design Zones and QC QA Roles

Per PR-14, Design Builder is to develop a QC plan for the project to include:

- Org-chart detailing QC Staff and roles & responsibilities
- Testing & Inspection Matrix for material to include sampling, testing frequencies, ASTM, Cal Trans, etc

Defined Areas

Zones 1 & 3 - QC Inspection of all work - No QC testing will be required in these areas

Zones 2,4,& 5 - Full QC inspection & Testing program

Entire project is BOE Permitted —

Zone 5 — Will be constructed per a B permit plan sheet under a Cal Trans Co-Op agreement and encroachment permit -Designed and built to Cal Trans standards including testing. LAWA QACID will be approved Cal Trans QA for Zone 5 under forthcoming QMP, & SIQMP and will perform all QA Inspection and testing. **Design-BUILDER will be responsible for QC Inspection and QC testing**

Zones 2 & 4 - Will be constructed under a B permit plan utilizing a Cal Trans design. LAWA QACID will be performing QA inspection and testing. **Design Builder will be responsible for QC Inspection and QC testing.**

Zones 1 & 3 - Will be constructed under a B permit utilizing LA City BOE plans, Standard plans. LAWA QACID will be performing QA inspection and testing. **Design Builder will be responsible for QC Inspection. Design Builder will not be required to perform QC testing in Zones 1 & 3.**

- B. All quality items of construction shall be subject to inspection by LAWA at the point of development, production, manufacture or shipment to determine if the Design-Builder including the Design-Builder's Subcontractors, producers or manufacturers maintain an adequate quality control system in conformance with the requirements detailed herein and the contract documents.
- C. Audits or Inspections by LAWA does not relieve the Design-Builder of performing the quality control checks and inspections to ensure construction activities are performed in conformance to the contract documents and as required herein of Design-Builder's Work, including the Work of the Design-Builder's Subcontractors.
- D. A copy of the audit report will be transmitted to the Design-Builder's Construction Quality Control Manager, the Design/Build Project Manager and LAWA. The Design-Builder shall develop a response to the audit findings that includes the steps to be taken to resolve the findings. Corrective action to resolve audit findings will be the responsibility of the Design-Builder.

10 NONCOMPLIANCE

- A. LAWA will notify the Design-Builder of any noncompliance with any of the foregoing requirements. The Design-Builder shall, after receiving such notice, immediately take corrective action. Any notice, when delivered by LAWA or its authorized representative and/or to the Design-Builder or its authorized Quality Control representative at the site of the work, should be considered sufficient notice.
- B. In cases where quality control activities do not comply with either the Design-Builder Quality Control Program or the contract provisions, or where the Design-Builder fails to properly operate and maintain an effective Quality Control Program, as determined by LAWA, LAWA may:
 - 1. Order the Design-Builder to replace ineffective or unqualified quality control personnel or Subcontractors.
 - 2. Order the Design-Builder to stop operations until appropriate corrective actions are taken.
 - 3. Impacts caused by these actions are deemed to be the responsibility of the Design-Builder.

11. EXHIBITS

The daily inspection reports shall be signed by the quality control personnel responsible and the Design-Builder's Quality Control Manager(s). LAWA shall be provided with at least one copy of each daily inspection report on the workday following the day of record.

2. Test Reports. The Quality Control Manager shall be responsible for establishing a system that will record all quality control test results. Test reports shall document the following information:
 - a. Technical specification item number and description.
 - b. Test designation.
 - c. Location.
 - d. Date of test.
 - e. Control requirements.
 - f. Test results.
 - g. Causes for rejection.
 - h. Recommended remedial actions; and
 - i. Retests.

Test results from each day's Work period shall be submitted to LAWA prior to the start of the next day's Work period. When required by technical specifications, the Design-Builder shall maintain statistical quality control charts. The daily test reports shall be signed by the quality control personnel responsible and the Quality Control Manager.

8 CORRECTIVE ACTION REQUIREMENTS

- A. Conditions adverse to quality or Work performed not in compliance with the Contract Documents will be reviewed by the Design-Builder to determine the cause and to recommend corrective action that will correct the Work and preclude recurrence.
- B. The Design Builder's Quality Control Manager(s) shall report the appropriate action to be taken when a process is deemed, or believed, to be out of control (out of compliance) and detail what action will be taken to bring the process under control. The requirements for corrective action shall include both general requirements for the operation of the Quality Control Program as a whole, and for individual items of Work contained in the technical specifications. The corrective action plan shall be submitted to LAWA within seven (7) days of the identification of the issue.
- C. The Quality Control Plan shall detail how the results of quality control inspections and tests will be used for determining the need for corrective action and shall contain clear rules to gauge when taken to regain process control.
- D. When applicable or required by technical specifications, the Design-Builder shall establish and utilize statistical quality control charts for individual quality control tests. The requirements for corrective action shall be linked to the control charts.

9 AUDIT REQUIREMENTS

- A. The Design-Builder Quality Control Program shall be subject to audit by the LAWA Quality Assurance Manager.

7 DOCUMENTATION

- A. The Design-Builder shall maintain current quality control records of all quality program activities, inspections and tests performed. These records shall include factual evidence that the required logistics planning, meeting minutes, inspections or tests have been performed, type and number of inspections or tests involved, results of inspections or tests, nature of defects, deviations, causes of rejection, etc., proposed remedial action, and corrective actions taken, are completed as required by the contract documents.
- B. These records must cover both conforming and defective or deficient features, and must include a statement that all designs, plans, supplies and materials incorporated in the Work are in full compliance with the terms of the contract. Legible copies of these records shall be furnished to LAWA daily. The records shall cover all Work placed after the previously furnished records and shall be verified and signed by the Design-Builder.
- C. Specific Design-Builder quality control records required for the contract shall include, but are not necessarily limited to, the following records:

- 1. Daily QC Inspection Reports During Construction. Each Design-Builder quality control staff member shall maintain and submit daily reports and maintain a log of all inspections performed for both Design-Builder and Subcontractor operations on a form acceptable to LAWA.

These daily reports shall provide factual evidence that quality control inspections have been performed and shall, as a minimum, include the following:

- a. Work activities including
 - 1) Date and work shift hours.
 - 2) Work performed.
 - 3) Who performed the Work (i.e. Name of Prime and/or Sub).
 - 4) Specific location of the Work.
 - 5) Quantity of Work installed in place.
 - 6) Onsite equipment and utilization
- b. Technical specification item number and description.
- c. Compliance with approved submittals.
- d. Proper storage of materials and equipment.
- e. Proper operation of all equipment.
- f. Statement attesting to conformance with plans and technical specifications.
- g. Review of quality control tests; and
- h. Safety inspection.

The daily inspection reports shall identify inspections conducted, results of inspections, location and nature of defects found, causes for rejection, and remedial or corrective actions taken or proposed.

completed Work is ready for inspection, LAWA will schedule the Pre-Final Acceptance Inspection and will prepare a list of deficient items (punch list) discovered during the inspection. The deficiency list will be transmitted to the Design-Builder for correction of the deficient items.

6. Final Acceptance Inspection – after the Design-Builder has completed all items on the deficiency list (generated from the Pre-Final Acceptance Inspection), he or she shall request a Final Acceptance Inspection. The request shall be made in writing at least 72 hours in advance of the inspection. All areas must be cleaned and ready for turnover prior to this inspection. LAWA, stakeholder representatives, the Design-Builder's Design Professionals, and other interested parties will inspect the subject Work to ensure that all deficiencies have been satisfactorily attended to and that no new deficiencies have appeared, and that all systems are completely functional. Any outstanding or additional deficient items will be noted and handled by B.5 (Pre-Final Acceptance Inspection) above until the Work is acceptable.
- C. The Design-Builder must allow sufficient time in the schedule to perform all required quality control inspections and testing.

6 QUALITY CONTROL TESTING REQUIREMENTS

- A. As a part of the overall Quality Control Program, the Design-Builder shall implement a Quality Control Inspection and Testing Plan, to meet the requirements of the Contract Documents. The inspection and testing plan shall include the minimum tests, inspections, and frequencies required by each technical specification, as well as any additional quality control tests that the Design-Builder deems necessary to adequately control production and/or construction processes.
- B. The required Quality Control inspections and tests can be developed in a matrix and shall, as a minimum, include the following:
 1. Technical Specification Section number.
 2. Item description (e.g., Concrete, Plant Mix Bituminous Pavements).
 3. Test Location (i.e. onsite, offsite, laboratory, manufacturer, fabricator, etc.)
 4. Test type (e.g., slump, gradation, grade, thickness etc...).
 5. Test standard (e.g., ASTM, UL, or another required test standard as applicable).
 6. Inspection and test frequency (e.g., as required by technical specifications or minimum frequency when requirements are not stated).
 7. Inspection and test responsibility (e.g., plant personnel); and
 8. Control requirements (e.g., target, permissible deviations and acceptance criteria).
- C. LAWA reserves the right to witness all quality control sampling and testing at any location.
- D. All quality control test results shall be documented by the Design-Builder as required by the Documentation this PR.

and no later than two weeks after the start of a new or changed operation, LAWA will meet with the Design-Builder's Quality Control Manager(s) and applicable subcontractors' supervisor and their Quality Control representatives to check the following items, as a minimum:

- 1) Workmanship to established quality standards
 - 2) Conformance to contract drawings, specifications and the accepted shop drawings
 - 3) Adequacy of materials and articles utilized
 - 4) Results of inspection and testing methods
 - 5) Adequacy of as-built drawings maintained daily.
- b. Once accepted, the representative sample will become the physical baseline by which ongoing work is compared to quality and acceptability. To the maximum practical extent, approved representative samples of Work elements shall remain visible until all work in the appropriate category is complete. Acceptance of a sample does not waive or alter any contract requirements or show acceptance of any deviation from the contract, not approved in writing by the LAWA.
3. Follow-up Inspection: The Design-Builder's Construction Quality Control Manager(s) will monitor the Work to review the continuing conformance of the Work to the workmanship standards established during the preparatory and initial inspections. These inspections will continue through construction completion and the initiation of the Stage 1 Closeout Procedure of the Project Requirement for Project Closeout.
4. Completion Inspection – 48 hours prior to the completion of an item or segment of Work, and prior to covering up any Work, the Design-Builder will notify LAWA in writing of the need for a Completion Inspection. LAWA will verify that the segment of Work is substantially complete, all inspection and tests have been completed, and the results are acceptable. The purpose of this inspection is to allow further corrective Work upon, or integral to, the completed segment of Work. This is not an acceptance inspection.
- Should any items be determined deficient, needing correction or found to be nonconforming, a deficiency list will be prepared and issued to the Design-Builder for correction, repair or replacement of any deficient or nonconforming items. The cognizant Design-Builder's quality control personnel will verify the correction of the deficient and/or nonconforming items, prior to the start of the next operation and notify LAWA.
5. Pre-Final Acceptance Inspection – prior to requesting a Pre-Final Acceptance Inspection of the completed facilities by LAWA, all Work and operational systems to be inspected shall be completed by the Design-Builder and accepted by the Design-Builder's Construction Quality Control Manager. The Design-Builder's written request for this inspection shall be made 72 hours in advance. The request will include a list of any known deficiencies and when they will be corrected. If the list is too large or contains too many significant items in the opinion of LAWA, no inspection will be held because of the incompleteness of the Work. Once the

as necessary to ensure adequate quality control. The scheduling and coordinating of all inspection and testing must match the type and pace of Work activity. The Quality Control Program shall state where different personnel will be required for different Work elements, whether design, construction or testing.

5 QUALITY CONTROL INSPECTION REQUIREMENTS

- A. Quality control inspection functions should be organized to provide quality control coverage for all definable features of Construction activities. All inspections shall be documented by the Design-Builder as specified by the Documentation Section of these Project Requirements.
- B. Construction QC Inspections - The Design-Builder shall utilize the following six-point inspection plan to ensure the conformance of the Work performed by the Design-Builder meets the requirements of the Contract Documents:
 - 1. Pre-Work Coordination: Prior to the start of construction Work on the Contract and prior to the start of Work under each separate specification section and prior to the start of Work where a change in a construction operation is contemplated by the Design-Builder and prior to a new subcontractor starting Work, a coordination meeting will be held with the Design-Builder's superintendent, and/or CM staff Construction Quality Control Manager(s), Safety representative(s), the testing laboratory, LAWA, and representatives of all applicable subcontractors and vendors. Prior to the meeting, the Construction Quality Control Manager(s) shall provide LAWA with a meeting agenda for review. The Construction Quality Control Manager(s) shall conduct the meeting and distribute the approved agenda. The Construction Quality Control Manager(s) shall develop and electronically distribute finalized meeting minutes within 24 hours upon completion of the meeting.
 - a. The purpose of the meeting is to ensure that the Design-Builder's personnel have no misunderstandings regarding their safety and quality procedures as well as the technical requirements of the contract. The following items shall be presented and reviewed by the Design-Builder:
 - 1) Contract requirements and specifications
 - 2) Status of shop drawings, certifications, submittals and as-built drawings
 - 3) Testing and inspection program and procedures
 - 4) Design-Builder's Construction Quality Control Program and assigned personnel
 - 5) Familiarity and proficiency of the Design-Builder's and subcontractor's workforce to perform the operation to the required workmanship standards including certifications of installers
 - 6) Safety, security and environmental precautions to be observed
 - 7) Any other preparatory steps dependent upon the particular operation
 - 8) The Design-Builder's means and methods for performing the Work.
 - 2. Initial Inspection:
 - a. Upon completion of a representative sample of a given feature of the Work

and equipment for conformance to the contract documents, and as required by the Project Requirements herein.

- 2) Coordination and Performance of all quality control tests as required by the contract documents and the Project Requirement covering the *Quality Control Testing* herein.

3. Quality Control Leads

- a. In addition to the QC Manager(s), the quality control organization shall consist of the following minimum Lead QC personnel as appropriate for the applicable disciplines of the project:
 - 1) QC Roadway Lead: Professional with ten (10) years minimum field experience in construction of civil works with emphasis on roadways, maintenance of traffic, utilities, and drainage facilities.
 - 2) QC Structures Lead: Professional with ten (10) years minimum field experience in construction of bridges, retaining walls, overhead sign structures, and box culverts.
 - 3) QC Electrical Lead: Professional with ten (10) years minimum field experience in construction of electrical systems, signals, and lighting systems.
 - 4) In addition to the aforementioned qualifications, Design-Builder's QC personnel shall be subject to interview and approval by LAWA.

4. Quality Control Inspectors

- a. In addition to the Quality Control Leads, the quality control organization shall consist of the following minimum Quality Control Inspectors:
 - 1) Roadway/Civil Inspectors: Professional with five (5) years minimum field experience in construction of roadway and civil works.
 - 2) Structures Inspectors: Professional with five (5) years' minimum field experience in construction of bridges and retaining walls.
 - 3) Electrical Inspectors: Professional with five (5) years minimum field experience in construction of electrical systems, signals, and lighting systems.
 - 4) In addition to the aforementioned qualifications, the Design-Builder's Quality Control Inspectors shall be subject to interview and approval by LAWA.

D. Staffing Levels

1. The Design-Builder shall provide sufficient qualified quality control personnel, as required, to monitor the quality of Work for fabrication and construction. LAWA will review Design-Builder staffing levels throughout the Work period. The Design-Builder shall appoint separate people to oversee the administration tasks and the fieldwork. Where material is being produced in a plant for incorporation into the Work, separate plant and field personnel shall be provided at each plant and field placement location

independent testing laboratory is used for implementation of all or part of the Quality Control Program, the laboratory and personnel assigned shall be subject to the qualification requirements of this PR. The organizational chart shall indicate which personnel are Design-Builder employees and which are provided by an outside organization.

C. The quality control organization shall consist of the following minimum personnel:

1. Quality Control Managers

- a. The Design-Builder shall provide dedicated Quality Control Manager(s) to manage the Construction Quality Control Plans and shall be full-time employees of the Design-Builder, or a consultant specializing in quality management engaged by the Design-Builder.
- b. The Construction Quality Control Manager(s) and Designated Alternates shall be a quality professional and have a minimum of ten (10) years of experience in major roadway and bridge construction and at least five (5) years shall be recent responsible quality control management experience on a project of comparable size, complexity and scope as the Work.
- c. The Quality Control Manager(s) shall have full authority to institute all actions necessary for the successful implementation of the Quality Control Program across all disciplines for Construction to ensure compliance with the contract documents. The Quality Control Manager(s) shall report directly to the officer responsible of their respective firm. The Quality Control Managers may not supervise the Quality Control Program on any other project and shall be on-site on a full-time basis, a minimum of forty (40) hours per week, and shall not be the same individual as, nor be subordinate to, the Construction Project Manager or Superintendent.
- d. No Work or testing is to be performed by the Design-Builder -whether during the day or at night – without the Quality Control Manager or his/her designated representative(s) approved by LAWA being present on-site.

2. Qualifications for Quality Control Personnel

- a. The Design-Builder shall provide sufficient number of quality control personnel necessary to adequately implement all elements of the Quality Control Program. These QC personnel shall be either architects, engineers, engineering technicians, or construction inspectors with acceptable qualifications that may be met through a combination of education, training, certifications and experience in their area of expertise.
- b. The Design-Builder shall submit a resume of the experience and qualifications for the proposed Design-Builder's Quality Control Personnel to LAWA for review and approval. A personal interview shall also be required for each proposed candidate. Only qualified personnel will be accepted to perform the Quality Control functions as required herein.
- c. The quality control personnel shall report directly to the Quality Control Manager(s) or his/her designated representative(s) and shall perform the following functions:
 - 1) In-process quality control inspection of all materials, construction, plant,

assembled or manufactured offsite.

13. Construction Quality Control Testing procedures that identify the approved testing agencies, qualifications and experience of personnel, accreditation information and frequency of tests.
 14. Offsite Construction Quality Control Testing procedures for manufacturers-provided testing and reporting.
 15. Controls and procedures providing for periodic calibration of testing and measurement equipment, including unique equipment identification and calibration tracking.
 16. Forms and procedures detailing the Quality Control Daily Inspection Report including recorded data, observations and non-compliant work.
 17. Procedure for identifying defective work and specific alternative actions to resolve the deficiency.
 18. Quality Control requirements to ensure final inspections and project closeout conform to the Contract Documents. See PR 27 (Project Closeout).
 19. Requirements and procedures for integrating and coordinating the Design-Builder's Quality Control activities and LAWA's Quality Assurance activities.
 20. Design-Builder is encouraged to add any additional elements to the Construction Quality Control Plan that he/she deems necessary to adequately control all production and/or construction processes required by this contract.
- C. Approval: The Construction Quality Control Plan must be approved before the start of construction activities. LAWA reserves the right to request revisions of the Quality Control Plan that are necessary to ensure the specified quality of the Work conforms to the contract Documents and the requirements herein. LAWA may interview Quality Control personnel at any time to verify their submitted qualifications.
- D. Changes: The Design-Builder shall submit any requested changes to the Quality Control Plan, including changes in personnel, to LAWA in writing for approval. Proposed changes must be submitted at least 7 days in advance of the desired effective date of the change. No change in the approved Quality Control Plan shall be implemented without LAWA's written approval.

4 QUALITY CONTROL ORGANIZATION

- A. The Design-Builder Quality Control Program shall be implemented by the establishment of a separate quality control team not involved in the production. An organizational chart shall be developed to show all quality control personnel for Construction services and how these integrate with other management/production and construction functions. Resumes for personnel shall be included in the Quality Control Program Plan submittal for approval by LAWA.
- B. The organizational chart shall identify all quality control staff positions by function and shall indicate the total staff required to implement all elements of the Quality Control Program for Construction services for each item of Work. If necessary, different qualified personnel can be utilized for specific functions for different items of Work. If an outside organization or

2. The approved project schedule.
3. The approved submittals schedule.
4. Controls to assure that only the "Approved/Issued/Released for Construction" construction documents are utilized in the Work. This includes provisions for removing superseded versions from the Work area, except where explicitly and prominently marked "Void - For Information Only"; such as to retain annotated installation data.
5. Identify all Quality Control activities, tests and inspections, including off-site source inspections and tests, or design quality control activities that the Design-Builder will perform to ensure conformance to the approved design and Contract Documents.
6. Forms and procedures for grade control of all structures, including the Design-Builder providing and setting deck elevation control points.
7. Procedures for identifying and contractually invoking the applicable technical and quality requirements delineated in the Contract Documents for all vendors supplying materials, parts and services.
8. Plans and procedures for receiving, inspecting and accepting material and equipment. These shall include examination of physical condition and compliance with purchasing requirements, including markings for class type and grade, and conformance of approved submittals. These shall also include provisions for:
 - a. Identifying, tracking, controlling and processing non-conforming items, including notification(s) to LAWA.
 - b. Inspection of materials for authenticity to preclude counterfeit parts, for items and attributes of concern identified by LAWA.
 - c. Verifying for compliance and traceability, maintaining, and turnover to LAWA, certificates of conformance and mill certificates required by Contract Documents or codes or standards invoked, for materials received.
 - d. Identify and plan production and installation processes that directly affect quality and ensure these processes are performed under controlled conditions. Special processes, including at a minimum welding, nondestructive testing, and heat treatment; the results of which cannot be directly verified by subsequent inspection and testing of the product, shall be continuously monitored to ensure the quality of the final product.
9. Requirements for corrective action when quality control and/or acceptance criteria are not met. Corrective action procedures shall include investigation of the root cause of non-conforming Work and determination of action needed to correct non-conforming Work and prevent a recurrence.
10. Technician and inspection staffing levels for each type of operation.
11. Construction Quality Control Inspection procedures that detail minimum qualifications and experience of personnel, applicable recognized standards and frequency of inspection.
12. Offsite Construction Quality Control Inspection procedures for items fabricated,

- K. List of specific QC checklists, standards policies and procedures to be used to verify accuracy and completeness of the Work.
- L. The Design-Builder shall execute the requirements of the Quality Control Plan over the course of the project and provide contemporaneous documentation, or other mutually acceptable records, demonstrating full compliance with the plan.
- M. Any non-compliance shall be addressed by the Design-Builder's Design Professional to LAWA's reasonable satisfaction within a mutually agreed upon time period. Repeated non-compliance and/or any failure to correct non-compliance to LAWA's reasonable satisfaction shall be considered a material breach of this Agreement. Non-compliance reports may be issued by the Design-Builder designated Quality Manager or his designated person, or by LAWA inspection team.
- N. Quality is the Design-Builder's sole responsibility. Neither LAWA's acceptance of the Preconstruction Quality Plan nor any -Quality Assurance Audit shall relieve the Design-Builder of the responsibility to deliver quality of all services provided under this Agreement.
- O. All preconstruction logistics and coordination documents intended for submission to LAWA or outside agencies, for review, shall be reviewed and signed off by the appropriate Preconstruction Quality Control Manager prior to submission.

3 DESCRIPTION OF CONSTRUCTION QUALITY PROGRAM

A. General Description

The Design-Builder shall establish a Construction Quality Control Program and organization to perform the necessary quality control of all items of Work required by the technical specifications, including those performed by subcontractors, suppliers and testing agencies. This Construction Quality Control Program shall ensure conformance to applicable contract documents and project requirements with respect to materials, workmanship, construction, finish, and functional performance. The Construction Quality Control Program will be guided by the Project Quality Control Plan.

The Construction Quality Control Plan shall be effective for controlling all construction Work performed under this Contract and shall specifically include methods, procedures and resources, surveillances and tests required by the technical specifications, in addition to other requirements of the Contract Documents and any other activities deemed necessary by the Design-Builder to establish an effective level of quality control.

B. Construction Quality Control Plan

The written Quality Control Plan shall be submitted to LAWA for review and acceptance at least thirty (30) calendar days before onsite activities are scheduled to begin.

The Quality Control Plan shall be organized to address, as a minimum, the following items:

1. Quality control organization and staffing levels for positions expected to be utilized during the construction phase for and construction phase.

7. **Construction Employee Parking Locations.** DESIGN-BUILDER's designated employee parking areas shall be as shown on their plans within their approved areas, including commercial/private parking lots and/or existing shuttle services, if used. If DESIGN-BUILDER chooses to use shuttle buses, they shall operate from the designated employee parking areas to the work site. Shuttle buses shall comply with all applicable California Air Resources Board (CARB) and SCAQMD rules and regulations, and LAWA's Alternative Fuel Policy. As parking is at a premium within the Project Site and surrounding areas, carpooling is strongly encouraged. DESIGN-BUILDER shall ensure that all employees, including those of subcontractors, vendors, suppliers, etc. at all tiers, park in the designated parking locations and not on city streets, nor in nearby neighborhoods. A complete description of this operation shall be included within the DESIGN-BUILDER's TMP. All construction personnel will be required to attend an airport project-specific orientation meeting that will cover where to park, where staging areas are located, construction policies, etc.
 8. **Engineered Traffic Control Plans.** DESIGN-BUILDER shall provide and implement an Engineered Traffic Control Plan, subject to LAWA review, comment, and approval, for any lane-closure or lane-restriction in the CTA, or any of the roads or ramps leading in or out of the CTA (Sepulveda Blvd, Century Blvd, World Way, Center Way, East Way, West Way, etc.). Traffic Control Plans shall be prepared, signed and stamped by a licensed Traffic Engineer, and shall be included in the Area Shutdown Request (ASR) at least 30 days prior to the requested shutdown start date.
- B. In addition to the mitigation measures identified above, DESIGN-BUILDER is required to comply with all AHJ guidelines and regulations.

4. **STOCKPILES**

A. **Construction Material Stockpiles Locations and Maintenance:**

1. All Stockpile locations require pre-approval by LAWA. Stockpile locations shall be accessed by construction vehicles with minimal disruption to adjacent public streets. The same applies for rock-crushing and concrete batch plant operations if either or both of those occur as part of Project construction (Note: Rock-crushing and concrete batch plant operations at LAX are subject to special permit requirements that must be coordinated through LAWA's Environmental Compliance Group)..
2. DESIGN-BUILDER shall seal the surface of all stockpiles of rock and earth materials that are not being actively constructed or mined with a dust control product. Treatment may include water spray via DESIGN-BUILDER-provided irrigation systems, proprietary non-toxic crusting agents, bituminous prime coat for dust control, anchored geotextile fabric or tarps, erosion control fabric, seeding, or other methods approved by LAWA. The method employed shall be appropriate for the expected duration of, and the material in, the stockpile. Throughout all stages of the project, DESIGN-BUILDER shall maintain the dust control seal to meet the requirements of this section. DESIGN-BUILDER shall submit the proposed method of sealing the stockpile area to LAWA for approval prior to its use. All costs of sealing, and maintaining stockpile seals, shall be considered incidental to other items and no separate measurement or payment will be made.
3. DESIGN-BUILDER shall use operational controls to reduce the dust potential of stockpiles and comply with applicable FAA, state and local environmental regulations. These operational controls may include, but are not limited to:
 - a. Locating stockpiles behind natural or manufactured windbreaks.
 - b. Locating the working area on the leeward side of the active piles.

- c. Using stone ladders, telescopic chutes, stacker conveyors or other mechanical devices to limit the drop of fall and exposure to wind when the stockpile is being constructed.
- d. Limiting the height of the stockpile in conformance to an approved FAA Airspace Determination (7460).
- e. Watering as necessary for dust control, a minimum of three times per day or as directed by LAWA.
- f. Minimizing vehicle traffic and vehicle speeds in and around stockpiles.
- g. Avoiding steep sides or faces on stockpiles.
- h. Arranging stockpiles in such a direction to minimize wind erosion.

5. AIR POLLUTION CONTROL

A. DESIGN-BUILDER shall not discharge smoke, dust, equipment exhaust, or any other air contaminants into the atmosphere in such quantity as will violate any federal, state, or local regulations. DESIGN-BUILDER shall also abate dust nuisance by cleaning, sweeping, and spraying with water or other means as deemed necessary. The use of water shall conform to the water pollution control requirements contained in this contract.

B. Dust Control

1. The DESIGN-BUILDER shall be responsible for continuously removing from the site, and haul roads on and off the airport, excavated materials and debris resulting from the work. Vehicles exiting the Site shall have all dirt clods and mud removed from their tires prior to leaving the site.
2. The DESIGN-BUILDER shall continuously contain dust and debris and remove it from the Site at intervals sufficient to prevent dissemination outside work limits and as directed by LAWA. DESIGN-BUILDER shall use adequate watering techniques to alleviate accumulation of construction-generated dust.
 - a. The DESIGN-BUILDER shall be responsible for containment of dust emission from all construction, transport, storage, or handling activities, in accordance with SCAQMD Rule 403: Fugitive Dust.
 - b. The DESIGN-BUILDER shall be responsible for the continuous clean-up of all construction-related dirt on approach/exit routes to/ from the Site.
 - c. The DESIGN-BUILDER shall pave all construction access roads at least 100 feet onto the site (i.e., unpaved construction areas) from the main road(s).
 - d. During construction, DESIGN-BUILDER shall demonstrate that all ground surfaces are covered or treated sufficiently to minimize fugitive dust emissions.
 - e. The DESIGN-BUILDER shall be responsible for all roadways, driveways, sidewalks, etc., installed as part of the project being completed as soon as practical; in addition, building pads should be laid as soon as practical after grading.
 - f. The DESIGN-BUILDER shall locate rock-crushing operations and construction material stockpiles for all LAX-related construction in areas away from LAX-adjacent residents, to the extent possible, to reduce impacts from emissions of fugitive dust.
 - g. The DESIGN-BUILDER shall furnish trash bins with a closed cover for all debris resulting from construction. All debris shall be placed in trash bins daily. Trash bins, including large dumpsters, shall be covered at the end of each work day, during rain

- events, and/or when not actively used. Forms or false work that is to be reused shall be stacked neatly as they are being removed. Forms and false work that are not to be reused shall be disposed of immediately upon their removal.
- h. The DESIGN-BUILDER shall submit to LAWA a monthly log showing daily fugitive dust mitigation measures. The log shall specify the subject area, mitigation measures utilized, frequency of control, and other relevant information.
3. The DESIGN-BUILDER shall furnish and operate self-loading motor sweepers with spray nozzles for the purpose of keeping paved areas acceptably clean wherever construction, including restoration, is incomplete or as requested by LAWA.
- a. DESIGN-BUILDER shall keep available at the job site, at all times, a minimum of two (2) self-loading operational vacuum motor sweeper, ELGIN Broom Bear or LAWA-approved equivalent, and at least one (1) water truck to maintain dust control and cleaning of pavements affected by DESIGN-BUILDER operations. DESIGN-BUILDER shall use this equipment as needed to keep pavement areas swept clean of debris, to the satisfaction of LAWA. Sweepers shall be kept in good working condition and stationed within work areas to provide swift response as needed.
 - b. Motor sweepers shall be CNG-fueled, unless otherwise approved by LAWA.
4. DESIGN-BUILDER shall post a publicly visible sign(s) with the telephone number and person to contact regarding dust complaints; this person is required to respond and take corrective action within twenty-four (24) hours.
5. DESIGN-BUILDER shall implement additional dust controls for activities that generate dust, like concrete saw cutting, joints cleaning/widening, etc., or as required by LAWA.
6. Reclaimed water shall be used for dust control, to the maximum extent practicable. If/where feasible, DESIGN-BUILDER shall install raised water tank (Water Buffalo) and connect to reclaimed water lines where available and as directed by LAWA.

6. AIR QUALITY

- A. The DESIGN-BUILDER shall, to the extent feasible, have construction employees commute during off-peak hours.
- B. The DESIGN-BUILDER shall utilize an on-site rock crushing facility, when feasible, during construction to reuse rock/concrete and minimize off-site truck haul trips.
- C. The design, installation, and operation of any concrete batch plant or rock-crusher at LAX, including project-related LAWA-owned properties, by DESIGN-BUILDER, shall comply with the "Construction and Operation Compliance Manual" dated October 25, 2024 or as subsequently updated, and all applicable requirements of the current SCAQMD Title V Permit for LAX.
- D. The DESIGN-BUILDER shall make access available for on-site lunch trucks during construction, as feasible and consistent with requirements pertaining to airport security, to minimize off-site worker vehicle trips.
- E. The DESIGN-BUILDER shall suspend use of all construction equipment during a second-stage smog alert in the immediate vicinity of LAWA.
- F. Tampering with construction equipment to increase horsepower or to defeat emission control devices is prohibited.
- G. The DESIGN-BUILDER shall prohibit construction diesel vehicles or equipment from idling in excess of the idling restrictions as defined in California Air Resources Board (CARB) Vehicle

Idling Rule (i.e., idling no more than five (5) minutes). DESIGN-BUILDER shall advise drivers and operators of these requirements during subcontractor onboarding and/or orientation, remind them on a daily basis, and post signs in appropriate places indicating the CARB Vehicle Idling Rule. Exemptions may be granted for safety-related and operational reasons, as defined by CARB or as approved by LAWA. DESIGN-BUILDER and their subcontractors shall have policies and procedures in place for compliance with the CARB Idling Rule and a copy of such shall be submitted within thirty (30) days of NTP to LAWA for approval.

- H. The DESIGN-BUILDER shall make every effort to utilize grid-based electric power at any construction site, where feasible. Grid-based power can be from a direct hookup or a tie-in to electricity from power poles. If diesel-fueled generators are necessary, generators with engines greater than 50 horsepower must meet the requirements of Section 6.N below.
- I. The DESIGN-BUILDER shall designate a person or persons to effectively ensure the implementation of all components of the construction-related air quality/pollutions control measures through direct inspections, record reviews, investigations of complaints, and the timely communication to all concerned parties. DESIGN-BUILDER shall provide LAWA with the name and cell phone number of that person(s), and shall provide LAWA with updated information within 5 working days should that person(s) and/or cell number change at any time. That person(s) can be the same as required in Section 16.B below.
- J. DESIGN-BUILDER shall prepare and submit to LAWA for approval, within thirty (30) days from Notice to Proceed, a list of all equipment to be used, including Subcontractors' equipment, necessary to complete the Work. Said list shall include, but not limited to equipment type, manufacturer, equipment model, model year, equipment identifying number (EIN/ PERP, License), fuel source and emission characteristics. The equipment list shall be updated monthly and submitted to LAWA.
- K. All diesel-fueled equipment used for construction shall be outfitted with the best available emission control devices, where technologically feasible, primarily to reduce emissions of diesel particulate matter (PM), including fine PM (PM_{2.5}), and secondarily, to reduce emissions of NO_x. This requirement shall apply to diesel-fueled off-road equipment (such as construction machinery), diesel-fueled on-road vehicles (such as trucks), and stationary diesel-fueled engines (such as electric generators). (It is unlikely that this measure will apply to equipment with Tier 4 engines, as these engines typically already incorporate the best available emission control devices.) The emission control devices utilized in construction equipment shall be verified or certified by CARB or US Environmental Protection Agency for use in on-road or off-road vehicles or engines. For vehicles and/or equipment outfitted with CARB approved BACT devices, the BACT device shall be approved by CARB as specified on the website <http://www.arb.ca.gov/msprog/ordiesel/vdecs.htm>. A copy of each unit's certified BACT documentation, and each unit's CARB or SCAQMD operating permit, shall be provided at the time of mobilization of each applicable unit of equipment. This requirement applies to diesel equipment owned and/or operated by the DESIGN-BUILDER and their subcontractors (including all sub-tiers).
- L. The DESIGN-BUILDER and their subcontractors (including all sub-tiers) shall use renewable diesel fuel in proposed project construction off-road equipment and on-site, on-road trucks, for at least 90 percent of diesel fuel demand.
- M. On-road medium-duty and larger diesel-powered trucks used on LAX construction projects with a gross vehicle weight rating (GVWR) of at least 14,001 pounds shall, at a minimum, comply with USEPA 2010 on-road emissions standards for PM₁₀ and NO_x. DESIGN-BUILDER requirements to utilize such on-road haul trucks or the next cleanest vehicle

available will be subject to the provisions of section 6.O below. For trucks subject to this requirement, DESIGN-BUILDER shall provide documentation, such as a copy of the vehicle registration or other such government document, confirming the model year of the truck prior to its use on the project. The required documentation must be submitted to the LAWA MMRP Monitor assigned to the project, and is subject to review and approval by the Monitor prior to the truck's use at the site (i.e., the truck cannot be used at the site without the Monitor's prior approval). LAWA has up to 21 days to review and respond to such submittals. Submittals with incomplete or inaccurate information will be rejected or returned to DESIGN-BUILDER as "Revise and Resubmit." It is recommended that DESIGN-BUILDER coordinate with LAWA's Mitigation Monitor(s) regarding submittal requirements and process prior to making a first submittal.

- N. All off-road diesel-powered construction equipment greater than fifty (50) horsepower shall meet, at a minimum, USEPA Tier 4 (final) off-road emissions standards. DESIGN-BUILDER requirements to utilize tier 4 (final) equipment or the next cleanest equipment available will be subject to the provisions of section 6.O below. For off-road equipment subject to this requirement, DESIGN-BUILDER shall provide documentation, such as available through the CARB DOORS registration specific to such equipment and CARB Executive Orders specific to engine family numbers, confirming the engine tier level of the equipment prior to it being brought onto LAWA property. The required documentation must be submitted to the LAWA MMRP Monitor assigned to the project, and is subject to review and approval by the Monitor prior to the equipment being brought onto LAWA property (i.e., the project-related equipment cannot be brought onto LAWA property without the Monitor's prior approval). LAWA has up to 21 days to review and respond to such submittals. Submittals with incomplete or inaccurate information will be rejected or returned to the DESIGN-BUILDER as "Revise and Resubmit." It is recommended that the DESIGN-BUILDER coordinate with LAWA's Mitigation Monitor(s) regarding submittal requirements and process prior to making a first submittal.
- O. Exceptions. The on-road truck and off-road construction equipment requirements set forth above in Paragraphs 6.L and 6.M of this section shall apply unless any of the following circumstances exist and the DESIGN-BUILDER or their Subcontractor provides a written finding consistent with project contract requirements and acceptable to LAWA that:
 - 1. DESIGN-BUILDER or their subcontractor does not have the required types of on-road trucks or off-road construction equipment within its current available inventory and intends to meet the applicable requirements of the Paragraphs 6.M and 6.N. as to a particular vehicle or piece of equipment by leasing or short-term rental, and the DESIGN-BUILDER or their Subcontractor has attempted in good faith and due diligence to lease the vehicle or equipment that would comply with these measures, but that vehicle or equipment is not available for lease or short-term rental within one hundred twenty (120) miles of the project site, and the DESIGN-BUILDER has submitted documentation to LAWA that the requirements of this exception provision apply.
 - 2. The DESIGN-BUILDER or their subcontractor has been awarded funding by SCAQMD or another agency that would provide some or all of the cost to retrofit, repower, or purchase a piece of equipment or vehicle, but the funding has not yet been provided due to circumstances beyond the DESIGN-BUILDER or their subcontractor's control, and the DESIGN-BUILDER or their subcontractor has attempted in good faith and due diligence to lease or short-term rent the equipment or vehicle that would comply with Paragraphs 6.M and 6.N , as applicable, but that equipment or vehicle is not available for lease or short-term rental within one hundred twenty (120) miles of the project site, and the DESIGN-BUILDER has submitted documentation to LAWA showing that the requirements of this exception provision apply.

3. DESIGN-BUILDER or their Subcontractor has ordered a piece of equipment or vehicle to be used on the construction project in compliance with Paragraphs 6.M and 6.N , as applicable, at least sixty (60) days before that equipment or vehicle is needed at the project site, but that equipment or vehicle has not yet arrived due to circumstances beyond the DESIGN-BUILDER or their subcontractor's control, and the DESIGN-BUILDER or their Subcontractor's has attempted in good faith and due diligence to lease or short-term rent a piece of equipment or vehicle to meet the applicable requirements of Paragraphs 6.M and 6.N , but that equipment or vehicle is not available for lease or short-term rental within one hundred twenty (120) miles of the project, and the DESIGN-BUILDER has submitted documentation to LAWA showing that the requirements of this exception provision apply.
4. Construction-related diesel equipment or vehicle will be used on the project site for fewer than twenty (20) days per calendar year. DESIGN-BUILDER or their Subcontractor shall not consecutively use different equipment or vehicles that perform the same or a substantially similar function in an attempt to use this exception to circumvent the intent of Paragraphs 6.M and 6.N, as applicable.
5. Documentation of good faith efforts and due diligence regarding the above exceptions shall include written record(s) of inquiries (i.e., phone log[s]) to at least three (3) leasing/rental companies that provide construction-related on-road trucks of the type specified in Paragraph 6.M above (i.e., medium-duty and larger diesel-powered trucks with a gross vehicle weight rating of at least 14,001 pounds) or diesel-powered off-road construction equipment such as the types to be used by the DESIGN-BUILDER or their subcontractor, documenting the availability/unavailability of the required types of trucks/equipment. LAWA will, from time-to-time, conduct independent research and verification of the availability of such vehicles and equipment for lease/rent within a one hundred twenty (120) mile radius of LAX, which may be used in reviewing the acceptability of the DESIGN-BUILDER or their subcontractor's good faith efforts and due diligence.

In any of the situations described above, DESIGN-BUILDER or their subcontractor shall provide the next cleanest piece of equipment or vehicle as provided by the step-down schedules in Table A for Off-Road Equipment and Table B for On-Road Equipment.

Continued on next page

Table A Off-Road Compliance Step Down Schedule*		
<u>Compliance Alternative</u>	<u>Engine Standard</u>	<u>CARB-verified DECS (VDECS)</u>
1	Tier 4 <i>interim</i>	N/A**
2	Tier 3	Level 3
3	Tier 2	Level 3
4	Tier 1	Level 3
5	Tier 2	Level 2
6	Tier 2	Level 1
7	Tier 3	Uncontrolled
8	Tier 2	Uncontrolled
9	Tier 1	Level 2
** Tier 4 (interim or final) or 2007 model year equipment not already supplied with a factory-equipped diesel particulate filter shall be outfitted with Level 3 VDECS.		
Equipment less than Tier 1, Level 2 shall not be permitted.		

Table B On-Road Compliance Step Down Schedule*		
<u>Compliance Alternative</u>	<u>Engine Model Year</u>	<u>CARB-verified DECS (VDECS)</u>
1	2007	N/A**
2	2004	Level 3
3	1998	Level 3
4	2004	Uncontrolled
5	1998	Uncontrolled
** 2007 Model Year equipment not already supplied with a factory-equipped diesel particulate filter shall be outfitted with Level 3 VDECS.		
Equipment with a model year earlier than Model Year 1998 shall not be permitted.		

**How to use Table A and Table B: For example, if Compliance Alternative #1 is required by this policy but DESIGN-BUILDER cannot obtain an off-road vehicle that meets the Tier 4 interim standard (Compliance Alternative #1 in Table A) and meets one of the above exceptions, then DESIGN-BUILDER shall use a vehicle that meets the next compliance alternative (Compliance Alternative #2) which is a Tier 3 engine standard equipped with a Level 3 VDECS. Should DESIGN-BUILDER not be able to supply a vehicle with a Tier 3 engine equipped with a Level 3 VDECS in accordance with Compliance Alternative #2 and has satisfied the requirements of one of the above exceptions as to DESIGN-BUILDER's ability to obtain a vehicle meeting Compliance Alternative #2, DESIGN-BUILDER shall then supply a vehicle meeting the next compliance alternative (Compliance Alternative #3), and so on. If DESIGN-BUILDER is proposing an exemption for on-road equipment, the step-down schedule in Table B should be used. DESIGN-BUILDER must demonstrate that it has satisfied one of the exceptions listed in the selected Compliance Alternative # before it can use a subsequent Compliance Alternative. The goal of this requirement is to ensure that DESIGN-BUILDER has exercised due diligence in supplying the cleanest fleet available.*

- P. Nothing in the above specifications shall require an emissions control device (i.e., VDECS) that does not meet OSHA standards.
- Q. **NON-ROAD MOBILE SOURCE CONTROLS** DESIGN-BUILDER shall prohibit staging or parking of construction vehicles (including workers' vehicles) on streets in residential areas or adjacent to schools, daycare centers, hospitals, or places of worship.
- R. **STATIONARY POINT SOURCE CONTROLS** DESIGN-BUILDER shall use a combination of electricity from power poles and electricity from portable diesel- or gasoline-fueled generators using "cleaner burning diesel" fuel and exhaust emission controls for his electrical energy requirements. DESIGN-BUILDER shall obtain approval of LAWA for the use of internal combustion engine water pumps, power generators, air compressors and other related construction equipment when an option exists to utilize grid power or electric powered equipment. In accordance with SCAQMD Rule 431.2, all diesel construction equipment shall use only Ultra Low Sulfur Diesel fuel (15 ppm or lower).
- S. Coating and paving materials shall be formulations with low volatile organic compound (VOC) levels, consistent with the requirements of SCAQMD Rule 1113.

7. NOISE CONTROL

- A. The DESIGN-BUILDER shall provide a Construction Noise Control Plan (CNCP) in each of their design-package submittals, and shall implement and maintain the plan throughout all stages of the project. The CNCP shall describe how the DESIGN-BUILDER will manage construction related noise to comply with noise provisions of the City of Los Angeles Municipal Code (Chapter XI Article 1 and Section 41.40) and the requirements of this contract. The intent of the CNCP is to control noise impacts to noise-sensitive areas. Noise-sensitive areas are defined as residences, apartments, hotels, schools, day care centers, places of worship, and hospitals.
- B. In particular, the CNCP shall address construction equipment noise at noise-sensitive receptors where construction noise impacts may be significant. Such noise-sensitive receptors include, but may not be limited to, the Residence Inn by Marriott Los Angeles LAX/Century Boulevard, Sheraton Gateway Los Angeles Hotel, H Hotel/Homewood Suites by Hilton Los Angeles International Airport, Hyatt Regency Los Angeles International Airport, and Courtyard Los Angeles LAX/Century Boulevard. (Note: Those are the hotel names/chains as of October 2020. This mitigation requirement still applies to those facilities if the names/chains subsequently change). The noise control plans shall be approved by LAWA prior to

implementation. The noise control plans shall calculate the total maximum noise level (in CNEL) associated with construction of each Project component, as well as cumulative noise impacts that account for Project-related activities that would occur concurrently with construction of other Project components and construction of other nearby LAX projects. If the calculated construction-related noise levels indicate an increase of 5 dBA over the existing exterior noise level at any noise-sensitive receptor, the noise control plan shall specify provisions and/or measures to be implemented during construction that will attenuate construction noise levels to be less than 5 dBA over the existing exterior noise level. The noise control plans shall include a section describing noise monitoring equipment, locations and methods for establishing a representative baseline exterior noise level. Potential noise attenuation measures could include, but are not limited to, noise curtains, noise blankets, temporary sound walls, or their equivalent during construction. The noise control plans shall include a provision that states that, if noise levels exceed the 5 dBA increase, LAWA will require the contractor to implement additional noise attenuation measures until the noise increase is less than 5 dBA. To verify efficiency of the construction noise attenuation measures, noise measurements shall be taken at the closest noise-sensitive receptors to confirm that the attenuated construction noise levels are less than 5 dBA over the existing exterior noise level.

- C. Construction Staging. Construction operations shall be staged as far from noise-sensitive uses as feasible. Loading and unloading of heavy construction materials/equipment shall be located on-site and away from noise sensitive uses to the extent feasible.
- D. Stationary source equipment that is flexible with regard to relocation (such as generators and compressors) shall be located at the greatest distance practical from sensitive land uses, and unnecessary idling (i.e., all nonessential idling of construction equipment shall be restricted to five minutes or less pursuant to Section 2449 *et seq.* of the California Code of Regulations) of equipment shall be prohibited.
- E. Use "quiet-design" air compressors and other stationary noise sources when such technology/equipment is commercially available.
- F. Construction equipment not complying with the requirements of the CNCP shall be replaced with compliant equipment except where specifically approved by LAWA. DESIGN-BUILDER shall remedy environmental malfunctions within 24 hours of discovery of such or the equipment shall be removed from the site.
- G. The timing and/or sequence of the noisiest on-site construction activities shall avoid sensitive times of the day, as feasible (9:00 p.m. to 7:00 a.m. Monday - Friday; 6:00 p.m. to 8:00 a.m. Saturday; and anytime on Sunday and Holidays).
- H. The above requirements shall not relieve DESIGN-BUILDER from the responsibility for complying with local ordinances regulating noise level should they be more stringent.

8. SEWAGE SPILL PREVENTION AND EMERGENCY RESPONSE PLAN

- A. The DESIGN-BUILDER shall create, provide, maintain and implement a Sewage Spill Prevention and Emergency Response Plan. The plan shall address implementation of measures to prevent sewage spills; procedures for spill control and containment, notifications, emergency response, and cleanup; and spill and damage reporting. Plan will also need to comply with Bureau of Engineering Master Specification - Section 01563 Pollution Control - Sewage Spill Prevention And Response Requirements (Specification can be found on BOE website).
- B. The plan shall account for all storm drain systems and water courses within the vicinity of the Work which could be affected by a sewage spill. Catch basins that could receive spilled

sewage shall be identified. Unless otherwise specified in the specifications, these catch basins shall be sealed prior to operating the bypass and pumping system. DESIGN-BUILDER shall remove all material used to seal the catch basins when the bypass and pumping system operations are complete.

- C. The DESIGN-BUILDER shall be fully responsible for containing any sewage spillage, preventing any sewage from reaching a watercourse, recovery, and legal disposal of any spilled sewage, any fines or penalties associated with the sewage spilled imposed upon by LAWA and/or the DESIGN-BUILDER by jurisdictional regulatory agencies, and any other expenses or liabilities related to the sewage spill.
- D. Sanitation. DESIGN-BUILDER shall provide and maintain enclosed toilets, with secondary containment, for the use of employees engaged in the work. These accommodations shall be maintained in a neat and sanitary condition. They shall also comply with all applicable laws, ordinances, and regulations pertaining to public health and sanitation of dwellings and camps.
- E. Wastewater shall not be interrupted. Should DESIGN-BUILDER disrupt existing sewer facilities, sewage shall be conveyed in closed conduits and disposed of in a sanitary sewer system following all applicable codes.

9. WATER POLLUTION CONTROL

- A. The DESIGN-BUILDER shall conform to all applicable local, state, and Federal regulations and laws pertaining to water pollution control. DESIGN-BUILDER shall conduct and schedule its operations, and follow and implement best management practices, in such a manner as to prevent water pollution, including that by introducing sediments into the receiving water, as defined by National Pollutant Discharge Elimination System (NPDES) permit requirements.
- B. When required, the DESIGN-BUILDER shall obtain permits for erosion and water pollution control from the appropriate jurisdictional agency before the start of construction.
- C. Construction activities at LAX are subject to the requirements of the LAWA Guidance Manual for Construction Storm Water Pollution Prevention, as can be found at <https://www.lawa.org/-/media/lawa-web/environment/files/final-master-lawa-guidance-manual.ashx>.
- D. Work shall be in compliance with the requirements of the NPDES permit for the City of Los Angeles (NPDES Permit No. CAS004001), including the Los Angeles Standard Urban Stormwater Mitigation Plan (SUSMP) and the City's Low Impact Development (LID) Ordinance. Guidance on NPDES, SUSMP, and LID can be found on the City of Los Angeles' Stormwater website at <http://www.lastormwater.org>.
- E. In addition to complying with the applicable requirements of the NPDES permit requirements, DESIGN-BUILDER shall also conform to the following requirements:
 - 1. Sediments shall not be discharged to a storm drain system or receiving waters.
 - 2. Sediments generated on the work site shall be contained on the work site using appropriate Best Management Practices (BMPs).
 - 3. No construction-related materials, waste, spill, or residue shall be discharged from the Work site to streets, drainage facilities, receiving waters, or adjacent property by wind or runoff unless such discharge is in compliance with regulatory agencies requirements.
 - 4. Non-storm water runoff from equipment, vehicle washing, or any other activity shall be contained within the work site using appropriate BMP.
 - 5. Erosion shall be prevented. Erosion susceptible slopes, shall be covered, planted, or otherwise protected in a way that prevents discharge from the work site.

10. BEST MANAGEMENT PRACTICES

- A. The DESIGN-BUILDER shall create, provide, maintain and implement a SWPPP for the project.
- B. The DESIGN-BUILDER shall provide their SWPPP to LAWA for review and approval at least thirty (30) days prior to the start of construction or soil disturbing activities. The SWPPP shall be prepared in accordance with the requirements of the LAWA Guidance Manual for Construction Storm Water Pollution Prevention, as can be found at <https://www.lawa.org/-/media/lawa-web/environment/files/final-master-lawa-guidance-manual.ashx>.
- C. The DESIGN-BUILDER shall have a Qualified SWPPP Developer (QSD) design BMPs and implement and maintain such BMPs as are relevant to the work, as specified in the NPDES permit requirement.
- D. The DESIGN-BUILDER shall be responsible throughout the duration of the contract for installing, constructing, inspecting, maintaining, removing and disposing of BMPs as needed and/or as directed by LAWA for wind erosion control, tracking control, erosion and tracking control, non-storm water control, and waste management and materials pollution control. Unless otherwise directed by LAWA, DESIGN-BUILDER shall be responsible for BMP implementation and maintenance throughout any temporary suspension of the Work.
- E. DESIGN-BUILDER shall be responsible throughout the duration of the Contract for conducting the inspections specified in the Construction SWPPP, including, but not limited to, weekly inspections, quarterly inspections, and storm-related inspections, and shall prepare the associated inspection forms/reports. Any BMP deficiencies identified in the inspections or brought to the attention of the DESIGN-BUILDER by LAWA must be addressed/corrected within 72 hours.
- F. All projects, regardless of size, shall implement good housekeeping BMPs to reduce the discharge of pollutants from construction sites and/or construction staging and laydown areas to the maximum extent practicable:
 1. Eroded sediments and other pollutants must be retained on site and may not be transported from the Site via sheet flow, swales, area drains, or natural drainage.
 2. Stockpiles of earth and other construction-related materials must be protected from being transported from the Site by water and/or wind.
 3. Fuels, oils, solvents, and other toxic substances originating from DESIGN-BUILDER's operations shall not be allowed to enter the ground water or be placed where they will enter a live stream, channel, drain, or other water conveyance facility. Spills may not be washed into the live streams, channels, drains, or other water conveyance facilities.
 4. Such features as drainage gutters, slope protection blankets, and retention basins shall be constructed concurrently with other work and at the earliest practical time. DESIGN-BUILDER shall exercise care to preserve vegetation beyond the limits of construction.
 5. Excess or waste concrete may not be washed into the public way, or any drainage system, onto soil. Provisions shall be made to retain concrete wastes on-site within appropriate storage/containment facility or system, such as roll-off bins specifically designed for such purpose (i.e., bins for storage of concrete waste wash water shall be designed, maintained, and monitored daily to avoid any leakage) or concrete washout pits that are properly designed, constructed, maintained, and monitored, until it can be appropriately disposed of or recycled.
 6. Trash and construction-related solid wastes must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.

7. Sediments and other materials may not be tracked from the site by vehicle traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the public ways. Accidental deposits must be swept up immediately and may not be washed down by rain or by any other means.
 8. After the completion of the work, the site shall be cleared of debris and restored to a condition equal to or better than that existing before construction.
 9. If utilized, DESIGN-BUILDER shall install fiber rolls along the toe of all slopes, face of slopes, and at the grade break of exposed slopes. Obstructions, including rocks, clods, and debris greater than one-inch in diameter, shall be removed from the ground before placing fiber rolls. DESIGN-BUILDER shall repair fiber rolls within twenty-four (24) hours of discovering damage. Fiber rolls, if used, shall be natural, fiber-wrapped (burlap/cotton) rolls. Monofilament, plastic-wrapped fiber rolls are not allowed on this project.
- G. The DESIGN-BUILDER shall comply with the SWRCB Order No. 2022-0057-DWQ (Construction Activities Storm Water General Permit) and all its amendments. DESIGN-BUILDER shall determine, in consultation with LAWA, the risk level for the Site in accordance with SWRCB Order No. 2022-0057-DWQ and determine which requirements are applicable.
- H. Compliance with SWRCB Order No. 2022-0057-DWQ, may include, but is not limited to the following:
1. Prepare all permit registration documents.
 2. Have a qualified SWPPP developer, as defined in SWRCB Order No. 2022-0057-DWQ, develop a site-specific SWPPP.
 3. Submit SWPPP to LAWA for review and approval.
 4. Implement the SWPPP in accordance with SWRCB Order No. 2022-0057-DWQ (and all its amendments) requirements, including, but not limited to necessary and appropriate site monitoring by a Qualified SWPPP Practitioner (QSP) as defined in Order No. 2009-009-DWQ, and filing of required reports and notifications via Stormwater Multiple Application and Report Tracking System (SMARTS) (in consultation with LAWA).
 5. Assist in preparation of a Notice of Termination (NOT) upon completion of said construction work, fulfill all post-construction requirements under SWRCB Order No. 2022-0057-DWQ, and coordinate with LAWA the filing of the NOT via SMARTS. Note: For the revegetation of areas graded or disturbed during construction that are not subsequently paved or otherwise permanently stabilized as part of the contract, DESIGN-BUILDER is responsible for the successful establishment of the revegetation (i.e., at least 70 percent plant coverage), as well as any other applicable post-construction requirements, in order to be relieved of the SWPPP responsibilities including, but not limited to, ongoing BMP maintenance, inspections, and reporting.
 6. Failure to comply with SWRCB Order No. 2022-0057-DWQ and all its amendments may subject discharges to penalties imposed by the State. Dischargers may become liable to pay up to ten thousand dollars (\$10,000) a day pursuant to California Water Code section 13385, and another penalty of a minimum of one thousand dollars (\$1,000) pursuant to sections 13399.25-3399.43.
 - I. Should the DESIGN-BUILDER violate any of the provisions of this subsection, or if pollution occurs in the work area for any reason, DESIGN-BUILDER shall immediately notify LAWA. In addition, DESIGN-BUILDER shall, within ten (10) days, submit written confirmation to LAWA describing the incident and corrective actions taken. DESIGN-BUILDER shall also comply with all discharge reporting requirements of SWRCB Order

No. 2022-0057-DWQ. If pollution, for whatever reason, is detected by LAWA before notification by DESIGN-BUILDER, the required written confirmation shall also include any explanation of why DESIGN-BUILDER had not notified LAWA.

11. DEWATERING

- A. DESIGN-BUILDER shall prepare, provide, maintain and implement a dewatering plan as necessary for construction of the work. Dewatering shall be performed in conformance with all applicable local, state and federal laws and permits issued by jurisdictional regulatory agencies. Permits necessary for treatment and disposal of accumulated water shall be obtained by the DESIGN-BUILDER. Accumulated water shall be treated prior to disposal if required by their SWPPP and/or permit.
- B. The DESIGN-BUILDER's dewatering Plan shall identify the proposed location, type and size of dewatering devices and related equipment, including the size and type of materials composing the collection system, retainage system, treatment system (if required), and proposed disposal locations. The Plan shall include working drawings and supporting information detailing its proposed methodology of dewatering, treatment and disposal of accumulated water.
- C. If the proposed disposal location is a sanitary sewer, DESIGN-BUILDER shall submit to LAWA written evidence of permission previously granted from the regulatory agencies. If the proposed disposal location is a storm drain system or receiving body of water, the DESIGN-BUILDER shall submit written evidence of permission granted from appropriate regulatory agencies for usage of the storm drain system.

12. DRAINAGE CONTROL

The DESIGN-BUILDER shall prepare, provide, maintain and implement a Drainage Control Plan to ensure that storm and drainage water does not pond due to the temporary impacts to existing drainage facilities (blockages, removals, etc.). DESIGN-BUILDER shall provide temporary methods that allow for the passage of storm and drainage water in a manner equivalent to the existing drainage system, with provisions for water quality BMPs appropriate to the temporary methods.

13. RECYCLING AND SOLID RESOURCES MANAGEMENT

- A. The DESIGN-BUILDER shall recycle a minimum of eighty-five percent (85%) of waste materials generated during construction and demolition. Waste materials to be recycled may include, but are not limited to, asphalt, concrete, drywall, steel, aluminum, ceramic tile, and architectural details. The required recycling/reduction of construction and demolition waste can be accomplished either directly onsite by DESIGN-BUILDER (i.e., onsite crushing and reuse of concrete waste, as applicable) or by taking project-related waste to a City certified construction and demolition waste processor or combination thereof, as feasible.
- B. DESIGN-BUILDER shall provide a monthly report to LAWA on their recycling and solid resources management, including quantitative data (by weight and/or volume) of the materials recycled, reused and/or disposed of for the project, with subtotals and grand totals provided for each material type (i.e. concrete, steel, etc.).

14. TRIBAL, ARCHAEOLOGICAL, AND PALEONTOLOGICAL RESOURCES

- A. Grading and excavation shall be subject to requirements of the LAX Master Plan Archaeological Treatment Plan (ATP), available at https://www.lawa.org/-/media/lawa-web/lawa-our-lax/studies-and-reports/mitigation-monitoring/archaeological_treatment_plan.ashx.
- B. Grading and excavation shall also be subject to the requirements of the LAX Master Plan

Paleontological Management Treatment Plan, available at: https://www.lawa.org/-/media/lawa-web/lawa-our-lax/studies-and-reports/mitigation-monitoring/archaeological_treatment_plan.ashx

- C. Personnel involved in grading and excavation shall be required to attend a briefing by the Project's Cultural Resource Monitor regarding the identification of cultural resources, including archaeological resources, paleontological resources, and historic resources, and the correct procedures for notifying the relevant individuals should such a discovery occur during Project excavation.
- D. Prior to grading/excavation, DESIGN-BUILDER will consult with LAWA regarding the potential need for monitoring during site excavation activities, based on specific design information and soils information, and the associated probability of encountering cultural, archaeological, or Tribal resources and identify the areas/construction elements that warrant such monitoring.
 - 1. As part of the above consultation process, LAWA will require that the DESIGN-BUILDER provide to LAWA, at least 90 days prior to grading/excavation, construction plans/specifications indicating whether and where grading/excavation will or may occur at depths greater than 5 feet beneath unpaved areas or 10 feet beneath paved areas.
 - 2. In the event that it is determined, through the above consultation process, that project grading/excavation activities will be monitored by a Tribal monitor, DESIGN-BUILDER shall allow the Tribal monitor to access project areas during such grading/excavation activities.
 - 3. The Tribal monitor will work independently from any other cultural resource monitor to monitor ground disturbing activities identified at project initiation to have the potential for encountering archaeological resources in undisturbed soils.

15. HAZARDOUS AND/OR REGULATED MATERIALS

- A. The DESIGN-BUILDER shall provide a Hazardous Materials Management Plan (HMMP) to describe their methods and procedures to safely detect, locate, identify, monitor, test, analyze, quantify, handle, treat, transport and dispose of hazardous and/or regulated materials within buildings, soils, and other areas on the project site in accordance with all federal, state and local rules and regulations. This includes, but is not limited to, asbestos, lead, mercury, polychlorinated biphenyls (PCBs), refrigerants, petroleum hydrocarbons, fuels, volatile organic compounds (VOCs), and other hazardous and/or regulated materials. DESIGN-BUILDER shall submit their HMMP to LAWA for review and approval prior to starting construction or excavation, and shall provide updates as needed throughout construction and closeout.
 - 1. The DESIGN-BUILDER shall identify their Hazardous Materials Manager in their HMMP; a person qualified to identify hazardous and/or regulated materials, initiate response and contingency plans, provide notifications to LAWA and the proper regulatory agencies in the event of encountering such materials, and training personnel onsite as needed.
 - 2. The DESIGN-BUILDER shall identify their subcontractors, test labs and disposal sites for Hazardous and/or regulated materials in their HMMP.
- B. The DESIGN-BUILDER shall immediately notify LAWA of any observances or occurrences of hazardous materials or other materials that pose a safety or regulatory risk.
- C. The DESIGN-BUILDER shall perform sampling and analysis of any suspect-material identified during the design and preconstruction stages of the project to mitigate risk during demolition and construction.

- D. Unless otherwise directed by LAWA, DESIGN-BUILDER shall safely remove from airport property all hazardous materials discovered on the Project Site in accordance with all federal, state and local rules and regulations.
- E. The DESIGN-BUILDER shall not introduce chemicals to any LAWA site without prior approval from LAWA. In case of such approval, DESIGN-BUILDER shall provide complete Material Safety Data Sheets (MSDS) or other data as requested by LAWA.
- F. Given the function and age of the existing facilities on the project-site, it is reasonable to suspect that some amount of hazardous materials and/or regulated substances will be encountered by the DESIGN-BUILDER during performance of the work. Therefore, it is imperative that the DESIGN-BUILDER prepares their HMMP during the early stages of site investigations, and begins implementation of their HMMP long before the GMP/CGMP is established.
- G. Some materials and items found in the buildings and site involved in the work are known to contain or may contain materials known to the State of California to be either hazardous, carcinogenic, or reproductive toxins. Such materials require special handling and disposition if encountered during demolition, remodeling, or other physical alteration, and include, but are not limited to, those with asbestos containing materials (ACM) or asbestos containing building materials (ACBM), lead-based paint (LBP), mercury primarily in lighting equipment, and polychlorinated biphenyls (PCBs).
- H. The DESIGN-BUILDER shall refer to PR-19 for additional requirements for Soils Impacted by Petroleum Hydrocarbons.

16. ENVIRONMENTAL MONITORING AND CONTROL

- A. The DESIGN-BUILDER shall demonstrate their compliance with all environmental requirements on the project by submitting a monthly environmental report throughout all stages of the project. The monthly report shall include narrative and/or bulleted updates, photos, lists, matrices, and other qualitative and quantitative data. LAWA will also randomly monitor DESIGN-BUILDER's compliance with environmental mitigation requirements throughout the term of the contract.
- B. Prior to initiation of construction activities, DESIGN-BUILDER shall designate an individual on the DESIGN-BUILDER's project team, along with an alternate as a backup for when the designated individual is not available, responsible for ensuring implementation of all construction-related environmental requirements set forth herein through direct inspections, record reviews, investigations of complaints, and other means to confirm implementation and compliance. DESIGN-BUILDER shall provide LAWA with the name and contact information, including cell phone number, of the designated individual and of the alternate. The designated individual and alternate shall be on-site full-time workers with the availability, and DESIGN-BUILDER management support, to conduct the necessary compliance activities, in addition to his/her other job responsibilities that would be secondary to compliance monitoring. If the designated individual or alternate changes, DESIGN-BUILDER shall provide the name and contact information of the replacement individual within 5 working days.
- C. In addition to any other penalty that may be imposed by other agencies, LAWA retains the authority to assess penalties for non-compliance. These penalties will be of one thousand dollars (\$1,000) per day and per occurrence for each non-compliance of the specified requirements herein as deemed by LAWA.
- D. In the event such non-compliance is not fully addressed and corrected to the satisfaction of LAWA within 24 hours from the time the non-compliance is first observed or noted by LAWA,

or a corrective action plan acceptable to LAWA is not provided within that 24-hour period, the penalties set forth above in Subsection 16.C shall be increased daily by 100 percent (i.e., \$1,000 on Day One, \$2,000 on Day Two, \$4,000 on Day Three, \$8,000 on Day Four, and so on) until the non-compliance is corrected to the satisfaction of LAWA or an acceptable corrective action plan is provided to LAWA.

- E. All of the DESIGN-BUILDER's records related to the implementation of these construction related measures are subject to a Third-Party Monitor review and LAWA audit at any time, and for the duration of the contract. These records shall be part of the DESIGN-BUILDER's record documents provided to LAWA.
- F. Unless otherwise provided, all requirements of this section shall be considered incidental to other items and no separate measurement or payment will be made.

END OF PR-18 ENVIRONMENTAL

PR-19 REMOVAL AND DISPOSAL OF CONTAMINATED MATERIALS

1. GENERAL

- A. Past and present operations at LAWA involve the use of various chemicals and hazardous materials, including, but not limited to, underground pipelines and fueling systems and aboveground fueling activities, aircraft and equipment maintenance, and the like. The confirmed or potential presence of underlying soils impacted by such chemicals and materials is known to occur at the airport, and there is the potential for encountering such impacted soils during excavation, grading, boring, or other earthwork activities.
- B. This section includes the identification, testing, screening, excavation, segregation, handling, stockpiling, transportation, characterization, and disposal of soil that is suspected or confirmed to be impacted by petroleum hydrocarbons (i.e., fuels), as may be encountered at the LAWA airports during site earthwork or any other construction activities. In the event soils or other materials are encountered and are known or suspected to be contaminated or hazardous for reasons other than being impacted by petroleum hydrocarbons (i.e., asbestos containing materials, solvents, chemically treated wood, etc.), a separate scope of work specific to the particular soils/materials encountered will be defined separately elsewhere in the contract documents.

2. REFERENCES

- A. California Department of Industrial Relations, Division of Occupational Safety and Health (Cal/OSHA).
- B. SCAQMD, Rule 1166 - Volatile Organic Compound Emissions from Decontamination of Soil.

3. PROCEDURE FOR THE MANAGEMENT OF PETROLEUM HYDROCARBON IMPACTED SOIL ENCOUNTERED DURING CONSTRUCTION

- A. DESIGN-BUILDER shall provide a HMMP to describe their methods and procedures to safely detect, locate, identify, test, analyze, quantify, characterize, monitor, screen, excavate, handle, segregate, stockpile, treat, transport and dispose of soil that has been suspected or confirmed to be impacted by petroleum hydrocarbons (i.e. fuels). DESIGN-BUILDER shall submit their HMMP to LAWA for review and approval prior to starting construction or excavation, and shall provide updates as needed throughout construction and closeout.
- B. DESIGN-BUILDER shall comply with applicable federal, state, and local regulations in their management of impacted soils. This includes, but is not limited to, SCAQMD; California Environmental Protection Agency (EPA); Department of Toxic Substances Control (DTSC); RWQCB; DOT; and Los Angeles Fire Department (LAFD).
- C. When required by permit and regulation; excavation of soils impacted or potentially impacted by hydrocarbons shall be performed in accordance with requirements of SCAQMD Rule 1166, such as in the case when excavation or grading is undertaken in areas where the use, storage, or transfer (piping) of volatile organic compound (VOC) materials, including fuels, has occurred, where previous investigation has determined that VOCs are present, or where visual or olfactory observation of soils impacted or potentially impacted by hydrocarbons occurs during excavation or grading. DESIGN-BUILDER shall provide a site-specific plan and permit for the excavation, grading, handling, storage, treatment and/or disposal of soil

containing VOCs in accordance with the AQMD Rule 1166.

- D. DESIGN-BUILDER shall provide personnel qualified to identify potentially impacted soil and shall also have trained personnel present on site to initiate spill response and to contact the proper regulatory agencies in the event of encountering contaminated soils. The citation and qualifications of such personnel must be included in the DESIGN-BUILDER's site specific health and safety plan and HMMP.
- E. DESIGN-BUILDER shall immediately notify LAWA of any observances or occurrences of soil contamination. In the case of any fuel spill or discovery of uncontained free product (raw fuel in liquid state) within the excavation, especially when strong odors or fumes are detected from such material, DESIGN-BUILDER shall contact both LAWA and LAFD. For active fuel release, stopping the spill at the source shall be a priority.
- F. DESIGN-BUILDER shall not introduce chemicals to any LAWA airport site without prior approval from LAWA. In case of such approval, DESIGN-BUILDER shall provide complete MSDS or other data as requested by LAWA.
- G. DESIGN-BUILDER shall plan their activities so that parallel activities can continue in other areas of the project site while any contamination is investigated and/or remediated so that any impact to the overall project schedule is minimized.
- H. DESIGN-BUILDER shall quantify all potentially VOC contaminated soil and impacted soil by the cubic yard (CY) for sampling, analysis, documentation, excavation, stockpiling, re-use and removal from airport property, as identified in the contract documents, and per regulatory requirements.
- I. DESIGN-BUILDER shall include in the HMMP, and provide at the end of the project, a "Contaminated Soil and Hazardous Material Management Report" that details the characterization and disposition of all contaminated soil and hazardous material removed from the project site. This report shall include at minimum the following sections:
 - 1. Identification of DESIGN-BUILDERS, Subcontractors, qualified environmental consultants, test labs, disposal sites and associated contract responsibilities;
 - 2. Soil management approach;
 - 3. Soil sampling and analyses;
 - 4. Soil disposition for the several "phase" areas of earthwork;
 - 5. Confirmation sampling at the limits of excavation;
 - 6. Other data as required.

4. **PETROLEUM HYDROCARBON-IMPACTED SOIL TESTING**

- A. Oil company pipelines, above and below ground fuel tanks, and pipelines for the various fuel delivery systems are known to exist on the airport. DESIGN-BUILDER shall contract with an environmental consultant (i.e., a professional consultant/firm qualified and experienced in the assessment, management, and handling of non-designated/non-hazardous contaminated soils/materials as well as hazardous soils/materials) capable of soils testing to assess the nature and geographic extent of such soils occurring within the project area, and formulate a grading approach and schedule that will avoid unnecessary interruptions or delays due to special handling requirements of impacted soils. DESIGN-BUILDER's environmental consultant shall also be available to assess soils known or suspected to be impacted by

hydrocarbons or contaminants that are unexpectedly encountered during site grading and excavation.

- B. DESIGN-BUILDER's environmental consultant shall have experience in complying with all aspects of SCAQMD Rule 1166 including, but not limited to, the ability to expeditiously obtain approval from SCAQMD for a Rule 1166 Various Locations Mitigation Plan or Rule 1166 Site Specific Mitigation Plan. It is DESIGN-BUILDER's responsibility for complying with all requirements of SCAQMD Rule 1166 without interruption or delay in the project schedule.
- C. DESIGN-BUILDER shall exercise care in the event that soils known or suspected to be impacted by hydrocarbons or contaminants are encountered during excavation of soil in all areas of the project.
- D. Identification and Screening. The monitoring for, and identification and screening of, soils for the presence of VOC materials will be based on whether such materials are known or suspected to be present within the specific area of excavation/grading, or whether the area is subject to the requirements of SCAQMD Rule 1166 (i.e., when excavation or grading is undertaken in areas where the use, storage, or transfer (piping) of VOC materials, including fuels, has occurred), or where visual or olfactory observation of soils impacted or potentially impacted by petroleum hydrocarbons or other VOC materials occurs during excavation or grading.
- E. Petroleum hydrocarbon-impacted soils may be identified by characteristic odor (i.e., a moderate to strong hydrocarbon odor, or other strong or unusual odors) and/or dark gray to black or greenish staining of the soil. The measurement of VOC levels near excavated soils using a photoionization detector (PID), measured within three (3) inches of the excavated soils, within three (3) minutes after being excavated, can also determine the presence of impacted soils. If petroleum hydrocarbon-impacted soils are found or suspected to be present, the measured VOC levels provide the basis for screening and preliminary characterization of the excavated soils, as follows:
 - 1. PID Reading of > 50 parts per million (ppm): This excavated material is considered under SCAQMD Rule 1166 to be "Contaminated" and must be treated/disposed of within thirty (30) days of excavation. Contaminated soil is subject to special handling requirements set forth in the following Sections.
 - 2. PID Reading of between 1 ppm and 50 ppm: This excavated material is not VOC Contaminated (Non-Contaminated) pursuant to SCAQMD Rule 1166.
 - 3. PID Reading of less than 1 ppm (and no visual or olfactory sign of being hydrocarbon-impacted): This excavated material is considered to be neither contaminated nor impacted, and is not subject to any special requirements for handling, reuse, or disposal (i.e., Unrestricted).

5. HANDLING OF CONTAMINATED AND NON-CONTAMINATED/IMPACTED SOIL

The following table summarizes the special handling requirements associated with contaminated and non-contaminated/impacted soils.

Soil Category	PID Reading	Handling Requirements
Contaminated	>50 ppm	<ul style="list-style-type: none"> • Manage soil in accordance with the DESIGN-BUILDER's HMMP, SCAQMD Rule 1166 Mitigation Plan, and Project Storm Water Pollution Prevention Plan (SWPPP). • Spray with water or approved vapor suppressant prior to transport. • Segregate and transport to contaminated stockpile area designated by LAWA • Conduct characterization as related to soil disposition – see Section 7 below • Immediately transport to LAWA-approved treatment, storage, and disposal facility (TSDF) – see Section 7 below. • Contaminated soil must be removed from the Site within thirty (30) days of excavation.
Contaminated	>1,000 ppm	<ul style="list-style-type: none"> • Manage soil in accordance with DESIGN-BUILDER's HMMP, SCAQMD Rule 1166 Mitigation Plan, and SWPPP. • Immediately spray soil and work area with water or approved vapor suppressant. • Place soil in SCAQMD-approved containers with vapor-tight lids, OR • Load directly into trucks, spray with vapor suppressant, conduct characterization as related to soil disposition, and transport immediately off-site to approved TSDF - see requirements for disposition below. • Notify SCAQMD within one hour of detection. • Contaminated soil must be placed in AQMD approved sealed containers equipped with vapor tight lids and transported to a LAWA-approved disposal facility within 30 calendar days OR shall be directly loaded into trucks and handled per Rule 1166 requirements and transported immediately offsite to a LAWA-approved disposal facility.
Non-Contaminated Impacted	≥ 1 ppm - <50ppm	<ul style="list-style-type: none"> • Manage soil in accordance with requirements of SWPPP. • Segregate and transport to designated stockpile areas. • Demonstrate that soil is safe to be reused onsite, and/or coordinate with disposal facilities for characterization and disposal.

6. DISPOSITION OF CONTAMINATED SOIL

- A. DESIGN-BUILDER shall conform to all local, state, and federal laws and regulations regarding the removal, handling, and transport of contaminated materials. DESIGN-BUILDER shall provide LAWA documentary evidence (manifests, bill of ladings, weight tickets) of legal disposal of all unsuitable-for-reuse materials. All costs associated with contaminated soil testing, excavation, transportation, remediation/recycling, and disposal shall be included in the respective CGMP or GMP proposal.
- B. DESIGN-BUILDER shall propose a disposal/recycle method and facility/location for disposal of soils. Acceptance of the proposed disposal/recycle method and facility is subject to review and approval of LAWA.
- C. Soil Disposal and Reuse. Soil shall be disposed of, recycled, or reused in accordance with the DESIGN-BUILDER's HMMP, regulatory requirements and as directed by LAWA. Non-Contaminated and VOC contaminated soil will be sampled in accordance with the proposed TSDf or other intended recipient. For example, Soil Safe's Recycling Facility typical sampling requirements as of November 2013 are: "Unless otherwise noted, composite samples should be collected with the following frequency: 1 sample for 100 cubic yards (cy) or less; 3 samples for 500 cy; 5 samples for 1000 cy and 1 additional sample for each additional 500 cy greater than 1000 cy." Such sampling and soil characterization shall occur prior to transport for disposal, recycle or reuse. Disposal facilities, including recycling facilities, establish their own criteria for acceptance of these materials and typically provide them to the DESIGN-BUILDER on request. DESIGN-BUILDER is responsible to determine facility-specific acceptance criteria and the laboratory testing methods necessary to meet those criteria. Procedures include but are not limited to;
 1. sample and analyze samples at a qualified laboratory;
 2. prior to submitting results of analysis to the disposal/recycling facility; DESIGN-BUILDER shall request the permanent or temporary EPA ID number from LAWA for the specific project location;
 - a. LAWA can typically provide a temporary EPA ID number in one business day.
 - b. Temporary EPA ID numbers are valid for 90 days from date of issue to LAWA.
 3. submit analytical results to the disposal/recycle facility to obtain a draft waste profile;
 4. obtain required profiles (from the disposal facility);
 5. obtain manifests/bill of ladings (from the disposal facility);
 6. provide other documents required for transportation and disposal, recycle or reuse of soil for all VOC contaminated and non-contaminated soils.
- D. DESIGN-BUILDER shall submit waste profiles to LAWA for review and approval. Once approved by LAWA, the signed profiles will be provided to the DESIGN-BUILDER. LAWA's review and approval process typically takes seven (7) days, providing that the waste profile form is properly completed;
 1. submit the draft profile, including the complete analytical results, chain of custody documentation and quality control data, and a statement from a qualified individual that they have "reviewed the results and, based on that review, the draft profile is correct and complete";
 2. The LAWA Environmental Coordinator will review the draft profile and forward to the LAWA Generator Representative for generator review and approval; the approved signed

profile will be returned directly to the DESIGN-BUILDER.

3. The DESIGN-BUILDER will submit a request for inspection to LAWA Inspections if a generator signature is required for the shipping documents.
- E. VOC Contaminated Soil – Non-hazardous. VOC contaminated soil (as determined by SCAQMD Rule 1166 screening procedures) that has been characterized as non-hazardous waste (as determined by review of sample analysis for characterization for disposal) will be disposed of by recycling (i.e., thermal desorption) or as directed by LAWA. Such recycling facilities include, but not limited to:

Thermal Remediation Solutions, Waste Management
1211 W. Gladstone Street
Azusa, CA 91702
Soil Safe
12328 Hibiscus Road
Adelanto, CA 92301
- F. DESIGN-BUILDER shall obtain a certificate of recycle for all project soils treated at the facility and provide the certificate(s) to LAWA as a submittal. No payment for the work will occur until LAWA receives these certificates.
- G. VOC Contaminated Soil - Hazardous. VOC contaminated soil (as determined by SCAQMD Rule 1166 screening procedures) that has been characterized as hazardous - RCRA or Non-RCRA Waste (as determined by review of sample analysis for characterization for disposal) will be disposed of at a facility designated by LAWA. Disposal facilities for RCRA and non-RCRA waste include, but not limited to:

US Ecology
PO Box 578
Hwy 95, 12 Miles South of Beatty
Beatty, NV 89003
- H. Non-Contaminated Soil. Non-Contaminated impacted soil (i.e., soil with PID reading of between 1 and 50 ppm) will be sampled and analyzed by the DESIGN-BUILDER as directed by LAWA. Pending analytical results; non-contaminated impacted soil will be disposed of or reused as directed by LAWA.
- I. Transporting Soil. Soils will be transported in accordance with the approved DESIGN-BUILDER HMMP. VOC contaminated soil will be loaded and handled in accordance with AQMD Rule 1166 and other requirements for the transport of regulated waste.
- J. Non-Contaminated non-impacted soil that has been characterized based on sampling and review of analysis as unregulated waste and unrestricted soil may be transported as unregulated soil.

END OF PR-19 REMOVAL AND DISPOSAL OF CONTAMINATED MATERIALS

PR-20 SUSTAINABILITY REQUIREMENTS

1. GENERAL

Compliance with this Section does not exempt DESIGN-BUILDER or its subcontractors from compliance with the EIR/MMRP, other applicable permits, approvals, requirements, rules and regulations of other agencies with jurisdiction over the work of this contract.

2. SUSTAINABLE PROJECT MANAGEMENT

- A. Construction Scheduling and Sequencing. DESIGN-BUILDER will coordinate material deliveries with installation times employing where possible "just in time" deliveries and provide pre-construction plans and schedules that show material deliveries and installations.
- B. Paperless Submittals and Change Orders. To the greatest extent possible and with LAWA's approval, electronic submittals/correspondence, revisions and RFIs will be dealt with electronically via the Prolog Manager® Project Management Software.

3. SUSTAINABLE CONSTRUCTION ACTIVITIES

- A. Erosion and Sedimentation Control Measures. DESIGN-BUILDER shall prepare and implement an Erosion and Sedimentation Control in accordance with the Environmental Mitigation Requirements and Special Construction (PR 18).
- B. Dust Control. DESIGN-BUILDER is to comply with BMP shall be implemented in accordance with "Environmental" PR-18.
- C. SWPPP. DESIGN-BUILDER will develop and implement a SWPPP for the construction site activities in accordance with "Environmental" PR-18.
- D. Recycle and Reuse of Construction Materials. DESIGN-BUILDER is required to adhere to the requirements of Environmental Mitigation and Special Construction Requirements PR 18.
- E. Construction Vehicles. DESIGN-BUILDER shall meet requirements for prohibiting vehicle idling in accordance with the environmental requirements defined in "Environmental" PR-18.
- F. Low Emission Construction Vehicle. DESIGN-BUILDER shall meet the emission requirements for construction vehicles in accordance with "Environmental" PR-18.
- G. Construction Noise Levels. DESIGN-BUILDER shall meet the requirements of "Environmental" PR-18.
- H. Construction Roadways: Prevent and repair roadway damage during construction. DESIGN-BUILDER will ensure that construction related vehicles operated on public roadways will not exceed maximum design load of any road that they will use. DESIGN-BUILDER is also responsible for ensuring that construction vehicles with the tractor treads are not driven on roadways. Should any accidents involving construction vehicles occur, DESIGN-BUILDER must report them immediately to the Police and LAWA. Any incident reports must be submitted to the appropriate law enforcement agency and LAWA.

4. CLEANING IN GENERAL

- A. DESIGN-BUILDER shall at all times keep premises free from accumulations of waste material

or rubbish caused by DESIGN-BUILDER 's employees or work, or employees or work of subcontractors, and shall remove rubbish from and about areas of work and DESIGN-BUILDER 's and subcontractors' tools, scaffolding and surplus materials and shall leave the work "broom clean", or its equivalent, except as hereinafter specified. In case of dispute between DESIGN-BUILDER and other contractors employed on or about the work areas, as to responsibility for removal of rubbish, etc., or in case debris is not promptly removed as herein required, the State may remove rubbish, etc., and back charge the DESIGN-BUILDER.

- B. At all times, project working area and site shall be kept clean and orderly. Dirt, debris, waste, rubbish and disused implements and equipment shall be removed frequently and not allowed to accumulate more than 24 hours. Flammable and toxic materials shall not be stored in structures.

C. PROGRESS CLEANING

1. General:

- a. Clean Project site and work areas daily, including common areas. Coordinate progress cleaning for joint-use areas where more than one installer has worked. Enforce requirements strictly. Dispose of materials lawfully.
- b. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
- c. Do not hold materials more than 7 days during normal weather or 3 days if the temperature is expected to rise above 80 deg F.
- d. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
- e. Maintain project site free of waste materials and debris

2. Work Areas:

- a. Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the work.
- b. Remove liquid spills promptly.
- c. Where dust would impair proper execution of the work, broom-clean or vacuum the entire work area, as appropriate.

3. Installed Work:

- a. Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

4. Concealed Spaces:

- a. Remove debris from concealed spaces before enclosing the space

5. Exposed Surfaces in Finished Areas:

- a. Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of completion.

6. Waste Disposal:

- a. Burying or burning waste materials on-site will not be permitted. Washing waste materials down sewers or into waterways will not be permitted.
7. Progress Cleaning:
 - a. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at completion.
 - b. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.
8. Limiting Exposures:
 - a. Supervise construction operations to assure that no part of the construction completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

D. FINAL CLEANING

1. Within contract limits, clean interior and exterior surfaces exposed to view; remove temporary labels, stains and foreign substances, polish transparent and glossy surfaces vacuum carpeted and soft surfaces.
 - a. Clean equipment and fixtures to sanitary condition, clean or replace filters of mechanical equipment.
 - b. Clean roofs, gutters, downspouts and drainage systems.
 - c. Glass: Clean all glass, interior and exterior, affected by work of this project; including removal of foreign material from glass.
2. Clean site: Sweep paved areas, rake clean other surfaces.
3. Remove waste and surplus materials, rubbish and construction facilities from project and from site.
4. Dust, dirt, stains, hand marks, paint spots, and like defects shall be completely removed from surfaces. Metal surfaces shall be cleaned, using only non-corrosive and non-abrasive materials.
5. Final Inspection: Deficient cleaning operations, as determined by the State, shall be immediately corrected as directed.

E. DISPOSAL

1. Under no circumstances shall rubbish or waste material be disposed of in site fills or backfills. Debris, rubbish, and waste or surplus material shall be removed from the State property daily and legally disposed of.

END OF PR-20 SUSTAINABILITY REQUIREMENTS

PR-21 BUILDING INFORMATION MODEL (BIM) AND VDC COORDINATION**1. GENERAL**

- A. Design-Builder shall employ BIM and VDC tools to facilitate the design, construction, coordination, scheduling, estimating, phasing, and close out of the Work. The BIM and VDC will be developed and refined based on LAWA's BIM Execution Plan (BXP) template in a coordinated effort between LAWA and the Design-Builder. The final BXP shall be formally submitted to LAWA for review and approval. The BIM Process shall be an integral part of project delivery and shall be used for:
1. Enabling all stakeholders to view and track the project throughout design, construction and closeout.
 2. Enabling a coordinated Design-Build delivery of construction documents and fabrication/shop drawings. The Design-Builder, its Design Professionals and Consultants, its Subcontractors and their Subcontractors shall assist, integrate and use the BIM model for the creation of construction documents and shop drawings as described in VOL 2- LAWA BIM Requirements, located in LAWA's Design and Construction Handbook. (<https://www.lawa.org/en/lawa-businesses/lawa-documents-and-guidelines/lawa-design-and-construction-handbook>)
- B. BIM Manager: DESIGN-BUILDER shall appoint a BIM manager to develop and oversee the BIM Execution Plan (BXP) as defined in the LAWA BIM Standards and Requirements (see hyperlink above). Additional qualified staff and support shall be made available to ensure adequate progress in the implementation and integration of the LAWA BIM Standard throughout the Design-Build team. Refer to the LAWA BIM Standards and Requirements in the DCH for a complete description of the BIM Manager's roles and responsibilities.

2. BUILDING INFORMATION MODEL (BIM) REQUIREMENTS

- A. The DESIGN- BUILDER's BIM Model shall be developed, maintained and delivered according to the LAWA BIM Standards and Requirements (See the hyperlink above for the complete LAWA BIM Standards and Requirements). The following is a partial list of topics covered:
1. General Requirements
 2. BIM Uses
 3. BIM Execution Plan (BXP)
 4. Procedures and Methods
 5. Coordinate System/Shared Coordinates
 6. Model File Naming
 7. Level of Detail
 8. Level of Development
 9. Design Review
 10. Interim Model Reviews
 11. QC/QA Requirements.
 12. Commissioning Requirements
 13. Spatial Coordination and Clash Detection

14. 4D/5D Model Simulation. However, 4D or 5D model updates are not required during the construction phase
15. Construction Simulation
16. Reconciled Record Model Requirements. Facility Management
17. GIS Integration

Modify the BXP to eliminate As-Built Model and Reconciled Record Model (RRM) deliverables. No 4D or 5D model updates during the construction phase

3. RELATED PROJECT REQUIREMENTS

A. Refer to the following Project Requirements for additional BIM related requirements:

1. PR-7 Utilities
2. PR-9 Submittal Procedures
3. PR-16 Surveying
4. PR-25 Project Record Documents

END OF PR-21 BUILDING INFORMATION MODEL (BIM) AND VDC COORDINATION

PR-22 GUARANTEED MAXIMUM PRICE (GMP) PROPOSALS

1. GENERAL

LAWA envisions this project will involve multiple Component Guaranteed Maximum Price (CGMP) Proposals for select project components, prior to establishing an overall Guaranteed Maximum Price (GMP) for the entire Project.

Each CGMP and/or GMP (collectively (C)GMP) Proposal shall clearly and conspicuously identify any proposed deviation from the Contract, in writing, and any such deviation must be specifically accepted by LAW A, in writing. In the event of a conflict between any term of the (C)GMP Proposal that was not clearly and conspicuously identified and approved by LAW A, the terms of the Contract and its attachments shall control.

2. (C)GMP DEVELOPMENT

- A. Building upon the deliverables described in PR-01, DESIGN-BUILDER shall provide a complete Proposal Binder for each CGMP and GMP work package.
- B. LAW A and DESIGN-BUILDER may choose to negotiate CGMP work packages for each Project Component (or some combination thereof) at a minimum 60% Design Package, unless otherwise directed by LAW A.
- C. DESIGN-BUILDER shall not withdraw any (C)GMP Proposal for ninety (90) days following submission to LAW A.
- D. DESIGN-BUILDER shall develop (C)GMP Proposals throughout Phase 1 of the Contract in accordance with PR-01, and shall review progress with LAW A on an ongoing basis.
- E. No billable work on any (C)GMP work package is authorized until and unless LAW A issues a Notice to Proceed (NTP) for the (C)GMP work package, specifically authorizing the billable work to proceed.

3. SUBMITTAL REQUIREMENTS

- A. The (C)GMP Proposal shall include a **Cover Letter (Tab 1)**.
- B. The (C)GMP Proposal shall include a **Table of Contents (Tab 2)**.
- C. The (C)GMP Proposal shall include a detailed written **Scope of Work (Tab 3)**. This shall include a clear & detailed narrative, and a corresponding list of scope components. This shall also clearly identify and include the associated drawings, specifications, calculations & reports, etc. that formed the basis for the scope of work.
- D. The (C)GMP Proposal shall include a clear & detailed breakdown of the **Guaranteed Maximum Price (Tab 4)**. This includes, but is not limited to;
 - Detailed Cost-Breakdowns by Project Component (WBS #, etc.)
 - Detailed Cost-Breakdowns by Scope Component (Unit Prices, Quantities, etc.)
 - Detailed Cost-Breakdowns by Trade / Subcontractor
 - Detailed Breakdowns of Proposed Prime Costs (Staffing, General Conditions, Self-Performed Work, etc.)

- Detailed Breakdowns of Proposed Allowances & Contingencies
 - Detailed Breakdowns of Proposed Soft Costs (Design, Permitting, etc.)
 - Detailed Breakdowns of Proposed Markups & Fees (Profit, Bonds, Taxes, Insurance, etc.)
 - Proposed Schedule of Values (SOV) for the basis of (C)GMP Progress Payments
- E. The (C)GMP Proposal shall include a clear & detailed **Work Plan & Schedule (Tab 5)**. This includes, but is not limited to;
- Detailed Critical Path Schedule and Construction Phasing Plans (See PR-04)
 - Summary Schedule of Key Activities & Milestones (i.e. Design, Permitting, Mobilization, Construction, Commissioning & Activation, Substantial Completion, Closeout, etc.)
 - Identification of any Proposed Liquidated Damages (LD) terms
- F. The (C)GMP Proposal shall include a clear & detailed explanation of **Clarifications and Assumptions (Tab 6)**. This includes, but is not limited to;
- Detailed Narrative of any Proposed Deviations from the Contract
 - Detailed Narrative of any Proposed Deviations from the Design & Construction Handbook (DCH)
 - Detailed Proposals for Additive & Deductive Alternates (where applicable)
 - Detailed List of Specific Exclusions (where applicable)
 - Other Clarifications & Assumptions (where applicable)
- G. The (C)GMP Proposal shall include a **Procurement & Packaging Plan (Tab 7)**. This includes, but is not limited to;
- List and description of bid packages
 - Bidding and award schedule.
 - List of pre-qualified bidders organized by package
 - Draft bid tabulation summary
 - Proposed portions of work to be self-performed
- H. The (C)GMP Proposal shall include a **Inclusivity Plan (Tab 8)**, that clearly demonstrates how the DESIGN-BUILDER will fulfill the Inclusivity Requirements of the Contract (ITP-1.3, ITP-11.3, Exhibit B, GC-9, Exhibit F, etc.)
- I. The (C)GMP Proposal shall include a **Permitting Plan (Tab 9)**, that clearly demonstrates how the DESIGN-BUILDER will obtain approvals & permits from all Authorities Having Jurisdiction (CALTRANS, DHS, FAA, LABOE, LADBS, LADOT, LADPW, etc.)
- J. The (C)GMP Proposal shall include a **CGMP Management Plan (Tab 10)**, that clearly demonstrates how the DESIGN-BUILDER will manage all aspects of the work package (design, permitting, mobilization, construction, risks, phasing & logistics, AOR & Commissioning, etc.)

- K. Revised (C)GMP Proposals shall include a **Comment Log (Tab 11)**, including a written response to each LAWA review comment on the previous CGMP Proposal submittal, clearly identifying where & how each comment was addressed in the revised Proposal.
- L. The (C)GMP Proposal and all supporting documents shall identify and describe all items, assumptions, costs, contingencies, schedules and other matters necessary and relevant for proper execution and completion of the Work and for establishment of the (C)GMP. The (C)GMP Proposal and the supporting documents are complementary and, in the event of an irreconcilable conflict between or among them, the interpretation that provides for the higher quality of material and workmanship shall prevail over all other interpretations.

4. REPRESENTATIONS

- A. In submitting the (C)GMP Proposal, DESIGN-BUILDER represents that it will provide every item, system or element of Work that is identified, shown or specified in the (C)GMP Proposal or the supporting documents, along with all necessary or ancillary materials and equipment for their complete operating installation, unless specifically excepted by LAWA. Upon LAWA's acceptance of the (C)GMP Proposal, DESIGN-BUILDER shall not be entitled to any increase in the (C)GMP due to the continued refinement of the Design Documents or Construction Documents, nor the absence or addition of any detail or specification that may be required in order to complete the Project as described in and reasonably inferable from the (C)GMP Proposal or the supporting documents used to establish the (C)GMP.
- B. LAWA may accept or reject the (C)GMP Proposal, or attempt to negotiate its terms with DESIGN-BUILDER. Upon acceptance by LAWA of the (C)GMP Proposal in writing, both parties shall execute the (C)GMP Proposal. The terms of the (C)GMP Proposal, including the (C)GMP and the supporting documents, will therefore become part of the Contract between the LAWA and DESIGN-BUILDER. If LAWA rejects the (C)GMP Proposal or the parties are unable or unwilling to agree on a (C)GMP, LAWA may stop some or all of the associated work, and/or terminate the Contract entirely, in accordance with the General Conditions.
- C. Following LAWA's acceptance of the (C)GMP Proposal, DESIGN-BUILDER shall continue to monitor the development of the Design Documents and Construction Documents so that, when complete, the Construction Documents adequately incorporate and resolve all qualifications, assumptions, clarifications, and other issues identified in the (C)GMP Proposal.
- D. The Parties may agree to convert budgets within the (C)GMP to lump sum amounts at any time after DESIGN-BUILDER has received bids or proposals from trade contractors or subcontractors for the performance of elements of the Work. In proposing lump sum amounts, DESIGN-BUILDER shall identify buyout savings, unused allowance and/or contingency amounts, and other trade package contracts that have not been finalized. In preparing a lump sum conversion proposal, the DESIGN-BUILDER shall provide the following information:
 - 1. The stage of completion of the Project;
 - 2. The trade packages that have been completely bought out;
 - 3. The trade packages remaining that have not been bought out;
 - 4. A complete line item breakdown of the calculations used to establish a lump sum amount based on the (C)GMP Schedule of Values;
 - 5. An accounting of all savings amounts that are to be returned to LAWA as part of the lump sum calculation; and
 - 6. Any other Project information requested by LAWA.

- E. DESIGN-BUILDER shall document the actual Cost of the Work at buyout as compared to the (C)GMP Proposal and shall report this information to LAWA with DESIGN-BUILDER's recommendation for selection of a bid or proposal for each subcontracting package.

5. (C)GMP PREPARATION GUIDELINES

A. Pre-Submittal Requirements:

1. Scope Definition: Prior to (C)GMP submittal, DESIGN-BUILDER shall thoroughly review the (C)GMP package with LAWA and determine if the scope is sufficiently defined, and identify those areas requiring additional scope definition.
2. Schedule: Prior to (C)GMP submittal, DESIGN-BUILDER shall review with LAWA their proposed dates for the Notice To Proceed (NTP), Substantial Completion, and key phasing & operational milestones (i.e. roadway closures, etc.).
3. Budget: Prior to (C)GMP submittal, DESIGN-BUILDER shall review with LAWA their proposed cost-breakdowns, additive & deductive alternates, and cost-saving opportunities to be included in the (C)GMP Proposal.
4. Pre-submittal Conference: DESIGN-BUILDER shall host a meeting with LAWA prior to submitting the (C)GMP to LAWA to review the format, content, and other relevant issues.

END OF PR-22 GUARANTEED MAXIMUM PRICE (GMP) PROPOSAL

PR-23 NOT USED

END OF PR-23 NOT USED

PR-24 PHOTOGRAPHS AND VIDEO DOCUMENTATION**1 GENERAL****A. Summary**

1. This section includes administrative and procedural requirements for the following:
 - a. Preconstruction photographs.
 - b. Periodic construction photographs.
 - c. Final completion construction photographs.
 - d. Preconstruction video recordings.
 - e. Periodic construction video recordings.
 - f. Construction Site Webcams

B. Submittals

1. Qualification Data: Submit qualifications for professional photographer, citing experience with construction photography.
2. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.
3. Submit Photographs and Video as defined in this PR. DESIGN-BUILDER shall submit two (2) DVD's containing the photographs. DVD shall be clearly labeled as to date of photographs, locations and project.

C. Coordination

1. Auxiliary Services: Coordinate with photographer and provide auxiliary services requested, including access to project site and use of temporary facilities, including temporary lighting required to produce clear well-lit photographs.

D. Usage Rights

1. Obtain and transfer copyright usage rights from photographer to LAWA for unlimited reproduction of photographic documentation.

2 PRODUCTS**A. Photographic Media**

1. Digital Images: Provide images in JPG format, produced by a digital camera with minimum sensor size of eight (8) mega pixels, and at an image resolution of not less than 1600 by 1200 pixels and 400 dpi.
 - a. Digital Camera: Minimum sensor resolution of eight (8) mega pixels.
 - b. Format: Minimum 1600 by 1200 pixels, 400 dpi minimum, in unaltered original files, with same aspect ratio as the sensor, un-cropped, date- and time- stamped, in folder named by date of photograph, accompanied by key plan file.
2. Photographic Documentation
 - a. Format: Electronic files of photographs provided on a clearly labeled CD. CD's sequentially numbered and dated upon the label.

- b. Identification: Provide an applied label with the following information:
 - 1) Name of Project.
 - 2) Name and contact information for photographer.
 - 3) Name of DESIGN-BUILDER.
- c. On the electronic file, provide the following information within the filename:
 - 1) Date photograph was taken.
 - 2) Description of photograph or area of photograph, defined to the extent it is clearly understandable.
 - 3) Unique sequential identifier keyed to accompanying key plan.
- 3. Video: High resolution video camera compatible for multiple formats, including PC based software

3 EXECUTION

- A. On each image (video, photograph), provide an applied label with the following information:
 - 1. Name of project.
 - 2. Name of DESIGN-BUILDER
 - 3. Date image was made.
 - 4. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - 5. Weather conditions at time of recording.
 - 6. Transcript: Prepared on 8-1/2-by-11-inch paper, punched and bound in heavy-duty, 3-ring, vinyl-covered binders. Mark appropriate identification on front and spine of each binder. Include a cover sheet with same label information as corresponding video Include name of project and date of video on each page.
 - 7. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
 - 8. Unique sequential identifier keyed to accompanying key plan.
- B. Construction Photographs
 - 1. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the work. Photographs with blurry or out-of focus areas will not be accepted.
 - 2. Maintain key plan with each set of construction photographs that identifies each photographic location.
 - 3. Key Plan: Submit key plan of project site and buildings with notation of vantage points marked for use in defining location and direction of each photograph. Indicate elevation or story of construction.
 - 4. Digital Images: Submit digital images exactly as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.
 - 5. Photographic Prints: Submit up to two hundred (200) eight inch by ten inch (8" x 10") prints

of the project, developed on a digital copy machine in color, for use in displaying within LAWA's office, at the discretion of LAWA.

6. **Preconstruction Photographs:** Before starting construction, take photographs of project site and surrounding properties, including existing items to remain, items to be salvaged, and items to be demolished. The entire site should be documented, including adjacent areas to the construction. Include haul routes, laydown areas, and other areas that could be affected by the work.
 - a. Flag construction limits before taking construction photographs.
 - b. Take photographs to show existing conditions adjacent to property before starting the work.
 - c. Take photographs of existing buildings either on or adjoining property to accurately record physical conditions at start of construction. Specific attention should be directed, but not limited to, the exterior of the FAA ATCT, their perimeter fencing and access gates, parking spaces and existing landscape improvements.
 - d. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.
 - e. Assume that, at a minimum, three hundred (300) preconstruction photographs are to be taken. The actual number shall be that which defines all work from at least two (2) different directions, as necessary to have a photographic log that can be referenced.
 - f. Categorize photographs by area for ease of reference. Use terminology such as "CUP area, World Way North, Center Way South", etc. to define the location. Prepare a table of contents that defines photographs by areas taken.
7. **Periodic Construction Photographs:** Provide twenty (20) to forty (40) photographs monthly, coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken. Photographs should only document areas that have been subject to construction change since the last application for payment.
8. **LAWA Directed Construction Photographs:** From time to time, LAWA or their designee will instruct photographer regarding general directions of vantage points. Select actual vantage points and take photographs to show the status of construction and progress since last photographs were taken. Notify LAWA on site personnel of availability of photographer such that comment can be provided.
9. **Emergency Situation/Accident Photographs:** Accidents and/or emergency situations shall be documented and shared with the State and investigative agencies.
10. **Final Completion Construction Photographs:** Take suitable number of color photographs after date of Substantial Completion for submission as project record documents. LAWA or their designee will provide input to photographer of any desired vantage points. Assume one hundred fifty (150) final photographs will be required.
 - a. Do not include date stamp on the face of the photograph.
 - b. Where construction is completed by area, take photographs of completed area and submit at time of substantial completion.
11. **Additional Photographs:** Circumstances that could require additional photographs include, but are not limited to, the following:
 - a. Special events planned at project site.

- b. Immediate follow-up when on-site events result in construction damage or losses.
- c. Photographs to be taken at fabrication locations away from project site.
- d. Substantial Completion of a major phase or component of the work.
- e. Extra record photographs at time of final acceptance.
- f. LAWA's request for special publicity photographs.

4 PRECONSTRUCTION VIDEO

- A. Preconstruction Video: Before starting construction, record video of project site and surrounding properties from different vantage points, as directed by LAWA's representative.
 - 1. Flag construction limits before recording construction video.
 - 2. Show existing conditions within 100 feet of project site before starting the work.
 - 3. Show existing buildings either on or adjoining project site to accurately record physical conditions at the start of construction.
 - 4. Show protection efforts by DESIGN-BUILDER.
- B. Narration: Describe scenes on video by audio narration by microphone while video is recorded. Include description of items being viewed, recent events, and planned activities. At each change in location, describe vantage point, location, direction (by compass point), and elevation or story of construction.
 - 1. Confirm date and time at beginning and end of recording.
 - 2. Begin video with name of project, DESIGN-BUILDER's name, videographer's name, and project location.

5 CONSTRUCTION VIDEO

- A. Photographer: Engage a qualified photographer with construction project experience to record construction video in a digital format.
- B. Recording: During key on-site activities, take video of areas of site under construction that documents the interrelationships between the site and adjacent facilities. Video must cover areas affected by construction. Mount camera on tripod before starting recording, unless otherwise necessary to show area of construction. Display continuous running time and date. At start of each videotape, record weather conditions from local newspaper or television and the actual temperature reading at Project site. Assume that certain video will be required as part of monthly photo documentation, limited to areas of activity at that time.
- C. Narration: Describe scenes on videotape by audio narration by microphone while videotape is recorded. Include description of items being viewed, recent events, and planned activities. At each change in location, describe vantage point, location, direction (by compass point), and elevation or story of construction.
 - 1. Confirm date and time at beginning and end of recording.
 - 2. Begin each videotape with name of project, DESIGN-BUILDER's name, videographer's name, and Project location.
- D. Transcript: Provide a typed transcript of the narration to allow viewers to locate specific segments of the video. Indicate running time captured from video with the corresponding

narration segment.

- E. Preconstruction Video: Before starting construction, record digital video of project site and surrounding properties from different vantage points, as directed by LAWA's Representative.
 - 1. Flag construction limits before recording construction videotapes.
 - 2. Show existing conditions within one hundred (100) feet of the project site before starting the work.
 - 3. Show existing buildings either on or adjoining project site to accurately record physical conditions at the start of construction.
 - 4. Show protection efforts by DESIGN-BUILDER.

6 CONSTRUCTION SITE WEBCAMS AND TIME-LAPSE PHOTOS

- A. Install and connect minimum six (6) digital video cameras at specific locations and vantage points designated by LAWA. Webcam hardware and software shall incorporate the following features:
 - 1. Cameras shall be fully controllable with preset positions and pan, tilt, and zoom (PTZ) capability.
 - 2. System shall be capable of automatic time and date stamping and archive storage.
 - 3. Equipment shall be durable, from reputable manufacturers, and suitable for onsite use.
- B. Webcams shall be operational prior to mobilization and shall operate continuously through project completion. Use webcam images to produce a time-lapse video of the entire construction project taken from a constant vantage point.
- C. The DESIGN-BUILDER shall be responsible for monitoring and maintenance of webcam equipment and system to assure:
 - 1. Continuous transmission and capture of digital images.
 - 2. Images are suitable for public viewing of the construction site as well as for photographic documentation of the work.
- D. Time-Lapse Construction Photographs: Take color digital photographs at predetermined vantage points and frequencies, and in sufficient quantities, to show the status and progress of construction from the beginning of construction activities through project completion. Closely coordinate the planning and execution of time-lapse photography with LAWA. No later than two (2) weeks after the beginning of construction activities, submit sample time-lapse photographs to the LAWA for review and approval.

END OF PR-24 PHOTOGRAPHS AND VIDEO DOCUMENTATION

PR-25 PROJECT RECORD DOCUMENTS**1. GENERAL**

This project requirement provides clear direction and detailed procedural steps to ensure proper coordination, organization and transfer of all project record documents. Procedural requirements provided herein are intended to supplement and apply in conjunction with PR-27 Project Closeout.

2. REQUIREMENTS**A. Visual Standard**

1. The DESIGN-BUILDER shall present all printed documents as clear, legible, printed black on white paper with a minimum font and letter size of Arial 11.
2. Paper size is letter (8 ½ x 11") and tabloid (11" x 17").
3. The use of highlighted background is discouraged.

B. Record Drawings and BIM Model

1. LAWA will review the BIM Model throughout the design and construction phases of the project. LAWA will also review reconciled design models and specifications for completeness and correctness and return comments to the DESIGN-BUILDER for required corrections. Refer to the PR-21 Building Information Model (BIM) and VDC Coordination.
2. As-Built or Red Line Drawings: "As-built" information and survey-data (PR-16) shall be incorporated into the reconciled design models and approved plans; changes in the field shall be marked on the red line drawings in accordance with the LAWA approved BIM Execution Plan.

C. Initial Submittal: At least thirty (30) days prior to submitting a request for substantial completion of a project component or the entire project, DESIGN-BUILDER shall submit two (2) paper copies of the As-Built or red line drawings and one (1) PDF electronic files of marked-up plans (in contrasting color) from the As-built construction model and shop drawings files. DESIGN-BUILDER shall prepare the Reconciled Design Model and drawings as prescribed in PR-21.**D. Record Digital Data Files:** Prior to submitting a request for Substantial Completion of a project component or the entire project, DESIGN-BUILDER shall review the "As-Built" drawings and BIM Model with LAWA. When authorized, DESIGN-BUILDER shall prepare a full set of corrected digital data files of the construction drawings as follows:

1. Format to be same digital data software program, version, and operating system as the in accordance with PR-21.
2. Annotated, indexed PDF electronic files with comment function enabled.
3. Record drawings shall include plans, sections and elevations and shall include plans, profiles and sections of all utilities, regardless of whether this data was included in the original construction documents.
4. Record drawings shall reflect the field-verified survey data of all construction and installations.

E. Final Submittal: Upon approval of the initial submittal, but not less than fifteen days after substantial completion of a project component or the entire project, DESIGN-BUILDER shall

submit one (1) redline original paper copy set, two (2) clean/revised updated copies and two (1) electronic PDF (marked-up in contrasting color) revised/final copy of each As-Built submittal. Drawings shall be full sized. DESIGN-BUILDER shall also submit one set of record digital data files and BIM model (PR-21).

1. Identify and date each record drawing, including the designation "PROJECT RECORD DRAWING" in a prominent location.
 2. Organize record prints and newly prepared record drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on the covers.
 3. Provide PDF copies of all record drawings, specifications, and supporting documentation required to make a complete technical record of the project. Include design calculations, worksheets, schedules and other documentation used in the project design.
- F. All electronic files shall include metadata describing the content in a format compatible with LAWA's document management system. For metadata requirements for record drawings refer to PR-21.

Record Data for Specifications, Documents, Manuals and Warranties

Field Name	Field Name Description / Use
Folder Name	Name of the folder where the document resides; used for importing into DMS
Name	User name for the document
Document File Name*	File name for the document
Discipline	Primary discipline for the document (i.e. civil, structure, geotechnical, mechanical, electrical, plumbing, etc.)
Project Title*	Name of the project that created the document
Location*	Location of the project (facility name)
Address / Coordinates	Facility address and/or GPS coordinates
Document Type*	Type of document (i.e. drawing, specification, manual, etc.)
Organization	The division / department / customer that the SYSTEM, SUBSYSTEM, AND EQUIPMENT is installed for
Designed By	Company that designed the SYSTEM, SUBSYSTEM, AND EQUIPMENT that the document is for
Completion Date	Date that the project was completed or operational date of SYSTEM, SUBSYSTEM, AND EQUIPMENT
Issue Number	Revision / issue number of the document
Document Source	Source / publisher of the document (i.e. vendor, consultant, etc.)

Field Name	Field Name Description / Use
Subject	Reference project and specific purpose of document
Status	Status of the document (draft, final, etc.)
Designer	Name of the designer for the SYSTEM, SUBSYSTEM, AND EQUIPMENT that the document relates to
Keyword Search	Searchable field of words that can be used to search for the document
Comments	Free form field to add any comments about the document
Barcode	For use with a referenced database or for document management
Project File	Project file name from approved file management system
Checked By	Name of person that checked the validity of the document
Record Archive	Is this document archived? (yes / no)

G. Formatting standards may be obtained from LAWA.

1. Record Specifications

- a. Mark specifications in contrasting color to indicate the actual product installation, where installation varies from that indicated in specifications.
- b. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
- c. Mark copy with the proprietary name and model number of products, materials and systems and equipment furnishes, including substitutions and product options selected.
- d. Record the name of manufacturer, supplier, installer and other information necessary to provide a record of selections made.
- e. Submit one (1) paper copy and a set of annotated, indexed PDF electronic files of project specifications, including addenda and contract modifications.
- f. All electronic files shall include metadata describing the content in a format compatible with LAWA's documents management system. Record specifications shall include the metadata information required by LAWA.

2. Recording and Maintenance

- a. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and modifications to project record documents as they occur. LAWA shall review documents in concert with the monthly application for payment.
- b. Maintenance of Record Documents and Samples: Store record documents and samples in the field office apart from the contract documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from

deterioration and loss. Provide access to project record documents for LAWA's reference during normal working hours.

H. Record Product Data according to the Project Requirements – Building Information Operations and Maintenance Manual Information

1. Technical Manuals

a. This section includes administrative and procedural requirements for preparing technical manuals, including the following:

- 1) Documentation directory;
- 2) Emergency manuals;
- 3) Operation manuals for systems and equipment;
- 4) Product maintenance manuals; and
- 5) Maintenance manuals for systems and equipment.

b. Submit technical manuals as required in individual technical specification sections and in the following format:

- 1) PDF electronic file. Assemble each manual into a composite electronically-indexed file. Submit on digital media acceptable to LAWA.
- 2) Name each indexed document file in composite electronic index with applicable item name. Include a complete electronically-linked directory.
- 3) Enable inserted reviewer comments on draft submittals.
- 4) Where scanning of paper documents is required, configure scanned file for minimum readable file size.
- 5) Four (4) paper copies. Include a complete directory. Enclose title pages and directories in clear plastic sleeves. Bind in heavy-duty, commercial-quality, durable three ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8½ by 11 inch paper with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversized sheets.
- 6) If two (2) or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary.
- 7) Identify each binder on front and spine with title, project title, subject matter of contents, and indicate specification section number on bottom of spine. Indicate volume number for multiple volume sets.
- 8) Dividers are to be heavy paper with plastic-covered tabs for each section of the manual. Mark each tab to indicate contents. Include typed list of products and major components included in the section on each divider, cross-referenced to specification section number and title of project manual.
- 9) Provide protective sleeves designed to enclose diagnostic software storage media for computerized electronic equipment.
- 10) If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents

and drawing locations.

- c. Timeliness of draft technical manual submittals is detailed in the other subsections. Before final payment, the DESIGN-BUILDER shall prepare and deliver to LAWA, four (4) each printed and two (2) each electronic copies on compact discs (CDs) or DVDs or other digital formats agreed to by LAWA of the final technical manuals. The content of the manuals is detailed in the subsections below.
 - d. The manuals shall be approved and stamped by the respective subcontractors.
 - e. Submit draft copy of each manual at least thirty (30) days before commencing demonstration and training. LAWA will comment on whether general scope and content of manual are acceptable. Correct or modify each manual to comply with LAWA comments.
 - f. Include a section in the directory for each of the following:
 - 1) List of documents,
 - 2) Alphabetical lists of systems and equipment, and
 - 3) Table of Contents – include for emergency, operation, and maintenance manuals.
 - g. Where manuals contain manufacturer's standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the work. If data includes more than one item in tabular format, identify each item using appropriate references from the contract documents.
 - h. Prepare a separate manual that provides an organized reference to all technical manuals. This is called the documentation directory.
 - i. In the documentation directory and in each technical manual, identify each system, subsystem, and equipment with the same designation used in the contract documents.
 - j. Enable bookmarking of individual documents based upon file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system, subsystem, and equipment into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel upon opening file.
2. Spare Parts and Tools Lists
- a. Submit a recommended spare parts list to LAWA in accordance with the DESIGN-BUILDER's commissioning plan and closeout plan and schedule as approved by LAWA and at least sixty (60) days prior to the request for substantial completion of a project component or the entire project. This is to be a list from the manufacturer of the recommended spare parts adequate to ensure two continuous years of normal operation after expiration of the system, subsystem, and equipment warranty.
 - b. The recommended spare parts list shall include, but not be limited to, items requiring replacement under the following conditions:
 - 1) Wear, corrosion, or erosion during normal operation;
 - 2) Failure which causes a shutdown of systems, subsystems, and equipment;
 - 3) Damage or breakage during routine maintenance or inspections of systems,

- subsystems, and equipment;
- 4) Custom or specially fabricated parts; and
- 5) Long lead items.
- c. Approval of the individual system, subsystem, and equipment submittal does not constitute authorization to procure the recommended spare parts.
- d. The spare parts supplier must be the manufacturer or a factory authorized representative of the manufacturer. The manufacturer will be responsible for any default of the representative that is not corrected by the representative in a timely and efficient manner. This responsibility includes replacing incorrect or defective parts, trouble shooting, and correcting problems that are traceable to the manufacturer's parts. The supplier shall provide, along with the spare parts list, a formal letter of certification from the manufacturer that the supplier is an authorized representative of the manufacturer.
- e. The supplier shall be a stocking facility of the manufacturer of the proposed parts, or the manufacturer must maintain a stocking facility of these parts on the West Coast, or the supplier can guarantee delivery of spare parts within seventy two (72) hours.
- f. The spare parts list shall be in addition to any other lists required under any other sections of these specifications. This list shall be delivered in electronic format and include but is not limited to the following:
 - 1) Current prices including delivery to the Jobsite;
 - 2) Original Equipment Manufacturer (OEM) part numbers, which identify interchangeability;
 - 3) Make and type of system, subsystem, and equipment as well as Model number;
 - 4) Size;
 - 5) Supplier's address and telephone number;
 - 6) Address and phone number of local representative;
 - 7) Address and phone number of servicing location;
 - 8) Certificate of certification from the manufacturer;
 - 9) Materials;
 - 10) Special tools, lubricants and/or fuels;
 - 11) Estimated delivery lead times;
 - 12) Warranty: State terms of warranty of spare parts offered;
 - 13) Cross-sectional, exploded view or assembly-type drawing with part numbers; and
 - 14) Manufacturer's price list catalog.
- g. Upon approval of the spare parts list, and no less than thirty (30) days prior to substantial completion of a project component or the entire project, deliver tools, spare parts, extra materials, and similar items to location designated by LAWA.
- h. The DESIGN-BUILDER shall be responsible for proper storage and protection of the spare parts until delivered to LAWA.
- i. Spare parts should be supplied in the manufacturer's original packaging and shall be

new and unused. A statement shall be included to clearly indicate that the spare parts are new and unused.

3. Emergency Instructions

- a. Content: Organize manual into separate section for each of the following:
 - 1) Type of emergency
 - 2) Emergency instructions and procedures (Job Plans)
- b. Type of emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, and equipment:
 - 1) Fire;
 - 2) Flood;
 - 3) Earthquake;
 - 4) Gas leak;
 - 5) Water leak;
 - 6) Power failure;
 - 7) Water outage;
 - 8) Systems, subsystems, and equipment failure; and
 - 9) Chemical release or spill.
- c. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of operating personnel for notification of installer, supplier and manufacturer to maintain warranties.
- d. Emergency Procedures: Include the following, as applicable:
 - 1) Instructions on stopping;
 - 2) Shutdown instructions for each type of emergency;
 - 3) Operating instructions for conditions outside normal operating limits;
 - 4) Required sequences for electric or electronic systems; and
 - 5) Special operating instructions and procedures during emergency.

4. Operational Instructions

- a. Content: In addition to requirements of this Section, include operation data required in individual specification sections and the following information:
 - 1) Systems, subsystems, and equipment descriptions: use designations for systems, subsystems, and equipment indicated on contract documents;
 - 2) Performance and design criteria if DESIGN-BUILDER is designated design responsibility;
 - 3) Operating standards;
 - 4) Operating procedures;
 - 5) Operating logs;
 - 6) Wiring diagrams;

- 7) Control diagrams;
 - 8) Piped system diagrams;
 - 9) Precautions against improper use; and
 - 10) License requirements including inspection and renewal dates.
- b. Descriptions include the following:
- 1) Product name and model number: use designations for products indicated on contract documents;
 - 2) Manufacturer's name;
 - 3) Systems, subsystems, and equipment identification with serial number of each component;
 - 4) Systems, subsystems, and equipment function;
 - 5) Operating characteristics;
 - 6) Limiting conditions;
 - 7) Performance curves;
 - 8) Engineering data and tests;
 - 9) Manufacturer's recommended tolerances and clearances;
 - 10) Complete internal and connection wiring diagrams: circuit diagrams and schematics shall be down to component level;
 - 11) Complete programming procedures and ladder logic documentation for all computer controlled, programmable logic controllers and automated systems and equipment;
 - 12) Approved isometric drawings of piping systems; and
 - 13) Complete nomenclature and number of replacement parts.
- c. Operating Procedures include the following, as applicable:
- 1) Startup procedures;
 - 2) Systems, subsystems, and equipment break-in procedures;
 - 3) Routine and normal operating instructions;
 - 4) Instructions on stopping;
 - 5) Normal shutdown instructions;
 - 6) Seasonal and weekend operating instructions;
 - 7) Instructions regarding load changes;
 - 8) Recommended "turn-around" cycles;
 - 9) Required sequences for electric or electronic systems;
 - 10) All special operating instructions and procedures; and
 - 11) Inspection procedures.
- d. Systems, subsystems, and equipment includes exploded views and schematics of

- each assembly.
- e. Systems, subsystems, and equipment controls: Describe the sequence of operation and diagram controls as installed.
- f. Piped Systems: Diagram piping as installed and identify color-coding where required for identification.
- 5. Maintenance Instructions
 - a. Product Maintenance Manuals: Include each product, material, and finish
 - 1) Include the following as applicable:
 - a. Product name and model number;
 - b. Manufacturer's name;
 - c. Color, pattern, and texture;
 - d. Material and chemical composition; and
 - e. Reordering information for specially manufactured products.
 - 2) Include manufacturer's written recommendations as applicable and the following:
 - a. Inspection procedures;
 - b. Types of cleaning agents to be used and methods of cleaning;
 - c. List of cleaning agents and methods of cleaning detrimental to product;
 - d. Schedule for routine cleaning and maintenance; and
 - ~~f. e.~~ Repair instructions – include local sources of materials and related services.
 - b. Systems, subsystems, and Equipment Maintenance Manuals: For each system, subsystem and equipment
 - 1) Include manufacturer's maintenance documentation as applicable including the following for each system, subsystem, and equipment:
 - a. Standard maintenance instructions and bulletins;
 - b. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly;
 - c. Identification and nomenclature of parts and components;
 - d. Include service, calibration, and lubrication requirements and standard time allotments;
 - e. Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies; and
 - f. Include manufacturer forms for recording maintenance.
 - 2) List the following information and any items that detail essential maintenance procedures:
 - a. Test and inspection instructions;
 - b. Trouble-shooting guide;
 - c. Precautions against improper maintenance;

- d. Disassembly: component removal, repair, and replacement; and reassembly instructions; and
- e. Aligning, adjusting, and checking instructions.
- 3) The maintenance manual letters are to be on the front cover of the maintenance manuals.
- 4) When a DESIGN-BUILDER performs maintenance work prior to LAWA acceptance of the facility, the information required is to be submitted in a format approved by LAWA on monthly basis to the project closeout.

I. Warranty Submittals

- 1. Submit written warranties to LAWA as required in the closeout procedures, and in accordance with the DESIGN-BUILDER's LAWA approved closeout plan and schedule as approved by LAWA and at least thirty (30) days prior to the request for substantial completion of a project component or the entire project. If the Certificate of Substantial Completion designates commencement date for warranties other than date of substantial completion for work, or designated portion of work, submit written warranties upon request of LAWA.
- 2. When a designated portion of work is completed and occupied or used by City, by separate agreement with DESIGN-BUILDER during construction period, submit properly executed warranties to LAWA as required by the closeout procedures.
- 3. When contract documents require DESIGN-BUILDER and subcontractor, supplier or manufacturer to execute special warranty, prepare written document that contains appropriate terms and identification, ready for execution by required parties. Submit draft to LAWA, for approval prior to final execution.
- 4. Refer to other sections for specific content requirements and particular requirements for submitting special warranties.
- 5. Form of Submittal: At final completion compile two copies of each required warranty properly executed by DESIGN-BUILDER, or by subcontractor, supplier, or manufacturer. Organize warranty documents into orderly sequence based on table of contents of project Manual.
- 6. Bind warranties in heavy-duty, commercial-quality, durable 3-ring, vinyl-covered loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8½ by 11 inch paper.
 - a. Provide heavy paper dividers with celluloid covered tabs for each separate warranty. Mark tab to identify product or installation. Provide typed description of product or installation, including name of product, and name, address, and telephone number of installer.
 - b. Identify each binder on front and spine with typed or printed title "WARRANTIES," project title or name, and name of DESIGN-BUILDER.
 - c. When warranted construction requires operation and maintenance manuals, provide additional copies of each required warranty, as necessary, for inclusion in each required manual.
 - d. Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide a table of contents at the beginning of the document.

- 1) Provide duplicate notarized copies of warranties in operation and maintenance manuals.
- 2) Execute and assemble documents from subcontractors, suppliers, and manufacturers.
- 3) Manufacturer's disclaimers and limitations on product warranties do not relieve DESIGN-BUILDER of warranty on the work that incorporates the products.
- 4) When correcting failed or damaged warranted construction, remove and replace construction that has been damaged as a result of such failure or must be removed and replaced to provide access for correction of warranted construction.
- 5) When Work covered by warranty has failed and has been corrected, reinstate warranty by written endorsement. Reinstated warranty shall be equal to original warranty with equitable adjustment for depreciation.
- 6) Upon determination that work covered by warranty has failed, replace or repair Work to an acceptable condition complying with requirements of the contract documents.

END OF PR-25 PROJECT RECORD DOCUMENTS

PR- 26 COMMISSIONING AND TRAINING

1. GENERAL

- A. The following requirements apply to the work or portion of the work performed on airport property. Work that is performed outside the jurisdiction of LAWA shall be performed in accordance with the requirements of the AHJ. All requirements for startup, testing and training shall be reviewed and complied with in accordance with the AHJ and shall be coordinated with LAWA.
- B. These requirements apply and are to be supplemented with LADBS building requirements.
- C. The DESIGN-BUILDER shall assure LAWA and provide documentation that all component, subsystem and system designs, installations and implementations perform to meet or exceed the requirements of the design and applicable standards.
- D. Startup, Testing and Training Summary
 - 1. The DESIGN-BUILDER shall design and provide complete and operational roadway network systems, mechanical, plumbing, electrical, and communications systems.
 - 2. The DESIGN-BUILDER shall systematically document that specified components and systems have been installed and started up properly and then functionally tested to verify proper operation through all sequences of operation and conditions.
 - 3. The DESIGN-BUILDER shall provide training of LAWA's operations personnel and include all training manuals, instructions and sessions and complete and final project closeout documents. Refer to the project closeout PR-27 for requirements.
 - 4. The DESIGN-BUILDER shall produce a startup and testing plan that will be implemented during the construction and is a prerequisite to fulfilling the project's closeout procedures. The plan shall include the detailed descriptions of the tests and demonstrations, all test forms, training process and schedule for performing startup and testing and training.
- E. Startup and testing shall:
 - 1. Verify that applicable equipment and systems are constructed and installed according to the contract documents, utility requirements, manufacturer's recommendations and industry accepted minimum standards and that they receive adequate operational checkout and functional testing including restart, emergency or abnormal events by the DESIGN-BUILDER and its subcontractor.
 - 2. Verify and document proper performance and interface functionality of systems, subsystems, and equipment.

2. STARTUP AND TESTING ACTIVITIES

- A. The DESIGN-BUILDER is responsible for the installation, startup and testing, and functional performance of the project in accordance with LAWA's requirements and related codes, standards, and contract documents. The DESIGN-BUILDER shall certify that the work is built, and is functionally performing in accordance with the requirement of the standards and contract documents.
- B. The DESIGN-BUILDER and its subcontractor responsible for system, subsystem and equipment installation shall assign representatives with expertise and authority to act on their

behalf throughout the project's construction and closeout, and they shall participate in and perform startup and testing related activities including, but not limited to meetings, scheduling, O&M and training preparation, final review and acceptance meetings.

- C. The DESIGN-BUILDER will develop a startup and testing plan which outlines the activities that shall be included in the project schedule, cost loaded and approved by LAWA. The following narrative provides a brief overview of the typical startup and testing tasks during construction.
1. Startup and testing team meetings will be required throughout the project's design, construction and closeout, scheduled and documented by the DESIGN-BUILDER with necessary parties attending to plan, scope, coordinate, schedule future activities and resolve problems.
 2. Equipment documentation is submitted by the DESIGN-BUILDER, during the submittal process described elsewhere in this PR and in the scope of work. The DESIGN-BUILDER ensures that LAWA receives copies of all pertinent submittals both electronically and in paper per the submittal project requirements.
 3. The startup or pre-functional checklists shall be generated and approved the DESIGN-BUILDER before being submitted for review and approval by LAWA. The checklists shall be completed by the DESIGN-BUILDER, before and during the startup process.
 4. Pre-functional checklists, startup shall be completed before functional performance testing begins.
 5. The DESIGN-BUILDER ensures that the subcontractor's pre-functional checklists are executed and documented and that startup and initial checkout are performed. This includes witnessing all startup of selected equipment. Any testing failure is to be corrected at no additional cost to LAWA, and a re-test is to be performed, observed, and documented.
 6. The Functional Performance Testing process is managed by the DESIGN-BUILDER in coordination with LAWA. The DESIGN-BUILDER's subcontractor performing the installations shall submit functional performance test plans for all systems and equipment being installed to the DESIGN-BUILDER. The plans shall include all necessary test forms to demonstrate that the installation meets the requirements of the contract documents including all control functions, sequence of operations and interfaces with other systems. Interface Control Diagrams for system to system interfaces shall also be included in the test plans.
 7. The startup and testing process is executed by the DESIGN-BUILDER and its subcontractor, who shall provide all support equipment and materials to execute and complete the startup and testing process.
 8. The DESIGN-BUILDER reviews the Operational and Maintenance (O&M) Manuals with documentation for conformance to the requirements of the project closeout PR-27. The DESIGN-BUILDER submits O&M manuals for review and approval by the design professionals in conjunction with LAWA personnel.
 9. Startup and testing shall be completed before substantial completion and in accordance with the startup and testing plan.
 10. The DESIGN-BUILDER shall develop a training plan, perform reviews, pre-approve content, coordinate, and implement the training provided by their subcontractor. Training agendas and syllabi are developed by the subcontractor and reviewed by the DESIGN-BUILDER, and submitted for review and approval.

3. **STARTUP AND TESTING PLAN**

A. The DESIGN-BUILDER shall develop a startup and testing plan that describes the overall startup and testing process including roles and responsibilities for all parties for all phases of the project and throughout the acceptance and the warranty period.

1. Design/Preconstruction Stage

a. The goals of the startup and testing tasks during the preconstruction of the project include but are not limited to:

- 1) Revision/completion of the design which reflect the actual final utility system configurations and intended operation, including normal, abnormal, by-pass, shutdown, road closures and restart for all systems, subsystems, and equipment.
- 2) Final contract documents periodic review shall be conducted with LAWA for constructability, operability and maintainability assessment.
- 3) Development of the startup and testing outline and plan by the DESIGN-BUILDER per the procedures identified elsewhere in this PR and in the scope of work.

2. Construction Stage

a. The goals of the startup and testing tasks during construction of the project include but are not limited to the following:

- 1) Updating the design as required reflecting any changes made during construction.
- 2) Review, comment and approve DESIGN-BUILDER submittals.
- 3) Scheduling, planning and final preparation for verification testing during closeout and acceptance period.
- 4) Development of the startup and testing plans by the DESIGN-BUILDER's subcontractor.
- 5) Verifying that all systems to be commissioned are constructed and installed per the contract documents and the utility requirements. If discrepancies are found, document on an issues log and identify mitigation measures for LAWA review.
- 6) Modify, review and approve startup and testing, training and closeout plans and schedules as required.

3. Acceptance Stage

a. Acceptance phase activities shall be defined in the project's schedule, and coordinated with and clearly defined in the DESIGN-BUILDER's project closeout plan.

b. The goals of the startup and testing tasks during the acceptance phase of the project include but are not limited to the following:

- 1) Verifying that all systems, subsystems, and equipment to be commissioned are constructed, installed and operate to meet the contract documents and utility's operation performance requirements.
- 2) Providing LAWA operation and maintenance staff, and other stakeholders useful documentation.

- 3) Training LAWA operations and maintenance staff, utilities' staff and other stakeholders on the design intent and operation of equipment and systems.
 - 4) Documenting the startup and testing process for future reference and use by LAWA O&M Staff, utilities and other stakeholders. The startup and testing report shall include but not limited to:
 - a) Introduction
 - b) Executive Summary
 - c) Startup and Testing Plans
 - d) Project Requirements / Basis of Design
 - e) Startup and Testing Specification
 - f) O&M Training Records
 - g) Functional Performance Test Reports
 - h) Issues Log
 - i) Startup and Testing Coordination Meeting Notes
 - j) DESIGN-BUILDER's and its subcontractors' test reports
 - k) Prefunctional Checklists
 - l) Blank Functional Test Procedures for retesting by LAWA or utility owners
4. Warranty Period
- a. The goals of the startup and testing tasks during the warranty period of the project include but not limited to the following:
 - 1) Revision/completion of the design requirements to reflect actual final system configurations and intended operation.
 - 2) Review of functional performance of systems tested to determine their level of performance ten (10) months after final acceptance, against the criteria and performance parameters established by LAWA and the utility owners and documented during Functional Performance testing.

4. REQUIRED MEETINGS

- A. Startup and Testing Kickoff Meeting: The DESIGN-BUILDER's coordinator will coordinate with LAWA to schedule, plan and conduct a Kickoff meeting for the startup and testing teams. The intent of this meeting is to introduce the key players of the startup and testing team and develop a go-forward process.
- B. Startup and Testing Meetings and Coordination:
 1. The DESIGN-BUILDER shall attend the startup and testing team coordination meetings throughout the project's construction period until completion of project closeout. The startup and testing team coordination meetings shall be planned, conducted and documented by the DESIGN-BUILDER as construction progresses. These meetings shall include but are not limited to coordination, scheduling, progress, deficiency and conflict resolution, and planning issues. These meetings will be held at least monthly, until the start of the acceptance phase when they may be held as frequently as once a week.

2. The DESIGN-BUILDER shall attend startup and testing planning and coordination work sessions during design. The startup and testing planning and coordination meetings are intended to review the startup and testing plan and resolve issues of equipment and systems identified as requiring startup and testing during design. These meetings may include but are not limited to:
 - a. Water and power distribution
 - b. Natural Gas distribution
 - c. Sewer collection and transmission
 - d. Roadway and ITS network system (lighting, wayfinding, signage, traffic signal, etc.)
 - e. Special Systems, such as alarm systems, telecommunication, fiber optics and horizontal cabling
 - f. Temporary systems
3. Pretesting Meetings: The DESIGN-BUILDER shall attend biweekly pretest meetings of the startup and testing team to review startup procedures, testing procedures, testing personnel and instrumentation requirements, and manufacturers' authorized service representative services for each system, subsystem, equipment, and component to be tested. Pretest meetings shall start at least four months prior to project completion.
4. Testing Coordination: The DESIGN-BUILDER shall coordinate sequence of testing activities weekly to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
5. Startup and testing meeting minutes and reports shall be distributed to LAWA within five (5) days of meeting.

5. SYSTEMS AND EQUIPMENT TO BE STARTED AND TESTED

- A. The systems and equipment to be started and tested shall be identified by the DESIGN-BUILDER and verified by all stakeholders, with the assistance of LAWA and LAWA's consultants during the design of the project. Systems that will require startup and testing may include but are not limited to roadway and its network, Pedestrian bridges, water, power, sewer, telecommunications and natural gas.
 1. The material and equipment matrix shall be formatted as a computerized spreadsheet with capability for printing of various data columns (ranges) to meet documentation requirements a various stages of construction, and for different purposes as required by the various technical specifications of the contract documents. The matrix shall be submitted as part of the startup and testing plan's development for review as part of the startup and testing plan's submission requirements stated elsewhere in this PR and in the scope of work, as well as during pre-startup and testing and startup and testing meetings. The electronic database program shall be used for all startup and testing activities.
 2. The matrix shall identify all operable devices, subsystems, and equipment to be provided and are to be grouped by the system they primarily support. When sorted by column for system identification, the resulting printout should identify all system components, regardless of whether they are of water, power, natural gas, sewerage, low voltage systems or other in nature. The matrix shall include the following data, as a minimum, for

each device, and shall allow for additional columns for subsequent data requirements.

- a. Brief equipment identification text
 - b. Equipment or device id number
 - c. Associated network system for roadway, if any
 - d. Governing Specification Section
 - e. Appropriate submittal reference number(s)
 - f. Installing location, by room number or column coordinates, as indicated on the Contract Documents.
3. In addition to including the material and equipment matrix as part of the startup and testing plan and any subsequent updates to the matrix that require LAWA review for approval, the final material and equipment matrix for each device or systems is to be provided as an attachment to the DESIGN-BUILDER's request/notice for check out or startup of equipment or systems.

6. TEST EQUIPMENT

- A. All standard testing equipment requiring initial checkout, startup and functional performance testing shall be provided by the DESIGN-BUILDER and its subcontractor for the equipment being tested. This includes, but is not limited to, two-way radios, meters and data recorders.
1. Special equipment, tools, and instruments required for testing equipment according to these contract documents shall be provided by the DESIGN-BUILDER and with the exception of TAB equipment, turned over to LAWA at project closeout.
 2. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance within the tolerances specified in the contract documents. If not otherwise noted, the following minimum requirements apply: Pressure sensors shall have an accuracy of +/- 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year. All equipment shall be calibrated according to the manufacturer's recommended intervals and when dropped or damaged. Calibration tags shall be affixed or certificates readily available.

7. PROJECT SCHEDULE

The DESIGN-BUILDER shall incorporate all startup and testing coordination and execution activities into the project's schedule and review all monthly updates with LAWA prior to submitting for approval.

8. PRIOR TO STARTUP

- A. Prior to equipment/system start-up the following conditions will be required:
1. Provide LAWA for review and approval a comprehensive start up plan from the DESIGN-BUILDER and subcontractor using manufacturer's approved start up methods and pre-start-up checklist if applicable.
 2. No equipment will be started until all applicable requirements of the contract documents have been completed for the installation and safe operations of the equipment being

started.

3. Written certification that the manufacturers' representative has verified that the installation and operation of the system or component is in accordance with their published recommendations (if required by contract document).
4. Provide no less than a three (3) day notification in writing to LAWA that startup is pending. Startup procedures shall be witnessed by the Project's Engineer of Record, and may be witnessed by LAWA, LAWA's consultants, and the utility owners.
5. All required field testing has been completed and testing forms approved by LAWA.

9. STARTUP, SYSTEM READINESS CHECKLISTS AND INITIAL CHECKOUT

- A. The DESIGN-BUILDER or its subcontractor shall not energize or activate any system in final use until the following conditions have been met:
 1. The DESIGN-BUILDER has verified that all wiring and support components for equipment are complete and have been tested in accordance with the technical specifications and/or the manufacturer's written recommendations.
 2. The DESIGN-BUILDER has verified and audited all control sensors types and locations, all piping specialties including balance, control, and isolation valves, all ductwork specialty items including turning devices, balance, fire, smoke, and control dampers, and access doors.
 3. The DESIGN-BUILDER has verified that each component device has been checked for proper lubrication, vibration isolation, drive rotation, belt tension, control sequence, or other conditions that may cause damage.
 4. The DESIGN-BUILDER has verified that all tests, meter readings, and specified electrical characteristics agree with those required by the equipment or system manufacturer and are in compliance with applicable specifications.
 5. The DESIGN-BUILDER has provided LAWA with a written three (3) day notice of intent to start-up the system for operational check-out. The completed startup and testing system readiness checklist, shall accompany the "Equipment or System Startup Request for Inspection Form" to be used for this notification.
 6. The DESIGN-BUILDER shall execute start-up under supervision of responsible manufacturer's or utility's representative in accordance with manufacturer's or utility's instructions and specification requirements if applicable.
 7. The DESIGN-BUILDER shall coordinate and schedule system(s) start-up in a timely manner so they can operate each system for a period of time sufficient to evaluate and adjust performance as necessary, prior to demonstrating the system to LAWA. All systems shall be operational, and shall have been successfully inspected by LAWA prior to the DESIGN-BUILDER requesting substantial completion inspections for the project and in accordance with the closeout procedures as required in the project requirements for project closeout.

10. FUNCTIONAL PERFORMANCE TESTING

- A. The DESIGN-BUILDER will develop and issue functional performance test procedures for each piece of equipment or system to be started and tested as required by the technical

specifications or utility owner. The DESIGN-BUILDER shall perform the functional performance test procedures observed by LAWA and the DESIGN-BUILDER's startup and testing coordinator.

- B. The DESIGN-BUILDER shall provide personnel and equipment to perform the Functional Performance Test Procedures. This includes any specialty subcontractors (controls CM, manufacturers reps, vendors, consultants, etc.) as required by LAWA and the DESIGN-BUILDER's startup and testing coordinator.
- C. The following requirements must be met before the functional performance test process will begin:
 - 1. All materials and equipment to be commissioned have had start-up procedures completed.
 - 2. System readiness checklists and test reports are completed, signed and submitted to the A/E and LAWA.
- D. Notify all personnel on the project site prior to any start-up or testing which may create a hazardous or dangerous condition. Coordinate with other trades.
- E. Initiate, develop, and document functional performance test procedures. Include functional performance test procedures data sheets for each system or equipment. Determine actual system performance and compliance with the design. Personnel experienced in the technical aspects of each system to be started and tested shall be engaged.
- F. Test procedures shall fully describe system configuration and steps required for each test and be appropriately documented so that another party can repeat the tests with virtually identical results.
- G. Functional test procedures must confirm the performance of systems. Comply with the requirements of the contract documents. The functional test shall meet the design intent and applicable code under which the work was permitted. When a system is accepted, LAWA and the appropriate utility owner must be assured that the system is complete, works as intended, is correctly documented and that the required training in operation and maintenance of the system is accomplished per the contract's requirements.
- H. Any mechanical equipment requires integral safety devices to stop/prevent equipment operation unless minimum safety standards or conditions are met. This shall include adequate oil pressure, proof-of-flow, non-freezing conditions, and maximum head pressure. Functional performance test procedures shall demonstrate the actual performance of safety shutoffs in real or closely-simulated conditions of failure.

11. DEFERRED TESTING

Deferred testing may be required to address seasonal conditions that may prohibit a required test, or to accommodate changes in the project schedule. All such changes shall be coordinated with the construction schedule monthly updates and submitted for LAWA's review and approval.

12. SUBMITTALS

- A. Startup and Testing Coordinator Qualifications Submittal: The DESIGN-BUILDER shall submit each startup and testing coordinator resume and sample documents in a timely fashion to LAWA for approval; which shall include the following:

1. Education and technical training.
 2. Present employment:
 3. Company name and address
 4. Present title and job description
 5. History of employment (include dates and positions held)
 6. Relevant work experience:
 7. Job name
 8. Position held
 9. Work history (include dates and positions held)
 10. Example of prior building startup and testing project performed by the proposed CxL:
 11. Submitted project shall be similar in startup and testing scope and complexity.
 12. Include test procedures developed by proposed CxL
- B. Test Checklists and Report Forms: The startup and testing coordinator shall submit sample checklists and forms to DESIGN-BUILDER's QC manager and subcontractor for review and comment. Submit each checklist and report form for review and approval by the A/E in conjunction with LAWA.
- C. The DESIGN-BUILDER shall provide the submittal schedule to LAWA per the requirements of the submittals PR. Prior to submission to LAWA, the DESIGN-BUILDER shall indicate on the submittal schedule which submittals are "Startup and Testing Related" for review and approval.
- D. The DESIGN-BUILDER shall submit all startup and testing outlines and plans to the A/E and LAWA for review and approval per the plan submission requirements identified elsewhere in this PR and the scope of work.
- E. The DESIGN-BUILDER shall provide one (1) copy of each startup and testing related submittal package and O&M Manual to LAWA at the same time the submittal package is issued to the A/E for review. See the project submittals PR-09 and the project closeout PR-27 for requirements.

13. REPORTING AND DOCUMENTATION

- A. Certificate of Readiness: Certificate of Readiness shall be signed by the DESIGN-BUILDER's, subcontractor(s) performing the installation, vendor(s), and the startup and testing coordinator certifying that systems, subsystems, equipment, materials and associated controls are ready for testing. Completed test checklists signed by the responsible parties shall accompany this certificate.
- B. Test and Inspection Reports: Startup and testing coordinator shall record test data, observations, and measurements on test checklists. Photographs, forms, and other means appropriate for the application shall be included with data.
- C. The startup and testing coordinator shall compile test and inspection reports and test and inspection certificates and submit to LAWA for review and approval. This includes all certifications, permits cards and other such forms that have been signed by the utility owner certifying or acknowledging successful completion of startup and testing.

- D. **Corrective Action Documents:** Startup and testing coordinator shall document corrective action taken for systems and equipment that fail tests. Include required modifications to systems and equipment and revisions to test procedures, if any. Retest systems and equipment requiring corrective action and document retest results.
- E. **Issues Log and Report:** Startup and testing coordinator shall prepare and maintain an electronic (Microsoft excel compatible) issues log that describes design, installation, and performance issues that are at variance with the utility owner requirements and contract documents. Identify and track issues as they are encountered, documenting the status of unresolved and resolved issues.
 - 1. **Creating an Issues Log Entry:**
 - a. Identify and document the CGMP or task order.
 - b. Identify the issue with unique numeric or alphanumeric identifier by which the issue may be tracked.
 - c. Assign a descriptive title, date and time of the issue, and person documenting issue for tracking.
 - d. Identify test number of test being performed at the time of the observation, if applicable, for cross-reference.
 - e. Identify system, subsystem, and equipment, and location to which the issue applies.
 - f. Include any information that may be helpful in diagnosing or evaluating the issue, and note recommended corrective action, identifying Cx team member responsible for corrective action and expected date of correction.
 - 2. **Documenting Issue Resolution:**
 - a. Log date correction is completed or the issue is resolved, identifying the person documenting the resolution.
 - b. Describe corrective action or resolution taken. Include description of diagnostic steps taken to determine root cause of the issue, if any.
 - c. Identify changes to the CGMP or Contract Documents that may require action.
 - d. State that correction was completed and system, subsystem and equipment are ready for retest, if applicable.
 - e. Identify person(s) who corrected or resolved the issue.
 - 3. **Issues Log Report:** On a periodic basis, but not less than for each startup and testing team meeting, startup and testing coordinator shall submit a written narrative for LAWA review of outstanding issues and a status update of the issues log. As a minimum, the startup and testing coordinator shall include the following information in the issues log and expand it in the narrative:
 - a. Issue number and title.
 - b. Date of the identification of the issue.
 - c. Name of the startup and testing team member assigned responsibility for resolution.
 - d. Expected date of correction.
- F. **Startup and Testing Report:** Startup and testing coordinator shall submit to LAWA results of the startup and testing process including unresolved issues and performance of systems,

subsystems, and equipment to for LAWA review. The startup and testing report shall indicate whether systems, subsystems, and equipment have been completed and are performing according to the utility owner requirements and contract documents. The startup and testing report shall include, but is not limited to, the following:

1. Lists and explanations of substitutions; compromises; variances in to the CGMP or utility owner requirements; record of conditions; and, if appropriate, recommendations for resolution.
 2. Startup and testing coordinator startup and testing plan.
 3. Corrective modification documentation.
 4. Issues log.
 5. Completed test checklist(s).
 6. Listing of off-season test(s) not performed and a schedule for their completion (if applicable).
- G. Product Failure (Due to Manufacturer Defect): If 10% (or three, whichever is greater) of identical pieces of equipment or material fail to perform to the utility owner requirements or contract documents due to a manufacturing defect, not allowing it to meet its submitted performance specification, all identical units may be considered unacceptable by LAWA. In such case, the DESIGN-BUILDER shall provide the LAWA with the following:
1. Within one (1) week of notification from LAWA, the DESIGN-BUILDER or manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to LAWA within two (2) weeks of the original notice.
 2. Within two (2) weeks of the original notification, the DESIGN-BUILDER or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc., and all proposed solutions. The proposed solutions shall not significantly exceed the specification requirements of the original installation.
 3. LAWA will determine whether a replacement of all identical units or a repair is acceptable.
 4. Two examples, where applicable, of the proposed solution shall be installed by the DESIGN-BUILDER, and LAWA, shall be allowed to test the installation for up to one week, upon which LAWA, will decide whether to accept the solution.
 5. Upon acceptance, the DESIGN-BUILDER and/or manufacturer shall replace or repair all identical items, at their expense. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

14. DEMONSTRATION AND DESIGN-BUILDER PROVIDED TRAINING

- A. This section includes administrative and procedural requirements for providing demonstrations and training to LAWA, utility owners and tenant personnel for those items requiring training in accordance with the technical specifications, including the following:
1. Demonstration of operation of systems, subsystems, and equipment.
 2. Development of training programs that will identify skills and knowledge necessary to safely and efficiently operate, adjust, and maintain the project.
 3. Training in operation, adjustment, and maintenance of products, equipment, and systems.

- B. The DESIGN-BUILDER shall provide and include in its Startup and Testing Plan training coordination, scheduling of subcontractor, and ensure that training is completed. Develop an instruction program that includes individual training modules for each system, subsystem, and equipment as provided herein.
- C. All training shall be coordinated through LAWA. Repeat training sessions shall be provided for operation and maintenance shift workers.
- D. Training may not occur before performance testing is complete except at the discretion of LAWA where required by the facility operators to assist the DESIGN-BUILDER in the performance testing.
- E. Training Preparation Conference: Before operation and maintenance training, the startup and testing coordinator shall convene training preparation conferences to include LAWA's operation and maintenance personnel, DESIGN-BUILDER, and subcontractor. In addition to requirements specified, perform the following:
 - 1. Review the Design
 - 2. Review installed systems, subsystems, and equipment.
 - 3. Review instructor qualifications.
 - 4. Review instructional methods and procedures.
 - 5. Review training module outlines and contents.
 - 6. Review course materials (including operation and maintenance manuals).
 - 7. Inspect and discuss locations and other facilities required for instruction.
 - 8. Review and finalize training schedule and verify availability of educational materials, instructors, A/V equipment, and facilities needed to avoid delays.
 - 9. For instruction that must occur outside, review weather and forecasted weather conditions and procedures to follow if conditions are unfavorable.
- F. All demonstration, training, and instructional sessions will be monitored and approved by LAWA. Any session or portion thereof deemed unsatisfactory, based on evaluation of the training shall be repeated by the manufacturer or manufacturer's representative at no additional cost to LAWA.
- G. When deemed appropriate by LAWA, field instruction to LAWA and/or tenant personnel designated to receive training may be acceptable as a training session. The instruction shall be provided by a field service technician qualified to perform corrective or preventive maintenance, troubleshooting, or related field services.
- H. Training shall be conducted so that home study will not be required. The training shall include courses, which combine classroom and field hands-on training that is structured and scheduled to facilitate trainee comprehension of the subject material. Courses shall be continuous, and the field training shall immediately follow the classroom instruction.
- I. Video Recording of the training sessions shall be provided by the DESIGN-BUILDER and added to the O&M manuals. Video shall meet or exceed the industry standard of quality. In addition, factory training high definition videos/DVD identifying key troubleshooting, repair, service and/or replacement techniques shall be provided by the DESIGN-BUILDER and reviewed with LAWA.
- J. LAWA reserves the right to videotape any and all training materials and presentations, except for proprietary material, and retain all rights for usage of such recorded material to train.

- K. Refer to the contract documents for specific requirements for demonstration, training, and instruction of operation adjustment, and maintenance of products, equipment, and systems.

15. DEVELOPMENT AND TRAINING PROGRAM

- A. With the exception of safety and overview training, training shall be divided into separate categories for operations training and maintenance training with maintenance training further broken down to specific crafts.
- B. No actual operations training of a piece of equipment will be permitted until the equipment is properly installed and is operational.
- C. Operations training shall be a prerequisite to the beneficial use of the facility or any portion thereof and shall be completed a minimum of one week prior to substantial completion being requested by the DESIGN-BUILDER.
- D. Maintenance training shall occur after and within thirty (30) days of the substantial completion and in accordance with the DESIGN-BUILDER's approved startup and testing plan, closeout plan and schedule.

16. TRAINING AND PROGRAM SUBMITTALS

- A. The DESIGN-BUILDER shall provide the training submittals in the following order for review and approval by the A/E and LAWA.
 - 1. First draft in accordance with the DESIGN-BUILDER's startup and testing plan and closeout plan and schedule as approved by the A/E and LAWA and at least sixty (60) days prior to proposed instruction date.
 - 2. Final draft in accordance with the DESIGN-BUILDER's startup and testing plan and closeout plan and schedule as approved by the A/E and LAWA and at least thirty (30) days prior to proposed instruction date.
- B. The "First Draft" of the training material shall, as a minimum, contain the following:
 - 1. Instructional text that details the specific topics of training for the system. These topics are detailed below. All text must be complete. Incomplete sections, paragraphs, etc., shall not be acceptable.
 - 2. Power Point, Media Player, and any other type of visual training aid that will be used in conjunction with the training plan.
 - 3. Reference materials as detailed in the lesson plan (e.g. handout, manufacturer catalogues, brochures, and pamphlets). All material shall be reviewed by LAWA to determine applicability and functionality. Reference materials that do not pass this review shall be modified and resubmitted within two weeks for approval.
 - 4. No actual classroom or field training shall be scheduled unless this material is approved.
 - 5. The DESIGN-BUILDER shall not proceed to the "Final Draft" stage of training material until LAWA has approved the "First Draft".
 - 6. With the final draft of the training material, the DESIGN-BUILDER shall submit a training agenda that provides the following information:
 - 7. Company name, address, and telephone number(s) for the vendor.

8. Name and telephone number(s) of the vendor training representative.
 9. Duration of class (total hours).
 10. Breakdown of class and duration in hours of each training activity.
 11. Target audience (e.g. operators, maintenance personnel, etc.).
 12. Audiovisual requirements.
- C. After the DESIGN-BUILDER has received approval of the "Final Draft" of the training material and the training agenda from LAWA, only then can the actual training be scheduled. DESIGN-BUILDER shall submit his proposed training schedule to LAWA for approval. The proposed training schedule shall be submitted in accordance with the DESIGN-BUILDER's startup and testing plan, closeout plan and schedule as approved by LAWA and at a minimum of sixty (60) days prior to the start of the training. If the proposed training schedule is approved, then it becomes the final training schedule.
- D. Any compensation that is paid to LAWA personnel as a result of cancellation of classes that begin more than thirty (30) minutes after the scheduled start time shall be reimbursed to LAWA by the DESIGN-BUILDER. An exception is when a class is canceled or delayed due to actions by LAWA. LAWA will monitor the starting times of scheduled classes.
- E. The scheduling, content and duration of training programs has to be coordinated with the DESIGN-BUILDER's approved startup and testing plan and the DESIGN-BUILDER's closeout plan and subject to approval.
- F. The review of the training material does not constitute its approval unless specifically stated so. The training material submittal shall contain, but not be limited to, the following:
1. Sufficient background information on each instructor for various sessions shall be provided to allow evaluation of the proposed instructor's qualifications and his capability of training the specific discipline.
 2. At the completion of the training, the DESIGN-BUILDER shall forward to LAWA one complete electronic set of training materials and support material for each defined training category.

17. DEMONSTRATION

- A. In accordance with the DESIGN-BUILDER's startup and testing plan, closeout plan and schedule as approved by LAWA and at least four (4) weeks prior to date of substantial completion, submit for LAWA's approval, a proposed outline of demonstration program including a schedule of proposed dates, times, length. Demonstration shall include, but not limited to, the following procedures:
1. Start-up
 2. Shutdown
 3. Emergency operations
 4. Noise and vibration adjustments
 5. Safety procedures
 6. Economy and efficiency adjustments
 7. Effective energy utilization

- B. Demonstrate products, systems, and equipment to LAWA-specified personnel two (2) weeks prior to substantial completion.
- C. For each demonstration submit list of participants in attendance.
- D. Provide two copies of high definition and professionally edited video on DVD of each demonstration and instructions session.
- E. For equipment or systems requiring seasonal operation, perform demonstration for other season within six (6) months.
- F. Utilize operation and maintenance manuals as basis for instruction. Review contents of manual with personnel in detail to explain all aspects of operation and maintenance.
- G. Demonstrate start-up, operation, control, adjustment, trouble-shooting, servicing, maintenance, and shutdown of each item of equipment at agreed-upon times, at equipment location.
- H. Prepare and insert additional data in operations and maintenance manuals when need for additional data becomes apparent during instruction.

18. OPERATIONAL TRAINING

- A. Manufacturer supplied (vendor) equipment training for all major equipment and subsystems shall be provided for the end users.
- B. The vendor training shall be provided by qualified instructors of the equipment manufacturers, i.e.: equipment field startup technician or their representative, as approved by the A/E and LAWA and may include both on and off-site training venues. Generally, manufacturer sales representatives will not be acceptable.
- C. Classroom training shall be structured to develop a basic understanding of the design, function, and capabilities of the equipment and the interrelationship with the process. In addition, routine operational and preventive maintenance, safety considerations, responses to abnormalities and startup, shutdown, and troubleshooting will be covered. Field training shall be scheduled to commence immediately following the classroom training and shall stress hands-on, performance-based application of the classroom training.
- D. Equipment shall be started and relevant systems and components shall be demonstrated.
- E. Training schedule: The DESIGN-BUILDER shall provide an operation and maintenance training schedule to be conducted immediately following vendor equipment startup of the equipment.
- F. The scheduling, content and duration of training programs has to be coordinated with the DESIGN-BUILDER's startup and testing plan and the DESIGN-BUILDER's closeout plan and subject to approval.

19. MAINTENANCE TRAINING

- A. The maintenance training shall include the function, adjustment, repair, and replacement of all components related to the trainee's trade. Safety aspects shall also be stressed.
- B. The training shall include, but not be limited to, the following:
 - 1. Preventive and corrective maintenance procedures, including replacement of parts; lubrication quantities, types, frequencies, and application points; and an estimate of time

to perform such procedures.

2. Special tools, techniques, or procedures required for either preventive or corrective maintenance of equipment, or its auxiliary or support systems.
 3. Procedures to perform adjustments required for alignment, wear, and calibration for all preventive and corrective maintenance, and an estimate of time required performing such procedures.
 4. Assembly and disassembly procedures, including parts lists required for appropriate preventive and/or corrective maintenance.
 5. Maintenance, overhauls, troubleshooting of equipment, and auxiliary or support systems.
 6. Models, "exploded" views, and/or audiovisual materials shall be used for this training. These materials shall be turned over to LAWA upon completion of training.
- C. Hands-on field training shall be provided, subject to the approval.
- D. The scheduling, content and duration of training programs has to be coordinated with the DESIGN-BUILDER's startup and testing plan and the DESIGN-BUILDER's closeout Plan and subject to LAWA's approval.

END OF PR-26 COMMISSIONING AND TRAINING

PR- 27 PROJECT CLOSEOUT**1. GENERAL**

To allow for a timely closeout process and ensure compliance with the administrative and contract closure requirements described in this project requirement, the DESIGN-BUILDER shall produce and submit a closeout plan for LAWA's review and approval at least sixty (60) days prior to the request for substantial completion. The plan shall incorporate the minimum requirements specified herein.

2. PRE-SUBSTANTIAL COMPLETION WORK

- A. In order to facilitate the preparation, scheduling and planning of all activities associated with project closeout, all submittals and activities specified below shall be completed prior to the DESIGN-BUILDER submitting a notice of substantial completion.
- B. All Work, including component work of the contract shall be substantially completed in conformance with the contract documents and inspected and verified by the DESIGN-BUILDER's QC Manager.
- C. Operating equipment, roadway systems and subsystems must have been taken through start-up and sequence of operations procedures per the CxP as required in the commissioning project requirements.
- D. The DESIGN-BUILDER shall submit maintenance and operations manuals for preliminary review by LAWA a minimum of thirty (30) days prior to submitting notice of substantial completion.
- E. Testing of electrical, alarm and communications systems must be complete.
- F. Certification of life safety systems and equipment must be complete.
- G. DESIGN-BUILDER shall submit a required two-week advance notice of request for inspection for substantial completion.
- H. All operating systems must have been maintained by DESIGN-BUILDER in continuous operation for a minimum of two weeks in accordance with the CxP and as required in the commissioning project requirements.
- I. The DESIGN-BUILDER shall ensure all training of LAWA operations and maintenance personnel has been completed in accordance with the project requirements for demonstration and training prior to turning over any portion of the work under any condition. (See PR-26 "Project Commissioning and Training").
 - 1. Operations training shall be a prerequisite to the beneficial use of the facility or any portion thereof and shall be completed a minimum of one week prior to the beneficial use or substantial completion.
 - 2. Maintenance training shall occur thirty (30) days prior to beneficial use or substantial completion and in accordance with the DESIGN-BUILDER's approved CxP, closeout plan and schedule.

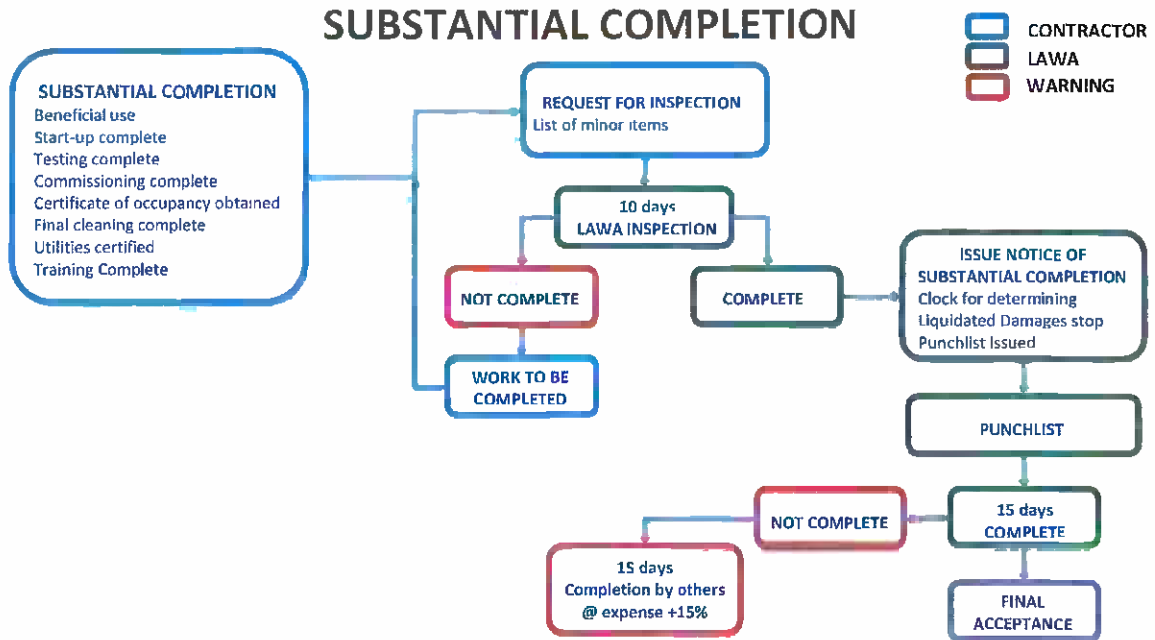

3. SUBSTANTIAL COMPLETION

- A. When the DESIGN-BUILDER considers that the work is substantially complete and has completed all quality control tests and inspections, the DESIGN-BUILDER shall notify LAWA that the work is completed in accordance with the contract documents and quality requirements and is ready for inspection utilizing a notice of substantial completion.
- B. The DESIGN-BUILDER shall include with its notice of substantial completion a list of minor items (DESIGN-BUILDER's punch list) to be completed or corrected that would not affect beneficial use. This list shall be generated by the DESIGN-BUILDER and shall ensure completion of the work necessary to accomplish substantial completion prior to scheduling the substantial completion inspection for their design professionals and LAWA. The DESIGN-BUILDER's QC Manager or designated representatives shall independently verify and confirm that the work is installed per the project's quality requirements and that it is ready for the substantial completion inspection. Refer to the PR-13/14 "Quality Assurance" for requirements.
- C. The DESIGN-BUILDER shall submit the listing of minor items to be completed or corrected in an electronic format approved by LAWA. Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by DESIGN-BUILDER that are outside limits of construction.
 1. In addition to the information required to identify location of punch list items, responsible parties, and proposed action, include following information in the punch list software and at the top of each printable page:
 - a. Project name
 - b. Date
 - c. Name of Designer, Architect, or Engineer
 - d. Name of DESIGN-BUILDER's responsible party for the work
 - e. Page number
 4. DESIGN-BUILDER shall complete final cleaning per the project requirements.
 - a. Materials: Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.
 - b. Use cleaning products that that comply with the California Code of Regulations maximum allowable VOC levels.
 - c. Final Cleaning
 - 1) General: DESIGN-BUILDER is required to provide general cleaning during construction and provide final cleaning as follows in this section conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations. Those include but are not limited to AQMD and SWRCB and other areas as required. Also refer PR-18 "Environmental".
 - 2) Cleaning: The DESIGN-BUILDER shall employ experienced Workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in a commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

- 3) The DESIGN-BUILDER shall complete the following cleaning operations before requesting inspection for certification of substantial completion for either the entire Project or a component of the Project.
- a) Removal of Protection: Remove temporary protection and facilities installed during construction to protect previously completed installations during the remainder of the construction period.
 - b) Clean project site, yard, and grounds, in areas disturbed by construction activities, including hardscape development areas, of rubbish, waste material, litter, and other foreign substances.
 - c) Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
 - d) Rake grounds that are neither planted nor paved to a smooth, even-textured surface.
 - e) Remove tools, construction equipment, machinery, and surplus material from project site.
 - f) Clean exposed exterior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
 - g) Remove debris and surface dirt from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
 - h) Sweep concrete floors broom clean.
 - i) Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Replace chipped or broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch surfaces.
 - j) Remove labels that are not permanent.
 - k) Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already show evidence of repair or restoration.
 - l) Remove paint over "UL" and similar labels, including mechanical and electrical nameplates. Replace label if damaged from cleaning.
 - m) Wipe surfaces of mechanical and electrical equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
 - n) Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
 - o) Clean ducts, blowers, and coils.
 - p) Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
 - q) Leave project clean and ready for use.

4. SUBSTANTIAL COMPLETION INSPECTION

- A. Upon receipt of DESIGN-BUILDER's notice of substantial completion, LAWA will either proceed with the inspection or advise the DESIGN-BUILDER of unfulfilled requirements. The substantial completion inspection will only be performed for the Project or a component thereof.
- B. When the project is deemed ready for the substantial completion inspection, LAWA will inspect the completed work and generate a punch list of incomplete items and items requiring correction.
- C. If the LAWA inspection yields only minor items requiring completion or correction, LAWA will prepare a notification that the DESIGN-BUILDER has achieved substantial completion or will notify the DESIGN-BUILDER of items (punch list), identified by LAWA that must be completed or corrected before notice of substantial completion will be issued.
- D. Should additional re-inspections be required, LAWA will make one (1) repeat inspection for which the DESIGN-BUILDER shall reimburse LAWA for its time spent in conducting additional re-inspections at rate of 2.5 times rate of Direct Personnel Expense (DPE). DPE is defined as direct salaries of LAWA's personnel engaged on project and portion of costs of mandatory and customary contributions and benefits related thereto, including employment taxes and other statutory employee benefits, insurance, sick leave, holidays, vacations, pensions, and similar contributions and benefits.
- E. The DESIGN-BUILDER shall immediately begin correction and completion of the items contained on LAWA punch list and when completed. When completed, the DESIGN-BUILDER shall request that LAWA verify the completion of those items so as to not impact the construction schedule. This process shall be repeated until LAWA determines that the work is complete in accordance with the contract documents.
- F. If LAWA's verification either reveals that items have been completed or that only a limited number of items remain to be completed, LAWA may issue a certificate of substantial completion for the work. However, if LAWA's verification reveals that a substantial number of items remain to be completed or corrected the DESIGN-BUILDER will be directed to complete those items at no schedule or cost impact to LAWA and will be subject to liquidated damages until substantial completion is verified and approved.
- G. A certificate of substantial completion shall not be issued until LAWA receives evidence of satisfactory completion of commissioning requirements specified in the PR-26 "Commissioning and Training".
- H. The "Substantial Completion" flow chart shown below applies to partial work or components of work completed and available for beneficial use by LAWA or work of the entire project.

5. PARTIAL OCCUPANCY AND USE

- A. LAWA shall have the right to take early beneficial possession of and to use any completed or partially completed phase or portion of the work, even if substantial completion of the work has not occurred and even if the work has not been finally accepted. Such beneficial possession and early occupancy shall not constitute substantial completion of such portions of the work nor affect LAWA's right to assess liquidated damages as provided in the contract documents.
- B. If LAWA elects to take possession of and to use any completed or partially completed portions of the Work prior to substantial completion, an inspection shall be made by the DESIGN-BUILDER and LAWA. Based upon such inspection, LAWA will attempt to list all incomplete work items observed and shall provide the DESIGN-BUILDER with such list. However, the absence of an item from the list shall not relieve the DESIGN-BUILDER of responsibility to perform all of the Work. Any and all areas occupied will be subject to a final inspection when the DESIGN-BUILDER complies with the final inspection requirements.
- C. At the time of such inspection, the parties shall also negotiate the responsibilities of LAWA and the DESIGN-BUILDER for security, operations, maintenance, heating and cooling, utilities, property insurance premiums, and damage to the work. These negotiations are subject to the final approval of LAWA.
- D. In the event the DESIGN-BUILDER believes there will be an additional cost associated with completion of the Work while LAWA occupies the work in whole or in part under this section, the DESIGN-BUILDER shall advise LAWA by Contactor Potential Change Notice (CPCN) followed by a Contractor Change Request (CCR) of all such costs at or before the time of such inspection. If the DESIGN-BUILDER fails or refuses to furnish such cost information or fails or refuses to comply with the CCR procedure, the DESIGN-BUILDER shall be deemed to have waived any and all rights to assert any claim therefore at any time thereafter.

- E. If LAWA's need to occupy the work prior to such time as the work is complete is caused by the DESIGN-BUILDER's failure to complete the work within the stipulated period of performance, the DESIGN-BUILDER shall bear any and all additional costs associated with completing the work.

6. FINAL COMPLETION

- A. Upon issuance of a certificate of substantial completion for the entire project, the DESIGN-BUILDER shall complete any minor punch list items remaining after the issuance of the certificate of substantial completion at which time the DESIGN-BUILDER shall notify LAWA for final inspection of the work.
- B. The DESIGN-BUILDER will notify LAWA to perform complete facilities and project site final meter readings for utilities, a measured record of stored fuel and any other similar data required.
- C. The DESIGN-BUILDER shall submit all record documents associated with the project in accordance with the PR-24 "Photographs and Videos".
- D. DESIGN-BUILDER shall submit final maintenance and operations manuals, final project photographs, damage or settlement surveys (as required), property survey and similar final record information.
- E. The DESIGN-BUILDER shall submit specific approved warranties, workmanship bonds, maintenance agreements, final certifications and similar documents.
- F. The DESIGN-BUILDER shall submit releases required from any LAWA jurisdiction having authority or utility owner over unrestricted use of the work including access to services, utilities, operating permits, occupancy permits, etc. as may apply.
- G. The DESIGN-BUILDER shall submit as-built drawings, BIM model and specifications for LAWA review. (See PR-21 "BIM and Virtual Reality Coordination").
- H. The DESIGN-BUILDER shall submit final "Approved" submittals and shop drawings of record documents.
- I. The DESIGN-BUILDER shall deliver tools, spare parts, extra stock and similar items as required by the contract documents to LAWA.
- J. The DESIGN-BUILDER shall deliver miscellaneous equipment, cabinets, panels, keys, etc. to LAWA.
- K. The DESIGN-BUILDER shall request changeover of any remaining insurance coverage to LAWA as required for continuing coverage of the work for the project.
- L. The DESIGN-BUILDER shall deliver inventory of all items purchased by LAWA under the project.
- M. The DESIGN-BUILDER shall provide additional cleaning associated with the performance of punch list work, warranty work, demobilization and any other activity performed by the DESIGN-BUILDER after final cleaning.
- N. DESIGN-BUILDER discontinues and/or relocates temporary facilities (except any construction offices as agreed upon by LAWA) and final construction trailer meter readings.
- O. The DESIGN-BUILDER shall replace burned-out bulbs and LED modules, and those noticeably dimmed by hours of use, and defective and noisy starters in lighting fixtures to

comply with requirements for new fixtures.

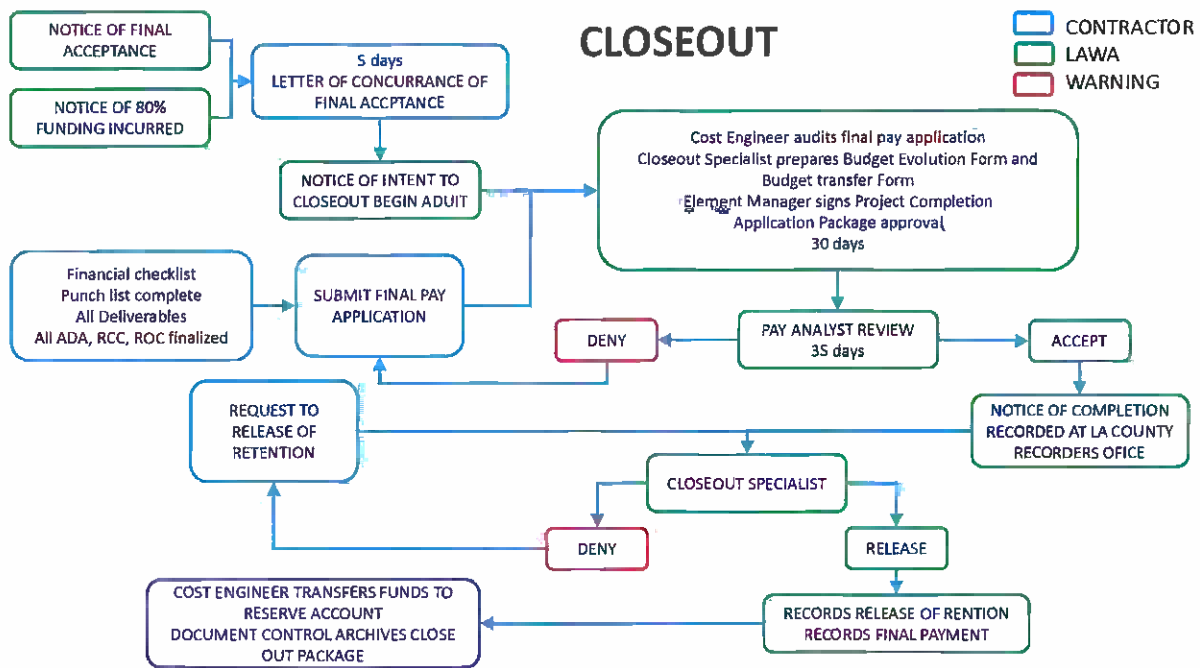

- P. The DESIGN-BUILDER shall replace parts subject to unusual operating conditions.
- Q. The DESIGN-BUILDER shall replace burned-out bulbs and LED modules, and those noticeably dimmed by hours of use, and defective and noisy starters in lighting fixtures to comply with requirements for new fixtures.
- R. The DESIGN-BUILDER shall replace parts subject to unusual operating conditions.
- S. The DESIGN-BUILDER shall comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on LAWA's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from project site and dispose of lawfully.
- T. The DESIGN-BUILDER shall confirm by snaking or piping camera that the new and existing underground sanitary and storm drain pipes are clean of construction debris under the building and on site until a connection of a significantly larger pipe.

7. FINAL ACCEPTANCE

- A. Upon notification from the DESIGN-BUILDER that final completion of component work or work for the entire project has been accomplished, LAWA shall complete a verification of each item contained on LAWA's punch list.
- B. Upon verification by LAWA of satisfactory completion of all outstanding punch list items, LAWA will issue a letter of final acceptance of component work or work for the entire project.
- C. LAWA will file the notice of final completion and acceptance of public works project with the County Recorder's Office when all work of the contract is complete.

8. RELEASE OF DESIGN-BUILDER RETENTION

- A. The DESIGN-BUILDER shall submit a final application for payment according to the contract's payment procedures.
- B. The DESIGN-BUILDER shall provide final release on contract.
- C. The DESIGN-BUILDER shall submit a certified copy of LAWA's substantial completion inspection list of items to be completed or corrected (punch list), endorsed and dated by LAWA. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
- D. The DESIGN-BUILDER shall submit evidence of final, continuing insurance coverage complying with insurance requirements.
- E. The DESIGN-BUILDER shall submit pest-control final inspection report and warranty.
- F. The DESIGN-BUILDER shall submit the application for retention release including consent of surety to release retention.
- G. The "CLOSEOUT" flow chart shown below applies to final acceptance of the entire project.

END PR-27 PROJECT CLOSEOUT

END OF DESIGN BUILD SPECIAL CONDITIONS TABLE OF CONTENTS

CONTRACT SPECIAL CONDITIONS

SC- 1 CHANGES TO THE GENERAL CONDITIONS

MODIFY GC-2, ORDER OF PRECEDENCE AND CONTRACT INTERPRETATION

Revise Section A to read as follows:

A. Conflicts in the application or interpretation of any parts of the Contract Documents that cannot be resolved shall be interpreted in accordance with the following order of precedence (the first listed being the highest precedence):

1. Applicable Laws and Regulations
2. Permits
3. Executed Contract Amendments (including attached and incorporated Exhibits, except for those Exhibits listed below) and Executed Change Orders (To the extent of any conflict between Executed Contract Amendments and Executed Change Orders, Executed Change Orders shall have precedence and be controlling)
4. Executed Contract Agreement and attached and incorporated Exhibits, except for those Exhibits listed below
5. Special Conditions
6. General Conditions
7. Project Requirements
8. Technical Specifications
9. Project Plans/Drawings (detailed plans having greater precedence)
10. ATMP Landside Improvements Project Final Request For Proposal (RFP) including Electronic Data Room Volume 2 documents, and Addenda.

For clarification, executed changes to the above-listed components of the Contract Documents do not result in a re-ordering of the order of precedence. This is the case even when the above-listed components are attached or incorporated by reference to an Executed Contract Amendment. For example, if the Parties amend the Special Conditions as a part of an Executed Contract Amendment, the Special Conditions do not move up in the order of precedence to third because they are a part of an Executed Contract Amendment, rather the Special Conditions would remain fifth in the order of precedence.

MODIFY GC-3, CONTRACTING DEFINITIONS

In Section C, Definitions, remove the following:

COMPONENT GUARANTEED MAXIMUM PRICE - Any component of a GMP issued during the development of the GMP in the Progressive Design-Build or CMAR contract. All final cGMP's will be incorporated into the final GMP. (YC's definition)

GUARANTEED MAXIMUM PRICE - A guaranteed maximum price (also known as not-to-exceed price or NTE) contract is a cost-type contract (also known as an open-book contract) where the Design-Builder is compensated for actual costs incurred plus a fixed fee subject to a ceiling price. (YC's definition)

MODIFY GC-3, CONTRACTING DEFINITIONS

In Section C, Definitions, add the following:

AMENDMENT: means a written agreement, signed by LAWA and DESIGN-BUILDER, which documents changes to the Contract Documents, which may or may not have cost implications. Amendments must be executed by both parties to be incorporated as a Contract Document.

AREA SHUTDOWN REQUEST (ASR) – Coordination of LAX terminal, landside, and airside vehicle, pedestrian, and tenant impacts with LAWA and LAWA tenants.

ATMP TASKS - Work identified in PR-01 Scope of Work.

CONTRACT PRICING – The total amount of compensation stated in the Contract that is payable to the Design-Builder per the Contract Documents for the complete performance of the Work in accordance with the Contract Documents, which is based on Design-Builder's Proposal, Design-Build GMP and/or cGMP(s) as adjusted for: (1) Change Orders; and/or (2) Contract Amendments.

LAWA IMPACT REQUEST (LIR) – Coordination of Maintenance of Traffic with LAWA and Authorities Having Jurisdiction.

MAINTENANCE OF TRAFFIC – means the comprehensive effort to maintain traffic.

REFERENCE DOCUMENTS - Documents provided with and so designated in the RFP, which are provided for disclosure purposes only and without any warranty as to their accuracy, completeness or fitness for any particular purpose.

SUBCONTRACTS BUYOUT FUND (SBF) – Has the meaning set forth in GC-9.P.

UTILITY SHUTDOWN REQUEST (USR) – Coordination of LAX and VNY terminal, landside, and airside utility shutdowns and impacts with LAWA, LAWA tenants, and respective impacted Utility companies and/or jurisdictions.

WEEKLY WORK PLANS – Detailed work plan, segmented weekly that includes Design, Submittals, Procurement of Materials/Equipment, Construction and Commissioning of a Project.

MODIFY GC-3, CONTRACTING DEFINITIONS

In Section C, Definitions, add the following to the definition of Work:

Work includes, but is not limited to, the Pre-Construction Phase Services, Design Services, the GMP proposal, the Construction Phase Services, and any Additional Services and other services required. The term "reasonably inferable" takes into consideration the understanding of the parties that all design details will be resolved to the satisfaction of LAWA and not every detail will be shown on the Drawings and included in the Specifications.

MODIFY GC-4, ABBREVIATIONS AND ACRONYMS

Add the following:

- AHJ Authority(ies) Having Jurisdiction
- APM Automated People Mover
- ASR Area Shutdown Request
- ATMP Airfield and Terminal Modernization Project

- ARCC Airport Response Coordination Center
- CALM Coordination and Logistics Management Program
- CALTRANS California Department of Transportation
- CD 11 Council District 11
- ConRAC Consolidated Rent-A-Car Facility
- CTA Central Terminal Area
- ITF Intermodal Transportation Facility
- LABSS Los Angeles Bureau of Street Services
- LABSL Los Angeles Bureau of Street Lighting
- LABOS Los Angeles Bureau of Sanitation
- LABOE Los Angeles Bureau of Engineering
- LAMP Landside Access Modernization Program
- LIR LAWA Impact Request
- MOT Maintenance of Traffic
- RUE Roadways, Utilities, and Enabling Projects
- SBF Subcontractor Buyout Fund
- SUSMP/LID BMP Standard Urban Stormwater Mitigation Plan/Low Impact Development Best Management Practices
- TBIT Tom Bradley International Terminal
- USR Utility Shutdown Request

MODIFY GC- 6, NO ALTERATION OF CONTRACT TERMS

Design-Builder has no authority to alter, modify, amend, or change the terms of this Contract or any agreement entered into with LAWA or any agreement for any work to be performed on or relating to this Project, except by an executed Change Order or Contract Amendment executed in compliance with the Contract and subject to the limits on Change Orders expressed in the Contract.

MODIFY GC-9, SUBCONTRACTS

In Section F, modify the following:

REMOVE; “To the extent the Design-Builder chooses to utilize mandatory inclusivity levels, the inclusivity levels for each CGMP must meet the inclusivity levels of participation given by LAWA to the Design-Builder for this Contract, unless otherwise specified by LAWA.”

And

REPLACE; with, “Design-Builder shall utilize the DBE levels of participation established by LAWA on each CGMP, unless otherwise specified by LAWA.”

MODIFY GC-10, DESIGN-BUILDER’S REPRESENTATIONS, SERVICES AND RESPONSIBILITIES

In Section A.10.a, modify the following:

REMOVE; "a. The Design-Builder shall employ a competent Superintendent satisfactory to LAWA who shall be in attendance at the Project site at all times during the performance of the Construction Work. The Superintendent shall represent the Design-Builder and communications given to, and received from, the Superintendent shall be binding on Design-Builder. Failure to maintain a Superintendent on the Project site at all times Work is in progress shall be considered a material breach of this Contract, entitling LAWA to terminate the Contract or, alternatively, issue a stop work order until the Superintendent is on the Project site. If, by virtue of issuance of said stop work order, Design-Builder fails to complete the Contract on time, Design-Builder will be assessed Liquidated Damages in accordance with the Contract."

And

REPLACE; with, "a. The Design-Builder shall employ a competent Superintendent satisfactory to LAWA who shall be in attendance at the Project site at all times during the performance of the Construction Work. The Superintendent shall represent the Design-Builder and communications given to, and received from, the Superintendent shall be binding on Design-Builder. Failure to maintain a Superintendent on the Project Site at all times Work is being performed at the Project Site, including but not limited to, construction, inspection, commissioning, and closeout Work or whenever it is necessary to take measures to protect the Work, persons, or property shall be considered a material breach of this Contract."

MODIFY GC-36, SUSPENSION OF WORK;

REMOVE; "D. If the Design-Builder intends to assert a claim for compensation or time extension under this Article, it must, and notwithstanding any time limitations specified elsewhere in the Contract Documents, within seven (7) days after receipt of notice to resume work, submit to LAWA a Contractor's Change Request setting forth the schedule impact and monetary impact of the suspension in sufficient detail to permit thorough analysis. Adjustment of work Completion Time, if appropriate, will be made pursuant to the provisions of the Contract Documents. Adjustment of the not to exceed contract amount, if any, will be within the Board's sole discretion and shall not in any event, exceed the cost of the extra work resulting from such suspension. Such cost, if any, shall be determined in accordance with the Contract Documents. Pursuant to California Civil Code section 1511, the Parties agree that any failure to submit a timely and properly documented Contractor Change Request shall constitute a waiver by Design-Builder of any claim for additional compensation, time or impact costs from LAWA.."

And

REPLACE with; "D. If the Design-Builder intends to assert a claim for compensation or time extension under this Article, it must, and notwithstanding any time limitations specified elsewhere in the Contract Documents, within fourteen (14) days after receipt of notice to resume work, submit to LAWA a Contractor's Change Request setting forth the schedule impact and monetary impact of the suspension in sufficient detail to permit thorough analysis. Adjustment of work Completion Time, if appropriate, will be made pursuant to the provisions of the Contract Documents. Adjustment of the not to exceed contract amount, if any, will be within the Board's sole discretion and shall not in any event, exceed the cost of the extra work resulting from such suspension. Such cost, if any, shall be determined in accordance with the Contract Documents. Pursuant to California Civil Code section 1511, the Parties agree that any failure to submit a timely and properly documented Contractor Change Request shall constitute a waiver by Design-Builder of any claim for additional compensation, time or impact costs from LAWA."

MODIFY GC-43, DELAYS

REMOVE; "B. An excusable delay is a delay to the critical path of the project and meets all of the following requirements:

1. It was beyond the control of Design-Builder;
2. It could not have been foreseen or avoided by Design-Builder;
3. It could not have been mitigated by Design-Builder;
4. It was not caused in whole or in part by Design-Builder, its subcontractors of any tier or agents;
5. Design-Builder has provided written notices to LAWA of the delay act or event within seven (7) days of its occurrence and thereafter satisfies all requirements in the Contract Documents for making a request for extension to the Project Schedules and Contract milestones."

And

REPLACE with; "B. An excusable delay is a delay to the critical path of the project and meets all of the following requirements:

1. It was not a delay whose risk Design-Builder has expressly assumed;
2. It was beyond the control of Design-Builder;
3. It could not have been avoided by Design-Builder;
4. It could not have been mitigated by Design-Builder;
5. It was not caused in whole or in part by Design-Builder, its subcontractors of any tier or their agents;
6. Design-Builder has provided written notices to LAWA of the delay act or event within fourteen (14) days of its occurrence and thereafter satisfies all requirements in the Contract Documents for making a request for extension to the Project Schedules and Contract milestones."

MODIFY GC-46, LIQUIDATED DAMAGES

Add the following:

Failure of the Design-Builder to complete the Work within the time allowed will result in damages being sustained by LAWA. For each consecutive day in excess of the time specified for the completion of the Milestones of Work provided in the chart below, as adjusted in accordance with the General Conditions, Extensions of Time, the Design-Builder shall pay to LAWA, or have withheld from monies due to Design-Builder. The amount of Liquidated Damages shall be as per the table of Liquidated Damages below.

LAWA expressly denies that any progress payment made after the scheduled deliverable date or duration constitutes a waiver of Liquidated Damages. All Liquidated Damages shall be charged at the value indicated for the amount of time or any part thereof that the Work is late.

Airfield and Terminal Modernization Project (ATMP) Roadway Improvements		
Milestone	Description	Liquidated Damages Amount

Schedule Deliverable 1 60 Calendar Days After Phase 1 NTP and each Phase 2 CGMP NTP	Failure to submit Contract Compliant Phase 1 or Phase 2 Baseline Schedule to LAWA	\$5,000/day
Schedule Deliverable 1a	Failure to Resubmit Contract Compliant Phase 1 or Phase 2 Baseline Schedule to LAWA within 15 Calendar days after LAWA review and comment	\$5,000/day
Schedule Deliverable 2 1st of each month	Failure to submit Contract Compliant Monthly Schedule Updates to LAWA	\$5,000/day
CGMP1 – Planned NTP July 15, 2025		
Milestone	Description	Liquidated Damages Amount
Schedule Deliverable 3. 199 Calendar Days After NTP on First Amendment to Contract DA-5609	Complete Duct Bank for OH to UG Comms at Vicksburg Interface with Segments A and D	\$10,000/day
Schedule Deliverable 4. 287 Calendar Days After NTP on First Amendment to Contract DA-5609	Eastbound Century Widening Open to Traffic	\$25,000/day
Schedule Deliverable 5. 347 Calendar Days After NTP on First Amendment to Contract DA-5609	Segment J Open to Traffic in Temporary Configuration	\$25,000/day
Schedule Deliverable 6. 235 Calendar Days After NTP on First Amendment to Contract DA-5609	Complete AT&T Duck Bank Installation Along Sepulveda	\$10,000/day

Schedule Deliverable 7. 381 Calendar Days After NTP on First Amendment to Contract DA-5609	Shift WB Century to Arrivals onto Temporary X-Over	\$ 10,000/day
Schedule Deliverable 8. 779 Calendar Days After NTP on First Amendment to Contract DA-5609	Segment A - 2 Lanes and Segment C Open to Traffic in Temporary Configuration	\$0/day (First 30 Days), \$75,000/day (31-60 Days), \$150,000/day (Over 60 Days)
Schedule Deliverable 9. 932 Calendar Days After NTP on First Amendment to Contract DA-5609	Pre-Olympic Operational Areas/Segments Segment A – 3 Lanes, Segment I, Pedestrian Bridge at Sepulveda Blvd. (No- Elevators), 96 Street and Pedestrian Bridge at 96 Street	\$0/day (First 30 Days), \$75,000/day (31-60 Days), \$150,000/day (Over 60 Days)
Schedule Deliverable 10. 992 Calendar Days After NTP on First Amendment to Contract DA-5609	Pre-Olympic Operational Areas Pedestrian Bridge at Sepulveda Blvd. (With Elevators)	\$25,000/day

All Liquidated Damages are independent and will not be assessed in the cumulative, except for milestone Liquidated Damages 1, 1a, 3, 6, and 10, which can be cumulative to other Liquidated Damages withholdings.

LAWA and Design-Builder agree that the Design-Builder's ability to complete the Milestones specified in this Section relies, in part, on the following schedule assumptions: (a) Design-Builder securing separate approvals from LAWA and other AHJs for temporary traffic lane closures; (b) Design-Builder being granted partial relief from the construction moratorium requirements provided in Section SC-8(C)(3), and (c) completion of utility work by utility companies by certain time frames to be agreed upon by LAWA and Design-Builder. The Design-Builder agrees to work collaboratively with LAWA and AHJs to secure the required approvals and with LAWA and utility companies to complete utility work, which Design-Builder's efforts may include, but not be limited to, making adjustments to its construction approach, construction schedule, maintenance of traffic design and implementation, and other measures to timely complete the Milestones in this Section. The Design-Builder shall make every reasonable effort to achieve the Milestones specified in this Section in a timely manner. In the event that one or more of the schedule assumptions (a) – (c) are not met and cannot be mitigated through alternative schedule modifications, LAWA will grant schedule relief. The Design-Builder must demonstrate any schedule impacts through methods such as a Time Impact Analysis, subject to LAWA's review and approval. Design-Builder has a contractual duty to work with LAWA to take reasonable remedial action, in the most economical manner, to mitigate any and all other delays to the Milestones, so as to timely achieve the Milestones.

For Unauthorized Lane Closures the following shall apply:

Unauthorized Lane Closures Liquidated Damages	
	Liquidated Damages Amount by Closure Duration

Description of Closure by Location	First 1/2 hour	Second 1/2 hour	Second hour and beyond
	per 10 minutes	per 10 minutes	per 10 minutes
Century Blvd Each Direction			
One Lane	\$500.00	\$1,000.00	\$2,000.00
Two Lanes	\$1,000.00	\$1,500.00	\$3,000.00
Full Closure	\$3,000.00	\$4,000.00	\$6,000.00
Sepulveda Blvd Each Direction			
One Lane	\$500.00	\$1,000.00	\$2,000.00
Two Lanes	\$1,000.00	\$1,500.00	\$3,000.00
Full Closure	\$3,000.00	\$4,000.00	\$6,000.00
Other Streets Each Direction			
One Lane	\$100.00	\$250.00	\$500.00
Two Lanes	\$200.00	\$500.00	\$1,000.00
Full Closure	\$400.00	\$1,000.00	\$2,000.00
<p>For each 10-minute interval or fraction thereof past the time specified in the approved LIR/ASR, the amount for Liquidated Damages per interval shown in the table above is deducted. Liquidated Damages are limited to 5 percent of the total bid per occurrence. Liquidated Damages are not assessed if the Engineer orders the closure to remain in place beyond the scheduled pickup time.</p>			

MODIFY GC-52, PAYMENT PROCEDURES

Replace Section I with the following:

I. Allowances

The Design/Builder will be paid for Allowance items on either a cost reimbursable, lump sum, or unit price basis. The Design/Builder's costs for the GMP shall include all overhead, bonds, and insurance and shall be paid out as the work is completed. The Design/Builder shall include all supervision and coordination of subcontractors' work in the pricing of allowance work, however no additional compensation for overhead, bonds, or insurance will be allowed in the pricing of Allowances. Work designated to be paid for out of an Allowance shall not be considered a change for the purposes of granting Work Completion Time extensions unless such allowance work delays the Critical Path of the Project beyond the ability of the Design/Builder to take reasonable remedial action to mitigate any such delay(s) to the Critical Path of the Project. Any and all unused portions of the stipulated Allowances amounts and associated mark-ups for overhead, bonds, and insurance will not be paid to the Design/Builder and shall be deducted from the GMP value at the completion of the Project via a deductive GMP

revision/change order. The Design/Builder shall not be entitled to any form of compensation whatsoever for unauthorized and/or unused Allowances.

Replace Section J. 2 with the following:

All contingency fund charges must have LAWA's advance written approval before being transferred to a line item in the Schedule of Values. All remaining funds in the Design-Builder's Contingency upon project completion shall remain with LAWA, including any associated fees and/or mark-ups for bonds, insurance, overhead, profit, etc. The Design-Builder shall not be entitled to any form of compensations whatsoever for unauthorized and/or unused contingency. In the event of the Design-Builder contingency fund is exhausted, at which point costs that exceed the (C)GMP/GMP that do not constitute a change order, Design-Builder will be responsible for the exceeded cost.

MODIFY GC-73, INSURANCE

In Section D,

REMOVE; "D. Subcontractors. Design-Builder shall include all of its subcontractors as insured's under its policies or shall furnish separate certificates and endorsements for each subcontractor (excluding professional services). All coverage's for subcontractors shall be subject to all of the requirements stated herein unless otherwise agreed to in writing by Executive Director and approved as to form by the Office of the City Attorney.

REPLACE; with, D. Subcontractors. Design-Builder shall include all of its subcontractors as insureds under its policies or shall furnish separate certificates and endorsements for each subcontractor (excluding professional services, automobile liability, and those subcontractors traditionally excluded by Contractor Controlled Insurance Program (CCIP)). All applicable coverages for subcontractors shall be subject to all of the requirements stated herein unless otherwise agreed to in writing by Executive Director and approved as to form by the Office of the City Attorney.

MODIFY GC-73, INSURANCE

Add Section O,

Design-Builder will provide Contractor Controlled Insurance Program ("CCIP") for Phase 2 Construction to include General Liability, Workers Compensation, and Excess Liability.

SC- 2 THE TWO-PHASE DESIGN-BUILD CONTRACT

The Design-Builder will perform design/pre-construction and construction services for this Project under Two-Phase Design-Build delivery method. The Two Phases consist of:

- A. Phase 1 – The Design/Pre-Construction Phase: Which will commence shortly after the award by the BOAC upon issuance of a Phase 1 – Notice To Proceed (NTP) by LAWA, and
- B. Phase 2 – Work to be Performed after GMP/CGMP: The issuance Notices To Proceed for Phase 2 is constrained by the requirement to establish a Guaranteed Maximum Price (GMP) or one or more Component Guaranteed Maximum Prices (CGMPs) for the Project by the specified Milestone dates or durations or unless otherwise directed by LAWA. Phase 2 will commence only upon the issuance of a Phase 2 – NTP by LAWA.

LAWA reserves the right not to award any portion of the Phase 2 Work to the Design-Builder and pursue other procurement alternatives. If LAWA pursues such a course of action and terminates the Contract, the Design-Builder shall execute an assignment to LAWA of all Design-Builder's contracts with Design Professionals for any remaining Design Work to be performed on Phases 1 and 2.

Under no circumstances will the authorization of Early Work Packages by LAWA constitute a waiver of its right to not award a Phase 2 GMP/CGMP portion of the Work to the Design-Builder.

Notwithstanding, should LAWA and the Design-Builder not successfully establish a Phase 2 GMP or CGMP(s), then the contracted General Conditions and Project Requirements as they relate to Substantial Completion, Final Completion, Project Closeout, Commissioning and Operational Readiness shall apply to completion and close out of any Early Work Package Work. Costs associated to demobilization and closeout will be resolved and settled as described in the Contract Agreement.

SC- 3 PERCENTAGE OF WORK PERFORMED BY THE CONTRACTOR

- A. The Design-Builder shall perform Contract Work amounting to a minimum of thirty percent (30%) of the Total Contract Value. General Conditions, Field Services, bond, supervision, profit, and similar items will not be included in calculating the Design-Builder's percentage of work performed. Construction Work Packages not self-performed by the Design-Builder shall be procured based upon competitive bids as required by the Contract's General Conditions on Subcontracts. The Design-Builder is responsible for meeting or exceeding the Inclusivity requirements detailed in the RFP and the contract documents.
- B. The Design-Builder may negotiate the cost of self-perform packages with LAWA directly, or may choose to be a bidder on any Work Packages in competition with the potential subcontractors who are bidding. In order to ensure fairness in such competition, LAWA will administer that procurement for the Design-Builder. Any competition the Design-Builder wins will count against the overall self-perform percentage.
- C. The subcontracting of any portion of the Work shall not relieve the Design-Builder of its responsibilities under the Contract. Where it is necessary for the Design-Builder to self-perform Work due to a failure of the subcontractor to perform its work, Design-Builder must perform the work remaining for the value remaining in that subcontract. Said work will not be counted in calculating the Design-Builder's percentage of work performed, provided that LAWA has agreed to the necessity of the Work take-over.

SC- 4 VALID CALIFORNIA CONTRACTORS LICENSES

- A. The Contractor shall possess valid California Class A Contractors License in good standing with the California State Contractors Licensing Board at the time of the Bid and shall remain valid through Final Acceptance of the Work by LAWA.
- B. Each subcontractor selected for the Work shall possess valid California Licenses in good standing with the California State Contractors Licensing Board, appropriate for the portion of the Work that will be accomplished by each subcontractor.
- C. Contractors are required by law (Business and Professions Code §7030 and §7030.5) to be licensed and regulated by DESIGN-BUILDER's State License Board which has jurisdiction to

investigate complaints against contractors if a complaint regarding a patent act or omission is filed within four years of the date of the alleged violation. A complaint regarding a latent act or omission pertaining to structural defects must be filed within 10 years of the date of the alleged violation. Any questions concerning a contractor may be referred to the Registrar, Contractors' State License Board, P.O. Box 26000, Sacramento, CA 95826.

SC- 5 PROJECT LABOR AGREEMENT

All work under this contract is subject to the Los Angeles Department of Airports Construction Project Labor Agreement (PLA), as may be amended from time to time. The current version of the PLA is made up of Attachment 1 Letter of Understanding dated January 16, 2025 as well as the documents located at LAWA Official Site | Project Labor Agreement. The Contractor shall comply with the terms of the PLA, however, the PLA shall not be construed as superseding California Labor Code Requirements nor any applicable Federal, State and Local laws. The Contractor shall comply with the terms of the PLA, however, the PLA shall not be construed as superseding California Labor Code Requirements nor any applicable Federal, State and Local laws.

SC-6 FEDERAL REQUIREMENTS

This Contract is eligible for Federal funds and the Contract's Federal Requirements are attached hereto and made part of the Contract Documents by this reference.

SC-7 RISK MANAGEMENT

Risk Management Plan (RMP) shall be developed as a separate section of the Project Management Plan. RMP, together with referenced exhibits and attachments, shall fully and systematically define the processes by which risks are identified, allocated, and analyzed; and the mitigation strategies developed and tracked. The RMP shall identify the persons responsible for managing various areas of risk, defines the risk management process, and describes the tools used to track the identified risks systematically. The Risk Management methodology shall be developed based on ISO 31000:2018.

The component objectives of the RMP shall include the following:

- A. Implement a) a clear and efficient risk management process that facilitates the unbiased identification of possible risks early in the Project, b) strategies to eliminate, avoid, or mitigate those risks, and c) proactive tracking protocols to capture risk actions through to ultimate retirement.
- B. Develop a comprehensive risk register to a) capture potential risk events, b) apportion probabilities of occurrence and likely range of impact in terms of both time and money, c) assign staff responsible for each risk, and d) maintain updates to provide measurement of the performance of the risk strategies implemented to address/mitigate the risks.
- C. Provide a reasonable probabilistic Project cost estimate and schedule that incorporates the impacts of major risks items identified on each Project, and updated appropriately as risk windows transpire and are retired.
- D. Provide a guide to Project stakeholders and team members in making informed decisions regarding effective actions to minimize risk impacts to the Project.

To facilitate the monitoring and updating of the possible Project risks, the Project's risk register shall be routinely reviewed and updated through the duration of the contract. Risk reporting shall be performed at the same frequency, and in similar detail to the reporting of other Project

data necessary for the effective management of the Project. Reporting can focus on the strategy for mitigation of the risk item, the resolution — if applicable, the date of resolution, the due date to resolve or mitigate the risk, the primary and secondary contact, and the responsible party are also all identified by each risk item.

SC-8 CONSTRUCTION MORATORIUMS

A. Background. LAX is one of the busiest airports in the world and is presently developing numerous projects that are intended to enhance its airport facilities and operations for the 2026 FIFA World Cup ("World Cup") and 2028 Summer Olympics and Paralympics ("Summer Olympics") in Los Angeles. As such, the operating environment at LAX includes many factors that affect construction of Projects, including without limitation, nearly continuous air and vehicle traffic from departures and arrivals, related vehicular congestion, new and ongoing construction projects, ongoing maintenance and repair, and security commensurate with the foregoing, among other things. Design-Builder is presumed to know these and all other potential impacts from airport operations on the construction of the Project.

B. Construction Moratoriums. In addition, all Contractors, Design-Builders, Subcontractors, and others under contract with LAWA to construct projects, regardless of the form of contract, shall schedule, comply with, and enforce all moratorium for the cessation of construction Work ("Construction Moratorium"). Except as more specifically provided for the 2028 Summer Olympics Moratorium Dates, the Construction Moratorium prohibits on-site Work of construction that either requires or may cause (a) temporary lane closures or queuing on streets (day or night); (b) utility interruptions; or (c) construction water on streets, directly or through Subcontractors. The Construction Moratorium does not preclude design, procurement, scheduling, or other non-construction activities.

C. Moratorium Dates. The currently known Construction Moratorium periods are the (1) LAWA Holiday Construction Moratoriums, (2) City of Los Angeles (COLA) Holiday Street Construction Moratorium, (3) World Cup Moratorium, and (4) Summer Olympics Moratorium. LAWA will make publicly available the Construction Moratorium dates and provide notice to Design-Builder annually of any changes to the Construction Moratorium dates. While LAWA will provide notice, it is Design-Builder's duty and responsibility to inquire about Construction Moratorium dates, and Design-Builder shall bear the risk of increased costs and delay if it fails to do so.

1. LAWA Holiday Construction Moratoriums

- Thursday before Thanksgiving through the Tuesday after Thanksgiving
- December 18th through January 2nd

2. City of Los Angeles (COLA) Holiday Street Construction Moratoriums

- Tuesday before Thanksgiving through the Monday after Thanksgiving
- All Weekends (Friday through Sunday) in December.
- December 15th through December 26th

3. 2026 World Cup Moratorium

LAWA shall provide the specific Moratorium Dates pursuant to Subsection F below. Design-Builder shall anticipate that the Moratorium dates will begin two weeks prior to the first scheduled World Cup game in Los Angeles and extend one week after the last World Cup Game in Los

Angeles. The Moratorium may begin earlier and end later than above due to preparation, arrivals and departures.

4. 2028 Summer Olympics Moratorium Dates

LAWA shall provide the specific Moratorium Dates pursuant to Subsection F below and Design Builder shall avoid any construction activities that may impact Olympic routes or services for the period of the Olympic Games and Paralympic Games. Design-Builder shall anticipate that the Moratorium dates for the 2028 Olympic and Paralympic Games will begin on July 1, 2028 and extend to September 3, 2028 (one week after the Closing Ceremony of the Paralympic Games). The Moratorium may begin earlier and end later than above due to preparation, arrivals and departures.

D. No LAWA Liability. All Contractors, Design-Builders, Subcontractors, and others under contract with LAWA to design and/or construct projects, shall plan, schedule, comply with, and enforce the Construction Moratorium and, specifically, shall schedule their Work, Subcontractors, and labor in accordance with the Construction Moratorium. Given the advance notice provided herein and except as provided below, Design-Builder shall have no basis for a claim of superior knowledge, owner impacts, or otherwise for delays, disruptions, or damages for impacts arising from, or related to, the Construction Moratoriums, and delays resulting from and related to the Construction Moratorium shall be considered non-excusable. LAWA shall not be liable for increased costs, delays, disruptions, loss of efficiency, loss of productivity, hindrances, individual impacts, cumulative impacts, ripple effects, or any other form of damages of any nature should Contractors, Design-Builders, Subcontractors, or others under contract with LAWA fail or omit to plan, schedule, comply with, and enforce the Construction Moratorium for the cessation of construction Work. LAWA also shall be entitled to recover all costs it may incur to enforce the Construction Moratorium for the cessation of construction Work which, if violated, also shall be grounds for termination for default.

E. Updates. The respective World Cup and Summer Olympics Construction Moratorium duration dates may be reduced, expanded, or otherwise changed in order to accommodate preparation, arrival travel and wrap-up and departure travel demands. In the event of a change, the World Cup and Summer Olympics Construction Moratoriums will be updated with no less than ninety (90) day written notice without any change to the provisions of this Special Condition.

F. Deviations. Any request for a deviation from any of the Construction Moratoriums shall be made in writing and made to LAWA at least sixty (60) days prior to the start date of any of the moratoriums. Design-Builder shall in its request provide a detailed explanation of the reason that Work cannot be performed before or after the Construction Moratorium at issue, the Worksites Design-Builder plans to use, and a plan that demonstrates how the Design-Builder would reduce and mitigate construction impacts during the Construction Moratorium. LAWA may request additional information to consider the deviation, which Design-Builder shall timely supply. LAWA may grant or deny a deviation from the Construction Moratorium in writing, in its sole and absolute discretion. LAWA may condition any requested deviation that it grants on limitations as to the specific Work that may be performed, the locations at which it is performed, the conditions under which it is performed, and the dates and times that it may be carried out.

G. Applicability. If this Special Condition is added as a change to the Contract, the Design-Builder shall request a change and include all the information required by the Contract Documents to establish its entitlement to extra compensation and/or additional time for performance of the Work, including Work by Subcontractors. If Design-Builder fails to request a change in the time and manner required by the Contract, the Design-Builder shall be deemed to have waived any

right to extra compensation, additional time, or other relief, and to have failed to exhaust its administrative remedies under the Contract.

Attachment 1

LOS ANGELES INTERNATIONAL AIRPORT
CONSTRUCTION PROJECT LABOR AGREEMENT
LETTER OF UNDERSTANDING

To All Contractors and Signatory Unions:

Regarding the Expansion of Zip Codes that Define Local Residents:

In order to expand inclusivity and the geographic recruitment reach for the HireLAX Apprenticeship Program, and to ensure the economic benefits of the Project Labor Agreement continue to increase the number of skilled local construction workers and have a positive impact on the economically disadvantaged communities in proximity to LAX, the Parties understanding of the definition of Local Resident is the following:

The definition of Local Resident in Article III, Section 6, which was amended as part of the ten-year extension of the Project Labor Agreement in 2020, is expanded to include zip codes 90220, 90221, 90222, 90745, 90746, 90747, 90249, 90260. As a result, the Craft Employee Request Form (revised PLA Addendum 8) has been updated with these zip codes. This new definition of Local Resident and the updated Craft Employee Request Form is effective for PLA-covered projects with a bid advertisement date or request for proposals posting date of July 30, 2024, or after.

Updated List of Grievance Arbitrators:

In order to have a viable list of arbitrators under the PLA's Article VII grievance procedure, the Parties will use the following arbitrator list: Thomas Pagan, Najeeb Khoury, Andrea Dooley, Edna Francis, David Weinberg, Fred Horowitz, and Sara Adler. The list of arbitrators will be used for all PLA-covered projects and supersedes any prior Article VII arbitrator lists.

EXHIBIT I:

cGMP Work Package 1

March 25, 2025

Los Angeles World Airports
7303 World Way West
2nd Floor
Los Angeles, CA 90045

Attn: Jean Yuan, PE
Airport Engineer

Subject: cGMP 1 Proposal
Tab 1

Dear Ms. Yuan:

Pursuant to approximately twenty-one (21) months of project development, Skanska-Flatiron A Joint Venture (SFJV) is pleased to submit the ATMP Roadway Improvements Project's first Component Guaranteed Maximum Price (cGMP) proposal. SFJV's cGMP1 proposal represents the culmination of the collaborative goals our teams established in June 2024 for an early works scope based on concept development, engineering, scheduling, procurement and packaging, and inclusivity.

We look forward to the opportunity to review the cGMP1 cost proposal, scope of work, schedule, and inclusivity plan with LAWA, and the continued successful development of the project.

If you require any additional information, please contact the undersigned at (951)295-9650 or via email to mike.spain@skanska.com.

Respectfully,
Skanska-Flatiron, A Joint Venture

Mike Spain
Vice-President of Operations
Project Manager
(951)295-9650

1.0 NARRATIVE AND SCOPE COMPONENTS

The cGMP1 proposal consists of scope components to facilitate bridge construction, as well as bridge substructure components. The following components generally comprise the cGMP1 scope:

- Demolition/Removals of existing features required to construct the work in AC-01 and AC-02, including existing pylons, LAX gateway letters, and 9/11 Memorial.
- Demolition/removal of existing buildings at the LACC and Wally Park properties
- Reinforced Concrete Box Culvert Line A including headwalls and junction structures.
- Various temporary and permanent storm drain piping, manholes, transition structures, and catch basins/inlets.
- Temporary and permanent asphalt pavement and associated grading, including striping and signing.
- Modification of signage and/or traffic signals at the following intersections:
 - Sepulveda Blvd. and Century Blvd.
 - Century Blvd. and Vicksburg Ave.
 - Century Blvd. and Jetway Blvd.
- Temporary ATSAC cable relocation at 96th St at:
 - Sepulveda Blvd. and 96th St.
 - Century Blvd. between Sepulveda Blvd. and Vicksburg Ave.
- Maintenance of Traffic including work zone establishment and temporary roadway lighting
- Utility relocations and removals including:
 - Removal of existing LADOT conduit and cabling
 - Removal of existing LADWP-Electrical conduits
 - Installation of new underground ductbank systems for AT&T, Spectrum, Crown Castle
 - Removal of existing LAWA electrical facilities
 - LADWP-Water relocations and removals
 - LAWA waterline relocations to facilitate new Line A box culvert

- Retaining Walls:

- Reinforcing steel for large diameter CIDH piles, bridge abutments including small diameter CIDH piles, and columns.
- Potholing of large diameter CIDH piles

Refer to the drawing table in Section 3 for utility relocations being performed by 3rd parties.

2.0 PERFORMANCE REQUIREMENTS

As indicated in Contract DA-5609 dated April 26, 2023 and as modified by:

- Tab 6 Clarifications & Assumptions dated March 25, 2025.
- cGMP1 General Requirements Basis Of Negotiations Rev. 3 dated March 25, 2025.

3.0 DRAWINGS

The following drawings are included in cGMP1 proposal. AHJ standard drawings included in drawing packages are not listed:

Taxi Hold Lot – tract map recording or other property line resolution by July 1 2025

Right-of-Way Acquisition

Parcel	Date
1 – Hyatt	13FEB26
4 – LACC	12NOV25
5 – LR Valet (Wally Park)	12NOV25
6-1 – MM and MN (Sunrise)	12NOV25
6-2 – MM and MN (Sunrise)	12NOV25
6-3 – MM and MMN (Sunrise)	12NOV25
9 – Hilton	12NOV25

Other Owner Activities

Activity	Completion
ATSAC Hub Relo. Project Complete	30APR26
Caltrans Project Report Approval	21OCT25
Caltrans Co-Op Agreement for Construction	11AUG25
Billboard Removals by LAWA/Others	11NOV25
Honeywell monitoring well abandonments	11JAN26
5G Antenna Relocations	30DEC25
SoCal Gas Main Relocation in Sepulveda	5JUL25
DWP OH to UG on Vicksburg	14APR25
DWP OH to UG West of Sepulveda	30SEP25
Shell Oil Relocations	03NOV25

Construction Area Turnover

Area	Turned Over to SFJV
Park One Lot	27OCT25
Lot along Jetway Blvd	18AUG25
Taxi Holding Lot Relocated	13NOV25
Terminal 9 Area South of Century	18AUG25
Close Park One Exit to Sepulveda and & 96 th St West of Sepulveda	22APR26

Project Substantial Completion	18-Sep-30	18-Sep-30	20-May-30
Project Final Completion	7-Dec-30	7-Dec-30	8-Aug-30

In schedule (B), SFJV modified the FIFA Moratorium calendar non-working days.

- Review of the FIFA Schedule of Games indicates the first game to be played in Los Angeles to be on 12JUN26 with the last game scheduled for 10JUL26. Per Update 20, the FIFA Moratorium ran from 30MAY26 thru 19JUL26. Schedule (B) adjusted the moratorium period limiting it to 06JUN26 thru 12JUL26 based upon the published game schedule for Los Angeles

In schedule (C), SFJV changed the calendar assignment on the activities previously constrained by calendar to commence after the expiration of the Olympic moratorium.

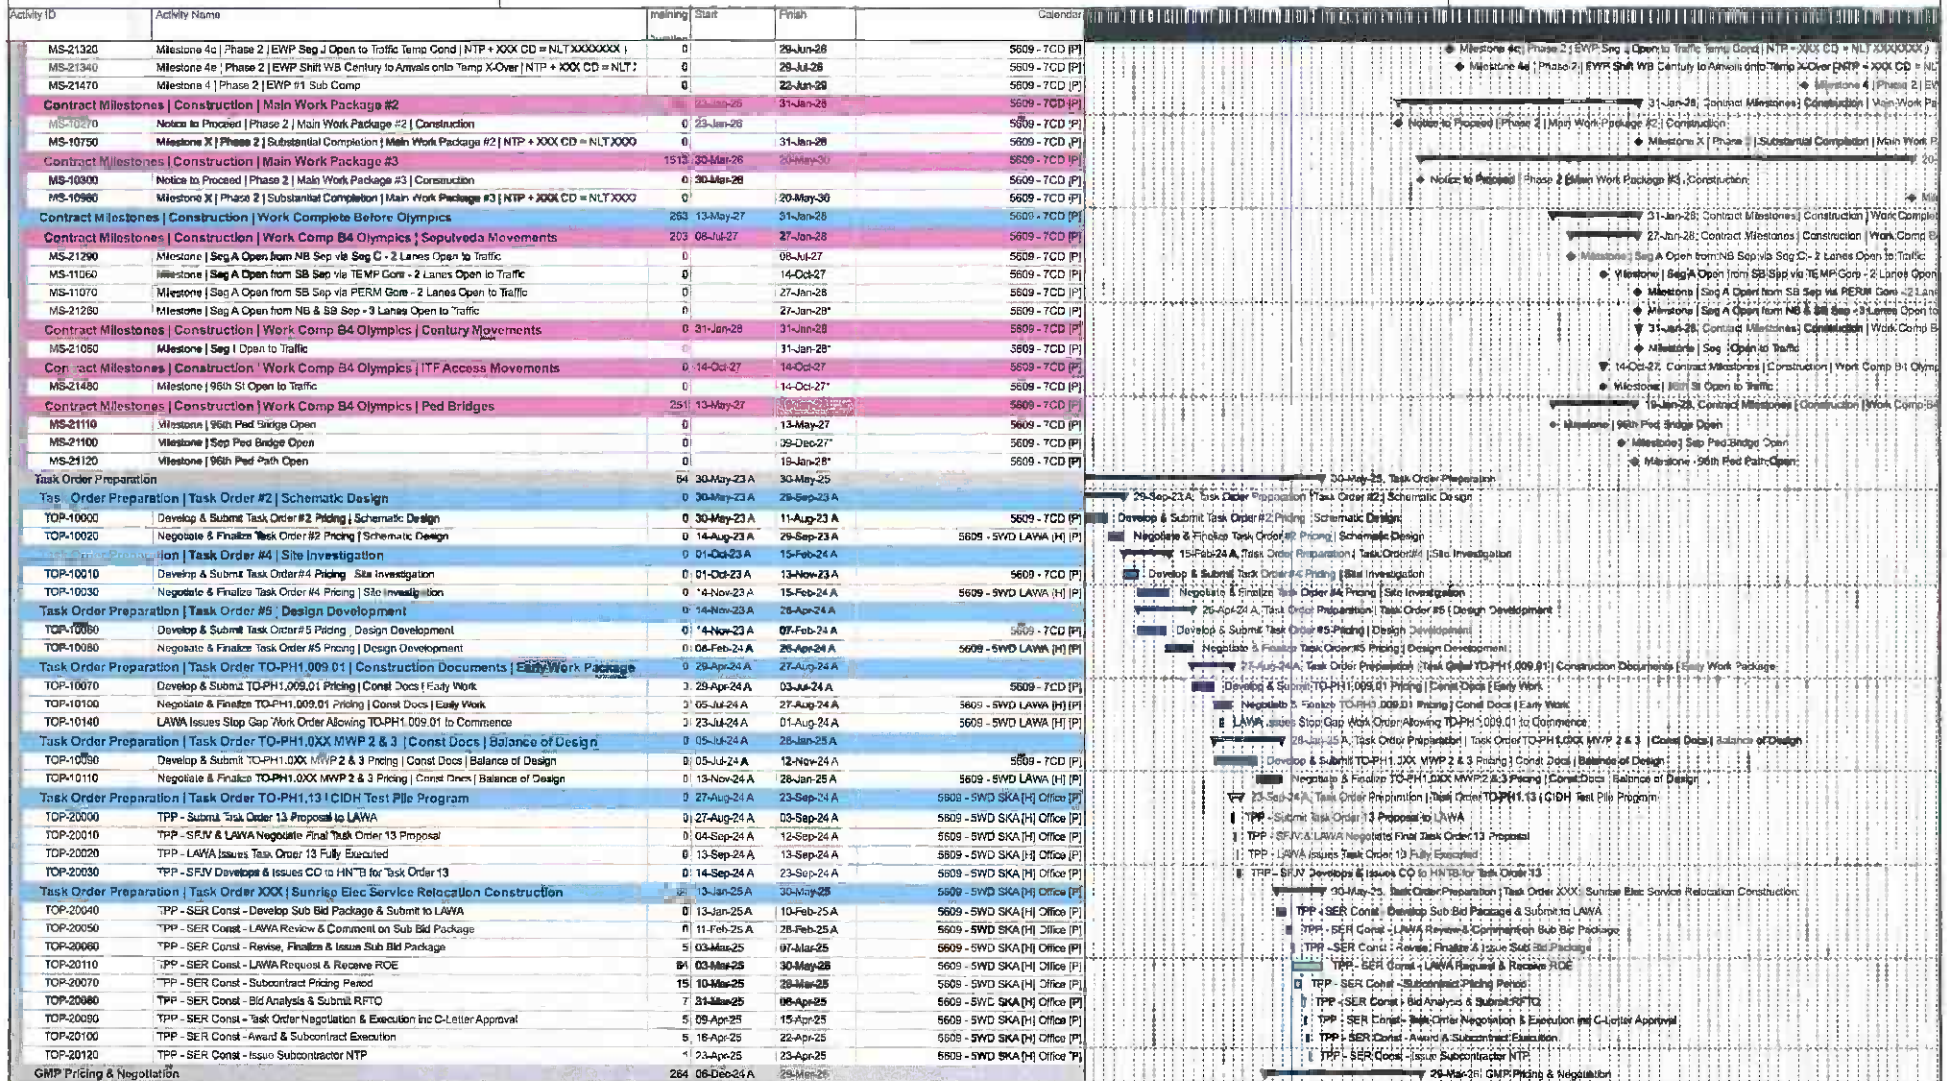

This modification allows the longest path of the Project to progress thru the moratorium and thereby bring back the Final Completion Date.

June 2026							July 2026

ATMP ROADWAYS IMPROVEMENTS PROJECT cGMP1

Tab 6 Clarifications & Assumptions

March 25, 2025

Prepared by:
Skanska-Flatiron A Joint Venture

SKANSKA | FLATIRON

1.0 PROPOSED DEVIATIONS FROM THE CONTRACT

The following deviations from the prime contract are proposed:

None.

2.0 PROPOSED DEVIATIONS FROM THE DCH

No deviations from LAWA's Design & Construction Handbook are proposed by cGMP1.

3.0 LIST OF SPECIFIC EXCLUSIONS

1. Rock excavation; none anticipated.
2. Costs for any work associated with the below, except 3rd Party Coordination:
 - SoCal Gas relocations
 - Shell Oil relocations
 - 3rd party communication company OH or UG cabling, and pole installation or removal (AT&T, Spectrum, Crown Castle)
 - Relocation of any 5G antennae (by Bureau of Street Lighting)
 - OH or UG cabling/conductor and pole installation and removals (DWP)
3. Painting of any kind except for galvanized metal repair and as required by specifications.
4. Anti-graffiti coating has not been included for exposed faces of retaining walls and abutments. Coatings are deferred to future cGMPs and not considered painting.
5. Crushing or recycling of demolished products (future cGMPs).
6. Removal or improvement of any uncertified fills for the Ramp J embankment.; approximated cost is contemplated in Design-Build Contingency
7. Testing for ADL. May be part of Allowances at LAWA direction.
8. COZEOP officers. COZEOP officers are recommended for worker safety and discussions should be had with Caltrans on the implementation of COZEOP officers during lane restrictions.
9. Restorations of Lots C, E, or any area used as LAWA provide laydown/staging area. To be included in future cGMPs.
10. Exhibit 6.1 provides the escalation structure used to develop cGMP1. Exhibit 6.1 does not contemplate the recently proposed international tariffs; therefore they are not included in the escalation calculation. SFJV excludes tariffs and price impacts associated with tariffs.

4.0 OTHER CLARIFICATIONS & ASSUMPTIONS

4.1 General

1. LAWA agrees not to add, in whole or in part, any scopes of work contemplated for cGMP1, future cGMPs or GMPs, using a unilateral change order process as identified in General Conditions Section GC-60.
2. SFJV has not included any items from the LAWA risk register in Design-Build Contingency.
3. LAWA allowances are included in cGMP1 price. Allowance compensation to be defined as below:
 - All Allowances items, except Partnering and Permits, will be paid with the SFJV Mark-Up of 4.60% and Gross Receipts Tax.
 - The cost of Bonds and Insurance are included in the Direct Cost Lump Sum.
4. Resident Engineer and Construction Support Staff required by Caltrans Cooperative Agreements for Caltrans Encroachment Permit work will be provided by LAWA.
5. Assumptions regarding available work hours where lane closures will be required are provided in Exhibit 6.2.
6. Caltrans will accept the use of Standard Specifications 2023 Edition in lieu of the 2024 Edition.
7. SFJV will not be defined as the generator of any contaminated/hazardous waste materials, unless SFJV generates said waste.

4.2 Schedule

1. Notice To Proceed is assumed to be 7/15/2025. If the date of NTP is earlier than 7/15/2025, LAWA and SFJV to determine if the duration of General Conditions and General Requirements costs is to be increased from sixteen (16) months, or the end period of 12/31/2026 revised.
2. LAWA's provided dates for delivery of Right-of-Way/Right-of-Entry for private and LAWA-operated or LAWA-leased parcels are included as constraints and inform the current construction sequence.
3. cGMP1 is based on the "what-if scenario C" version of monthly schedule Update 20. The schedule articulates activities that can be performed during moratoria.

4. Schedule assumes wall formwork can be completely removed 24 hours after concrete placement and assumes such approach is not in violation of the specifications.
5. Weather day clarifications:
 - o Project schedule does not include weather days.
 - o Throughout the project lifecycle SFJV will be granted non-compensable weather days that will be incorporated into monthly schedule updates, only if it affects the critical activity.
 - o Non-compensable weather days will extend the dates for both interim milestones and project completion dates, only if it affects the critical activity.
6. Schedule assumptions include:
 - o 55 Hour weekend closures on Sepulveda for falsework erection/removal.
 - o 55 Hour weekend closures on Sepulveda for bridge demolition.
 - o 7 Hour weeknight closures (Monday-Friday) on Century Blvd. for bridge falsework erection/removal.
 - o NB Sepulveda can be restricted to 3 lanes while falsework is still in place for Bridges A/D construction.
 - o cGMP1 City Council duration limited to 90 CDs from BOAC date of 4/17/2025.
 - o AT&T maximum splicing duration of 240 CDs from completion of mandreling of conduits.
 - o Parties agree to jointly work thru permitting issues related to improvement of Ramp J uncertified fills as schedule does not include mitigation, details underway with BOE.
 - o Elimination or modification of FIFA moratorium restrictions.
 - o Bridge D2 falsework over Century Blvd. can be in place during the 2028 Olympic/Paralympic moratoria.

4.3 Earthwork

1. Short-term stockpiling of spoils and demolished products to be crushed for re-use in later cGMPs are assumed to occur at Lot E (multiple bid packages).
2. 25,000 CY of existing crushed material at Continental City is available for use and meets specifications for embankment and structure backfill. This material has been allocated to certain elements of the following subcontract bid packages thru subcontract bid package scopes:
 - o CBSP01 Retaining Walls (Wall J-2 structure backfill and Ramp J embankment)
 - o CBSP04 Reinforced Concrete Box Culvert
3. For cost estimating purposes, existing on-site soils were assumed to be not suitable for structure backfill (multiple bid packages).

4. Existing soils in cut areas are suitable as fill under temporary pavements (CBSP06).

4.4 Structures

1. SFJV has assumed architectural texture on exposed abutments and wing walls will be required although not indicated in the design documents. Formliner is assumed to be a standard pattern with limited use (NSP).
2. Architectural texture on exposed retaining walls (CBSP01) is assumed to be fractured fin formliner with:
 - ¾" depth
 - 1 ½" center-to-center pattern repeat
 - ½" peak
 - ½" valley
3. Ground replacement under utility protection concrete at Walls A-1 and A-2B shall extend to a depth of 10' below original ground surface. Utilities identified to remain, and protect-in-place, will require supporting to perform the ground replacement (CBSP01).
4. Type 1-S (MOD) details for Wall A-2A to be used for Wall A-2B (CBSP01).
5. Pricing includes Schematic Design (30%) documents for Bridge D2 and K1 CIDH, D2 Abutment 1, and columns as 60% design documents are under re-design for cost reduction purposes. CIDH for Bridges D2 and K1 are assumed to be 90 feet in length. Abutment CIDH are assumed to be 60 feet in length (multiple bid packages). Pricing to be trued-up at IFC from D-B Contingency or SBF.
6. Pricing includes Schematic Design (30%) for Walls D5 and D6 (CBSP01). Pricing to be trued-up at IFC from D-B Contingency or SBF. The following assumptions are made:
 - 24" CIDH pile length = 60 linear feet per pile, pile details per other DU2A walls
 - Rebar to match design height tables shown in DU2A plan set
7. Subcontract bid package CBW01 (Large Diameter CIDH Piles) has assumed that no test tubes are required to be installed with any CIDH, and no pile integrity testing is required. This bid package specifies that piles must be excavated to tip elevation with temporary casing, mitigating the potential for contaminating the pile concrete with caving soils. Pricing to be trued-up at IFC from D-B Contingency or SBF.

8. Subcontract bid package CBW02 (Small Diameter CIDH Piles) has assumed that no test tubes are required to be installed with any CIDH, and no pile integrity testing is required. Wet conditions are not anticipated with groundwater at approximately 90 feet below ground surface.
9. Subcontract bid package CBSP01 (Retaining Walls) has assumed that no test tubes are required to be installed with any CIDH, and no pile integrity testing is required. Wet conditions are not anticipated with groundwater at approximately 90 feet below ground surface.

4.5 Demolition

1. Salvage and deliver the following items to a LAWA facility within 5 miles of LAX is included in CBSP03 but not identified in design documents:
 - 1 EA pylon X 6' diameter
 - 1 EA pylon x 12' diameter
 - 32' LAX letters (all 3 letters)
 - Unloading of the above
2. Removal of existing building foundations (CBSP 03) shown on AC01-CD1-055 has been assumed to include:
 - Demolition and removal of 200 cubic yards of reinforced concrete at a depth of 15' below ground surface to top of foundation

4.6 General Conditions

1. SFJV staffing levels are included for the period from 9/1/2025 through 12/31/2026. The staffing plan includes staff managing the entire project scope, as currently known, during this time period, and not just the work included in cGMP1.

4.7 General Requirements

1. General Requirements are included for the period from 9/1/2025 through 12/31/2026. The following items have been priced to reflect the full project scope over this duration and not just the work included in cGMP1:
 - Traffic control
 - Survey
 - Environmental Management (excluding crushing/recycling of demolished products)
 - Scheduling staff
 - SWPPP BMP Install & Maintenance

- 3rd Party Coordination staff
 - Building Information Model (BIM) staff
 - Safety staff
 - Temporary Works Engineering staff
2. Costs for temporary sediment and erosion control BMP types beyond standards provided in the SWPPP plans included in the PMP are not included.
 3. Reference attached ATMP ROADWAY IMPROVEMENTS PROJECT cGMP 1 GENERAL REQUIREMENTS BASIS OF NEGOTIATIONS for basis of additional General Requirements costs and assumptions.

4.7.1 Insurance

1. SFJV has been elected by LAWA to furnish a Contractor Controlled Insurance Program (CCIP) providing for General Liability, Workers Compensation and Excess/Umbrella coverage for work performed on behalf of the Project. The CCIP shall only cover and apply to on-site exposures for participants enrolled in the CCIP.
2. A Builders Risk policy with a loss limit of \$500M has been included. SFJV and LAWA to continue discussions of replacement value and sublimits to refine pricing from the insurance markets.
3. Refer to Exhibit 6.3 for a breakdown of coverages, limits, deductibles, and costs. Quotations have been submitted to LAWA via email on 1/22/2025.
4. Refer to Exhibit 6.3 - The insurance premium costs are reimbursed as an allowance and Loss Content costs are included in cGMP Lump sum cost.

4.7.2 Quality

1. Quality Assurance for work performed under Caltrans Encroachment Permit will be by LAWA.
2. PR-13 and PR-14 Pre-Construction (Quality Assurance and Quality Control): The Pre-Construction Quality Assurance and Quality Control requirements no longer apply to the Phase 1 scope of work.

4.7.3 Maintenance of Traffic

1. K-rail style temporary concrete barrier will be acceptable for use.
2. Chain link fence with screen will be mounted on temporary concrete barrier.

4.7.4 Temporary Facilities

1. Integrated Project Management Office costs at the existing City Bus Lot at 96th and Jetway Blvd. are to be reimbursed as an allowance.
2. The laydown area rental costs for the project are reimbursed as an allowance.
3. Refer to CGMP Tab 4 – Costs related to BID ITEM NO. 1,003,400 (Foreman Trailer), BID ITEM NO. 1,003,410 (Graffiti Removal), and BID ITEM NO 1,003,450 (Office & Yard) are included in cGMP Lump sum cost.
4. Laydown areas are assumed as follows:

Laydown Location	Duration		Area (SF)	Lease Type
	Start	End		
T9 Lot	Dec -25	Dec-29	354,000	No Cost
Park One	Sep-25	Dec-27	525,000	No Cost
Lot C – South A & Cell Phone Lot	Sep 25	Dec-29	175,000	No Cost
Lot C – South B	Dec 25	Dec-29	273,000	No Cost
CTA Cloverleafs	Sep 25	Dec-29	87,000	No Cost
Taxi Hold Lot	Oct-25	Dec-29	108,000	No Cost
City Bus Center	Sep-25	Dec-29	94,000	No Cost
Lot E - Dirt	Sep-25	Dec-29	165,000	No Cost
Lot E - Paved	Sep-25	Dec-29	263,900	Lease Cost

ATMP Roadways - Night Shift Work

DATE: 4/22/2024

Row No.	Phase	Area/Location	Work Activity Type	Self Perform/SFJV Sub Support	Reason for Night-Shift	Anticipated Work Window
1	1	World Way North, SkyWay, Vicksburg, 96 Street	SkyWay CO Detour Construction	Yes	Off peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
2	1	Roadways A & D within sharded Concourse 0 project limits	CIDH Drill pad prep, CIDH Pile installation, CIDH Quality Inspection, Spoil Removal	Yes	Coordination with CO, HP will work days, SFJV will work nights	12 hour window for sharing site, but will work 8 hour production shift
3	2	Roadways A & D within sharded Concourse 0 project limits	Roadway A& D Retaining Walls, Abutments, columns, Approach Roadways	Yes	Coordination with CO, HP will work days, SFJV will work nights	12 hour window for sharing site, but will work 8 hour production shift
4	2	Sepulveda Blvd, NB & SB	Reconfigure lanes, set K-rail for Bridge work in median	Yes	Off-peak lane closures needed for construction and traffic switches	5 hours, 0000 midnight to 0500
5	2	Sepulveda Blvd. Median work zone	CIDH Drill pad prep, CIDH Pile installation, CIDH Quality Inspection, Spoil Removal	Yes	Off-peak lane closures needed for construction and traffic switches	5 hours, 0000 midnight to 0500
6	2	Sepulveda Blvd. Median work zone	Bridge A & D columns	Yes	Off-peak lane closures needed for construction and traffic switches	5 hours, 0000 midnight to 0500
7	2	Sepulveda Blvd. Median work zone	Bridge A & D Falsework	Yes	Off-peak lane closures needed for construction and traffic switches	5 hours, 0000 midnight to 0500
8	2	98th Street	Bridge A Falsework Traffic Opening Stringers	Yes	Off-peak lane closures needed for construction	8 hours, 2200 to 0600
9	2	Century Blvd	Construct re-alignemnt of Segment J	Yes	Off-peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
10	2	Century Blvd	Underground Utilities re-alignment	Yes	Off-peak lane closures needed for construction	4 hours, 0000 midnight to 0400
11	2	Century Blvd	Bridge A CIDH pad prep, CIDH Pile installation, CIDH Quality Inspection, Spoil Removal	Yes	Off-peak lane closures needed for construction	4 hours, 0000 midnight to 0400
12	2	Century Blvd	Bridge A Columns, Abutments, Falsework, Superstructure	Yes	Off-peak lane closures needed for construction	4 hours, 0000 midnight to 0400
13	2	Sepulveda Blvd	Bridge I, demo existing Bridge, Superstructure Construction	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
Added	3	Roadway A and existing north worldway ramp	Tie in existing Sepulveda Blvd/N Worldway Ramp to new A alignment	Yes	Off-peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
14	3	Roadway I and existing Fly-over hook ramp from SB Sepulveda	Temporary Tie-in existing connector to new I Alignment	Yes	Off-peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
Added	3	Sepulveda Blvd, NB	Segment C at grade work	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500

15	4	Sepulveda Blvd, SB	Tie-in roadway section to new "A" alignment, Switch traffic	Yes	Off-peak lane closures needed for construction and traffic switches	5 hours, 0000 midnight to 0500
16	4	Sepulveda Blvd, NB	Temp Stripe & K-rail from 96th Street to new 94th Street driveway, construct Widening	Yes	Off-peak lane closures needed for construction and traffic switches	5 hours, 0000 midnight to 0500
17	4	JetWay Blvd SB	Access for construction of Bridge D, adjacent to and overhang at Jetway	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
Added	4	98th Street	Bridge D Falsework Traffic Opening Stringers	Yes	Off-peak lane closures needed for construction	8 hours, 2200 to 0600
18	4	Century Blvd	Demolish existing fly-over connector hook-ramp	Yes	Off-peak lane closures needed for demolition	4 hours, 0000 midnight to 0400
Added	4	Century Blvd, WB	Tie in the new "I" to WB Century west of Sepulveda	Yes	Off-peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
19	4	Century Blvd	Re-configure Century to temporary alignment, Construct portion of Bridge D	Yes	Off-peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
Added	5	Sepulveda Blvd	Demolish existing Skyway Bridge	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
20	5	Century Blvd	Bridge K construction at traffic opening	Yes	Off-peak lane closures needed for construction	4 hours, 0000 midnight to 0400
21	5	Sepulveda Blvd	Demolish existing bridge for construction of Bridge K	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
22	5	Sepulveda Blvd	Bridge K construction	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
23	5	Sepulveda Blvd	demolish existing Bridge for construction of Bridge P	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
24	5	Sepulveda Blvd	Bridge P construction	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
Added	5	Century Blvd, EB	Bridge P abutment 4 construction	Yes	Off-peak lane closures needed for construction	4 hours, 0000 midnight to 0400
25	5	World Way/Center Way	Roadway K&P tie-in to final alignment, Lane-by-lane or 55 hour extended closure	Yes	Off-peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
26	5	Roadway L	Re-stripe, set K-rail to one-lane configuration for widening	Yes	Off-peak lane closures needed for construction and traffic switches	4 hours, 0000 midnight to 0400
27	5	Sepulveda NB/SB	Demolish existing World Way Overcrossing at Sepulveda	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
28	5	Sepulveda SB	Construct Tie-in, final striping for Roadway D to SB Sepulveda Blvd	Yes	Off-peak lane closures needed for construction and traffic switches	5 hours, 0000 midnight to 0500
29	5	Sepulveda NB/SB	Erect Pedestrian Bridge Superstructure and pour deck	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
30	6	Sepulveda NB/SB	Construct Bridge M over Sepulveda	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500
Added	6	Segment P	Wall P3 construction	Yes	Off-peak lane closures needed for construction	4 hours, 0000 midnight to 0400 ?
31	6	Sepulveda NB	Construct Tie-in, final striping for Roadway NE from NB Sepulveda Blvd	Yes	Off-peak lane closures needed for construction	5 hours, 0000 midnight to 0500

Equipment Premium derived from equipment value x annual rate x term months/12

ATMP ROADWAY IMPROVEMENTS PROJECT cGMP 1 GENERAL REQUIREMENTS BASIS OF NEGOTIATIONS

The following documents serve as the basis of negotiations between LAWA and Skanska-Flatiron, A Joint Venture (SFJV) for the General Requirements scope contained within cGMP1. The General Requirements scope definitions are further clarified in the following Project Requirement (PR) worksheets.

The overall term of cGMP1 and duration of General Requirements support services for cGMP1 is from 9/1/2025 through 12/31/2026, a duration of 16 calendar-months.

This basis of negotiations for General Requirements for cGMP1 will be further evaluated for added General Requirements scope and pricing in future cGMPs/GMPs.

If LAWA and SFJV fail to reach agreement on General Requirements support services for subsequent/future cGMPs, then SFJV may choose not to proceed with remaining stages of the Contract for the associated scope of work. In such case, the off-ramp provision of PR-01 (3),(E), (2), (I) will be implemented.

Revisions to this basis of negotiations for General Requirements will be documented below for version control.

Rev. 0	Feb 4, 2025
Rev. 1	Feb 14, 2025
Rev. 2	Mar 21, 2025
Rev. 3	Mar 25, 2025

PROJECT MANAGEMENT AND COORDINATION
<p><u>Reference: PR-02</u></p>
<p><u>Basis of Negotiations:</u></p> <p>SFJV is required to deliver to LAWA any and all design materials. These materials include, but are not limited to: calculations, preliminary drawings, construction drawings, shop drawings, samples, electronic media data, sketches, illustrations, specifications, descriptions, models, mock-ups, and other information SFJV developed, prepared, furnished, or delivered in the prosecution of the design work.</p> <p>Additionally, the construction documents shall include all information required by the building trades to complete the construction of the project, other than such details customarily developed by others during construction.</p> <p>Project management and coordination includes cost for SFJV design staff that will provide shoring, falsework, column guying, and any additional temporary works designs required for construction. PR-02 includes the following staff costs to temporary works design:</p> <ul style="list-style-type: none"> • One (1) Temporary Engineering Design Manager @ 16 months • Two (2) Temporary Engineering Designers @ 27 months total • Two (2) Temporary Engineering Design Checkers @ 27 months <p>Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.</p> <p>Pursuant to previous cost reduction exercises, LAWA and SFJV have agreed to modify PR-18 to indicate that cultural monitoring resources will be provided through an Allowance. No at-risk costs for tribal, archaeological or paleontological monitoring are included in cGMP1.</p> <p>All other staff costs to comply with PR-02 are in General Conditions costs or other cost elements.</p>
<p><u>Payment Provisions:</u></p> <p>The agreed-to amount shall be a lump sum price to be reimbursed in accordance with the agreed-to Schedule of Values.</p>
<p><u>Discussion Dates:</u> Read 1 – January 27, 2025 March 24, 2025</p>

TRAFFIC MANAGEMENT AND COORDINATION

Reference: PR-03

Basis of Negotiations:

SFJV shall conduct all operations in a manner that will minimize impacts and interferences with normal operation of the Airport. SFJV's operations shall cause no unnecessary inconvenience. The access rights of the public shall be considered at all times.

Safe and adequate pedestrian and vehicular access shall be provided and maintained to: fire hydrants; commercial and industrial establishments; churches, schools and parking lots; service stations and motels; hospitals; police and fire stations; and establishments of similar nature.

SFJV shall install and maintain all temporary signage and messaging at all construction barricade locations, access gates, work area access points, etc. as long as the barricades are in place to help direct traffic around work areas and to alternate paths of travel.

Dynamic Lane Closures:

The primary element included in PR-03 is maintenance of traffic and flagging. SFJV's dedicated subcontractor, Fryman Management Inc (FMI), provided pricing for both elements.

Three (3) nighttime traffic control crews and two and one-half (2.5) crews are included. A traffic control crew is defined as two traffic control craft and a traffic control truck. Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.

Attenuator Trucks:

Attenuator trucks with drivers are included with dynamic lane closures to protect workers from the public.

Traffic Control Plans:

Costs for traffic control plan designs (88 locations / 6.25 sheets each) and engineering staff required to support their operations are included. Fifty-nine (59) WTCPs are for dynamic lane closures and twenty-nine (29) WTCPs to implement static work zones based on MOT design. WTCPs prepared by Fryman Management Inc.; reference the attached dynamic lane closure exhibit for basis of number of locations. Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.

Flaggers:

The estimated average number of flaggers provided by FMI is eight (8). They have excluded flagging required for static / long term closures. SFJV has included two (2) additional flaggers for this condition. Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.

Static Work Zones:

PR-03 includes costs for work zone establishment including but not limited to temporary barrier rail (K-rail), temporary striping, crash cushion modules, CMSS, construction signage, and other devices as indicated in staging plans provided in AC-01 (Stages 1A / 1B) only. K-Rail is left in place, as shown in Stage 1B. The K-rail purchase included in cGMP1 represents the maximum use of K-rail shown in AC-01 only (5,870 LF).

Work zone establishment requires temporary signaling and lighting modifications. Costs for this work are included in PR-03 for the temporary work shown in AC-01 only.

Security Guards:

Costs for security guards are included in PR-06. Pursuant to previous cost reduction exercises, LAWA and SFJV have agreed to modify PR-03 to eliminate the requirement to have a minimum of one (1) dedicated security gate guard at any access gate used whenever work is being performed. The revised language would allow unattended, open gates in active work areas in non-AOA areas.

Traffic Management Team:

Costs are included for traffic management team from Fryman Management to manage the anticipated full scope:

- One (1) Sr. MOT Manager @ 16 months
- One Sr. PM @ 16 months
- Two (2) Project Engs. @ 16 months each

Payment Provisions:

The agreed-to amount shall be a lump sum price to be reimbursed in accordance with the agreed-to Schedule of Values.

CONSTRUCTION SITE OFFICES/FIELD FACILITIES AND LAYDOWN AREA
Reference: PR-06
<p><u>Basis of Negotiations:</u></p> <p>SFJV shall assume sole and complete responsibility for the project site in accordance with the contract (GC-40). This includes full responsibility for safety, security, cleanliness, FOD-control, dust-control, Storm Water Pollution Prevention, maintenance, etc. at all construction sites, offices, storage and laydown areas, airside haul routes, employee parking areas, etc.</p> <p>SFJV shall provide graffiti and vandalism control throughout all stages of the project. SFJV shall keep all equipment, offices, storage facilities, and other facilities at the site free of graffiti and vandalism.</p> <p>SFJV shall provide a construction field office in the DESIGN-BUILDER's staging and laydown area for LAWA's sole use. Any other construction site field offices needed by the DESIGN-BUILDER for his/her use shall be supplied by the DESIGN-BUILDER, however, they shall be located within the staging and laydown area site.</p> <p>Included in PR-06 are the following elements:</p> <p>Laydown Area Rentals: To be reimbursed as an Allowance "I". No yard restoration is included in cGMP1.</p> <p>PMO Office: The following costs to be reimbursed by Allowance "H": SFJV has included costs in PR-06 to establish a fifty-five thousand (\$55,000) SF integrated modular office building both SFJV and LAWA/BOE/PMCM staff. Cost includes mobilization of offices and utility hook-ups, decking between buildings, monthly rental, utilities, supplies, janitorial, copiers, coffee and water. Price also includes cubicle purchase/installation and furniture for ninety-five (95) LAWA and PM/CM staff and one-hundred and twenty-five (125) SFJV staff. Forty (40) electrical vehicle charging stations have been included for the PMO.</p> <p>Foremen Trailers: Foremen trailers are also included. Rent and utility consumption costs for foremen trailers is included in cGMP 1 from September 1, 2025, through December 31, 2026.</p> <p>No demobilization of trailers is included in cGMP1.</p> <p>Graffiti Removal: Graffiti removal and fence maintenance are included in PR-06 for cGMP1 from September 1, 2025, through December 31, 2026. Costs include one (1) crew performing maintenance on a half-time basis (168 WD), with equipment.</p> <p>Office/Yard Maintenance: Yard preparation includes nine (9) laydown areas. A yard crew is staffed at five (5) yards for the duration of cGMP1 (September 1, 2025, through December 31, 2026). A material handler will be provided for the bar</p>

reinforcing steel subcontractor at one (1) yard for their use in construction of CIDH cages. No operator is included for this equipment.

Security Guards:

Pursuant to previous cost reduction exercises, LAWA and SFJV have agreed to modify PR-03 to eliminate the requirement to have a minimum of one (1) dedicated security gate guard at any access gate used whenever work is being performed. The revised language would allow unattended, open gates in active work areas in non-AOA areas. Three (3) security guards with vehicles are included on the site full-time, 24 hours per day, 7 days per week. Costs for security guards are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.

PR-06 Section 5.C.2.2 is amended, regarding completing flow and pressure tests at all existing fire hydrants that serve the Project Offices and Laydown areas prior to the start of construction.

Payment Provisions:

The agreed-to amounts for, Foremen trailers, Graffiti Removal, and Office/Yard Maintenance shall be lump sum prices to be reimbursed in accordance with the agreed-to Schedule of Values.

Laydown Area rental and PMO Office costs to be reimbursed as an Allowance.

DESIGN MANAGEMENT
<p>References: PR-11 Design Management PR-08 Request For Information PR-09 Submittal Procedures</p>
<p><u>Basis of Negotiations:</u></p> <p>SFJV (DESIGN-BUILDER) to provide one (1) full-time manager to oversee Design Services During Construction (DSDC) for the agreed-to duration of cGMP1 general conditions time-spanned services, 16 months. Cost included in General Conditions.</p> <p>HNTB (DESIGNER) to provide DSDC to SFJV. Services by DESIGNER as detailed below.</p> <p>DSDC shall begin after acceptance of IFC-Ready (or equivalent) documents by LAWA and/or applicable AHJs, unless services are required because of a DESIGNER caused error or omission in the Basic Design Services previously performed under task orders.</p> <p>Costs for DSDCs for Non-Conformance Reports (NCRs) and Field Design Changes (FDCs) are included in Design-Build Contingency.</p> <p>DSDC shall include the following services:</p> <p>Project Management:</p> <ul style="list-style-type: none"> • Monitor DSDC activities. • Review and track project progress, forecasts, expenditures and reporting. • Provide monthly status reports and internal project reviews. • Prepare project invoices. • On-Site Coordination Meetings. • Attend weekly coordination meetings to review status of RFIs, NCRs and shop drawings. • DESIGNER will maintain a document control procedure for its documents. • DESIGNER will maintain DSDC project files using ProjectWise and SharePoint. <p>Field Design Support:</p> <ul style="list-style-type: none"> • DESIGNER shall appoint a qualified, responsible member of the design team to be the contact person for all field-design support services. • DESIGNER shall review and take appropriate action with respect to submittals. Such action will be taken with reasonable promptness to comply with the applicable time requirements. • DESIGNER shall review drawings for temporary work. • DESIGNER shall assist in evaluations of changes in field conditions or unanticipated differing field conditions. • Subsequent to the issuance of Released For Construction (or equivalent) documents and when requested by Client, DESIGNER shall make revisions to the plans and specifications as necessitated by changed field conditions, or as a result of a request by Design-Builder for changes in construction details. Changes made shall meet the requirements of the AHJ and appropriate approvals will be

obtained by DESIGNER/Design-Builder. DESIGNER shall submit changes to Client and AHJ for review. DESIGNER shall resolve all comments before issuing revision.

- DESIGNER shall evaluate and assist in the resolution of work that does not conform to the design documents. Such assistance may include, but is not limited to, rendering a professional opinion regarding the advisability or acceptability of incorporating the nonconforming work in the Project and revising the plans and specifications as required to remedy any nonconforming work.
- DESIGNER shall provide necessary clarifications and interpretations of the design documents, as appropriate to the orderly completion of the respective portions of the construction. Such clarifications and interpretations will be consistent with the intent of, and reasonably inferable from, the design documents.
- DESIGNER shall attend meetings or make observations at the Project site during construction as needed.
- DESIGNER to respond to Requests for Information (RFIs) per the procedures of the Project and visit the Project site as necessary to access conditions.

Shop Drawings, Samples, and Working Drawings:

- DESIGNER shall review and take other appropriate action with respect to, shop drawings and samples which require, but only for general conformance with the information given in the design documents and compatibility with the design concept of the completed Project.

As-Builts:

- Preparation of as-built drawings.

Other DSDC:

- Other DSDC services by DESIGNER include Geotechnical Construction Services such as drilled shaft inspection as mutually agreed between the parties.

Means and Methods:

- DSDC shall not extend to construction means, methods, techniques, sequences, construction quality control, or procedures of construction, nor to Project site safety and security precautions and programs incident thereto.

Reference attached DESIGNER staffing plan for costs included. Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.

Payment Provisions:

The agreed-to amounts shall be lump sum prices to be reimbursed in accordance with the agreed-to Schedule of Values.

QUALITY CONTROL
<p>Reference: PR-14</p>
<p><u>Basis of Negotiations:</u></p> <p>PR-14 includes a Preconstruction Quality Control Program required by Design-Builder. SFJV has not included any specific personnel or deliverables for this requirement in any task order to date, or cGMP1, other than its Design Quality program. It is agreed by both parties (LAWA and SFJV) that the Pre-Construction Quality Assurance and Quality Control requirements no longer apply to the Phase 1 scope of work. SFJV has already submitted its QA/QC Plan under the initial PR-13/PR-14 requirements. This plan will need to be revised to eliminate Quality Assurance scope.</p> <p>Pursuant to previous cost reduction exercises, LAWA and SFJV have agreed to modify PR-13/14 to eliminate the requirement for a QC Manager to be on-site during the performance of any work.</p> <p>Costs are included for a dedicated QC Manager during standard weekday work hours only and no specific services for preconstruction. No other deviations are included.</p> <p>Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.</p> <p>SFJV Quality Management Staffing – included in General Conditions:</p> <ul style="list-style-type: none"> • One (1) Quality Manager @ 18 months • One (1) Construction Quality Manager @ 18 months • One (1) Civil Quality Manager @ 18 months • One (1) Reinforced Concrete Quality Manager @ 18 months • One (1) Senior Quality Engineer @ 16 months • One (1) Assistant Quality Engineer @ 11 months • Three (3) Quality Administrative/Document Control @ 11 months each • Staff vehicles <p>Subconsultant Inspection and Independent Testing Services – included in General Requirements:</p> <ul style="list-style-type: none"> • Day & Night Lead Inspectors @ 30 months total • One (1) Quality Engineer @ 11.75 months • Day & Night Civil/Structures/Utility Inspectors @ 60 months total • Day & Night Field Technicians @ 74 months total • Lab Technician @ 14.5 months total • Source Inspector @ 10.25 months • Electrical Inspection @ 13.5 months • One (1) on-site testing laboratory • Specialty tests • Staff vehicles <p>Reference attached inspection and testing staffing plan for costs included for the period of September 1, 2025 through December 31, 2026.</p>

Payment Provisions:

SURVEYING
<p><u>Reference:</u> PR-16</p>
<p><u>Basis of Negotiations:</u></p> <p>SFJV to provide construction phase survey only in accordance with PR-16. SFJV shall provide accurate survey as necessary to adequately construct the Project in accordance with the Contract Documents. All work under this section shall be accomplished by or under the direct supervision of a Surveyor with a current California Professional Land Surveyor License.</p> <p>Costs included in General Requirements:</p> <ul style="list-style-type: none"> • One (1) part-time Survey Manager @ 6.5 months + vehicle • One (1) full-time survey crew @ 16 months + vehicle • One (1) part-time survey crew @ 8 months + vehicle <p>Additionally, one (1) full-time grade checker and vehicle is included in cGMP 1. This grade checker will support all construction crews by transferring and preserving the survey layout provided by survey crews to minimize re-staking fees.</p> <p>Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.</p>
<p><u>Payment Provisions:</u></p> <p>The agreed-to amounts shall be lump sum prices to be reimbursed in accordance with the agreed-to Schedule of Values.</p>
<p><u>Discussion Dates:</u></p> <p>Read 1 – January 27, 2025</p>

PORTABLE CONCRETE BATCH PLANT AND CRUSHER	
<u>Reference: PR-17</u>	
<u>Basis of Negotiations:</u> <p>No batch plant or crushing cost is included in cGMP1. However, to satisfy sustainability requirements in PR-20, it is SFJV's intent to crush and recycle all available demolition (concrete, HMA, PCC, aggregate base) generated from construction in future cGMPs.</p> <p>cGMP1 includes costs for knock-down and maintenance of demolition materials being staged at Lot E. Approximately 4,885 CY of demolished materials is hauled to Lot E from removals of sidewalk, parking lots, pavement removal and retaining wall demolition.</p>	
<u>Payment Provisions:</u> <p>The agreed-to amounts shall be lump sum prices to be reimbursed in accordance with the agreed-to Schedule of Values.</p>	
<u>Discussion Dates:</u> <p>Read 1 – January 27, 2025 March 24, 2025</p>	

ENVIRONMENTAL
Reference: PR-18
<p><u>Basis of Negotiations:</u></p> <p>SFJV shall conform to all applicable local, state, and Federal regulations and laws pertaining to water pollution control. SFJV shall conduct and schedule its operations, and follow and implement best management practices, in such a manner as to prevent water pollution, including that by introducing sediments into the receiving water, as defined by National Pollutant Discharge Elimination System (NPDES) permit requirements.</p> <p>Included in PR-18 are the following elements:</p> <p>Water Development:</p> <p>SFJV has included two (2) water tanks to support construction operations. Includes construction water purchase, including water meter rental. Construction water purchase is for:</p> <ul style="list-style-type: none"> • AC-01/AC-02 construction activities only and not entire project scope • General dust control for the anticipated full project scope for the period of September 1, 2025, through December 31, 2026. <p>Jobsite Management:</p> <p>Trash pickup and housekeeping crew is included. Cost includes one (1) crew performing maintenance on a half-time basis (294 WD). Additionally, spill prevention and controls and non-stormwater management is included two (2) days per week to inspect and manage liquids needing dual containment. Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.</p> <p>Temporary Erosion Control Measures:</p> <p>Installation of Best Management Practices (BMPs) are included for the Early Works scope and Main Works Packages. BMPs include hydraulic mulch, temporary construction entrances, check dams, drainage inlet protection, fiber roll and silt fence. Maintenance is included for the anticipated full project scope for the period of September 1, 2025, through December 31, 2026. No removals are included.</p> <p>Temporary Concrete Washout:</p> <p>Temporary concrete washout facilities are included only for the concrete quantity represented by cGMP1.</p> <p>Street Sweeping:</p> <p>Pursuant to previous cost reduction exercises, LAWA and SFJV have agreed to modify PR-18 to eliminate the minimum number of sweepers to be provided to perform the stated requirements for dust control. Two (2) full-time street sweepers are included. Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.</p> <p>Dust Control:</p> <p>Two (2) full-time water trucks are included. Water purchase is included in Water Development. Costs are reflective of the anticipated full project scope for the period of September 1, 2025, through December 31, 2026.</p>

Temporary Access Roads:

Construction of Temporary Access Road 11 is included in PR-18. This access road is located west of Sepulveda between Segments M and P. Cost includes required earthwork, base and HMA paving. No removal is included in cGMP 1.

Cultural Monitoring:

To be reimbursed by Allowance "N".

Payment Provisions:

The agreed-to amount, excluding Cultural/Archeological Monitoring, shall be a lump sum price to be reimbursed in accordance with the agreed-to Schedule of Values.

Cultural/Archeological Monitoring costs shall be reimbursed as an Allowance.

Tab 7 Procurement & Packaging Plan

March 25, 2025

Prepared by:
Skanska-Flatiron A Joint Venture

SKANSKA | FLATIRON

1.0 LIST & DESCRIPTION OF BID PACKAGES

The strategy for early works scopes to be included in cGMP1 was developed with LAWA in June 2024 and memorialized in Field Directive 009 dated June 24, 2024. Scopes were refined through November 2024, based on design progression, and permitting strategies and feedback. Scopes were procured prior to finalizing cGMP1 to minimize procurement risks. Scopes were broken into fourteen (14) subcontract bid packages and procured using three (3) procurement types:

- Negotiated Self-Perform (NSP)
- Competitively Bid Self-Perform (CBSP)
- Competitively Bid Work (CBW)

Subcontract bid packages were prepared and submitted for review by LAWA. CBSP and CBW packages were developed with lowest responsive and responsible bidder criteria.

BID PACKAGE ID	SFJV CODE	BID PACKAGE DESCRIPTION
A. NEGOTIATED SELF-PERFORM WORK (NSP)		
N/A	NSP1	ABUTMENTS & COLUMNS
N/A	NSP2	BRIDGE FALSEWORK (PROCUREMENT ONLY)
N/A	NSP3	SUBCONTRACTOR SUPPORT
B. COMPETITIVELY BID SELF-PERFORM WORK (CBSP)		
BP #DA5609-0011	CBSP02	POTHOLING OF LARGE DIAMETER CIDH
BP #DA5609-0012	CBSP03	CIVIL/STRUCTURAL DEMOLITION
BP #DA5609-0013	CBSP04	REINFORCED CONCRETE BOX CULVERT
BP #DA5609-0014	CBSP01	RETAINING WALLS
BP #DA5609-0015	CBSP05	STORM DRAIN & MINOR STRUCTURES
BP #DA5609-0016	CBSP06	EARTHWORK & SITE CIVIL
C. COMPETITIVELY BID WORK (CBW)		
BP #DA5609-0003	CBW01	LARGE DIAMETER CIDH PILES
BP #DA5609-0004	CBW02	SMALL DIAMETER CIDH PILES AT BRIDGE ABUTMENTS
BP #DA5609-0005	CBW04	BAR REINFORCING STEEL
BP #DA5609-0006	CBW05	TREE REMOVAL
BP #DA5609-0007	CBW06	ELECTRICAL & COMMUNICATION DUCTBANKS
BP #DA5609-0008	CBW07	WATERLINES
BP #DA5609-0009	CBW08	ASPHALT PAVING
BP #DA5609-0010	CBW10	TREE REMOVAL

BuildingConnected was the online platform selected to host, manage, and receive bids. SFJV developed all subcontract bid package documents. SFJV administered the bid process for CBW packages, and LAWA managed the CBSP bids.

SFJV also procured material, vendors, and support services for NSP and General Requirements as indicated below. SFJV provided LAWA with quotes and its selections on February 11, 2025.

NSP/GR	MATERIAL/VENDOR/SERVICE
NSP	Bridge Bearings
NSP	Isolation Casings
NSP	Ready-Mix Concrete
NSP	Formliner
NSP	Timber Forms
NSP	Column Forms
GR	Temporary Erosion Control Materials
NSP	Falsework Material
GR	Traffic Control Material
GR	Temporary Street Lighting & Traffic Signals
GR	Pre-construction & Progress Surveys/Photos/Videos
GR	Temporary Fencing
GR	Security Guards
GR	Webcam Services
GR	Construction Survey
GR	Street Sweeping
NSP	Trucking
GR	Water Truck Services
NSP	Concrete Pumping

2.0 BIDDING AND AWARD SCHEDULE

Reference Exhibit 7.1 for the bidding schedule. Since all packages were bid prior to cGMP1 execution, final package award and subcontract execution will occur after LAWA and SFJV have executed a Contract Amendment for cGMP1.

3.0 DRAFT BID TABULATION SUMMARY

Reference Exhibit 7.2 for the bid tabulation summary intended to be used for procurement for the CBW bid packages administered by SFJV.

4.0 PROPOSED SELF-PERFORM WORK

SFJV intends to self-perform the following packages using the NSP process. Refer to Tab 3 for more detailed information regarding the scopes:

Skanska-Flatiron A Joint Venture

SKANSKA | FLATIRON

INSTRUCTIONS FOR SUBCONTRACTOR PARTICIPATION PLAN

ATTENTION:

You MUST list ALL anticipated subcontractors, regardless of their dollar amount or percent proposed, and regardless of whether they are certified or not.

You MUST fill out ALL applicable fields completely for the Bidder/Proposer and all subcontractors. Failure to provide complete and legible information on this form may result in your firm not receiving full certification credit. You may add pages as needed.

Project Title – The name of the project at the time of bid or proposal.

Bid/Proposal Amount – Total amount bidder/proposer proposed for the project.

Company Information – The complete name, address, phone number (including area code), Federal Tax Identification Number, email and contact person for the bidder/proposer and each subcontractor, vendor or supplier.

- **Ethnicity** – African American, Hispanic American, Native American, Asian-Pacific Islander, Subcontinent Asian Indian, Asian American, Aleut, Eskimo, Caucasian

- **Gender** – Male, Female

- **Certification Type*** –

ACDBE (Airport Concession Disadvantaged Business Enterprise)

DBE (Disadvantaged Business Enterprise)

DVBE (Disabled Veteran Business Enterprise)

LBE (Local Business Enterprise)

LSBE (Local Small Business Enterprise)**

MBE (Minority Business Enterprise)

SBE (Small Business Enterprise)

WBE (Woman Business Enterprise)

*Any firm that is not certified as an ACDBE, DBE, DVBE, LBE, LSBE, MBE, SBE or WBE is considered an OBE (Other Business Enterprise).

**LSBE designation is only for firms that are certified as both SBE and LBE.

- **Certifying Agency** – Agency that issued the certification

City of Los Angeles (Department of Public Works)

CALIF DGS (State of California Department of General Services)

CALTRANS (California Department of Transportation)

METRO (L.A. County Metropolitan Transportation Authority)

SBA (Federal Small Business Administration)

DVA (Department of Veterans Affairs)

USWCC (US Women's Chamber of Commerce)

WBEC-WEST (Women's Business Enterprise Council – WEST)

NWBOC (National Women Business Owners Corporation)

Description of Project Services – A brief description of the work the bidder/proposer or subcontractor will perform.

NAICS – North American Industry Classification System codes listed at <http://www.census.gov/epcd/www/naics.html>

In order to receive credit for ACDBE/DBE/DVBE/LBE/LSBE/MBE/WBE/SBE participation, the companies must be certified in the NAICS code for the specific work they will perform on the contract.

Amount Proposed – Indicate the anticipated amount to be paid to the subcontractor over the term of the contract.

Proposed Percentage – Calculate the subcontractor's share of the contract by dividing the Subcontractors Proposed Amount by the Bid/Proposal Amount.

Please note: For projects with ACDBE or DBE goals, the Code of Federal Regulations, Title 49, Part 26.55(e) allows only 60% of the Amount Proposed to be used in the calculation for a subcontractor who is a regular dealer/supplier.

Signature/Date – This form must be signed by a responsible person capable of committing the firm contractually.

Participation Level Proposed by Bidder/Proposer –

Indicate the level of ACDBE/DBE/DVBE/LBE/LSBE/MBE/WBE/SBE participation proposed by Bidder/Proposer.

Goal(s) Stated in the Request for Bid/Proposal –

The ACDBE/DBE/DVBE/LBE/LSBE/MBE/WBE/SBE goal(s) established by Procurement Services Division for the Request for Bid/Proposal.

For information regarding the certification process, please call the Department of Public Works, Centralized Certification Section at (213) 847-2684.

SUBCONTRACTOR PARTICIPATION PLAN

ATTENTION:

You MUST list ALL anticipated subcontractors, regardless of their dollar amount or percent proposed, and regardless of whether they are certified or not.

You MUST fill out ALL applicable fields complete for the Prime and all subcontractors. Failure to provide complete and legible information on this form may result in your firm not receiving full certification credit.

I certify under the penalty of perjury that the information contained on this form is true and correct and that the firms listed are the subcontractors anticipated to be utilized if this project is awarded to the above prime contractor. I agree to comply with any applicable provisions for additions and substitutions, and I further understand and agree that any and all changes or substitutions must be authorized by the LAWA Procurement Services Division prior to their implementation. An amended Subcontractor Participation Plan is required for any substitution or change to Subcontractors listed on the originally submitted Plan.

ATMP ROADWAYS IMPROVEMENTS PROJECT cGMP1 EARLY WORKS

Tab 9 Permitting Plan

March 25, 2025

Prepared by:
Skanska-Flatiron A Joint Venture

SKANSKA | FLATIRON

1.0 OVERVIEW

The goal of the permitting plan is to outline the SFJV strategy to obtaining permits for the ATMP roadways so that construction can begin. As the new roadway network lies within both private property and public Right-of-Way limits both LAWA and City of Los Angeles are responsible for making sure that SFJV can obtain permits seamlessly.

The roadways that need to be permitted have been broken up into three different areas as shown on the map below:

1. Yellow area will follow Caltrans Standards
2. Blue will follow Project Specific Standards
3. Pink will follow City of Los Angeles Standards

2.0 PERMITTING PLAN AND AHJ STRATEGY

Through various meetings with LAWA, SFJV and the applicable City agencies it has been deemed that the permitting on the project will be completed as follows:

- LADBS will be the permitting authority for all improvements with Private Properties.
- Structural and Foundation review of Bridges will be undertaken by LABOE
- Pedestrian Bridges will be reviewed and permitted by LADBS.
- For the new roadway segments that serve as direct airport connectors and do not meet functional classifications of public or private streets defined by BOE's Street Design Manual, City of Los Angeles Complete Streets Design Guide, and municipal code, LADBS will issue a use-of-land permit with a clearance for structural review by LABOE.
- LABOE will review these roadway segments and issue B-permits (as clearances) as part of the process prior to LADBS issuing the applicable land use permits.
- LABOE will not issue B-permits until Caltrans also reviews and approves sections that cross Caltrans Right-of-Way.
- LADBS will also have purview over site grading, electrical, and drainage connections on LAWA's private facilities. LABOE will also review drainage connections to public drainage systems and drainage within bridge structures.
- Improvements to existing roadway elements in the City of Los Angeles public road Right-of-Way that do not serve as direct airport connectors are anticipated to be permitted by LABOE under the B-permit process.
- The permitting approach to 96th St. will follow a Use of land permit from LADBS with a B-permit clearance from LABOE. LAWA intends to vacate this portion of public Right-of-Way and establish a private street easement for the portion of 96th St. between Sepulveda Blvd and Jetway Blvd. This road will serve a multi-use function related to airport access.
- Significant coordination will be required with the following City of Los Angeles entities to review and approve the respective components of the LAWA roadway design:
 - Los Angeles Department of Transportation (LADOT)
 - Los Angeles Department of Building and Safety (LADBS)
 - Los Angeles Bureau of Street Lighting (LABSL)
 - Los Angeles Bureau of Street Services (LABSS)
 - Los Angeles Department of Water & Power (LADWP)
 - LA Sanitation & Environment (LASAN)
 - LACFD – Los Angeles County Fire Department (LAFD)

The LABOE B-permit will be issued once LADOT, LABSS, LABSL, LABOE and LASAN give their approval.

Through meetings with LAWA, LABSL and LADBS it has been determined that Street Lighting will be permitted as follows.

- Private ROW (BLUE) – City of LA LABSL will review under a B permit. Any clearances for electrical for the Use of Land permit will be issued by LADBS.
- Public ROW (Pink) – City of LA LABSL will review.
- CALTRANS ROW (Yellow) – City of LA LABSL will review.

ATMP Street Lighting Permitting Agency and Reviewer Matrix			
Permitting Agency/Reviewer			
ITEM	Blue (Private ROW)	Pink (Public ROW)	YELLOW (Caltrans ROW)
Lighting Cables - Part of Plan Check	TBD	LABSL	LABSL
Pole and Luminaire Types	LABOE / LABOE	LABOE / LABSL	LABOE/Caltrans / LABSL / Caltrans
Pole Anchorage/ Foundation	LABOE / LABOE	LABOE / LABSL	LABOE/Caltrans / LABSL / Caltrans
Point of Service Connection and Metering	LADBS / LADBS Electrical	LABOE / LABSL / LADWP	LABOE / LABSL / LADWP
Conduits and Pull Boxes (System Appurtenances)	LADBS / LADBS Electrical	LABOE / LABSL	LABOE / LABSL

Caltrans will be the AHJ for the improvements within their right-of-way, except for facilities owned and operated by LADOT and LABSL, as well as reviewing and issuing encroachment permits for LAWA-owned structures that span over their right-of-way.

The following are the steps required to obtain an encroachment permit from Caltrans:

1. Complete the "Standard Encroachment Permit Application" (form TR-0100)
2. Attach supporting documentation, such as:
 - Plans
 - Location map
 - Environmental documentation
 - Letter of authorization
 - Surety bonds
 - Liability insurance
 - Any applicable fees
3. Submit the application and documentation to the District Encroachment Permits Office that has jurisdiction over the proposed encroachment site.

3.0 PERMITS

SFJV's permitting team have opened the following permits for scope relative to cGMP1.

Permit Number	AHJ	Description
B-Permit BR403203	LABOE	30% Design review
B-Permit BR403218	LABOE	60% DU1 Design review
B-Permit BR403219	LABOE	60% AC1 and AC2 Design review
B-Permit BR403220	LABOE	60% DU3 Design review
B-Permit BR403225	LABOE	60% DU4 Design review
B-Permit BR403226	LABOE	60% DU5 Design review
B-Permit BR403227	LABOE	60% DU2 Design review
B-Permit BR403219	LABOE	90% AC1 Design review
E-Permit PW2	LABOE	60% MW3 ATSAC and ITS
B-Permit BR403219	LABOE	90% AC2 Design review
B-Permit BR403218	LABOE	90% DU1 Design review
B-Permit BR403220	LABOE	90% DU3 Design review
B-Permit BR403225	LABOE	90% DU4 Design review
B-Permit BR403226	LABOE	90% DU5 Design review
B-Permit BR403227	LABOE	90% DU2 Design review
Pedestrian Bridges	LADBS	PB1 Design Review
Caltrans Encroachment Permit EW	Caltrans	Design Review
Caltrans Encroachment Permit MW	Caltrans	Design Review
Caltrans Encroachment Permit AT&T	Caltrans	Design Review
	LABOE	90% PW1A MOT
	LABOE	90% PW1B MOT
U-Permit 2024010875	LABOE	AT&T/Sunrise Relocation
U-Permit 2025001735	LABOE	AT&T/96 th @ Jetway
U-Permit 2025001739	LABOE	AT&T/ 98 th St
U-Permit 2024010886	LABOE	Crown Castle/96 th & Vicksburg
U-Permit 2024010876	LABOE	Spectrum/Vicksburg & Jetway

The following permits will be applied for to obtain approvals:

Permit Purpose	AHJ
Demolition Permit - Pylons	LADBS
Demolition Permit – LAX Letters	LADBS
Demolition Permit – Wall Park Building	LADBS
Demolition Permit – LACC Buildings	LADBS
Use of Land – Parcel 4	LADBS
Use of Land – Parcel 5	LADBS
Use of Land – Lot A	LADBS
Use of Land – Lot 1	LADBS
Use of Land – Lot 37	LADBS
Use of Land – Lot 38	LADBS
Various PMO Permits	LADBS

Project Management Plan

1.0 Project Management Plan (PMP)

1.1 Overview

The SFJV Project Management Plan (PMP) is the framework for our project management team. This plan is a living document and, as such, will be maintained and updated throughout the duration of the Contract, including major updates as required under PR-01 at each major design milestone: 30%, 60%, 90% and 100%. We will provide our team PMP training and each SFJV employee will be required to read and understand the plan to ensure continuity and consistency throughout our team. The plan includes companion documents for ease of understanding and organization.

1.2 Maintenance and Update of PMP

The PMP is considered a living document and, as such, is responsive and flexible. It will be continuously maintained to ensure that it is current and accurate. We will update the plan as required with the BOD, 30%, 60%, 90%, and 100% submittals and on a quarterly basis during construction.

1.3 PMP Training

The SFJV staff will be trained to fully understand and implement the ideas and concepts of the PMP for their prescribed and assigned duties. The staff will be informed and trained on any updates to the PMP and are encouraged to continuously improve upon processes and procedures defined in the plan.

1.4 PMP Outline

The PMP will be comprised of the following 25 elements as defined in PR-01 4.B.1.a.1. The elements shall be submitted separately under their respective Project Requirements Section and compiled as appendices to the overall PMP (this plan). The PMP has the scope for the DD phase as defined in the scope negotiated for Task Order PH1-TO5, and summarized in the table below:

	PR-01 4.B	SD Update Scope
1	Project Management Plan (PR-02 and PR-22)	Update
2	Traffic Management Plan (TMP)	Update
3	Construction Area Access, Phasing and Logistics Plan (PR-03)	Update
4	Safety Plan (PR-15)	Update
5	Security Plan (PR-03)	Update
6	Work Plan & Schedule (PR-04)	Update

7	Site Investigations Plan	Update
8	Design Management Plan (PR-11)	Update
9	Design Submittal Packaging Plan	Update
10	Cost Management Plan	Update
11	Project Controls Plan	Update
12	Quality Control Plan (PR-14)	Update
13	Virtual Design and Construction (VDC) and Building Information Modeling (BIM) Execution Plan (PR-21)	Update
14	Risk Management Plan	Update
15	Sustainability Plan	Develop
16	Airport Operational Readiness & Commissioning Plan (PR-26)	Deferred to Future Task Order
17	Storm Water Pollution Prevention Plan (SWPPP)	Update
18	Hazardous Materials Management Plan (HMMP)	Update
19	Environmental Monitoring and Control Plan (PR-18)	Update
20	Permitting Plan	Update
21	Third Party and Agency Coordination Plan (PR-12)	Update
22	Communication Plan	Update
23	Stakeholder Engagement and Management Plan	Update
24	Procurement and Packaging Plan (including but not limited to self-perform, subcontracting, etc.)	Update
25	Onboarding and Training/Familiarization Plan	Deferred to Future Task Order

2. Project Management and Execution

2.1 Document Control

SFJV will coordinate with LAWA and process all document control through LAWA's construction project manager software, web-based Meridian System Prolog. Skanska-Flatiron uses Procore for internal document control and will provide access to LAWA if requested, however all official transmitting and coordinating of construction documentation will be through LAWA's Prolog System.

2.2 Office Location

Co-location supports timely discussion and issue resolution. Our team's Integrated Project Office will house key project management, administrative and design management personnel. We value the opportunity to co-locate with LAWA and their PM/CM. For preconstruction SFJV is co-located with LAWA and their PM/CM at 7301 World Way West 2nd Floor. Another office will be required for the Phase 2 work to accommodate the larger Phase 2 staff, and this will be determined and included in future c/GMP's.

2.3 3rd Party Coordination

3rd party coordination will be led by Third Party Coordination manager Jill Steiner. Jill fulfills the requirements of PR-02 1.C and has been heavily involved in managing all aspects of the permit approval process for the LAWA RUE project with Skanska and the LAWA APM project with Flatiron. Jill is extremely knowledgeable and has been successful in obtaining permits and agency approvals through Caltrans, LADOT, LADBS and other AHJs, ensuring a streamlined approach to approvals. Further detail can be found in Appendix 21 – Third Party and Agency Coordination Plan.

2.4 Phasing and Logistics

SFJV will coordinate with LAWA, and all required LA City, County, and Caltrans Departments and AHJ's throughout the life of the project. SFJV will develop and maintain phasing and logistics plans that will be submitted under PR-03 as well as the requirements from PR-02 and coordinate the development of the plans with the appropriate Stakeholders throughout all stages of the Project. Preliminary phasing and logistics plans can be found in Appendix 3 – Construction Area Access, Phasing, and Logistics Plan. The completed phasing and logistics plan will be included in the GMP/CGMP proposal.

2.5 Project Meetings

All project meetings are intended to be held at the project site. Unless otherwise noted, LAWA will prepare agendas for all meetings and distribute the agenda prior to the meeting, and will distribute meeting minutes after each meeting.

2.5.1 Project Kick-off Conference

LAWA scheduled the project kick-off conference on June 20, 2023 and was attended by both SFJV and LAWA team members.

2.5.2 Design Coordination Meetings

These meetings will be scheduled as needed during the design and preconstruction phase. Primary design coordination will be with the Concourse 0 and Terminal 9 design teams.

2.5.3 Design Progress Meetings

These will be the design task force meetings where on a discipline basis the design builder facilitates LAWA's understanding of the design progress and receives input on technical matters from LAWA. These will be attended by SFJV, HNTB, and LAWA.

2.5.4 Construction Document Reviews

If LAWA requires any peer reviews or code certification of construction documents during the construction documents phase, SFJV will cooperate and coordinate with LAWA in the performance of these reviews and distribution of construction documents.

2.5.5 Preconstruction Conference

SFJV will schedule a preconstruction conference no later than 10 working days after the completion of construction documents, including LAWA, SFJV, and major SFJV subcontractors, suppliers, and other concerned parties.

2.5.6 Weekly Progress Meetings

This will be a weekly meeting with LAWA and SFJV to review and monitor progress, procedures, issues, schedules, and other concerns of the project. Per PR-02 LAWA will prepare and distribute the agenda and meeting minutes. SFJV will support LAWA with any information needed for this meeting.

2.5.7 Coordination Meetings

SFJV will hold project coordination meetings when coordination with separate LAWA contractors is needed. These are in addition to specific meetings held for other purposes such as progress meetings and pre-installation conferences.

2.6 Coordination with Work Under Separate Contracts

SFJV is aware of the central role it plays in the ATMP program with our project touching all of the other ATMP projects including Concourse 0, Terminal 9, Taxiway D&E, and the other Airfield improvement projects, as well as other LAWA projects under LAMP and other programs. SFJV will work with LAWA and LAWA's other designers and contractors from the other projects to implement interface agreements with the adjacent projects to define the coordination and hold regular coordination meetings as required for both the design and construction with the other projects. During design and preconstruction regular Design coordination meetings will be held with the design teams from the adjacent projects as described in section 2.3.2 of this PMP. During construction, coordination meetings with adjacent project construction teams will be held as described in section 2.3.7 of this PMP.

All interface agreements will be included in Appendix 1 to this PMP for reference for all project staff to understand the obligations of SFJV with the adjacent projects.

2.7 Project Organization

2.7.1 Organization Chart

The organization chart for the DD phase of the project for SFJV is included below:

2.7.2 Roles and Responsibilities

JV Executive Committee

- Provide guidance to project management
- Issue and implement company policies
- Appoint management team
- Attend periodic inspections (safety, quality) – monitor performance of both
- Attend quarterly meetings to review safety, schedule, financials
- Maintain open line of communication with SFJV team, major subcontractors, designers, and LAWA.
- Train and develop project staff
- Review cost and schedule projections - ensure action is taken on bad trends promptly

Project Manager

- Ensure safety and quality standards are being adhered to before all else
- Responsible for all financials on job
- Responsible for ensuring schedule is met
- Responsible for ensuring insurance requirements are met
- Administer the contract
- Responsible for ensuring Project staff understands roles and is on task
- Communicate and improve relations with the client
- Be the liaison between the project team and the JV executive committee

Senior Managers – Construction Manager, Design Build Manager, Estimating Manager, etc.

- Assist and support the Project Manager in the technical day to day project management responsibilities
- Ensure safety and quality standards are being adhered to before all else
- Support the Field Operations
- Administer subcontracts and purchase orders
- Provide accurate cost projections
- Be the liaison between the project team and the Project Manager
- Manage, train and develop project administrative staff
- Make arrangements for and establish location of field offices
- Monitor Project Schedule
- Monitor project costs and trends including weekly labor and monthly cost reports
- Monitor design package, shop drawing, and other submittals
- Supervise all change orders, back charges, and payment activities
- Maintain a focus on Project Close-Out for duration of the project

Safety Staff

- Work with Corporate and operations managers to ensure corporate policies are in place and being followed
- Provide and track required training
- Maintain and report required records
- Work with Superintendents and Engineers to ensure plans are in place for each task being performed
- Ensure triggers, hazards and preventative actions are identified in each plan and controls for each are being utilized in field
- Encourage Safety participation by the craft, and management
- Develop and maintain an Environmental, Health, and Safety Plan

Engineers

- Assist and support the Deputy Project Manager in the technical day to day aspects of the project
- Ensure submittals are submitted to owner accurately and timely as to not impact construction operations.
- Coordinate with and expedite subcontractors and vendors
- Ensure work plans are in place for all construction activities.
- Report costs and update quantities
- Assist field operations with Quality Control, resolve field issues and Submit RFIs
- Assist with schedule updates
- Provide daily reports

Superintendents

- Ensure all safety plans, precautions, permits, training, etc. are in place prior to starting work
- Ensure safety and quality standards are being adhered to before all else
- Manage Field Operations both long term and day to day
- Ensure work, equipment and material are laid out for manpower in advance
- Manage work to meet project schedule and budgets
- Schedule work with the owner, inspectors, community, third parties, etc.
- Coordinate work of Third Parties, subcontractors, and SFJV personnel
- Perform design constructability reviews

Design Coordinators

- Prioritize design work to meet the construction schedule
- Coordinate with other design disciplines
- Monitor and ensure designers are moving in the right direction
- Resolve issues to ensure design maintains momentum
- Coordinate constructability reviews with field operations
- Ensure design meets Owner's requirements and expectations.

QA/QC Staff

- Develop Project Quality Plan
- Ensure all Test plans, reports, procedures, requirements, etc. are met, submitted and approved.
- Coordinate testing and training
- Review Design, Equipment, and Material submittals for contract compliance
- Manage field inspectors

Scheduler

- Establish an approved Baseline Schedule
- Provide rolling schedules to LAWA and SFJV operations
- Coordinate with staff and provide monthly schedule updates
- Work with contract change department
- Analyze and ensure staff understands critical path(s)

Document Control

- Organize and process submittals, correspondence, RFIs, etc. in a timely fashion as to not impact construction operations
- Maintain a document control database with updated information which can be easily navigated by the staff
- Coordinate with the owner and other stakeholders to provide submittals in a timely, easily understandable fashion

3. Guaranteed Maximum Price (GMP) Proposals

3.1 GMP Proposals

SFJV has in initial plan of 3 (c)GMP's for the project from the proposal development, with plans to submit the cGMP's sometime after the 90% design submittals. This plan is further defined in the Cost Management Plan in Appendix 10.

(Interface agreements will be included here as they are executed with adjacent projects.

1. Introduction

Project Description

This Project focuses on roadway improvements to help reduce airport-related congestion on the local roadway system resulting in back-ups on public streets by redirecting airport traffic from local streets to new dedicated access roadways. A new system of roadways and bridges will be constructed to consolidate traffic away from Sepulveda Boulevard and Century Boulevard. This roadway system was evaluated under the California Environmental Quality Act (CEQA) and certified by LAWA on November 2021 via the ATMP Environmental Impact Report.

The overall purpose of this project is to improve the landside ground transportation systems at LAX. LAWA's aim is to make ground transportation, in and around the LAX campus, safe and efficient through the use of effective planning, design, and construction of roadways, as well as the use of technological advancements for the monitoring and control of transportation at LAX.

The goals and objectives of the Project are:

- A. Enhance the safety and efficiency of ground systems at LAX
 - a. Provide safe and convenient access for motor vehicles, pedestrians, and cyclists (where applicable)
 - b. Consolidate roadway access to and from the Central Terminal Area (CTA)
 - c. Separate airport traffic from local traffic on the roadway network
- B. Enhance the user experience of ground transportation systems at LAX
 - a. Reduce traffic congestion and queuing on local streets
 - b. Increase throughput into and out of the CTA
 - c. Enable Dynamic, demand-based transportation policies
- C. Modernize the transportation technology systems at LAX
 - a. Integrate intelligent transportation technologies and systems (global positioning systems, smart-parking, traffic monitoring, etc.)

The overall project area is illustrated in Figure 1. The proposed project improvements are bounded by the existing Sky Way to the west, the future Terminal 9 to the south, future Jetway Boulevard to the east, and future 94th Street to the north.

Figure 1: ATMP Project Site

Purpose of TMP

The purpose of this Traffic Management Plan (TMP) is to manage congestion in work zones and to minimize motorist delays during the project construction. The TMP outlines the strategies that should be implemented to minimize impacts to the traveling public during construction and outlines the roles and responsibilities of the project stakeholders prior to and during construction. The TMP documents the necessary operations and closures to construct the project efficiently/ effectively based on the baseline construction schedule and staging plan. The overall TMP has been developed by Skanska-Flatiron Joint Venture (SFJV), who is responsible for the design and construction of this project. The TMP will be approved by Los Angeles World Airports (LAWA), Los Angeles Department of Transportation (LADOT), and other appropriate agencies. With impacts to multiple agencies, coordination protocols and proposed strategies described in this report will be imperative to minimize delays along inbound routes to the CTA of Los Angeles International Airport (LAX).

The TMP is a living document that continually receives updates to meet the individual needs and expectations of the reviewing agencies and other stakeholders involved as the project design progresses.

Preferred Alternative

The Preferred Alternative selected by LAWA is shown in Figure 2 below. The following is a discussion of each roadway segment.

Figure 2: Preferred Alternative

The project constructs new elevated roadways to direct the inbound and outbound traffic to CTA from Sepulveda Boulevard and Century Boulevard and improves traffic congestion on these major local and regional highways. 96th Street will be modified to receive and send traffic from and to northbound Sepulveda Boulevard via the Sepulveda Boulevard/96th Street intersection. The return to departure (upper level) and arrival (lower level) access roads will also be reconstructed. Existing inbound and outbound ramps to the CTA along with the 96th Street Bridge over Sepulveda Boulevard will be removed. The following is a detailed list of the improvements:

- **Sepulveda Boulevard Modifications:** Sepulveda Boulevard will be modified in the northbound direction to allow construction of the Segment NE connection, removal of the existing CTA/Century

Boulevard ramp connection, and widened in the vicinity of 96th Street to facilitate connection to Segments C, G, E, and F. The southbound direction will be modified to provide access to Segments A and D, removal of the westerly sidewalks and median will be reconfigured for the proposed Segments A, D, I, P, K, and W overcrossing structure bents. A pedestrian bridge over Sepulveda Boulevard at Century Boulevard will be added.

- Century Boulevard Modifications: Century Boulevard will be modified at the intersection of Jetway Boulevard to provide for left turn lanes into the future Terminal 9 roadway by others, and modified approach from Segment P. The northern curb lines and travel way alignment between Jetway Boulevard and Vicksburg Avenue will be re-configured to fit columns for the Segments A and K overcrossing structures.
- Proposed Segment A: New roadway at grade and bridge from just south of the existing Lincoln Boulevard/Sepulveda Boulevard intersection to provide southbound traffic access into the CTA. This alignment varies from two to three lanes and is grade separated above Sepulveda Boulevard, 98th Street, and Century Boulevard.
- Proposed Segment C: New roadway at grade and bridge from the existing Sepulveda Boulevard/96th Street intersection to carry the northbound Sepulveda Boulevard traffic into the CTA via merging with Segment A. This alignment is two lanes and is grade separated to cross over Segments F and D.
- Proposed Segment D: New roadway at grade and bridge to carry the outbound CTA traffic via Segments K and W to southbound Sepulveda Boulevard. This alignment varies from one to four lanes and is grade separated above 98th Street, below Segments C and A, and above Sepulveda Boulevard.
- Proposed Segment E: Modifications to 96th Street roadway to provide access from northbound Sepulveda Boulevard to the Jetway Boulevard/96th Street intersection via a single lane that diverts from Segment C. A second lane adds from Segment A that serves traffic originating from southbound Sepulveda Boulevard.
- Proposed Segment G: New roadway at grade and bridge to provide access for outbound CTA to northbound Sepulveda Boulevard via Segment D. This alignment is one to two lanes grade separated over 96th Street (Segments E and H) and the driveway to the LAX City Bus Center.
- Proposed Segment H: Modifications to 96th Street roadway to provide access from northbound Sepulveda Boulevard to the Jetway Boulevard/96th Street intersection and ITF West. This alignment varies from one to two at-grade lanes.
- Proposed Segment I: New roadway at grade and bridge to provide access from westbound Century Boulevard into the CTA arrival level by joining to the Segment N. World Way. This alignment is two lanes grade separated over Sepulveda Boulevard and Segment D.
- Proposed Segment K: New roadway at grade and bridge connecting Segment L and Center Way to Segment D, to provide CTA outbound access to both northbound and southbound Sepulveda Boulevard. This alignment is two to three lanes and is grade separated under Segment L, and over Segments N, Sepulveda Boulevard and Century Boulevard.
- Modified Segment L: The existing structure connects CTA departures level to Segment K and provides CTA outbound access to northbound and southbound Sepulveda Boulevard will be modified by widening the structure from one to two lanes. This structure crosses over Segments P and K.
- Modified Segment L1: The existing structure from Segment L to CTA provides for the departure-to-departure return movement. This alignment remains at one lane and is grade separated over Segment N and may need some modifications due to the proposed widening of Segment L.

- Proposed Segment M: New bridge from CTA departures level joining Segment P with destination of eastbound Century Boulevard. This alignment varies from one to two lanes and is grade separated over Segment N and Sepulveda Boulevard.
- Proposed Segment N: New at grade roadway to provide arrival-to-arrival level return movement to CTA. This alignment is one lane and crosses under Segments L, M, P, K, and L1 bridges.
- Proposed Segment NE: New at grade roadway providing direct connection from northbound Sepulveda Boulevard to eastbound Century Boulevard via Segment P. It also provides access to future Terminal 9. This alignment is one lane and crosses under Segment W bridge.
- Proposed Segment P: New at grade roadway and bridge from CTA outbound arrivals level to Century Boulevard. This alignment varies from four to five lanes and is grade separated crossing under Segment L, and over Segments N and D, and Sepulveda Boulevard.
- Proposed Segment W: New bridge from CTA departures level to provide a connection to Terminal 9 roadways (to be designed and built by others). The segment joins Alignment D to provide access to northbound and southbound Sepulveda Boulevard from Terminal 9 roadways. This alignment varies from one to two lanes and is grade separated crossing over Sepulveda Boulevard, Segment NE, and Century Boulevard.
- World Way Modifications (Arrivals): At Sky Way the intersection will be modified to remove the north leg and it will become a T intersection.
- World Way Modifications (Departures): At Sky Way the intersection will be modified to remove the north leg and the traffic signal.
- Existing Roadway Removals: The project demolishes the following roadways:
 - Ramp from northbound Sepulveda Boulevard to CTA
 - Ramp from southbound Sepulveda Boulevard to Sky Way
 - 96th Street bridge over Sepulveda Boulevard
 - Vicksburg Ave from 96th Street to mid-block to 98th Street
 - Connector ramp between NB Sepulveda Boulevard and Vicksburg Ave
 - Intersection of Center Way, World Way, and outbound road to Century Boulevard
 - Road outbound to Century Boulevard including bridge over Sepulveda Boulevard and two associated loop ramps to Sepulveda Boulevard
 - Inbound road from Century Boulevard including bridge over Sepulveda Boulevard
 - West Century Boulevard west of Sepulveda Boulevard

Existing Facilities

In addition to critical roadways that are part of the CTA, the TMP also focuses on a much broader area outside of the project footprint and includes access roadways to LAX and the supporting local multi-modal transportation facilities. The following paragraphs in this section briefly describe the main roadways and supporting facilities in the vicinity of the project area (Figure 3). Roadway classifications per the LADOT's Mobility Plan 2035 are provided where available through the Bureau of Engineering Department of Public Works NavigateLA platform. The surrounding roadway network feeds into three traffic arteries that provide principal access to the CTA: (1) Northbound Sepulveda Boulevard using the north-to-west connectors, (2) Southbound Sepulveda Boulevard using the Sky Way connection, (3) Westbound Century Boulevard using connections to World Way.

Figure 3: Study Area Roadways

Automated People Mover (APM)

The APM is an electric train system on a 2.25-mile-long elevated guideway that will provide free transportation services for the passengers and the airport employees within the CTA and outside of the CTA. The APM is expected to open in 2025.

Intermodal Transportation Facility (ITF) East and West

The ITF East and West will provide public parking, passenger pick-up and drop-off areas, and amenities such as waiting areas and shuttle services for the passengers and the airport employees. The ITF East will be bounded by 94th Street to the north, 98th Street to the south, the Consolidated Rent-A-Car (ConRAC) facility to the east, and Aviation Boulevard to the west. The ITF West will be bounded by Westchester Boulevard to the north, 98th Street to the south, Airport Boulevard to the east, and Jetway Boulevard to the west. While the public parking structure at the ITF West is currently open, full operation of the ITF West and ITF East is expected to begin in 2025.

Consolidated Rent-A-Car (ConRAC)

The ConRAC facility will provide a centralized location for rental car agencies serving the airport. The ConRAC facility will be bounded by Arbor Vitae Street to the north, 98th Street to the south, La Cienega Boulevard to the east, and Aviation Boulevard and the ITF East to the west. The ConRAC facility is expected to open in 2025.

LAX-it

LAX-it is a drop-off/pick-up area outside of the CTA, located east of Sky Way and north of World Way (lower level) for passengers who use taxi or rideshare application services. Free transportation services between the CTA and LAX-it is provided via shuttle buses. While LAX-it is currently in operation, the facility will be permanently removed with the construction of Concourse 0. All rideshare/shuttle operations will be moved to ITF West.

Fire Station

There is a fire station (Los Angeles Fire Department Station 51) located at the southwest corner of the Terminal 8 in LAX. The access into the fire station is through Post Way which connects to Center Way. There is an egress connection that provides access directly to southbound Sepulveda Boulevard.

Jetway Boulevard

When fully constructed, Jetway Boulevard will extend north-south from Westchester Parkway to Century Boulevard. It consists of four lanes, two in each direction along with a painted median to accommodate northbound and southbound left-turn lanes. On-street parking is prohibited on both sides of the road. Sidewalks are provided on both sides. The posted speed limit is 25 miles per hour (mph). The segment between Westchester Parkway and north of 96th Street is open but the segment from north of 96th Street to Century Boulevard is still under construction and not open to traffic. It provides a north-south connection between Century Boulevard and ITF West (including the APM station). Parking facilities are provided as part of the APM to facilitate people intend to use the service. Bike lanes are proposed to be installed along Jetway Boulevard.

Airport Boulevard

Airport Boulevard extends north-south from 74th Street to Century Boulevard. North of La Tijera Boulevard, Airport Boulevard is a two-lane roadway (one lane in each direction), traveling through residential neighborhoods, with parking available on both sides. Sidewalks are also provided on both sides.

South of La Tijera Boulevard, Airport Boulevard is a four-lane roadway (two lanes in each direction along with a painted median to accommodate southbound left-turn lanes) with a posted speed limit of 35 mph. On-street parking is allowed at some locations in the east side, but parking restrictions exist on along the entire west side of the roadway. Sidewalks are also provided on both sides of the street. There is no bike lane provided with the exception of the segment between Westchester Parkway and Manchester Avenue, where a bike lane is striped northbound and southbound.

The section between 98th Street and Westchester Pkwy is classified as Modified Boulevard I. The section between Century Boulevard and 98th Street and the section between Westchester Pkwy and La Tijera Boulevard is classified as Boulevard II. The section north of the La Tijera Boulevard intersection is classified as Collector.

Century Boulevard

Century Boulevard is the LAX's main east-west local connection with direct connectors that feed the CTA departures and arrivals. Century Boulevard is generally three lanes in each direction with a raised median in the study area. Extra lane capacity is provided as Century Boulevard nears the airport facilities. On-street parking restrictions exist on both sides of the roadway throughout the study area. Several hotel and office facilities are accessed via Century Boulevard. Century Boulevard is classified as a Boulevard I, west of Avion Drive and classified as a Modified Boulevard I between Avion Drive and I-405. No striped bike lanes are available along this roadway, and it serves Metro Bus Route 117. During elevated airport demand, Century Boulevard experiences heavy congestion in the WB direction that extends to Airport Boulevard during the evening hours. The posted speed limit along Century Boulevard is 35 mph.

Sepulveda Boulevard

Sepulveda Boulevard is a major north-south roadway that extends through much of the Los Angeles Greater Region and then transitions into Pacific Coast Highway to the south. In the vicinity of LAX, Sepulveda Boulevard is generally three lanes in each direction with portions that expand to four lanes in each direction. Sepulveda Boulevard is a critical connection to the CTA from I-105 (via a tunnel that traverses under the main southern runways) and coastal cities to the north. Airport traffic that does not chose Century Boulevard as a route will chose northbound or southbound Sepulveda Boulevard as their main route in and out of the CTA. Sepulveda Boulevard is classified as a Boulevard I throughout the project area. Sidewalk facilities are generally provided on both sides of Sepulveda Boulevard with the exception of the tunnel area, where pedestrian and bicycle activities are restricted. Bike lanes are provided along Sepulveda Boulevard north of Manchester Avenue; however, are not available near the connections with the CTA. Speed limits in the study area vary from 35 to 40 mph. Culver CityBus Routes 6 and R6 as well as Metro Bus 8 and 232 use Sepulveda Boulevard to provide transit connections to the airport facilities.

Sepulveda Boulevard is generally congested during both peak periods due to the constrained capacities at the airport connections. Queues may develop in both directions that extend back to the I-105 interchange (northbound) and Manchester Boulevard (southbound).

Westchester Parkway

Westchester Parkway is an east-west roadway that extends from Pershing Drive (west of LAX) and continues as Arbor Vitae Street east of the intersection of Airport Boulevard. Westchester Parkway is two lanes in each direction throughout the study area. With the exception of some blocks east of Sepulveda Boulevard, on-street parking is restricted in both directions of this roadway. Westchester Parkway is classified as a Boulevard II west of Will Rogers Street and as a Modified Boulevard II east of Jenny Avenue. The posted speed limit along Westchester Parkway is 40 mph in the study area. Westchester Parkway serves transit line Metro Bus 111 as an east-west route north of LAX. A striped bike lane is provided in each direction of Westchester Parkway, west of Sepulveda Westway and it also includes a wide landscaped or striped median.

Aviation Boulevard

Aviation Boulevard is a north-south roadway east of LAX that provided connections to the ConRAC and ITF East. Aviation Boulevard is generally two lanes in each direction from I-105 to Manchester Avenue. Aviation Boulevard is classified as a Boulevard II south of 98th Street and Modified Boulevard II between 98th Street and Arbor Vitae Street. Sidewalks along the northbound direction are provided between Imperial Highway and 111th Street. Sidewalks continue on the northbound side north of 104th Street and eventually on both sides of Aviation Boulevard, north of Arbor Vitae Street. The posted speed limit along Aviation Boulevard is 40 mph. On street parking is restricted for most of the study area limits, with the exception of small portions between Arbor Vitae Street and Manchester Boulevard. Transit routes Big Blue Bus routes 3 and R3, Culver CityBus routes 6 and R6, Metro Bus routes CKL, GTrans route 5 and Torrance Transit route 8 all use Aviation Boulevard. Bike lanes are available in both directions of Aviation Boulevard, south of Century Boulevard. There is currently a temporary roadway serving traffic along a portion of Aviation Boulevard north of Century Boulevard to facilitate construction of the 96th Street underpass.

La Tijera Boulevard

La Tijera Boulevard is a northwest-southeast roadway that connects to Westchester Parkway north of LAX. La Tijera Boulevard is generally two lanes in each direction and has a posted speed limit of 40 mph. La Tijera Boulevard is classified as a Boulevard II throughout the project area. Sidewalks are generally available on both sides of the roadway; however, La Tijera Boulevard does not provide striped bike lanes. On-street parking is allowed on both sides between Sepulveda Boulevard and Manchester Avenue. La Tijera Boulevard provides transit service to Metro Bus Route 102.

Lincoln Boulevard

Lincoln Boulevard is an east-west and then north-south roadway that connects to Sepulveda Boulevard. North of LAX, Lincoln Boulevard continues as State Route 1 into the coastal cities west of Los Angeles. In the study area Lincoln Boulevard is generally two lanes in each direction with a posted speed limit of 40 mph. Lincoln Boulevard is classified as a Boulevard I. Sidewalks are provided on each side of the roadway; however, bike lanes are not available. Lincoln Boulevard provides transit service to Big Blue Bus routes 3 and R3.

Imperial Highway

Imperial Highway is an east-west arterial that parallels I-105 to its terminus located south of LAX. In the study area, Imperial Highway is generally three lanes in each direction with a wide striped median. On-street parking is restricted in both directions of Imperial Highway due to the striped bike lanes that are available between Sepulveda Boulevard and Aviation Boulevard. Sidewalks are available on both sides of Imperial Highway. The posted speed limit in the study area is 40 mph. Imperial Highway provides transit service to LADOT Commuter Express Route 438, Beach City Transit, and Torrance Transit Route 8.

The Knot

"The Knot" is a term used to reference the three-level interchange that crosses over Sepulveda Boulevard adjacent to the CTA. There are connector ramps that provide access from Sepulveda Boulevard to the upper and lower levels in the CTA. The Knot also includes direct connectors to and from Century Boulevard. There are ramps from upper and lower level of the CTA to northbound/southbound Sepulveda Boulevard and eastbound Century Boulevard. Two connections are provided that serve as airport returns from upper and lower of the CTA back to CTA. There are two loop ramps that connect Sepulveda southbound to Century Boulevard eastbound and Century Boulevard eastbound to Sepulveda Boulevard northbound. The APM link also crosses over the Sepulveda Boulevard interchange and connects to CTA on Center Way.

CTA Upper Level (World Way)

CTA upper level is a one-way loop that consists of three traffic lanes plus two drop off/pick up lanes. The departure terminals are located on the outer side of the road and parking structures are located on the inner side. Two signalized pedestrian crossings are available on the upper level that provide access from Parking Structures 3 and 4 to Tom Bradley International Terminal. There are two connection roads, East Way and West Way that are perpendicular to the loop with East Way being a two-way road and West Way being one way westbound for the upper-level loop. Sidewalks are provided along the terminal side of the loop. The posted speed limit is 25 mph. No bike lanes are provided along CTA upper level.

CTA Lower Level (World Way)

CTA lower level is a one-way loop with three to five lanes and two drop off/pick up lanes. The arrival terminals are located on the outer side of the World Way and parking structures are located on the inner side. There are 18 signalized pedestrian crossings along the lower-level loop that provide access from the inner parking structures to the terminals. There are two connection roads, East Way and West Way that are perpendicular to the loop. Sidewalks are provided along the terminal side of the loop. The posted speed limit is 25 mph. No bike lanes are provided along CTA lower level.

Sky Way

Sky Way is a two-way north-south roadway that provides three traffic southbound lanes and two northbound lanes. Sky Way connects southbound Sepulveda Boulevard from north of LAX and splits to World Way upper and lower level prior to entering the CTA. There are no bike lanes nor bus routes available on Sky Way. A sidewalk is provided on the south/east side of Sky Way (lower level). The posted speed limit is 25 mph. In its current operations, Sky Way provides the main access to the LAX-it facility from the northbound and southbound directions.

Center Way

Center Way is a one-way eastbound road that connects the inner CTA facilities such as the parking structure exits, air traffic control, the Theme Building, and the LAX administration buildings. Center Way is generally three lanes but has added lanes when merging into other roadways as it exits the CTA. There are no bike lanes along Center Way and sidewalks are provided in at least one direction.

Vicksburg Avenue

Vicksburg Avenue is a north-south roadway that connects Century Boulevard and 96th Street and provides access to hotel establishments and several parking facilities. To the north, Vicksburg Avenue provides an alternate connection from the east side of Sepulveda Boulevard to the west side via the 96th Street Bridge. Vicksburg Avenue is generally one lane in each direction south of the bridge. At the bridge, two lanes in each direction are provided. A direct connection between northbound Sepulveda Boulevard and Vicksburg Avenue exists via a signalized intersection at Century Boulevard. Sidewalks are provided in both directions south of the bridge but are only limited on one side over Sepulveda Boulevard. Metered parking spaces are available on both sides of Vicksburg Avenue near Century Boulevard and restricted elsewhere.

Little Century Boulevard

"Little Century" Boulevard is the westbound extension of Century Boulevard, downstream of the direct ramps to CTA, that connects to northbound/southbound Sepulveda Boulevard and continues to the outside facilities in the lower level of the CTA. Little Century Boulevard also provides connection to Vicksburg Avenue and the surrounding hotel and parking facilities. A sidewalk is provided on the north side of the road. On-street parking is not permitted along Little Century Boulevard.

Concurrent Projects

The proposed project is part of the overall LAWA Airfield and Terminal Modernization Project that proposed a series of infrastructure improvements to maintain LAX as a world-class airport. The proposed project discussed in this TMP report is focused on the landside improvements that includes the project's access roadways and reconfigurations. Two major airside improvements are proposed as part of the larger program. Details for each project are as follows:

- Concourse 0 is a proposed expansion of Terminal 1, which currently serves domestic and international flights. Concourse 0 will be located north of World Way and to the west of Sepulveda Boulevard. Concourse 0 will repurpose the land currently occupied by LAX-it and the Sky Way access to the CTA. The landside construction of Concourse 0 is expected to occur after the proposed project is completed.
- Terminal 9 is a proposed new international terminal that will be located to the east of Sepulveda Boulevard and to the south of Century Boulevard. Access to this terminal will be via Century Boulevard at a signalized intersection approach that will connect to Jetway Boulevard. Terminal 9 will have a connection from the CTA via an elevated roadway that will be grade-separated over Sepulveda Boulevard and connect to the pick-up/drop-off levels of the proposed terminal. Both main access points will connect to a two-level (upper and lower) inner roadway system similar to the CTA. While the proposed terminal construction will occur concurrently with the proposed project, the opening day will be after the proposed roadways and reconfigurations for ATMP are completed. Details for the Terminal 9 project will evolve as this TMP report is revised in later phases of this project.

2. Stages of Construction

The overall approach to the construction staging was centered around the handling of existing traffic accessing the LAX supporting facilities and the CTA while the new proposed access roadways and bridges are being constructed. Due to the volume of traffic traveling through the principal arterials into/out of the CTA, it is not possible to stage construction in a manner that would close/reroute more than one principal arterial at the same time. The closure of one principal arterial will lead to additional vehicle delay that can be minimized with temporary mitigation measures during construction. The closure of two principal arterials at the same time would lead to catastrophic traffic impacts to travelers into/out of the CTA that cannot be mitigated. Therefore, the SFJV developed the phasing and sequencing of work accordingly. The current construction staging approach does not interrupt any of the main principal arterials into the CTA for long-term periods.

The project will be constructed in six major stages, building as much of the project outside of active roadways as possible while keeping traffic on existing routes. Construction will begin with the area north of Century Boulevard focusing on building inbound access while preserving inbound access to the CTA via Sepulveda Boulevard. Once the inbound Sepulveda Boulevard movements are complete the focus will be on the area south of Century Boulevard to complete outbound CTA access to both Century Boulevard and Sepulveda Boulevard.

Table 1 below highlights the goal of each stage of construction and provides a list of construction activities and where traffic will be located during each stage. The Preliminary Phasing Plans are depicted in Appendix A. Note that the plans and exhibits attached to this TMP are preliminary (60% level at the time of this report preparation). Staging plans and associated analysis will be continually updated and revised as design and construction activities advance to later phases of the project.

Table 1: Construction Phasing and Traffic Handling

Stage/Phase	Construction Activities	Traffic Handling
Stage 1 Phase A	<ol style="list-style-type: none"> 1. Build temporary pavements for use in following Stages. 2. Build Wall J-2. 3. Build RC box culvert. 	<ol style="list-style-type: none"> A. Permanently close NB Sepulveda Blvd to Vicksburg Ave ramp. B. Permanently close west side of 96th St. C. Temporarily close EB Century Blvd to NB Jetway Blvd double left turn lanes. Detour to Airport Blvd to 98th St. D. Permanently close Sepulveda west side sidewalk, detour pedestrians. E. Reduce WB Little Century to 1 lane. F. Reduce SB Sepulveda Blvd to 3 lanes. G. Temporarily reduce EB Century Blvd to 2 lanes, 3 EB lanes with NB Sepulveda Blvd to EB Century Blvd add lane. H. Permanently drop 3rd add lane on WB Century Blvd to World Way. I. Provide for single left for EB World Way return to arrivals.
Stage 1 Phase B	<ol style="list-style-type: none"> 1. Build temporary J pavement for use in following stages. 	<ol style="list-style-type: none"> A. Shift 3 lanes EB Century Blvd traffic to temp widening. B. EB Century Blvd to NB Jetway Blvd lefts remain closed.
Stage 2 Phase A	<ol style="list-style-type: none"> 1. Construct foundations for L bridge and retaining walls. 2. Construct foundations for bridges north of 98th St & west of Century Blvd. 3. Construct center A and D bridge shafts/columns on Sepulveda Blvd. 4. Construct pedestrian bridge over Sepulveda Blvd. 	<ol style="list-style-type: none"> A. Shift WB Little Century to CTA Departures onto Temp J pavement. B. Close WB World Way return road to Sky Way/Arrivals. C. Shift Arrivals to Arrivals return road to temp pavement. D. Reduce Jetway Blvd to 1 lane each direction at Century Blvd. Provide left turn lanes at 98th St. All lanes open at 96th St. E. Reduce WB Little Century to 3 lanes at Sepulveda Blvd. F. Reduce NB Sepulveda Blvd to 3 lanes at Little Century. G. EB Century Blvd to NB Jetway Blvd lefts remain closed. H. Close Vicksburg Ave between 98th St and 96th St. I. Reduce 96th St to 1 lane each direction between Vicksburg Ave and west of Jetway Blvd. J. Divert 96th St traffic to Vicksburg (96th St) bridge over Sepulveda Blvd to and from CTA.
Stage 2 Phase B	<ol style="list-style-type: none"> 1. Construct foundations for A bridge west of Jetway Blvd. 2. Construct A and D bridge abutments/walls west of Sepulveda Blvd. 3. Construct retaining walls for bridges north of 98th St & west of Century Blvd. 4. Construct L bridge superstructure. 5. Construct pedestrian bridge over 96th St. 6. Construct G bridge foundations. 	<ol style="list-style-type: none"> A. Construct G bridge foundations. B. EB Century Blvd to NB Jetway Blvd lefts, Center Way, 96th St remain closed. C. Divert pedestrians on Century Blvd to Pedestrian bridge over Century Blvd. Close crosswalk on Sepulveda Blvd.

Table 1: Construction Phasing and Traffic Handling

Stage/Phase	Construction Activities	Traffic Handling
Stage 2 Phase C	<ol style="list-style-type: none"> Construct A and D bridge superstructures. Construct A, D, E, F and G ramp pavements. Construct SB Sepulveda Blvd to A ramp temporary ramp connection. 	<ol style="list-style-type: none"> Close 98th St between Sepulveda Blvd and commercial drives. Open Center Way. EB Century Blvd to NB Jetway Blvd lefts, 96th St remain closed.
Stage 2 Phase D	<ol style="list-style-type: none"> Construct D and G bridge superstructures west of Jetway Blvd. 	<ol style="list-style-type: none"> Open 98th St. EB Century Blvd to NB Jetway Blvd lefts, 96th St remain closed
Stage 3 Phase A	<ol style="list-style-type: none"> Construct NB Sepulveda Blvd pavement widening. Construct EB 96th St pavement west of Jetway Blvd. Construct of WB 96th St west of Vicksburg Ave. Construct northside of J pavement. 	<ol style="list-style-type: none"> Divert peds to Ped bridge over 96th St. Close crosswalk on 96th St. EB Century Blvd to NB Jetway Blvd lefts, 96th St remains closed.
Stage 3 Phase B	<ol style="list-style-type: none"> Construct southside of J pavement. Construct A ramp tie into to existing pavement east of Sepulveda Blvd. 	<ol style="list-style-type: none"> Shift J ramp traffic to build north side. EB Century Blvd to NB Jetway Blvd lefts, 96th St. remains closed.
Stage 4 Phase A	<ol style="list-style-type: none"> Construct remaining portion A ramp retaining wall off SB Sepulveda Blvd. Construct I bridge foundations and retaining wall. Demo existing NB Sepulveda Blvd to CTA hook ramp bridge. 	<ol style="list-style-type: none"> Shift NB and SB Sepulveda to new A ramp into CTA. Close Sky Way. Open EB 96th St from Sepulveda Blvd to 96th St. EB Century Blvd to NB Jetway Blvd lefts remain closed.
Stage 4 Phase B	<ol style="list-style-type: none"> Construct remaining portion A ramp pavement off SB Sepulveda Blvd. Construct I bridge superstructure and ramp pavement. 	<ol style="list-style-type: none"> EB Century Blvd to NB Jetway Blvd lefts remain closed.
Stage 4 Phase C	<ol style="list-style-type: none"> Construct D bridge foundations. Demo existing WB Century Blvd bridge over Sepulveda Blvd. 	<ol style="list-style-type: none"> Shift WB Century Blvd traffic to CTA arrivals to new I ramp. Shift SB Sepulveda Blvd to CTA to new pavement on north end. EB Century Blvd to NB Jetway Blvd lefts remain closed.
Stage 5 Phase A	<ol style="list-style-type: none"> Construct D bridge superstructure. Construct K and P bridge foundations. Construct WB 96th St pavement between Jetway Blvd and existing Vicksburg Ave. Construct remaining G ramp pavement and retaining walls. Construct SB Sepulveda Blvd widening. 	<ol style="list-style-type: none"> Close SB Sepulveda Blvd to EB Century Blvd loop ramp. Keep access to Post Way. Close CTA arrivals to arrivals return road. Close WB 96th St to 96th St bridge. EB Century Blvd to NB Jetway Blvd lefts remain closed.
Stage 5 Phase B	<ol style="list-style-type: none"> Construct K and P ramp pavement. Construct K and P superstructure. Construct portion of N ramp 	<ol style="list-style-type: none"> Open WB 96th St between Sepulveda Blvd and Jetway Blvd. EB Century Blvd to NB Jetway Blvd lefts remain closed.

Table 1: Construction Phasing and Traffic Handling

Stage/Phase	Construction Activities	Traffic Handling
Stage 6 Phase A	<ol style="list-style-type: none"> 1. Construct portion of NE ramp pavement. 2. Construct remaining portion of N ramp. 3. Demo existing EB CTA bridge over Sepulveda Blvd. 	<ol style="list-style-type: none"> A. Shift CTA outbound traffic to new K, P and D ramps and bridges to NB/ SB Sepulveda Blvd and EB Century Blvd. B. EB Century Blvd to NB Jetway Blvd lefts remain closed.
Stage 6 Phase B	<ol style="list-style-type: none"> 1. Construct M ramp and bridge. 2. Construct remaining portions of EB Century Blvd pavement west of Jetway Blvd. 	<ol style="list-style-type: none"> A. EB Century Blvd to NB Jetway Blvd lefts remain closed.
Stage 6 Phase C	<ol style="list-style-type: none"> 1. Demo existing CTA departures bridge over Sepulveda Blvd. 2. Demo existing NB Sepulveda Blvd to EB Century Blvd ramp and retaining walls. 3. Construct remaining EB Century Blvd pavement. 	<ol style="list-style-type: none"> A. Open EB Century Blvd to NB Jetway Blvd and SB Jetway Blvd to EB Century Blvd left turn lanes. B. Shift CTA departures traffic to new M bridge and ramp.
Stage 6 Phase D	<ol style="list-style-type: none"> 1. Construct remaining portions of NE ramp and widening on NB Sepulveda Blvd NB. 	

Blvd=Boulevard; Ave=Avenue; St=Street, Hwy= Highway; Pkwy=Parkway; Rd=Road; Dr=Drive; NB= Northbound; SB=Southbound; EB= Eastbound; WB= Westbound; NE=Northeast

3. Mitigation Measures

Application of traffic control devices or mitigation strategies will be consistent with the standards outlined in the Manual on Uniform Traffic Control Devices (MUTCD) and Caltrans guidelines. These standards ensure that all traffic control devices, such as signage, signals, and roadway markings, are appropriately placed, designed, and maintained to protect the safety of drivers, pedestrian, and workers within the work zone.

4. TMP Strategies

This section describes the TMP strategies that may be implemented throughout all stages of the project. Caltrans Transportation Management Plan Guidelines (2015) defines the following six categories of TMP operational and demand management strategies that are designed to minimize the traffic effects during periods of construction activities:

- **Public Information:** Strategies in this category are designed to inform motorists of potential closures or delays prior to initiating their trips so that alternative plans can be considered. Since the majority of the affected traffic in the study area is airport traffic, there are effective ways to raise traveler awareness through various media outlets. Public awareness through this strategy can greatly relieve the congestion anticipated due to project construction.
- **Motorist Information:** Strategies in this category involve information disseminated to motorist real-time at key decision points as they approach a work zone or potential closures to generate project diversion. Key information available are alternative routes, total expected travel times, description of the closure downstream. Motorists informed of the length, intensity, and reasons for delays are less likely to become stressed or further contribute to congestion due to the project.
- **Incident Management:** Strategies in this category utilize existing protocols and systems to provide real-time solutions to a traffic incident. Transportation management centers, traffic management teams, and implementation of intelligent transportation systems are effective ways to reduce potential congestion as quickly as possible.
- **Construction Strategies:** Strategies in this category provide clear separation between worker and motorist for construction safety, streamline the construction of the project while maintaining the continuity of existing roadway facilities, and minimize the true impact of construction by considering congested traveling peaks in the planning of necessary minor and major closures.
- **Demand Management:** Demand management strategies work to attempt to reduce peak period travel through a work zone by varying work hours and/or encouraging carpooling/mass transit alternatives. Reduced parking or transit fees may be implemented to encourage commuters to travel together. Inbound travelers are expected to have various traveling alternatives during construction once all transportation facilities around the project area particularly the APM are completed. This can prove to be the most effective strategy to minimize traveling delays to airport passengers.
- **Alternate Routes (or Detours):** This strategy can give the opportunity to the motorist to completely avoid a work zone and the related congestion. Detours are closely examined with the local agencies to determine the effectiveness and supplemental strategies to enhance vehicular throughput during construction. This is done by adjusting signal timing at critical intersections or assigning traffic control officers during the congested peak periods. While the analysis in this TMP is focused on the proposed primary detour, secondary detours may be applicable to reduce delays for airport entering and exiting traffic.

As previously discussed, SFJV will continue to update the TMP as more information becomes available for each of these strategies based on continuous coordination meetings with LAWA, LADOT, and other local agencies throughout the design phase of the project. SFJV has added Fryman Management to the team that will serve as the MOT Management contractor, under the direction of Ross Fryman. Fryman Management will be responsible for the implementation of the TMP strategies described in the subsections below and will lead the coordination efforts with LAWA, Caltrans, City of Los Angeles, and the local agencies.

Public Information

Public Information

SFJV is responsible for working closely with and supporting LAWA, LADOT, Caltrans, and other affected local agencies to notify all affected audiences about the construction impacts.

Motorist Information

Changeable Message Signs (CMS)

These permanent overhead message signs are placed along roadways to notify road users of lane and road closures, work activities, traffic incidents, potential work zone hazards, traffic queues (backups), travel times, or delay information, as well as alternate routes in or around the work zone. Coordination with the local agencies will be needed to determine which existing CMSs are available for use during major construction activities.

There are two existing CMSs available within the project area. There are two "Gateway to LAX" CMS signs. One is located one on Century Boulevard and the other on Imperial Highway facing westbound traffic travelling to the airport. However, the "Gateway to LAX" signs are no longer operational due to outdated communication protocols.

New CMS signs installed as part of the project may be used to support traffic control operations as they come online in later phases of the project.

Portable Changeable Message Signs (PCMS)

PCMS are some of the most effective ways to alert drivers of downstream lane closures, full closures, active/upcoming detours, and construction delays. As part of the overall maintenance of traffic strategy, PCMS will be strategically placed at locations where motorists are expected to seek alternative routes and avoid downstream congestion. Specific locations of these PCMS will be identified in the detour and detailed traffic handling plans during a later design phase of this project.

Additional PCMS will be made available during the project and may be placed and operated as deemed necessary.

During construction, PCMS will be checked nightly and fixed or replaced as needed so that that they are in proper working condition.

Temporary Motorist Information Signs

Ground mounted signs are another effective strategy to alert motorists about upcoming construction activities, changes in downstream lane configurations, and proposed detours.

Signs will be used during the construction of the project and these signs shall be placed at appropriate locations to guide motorists through the construction zones and detour routes. Ground mounted signs will be maintained and updated to keep information current and accurate.

Ground mounted signs will also provide advance warnings to motorists of future roadway and/or intersection closures.

Specific locations of these ground-mounted signs will be identified in the detour and detailed traffic handling plans during a later design phase of this project.

Mobile Applications

SFJV/HNTB will support LAWA operations with coordination and outreach to mobile application developers to ensure proper information is presented to motorists during construction activities that impact roadways.

Incident Management

During the construction of the project, SFJV will support LAWA Traffic Management Center (TMC) in identifying, assessing, responding to, and resolving disruptions that occur and impact traffic. The goal is to minimize the impact of incidents on the project's productivity while maintaining airport operations. SFJV will work closely with LAWA Landside Operations in managing Tier 1 (Emergencies) and Tier 2 (Incidents) throughout the LAWA Box.

Tier 1 – Project Emergency*

- | | |
|------------------------|---------------------------|
| • Fire: | 911 or (424) 646-7911 |
| • Life Safety/Medical: | 911 or (424) 646-7911 |
| • Environmental: | 911 or (424) 646-7911 |
| • Property: | 911 or (424) 646-7911 |
| • ARCC: | (424) 646-5292 – Option 5 |
| • LAWA Landside Ops: | (310) 654-3094 |

*In case of life-threatening emergency, every employee is trained and empowered to contact emergency response service(s) if needed or required.

Tier 2 – Incident Response Notification (Verbal)

In the event of an incident or injury, SFJV shall immediately notify the following:

- | | |
|----------------------------------|----------------|
| • ARCC | (424) 646-5292 |
| • LAWA Landside Ops | (310) 654-3094 |
| • LAWA Traffic Management Center | (424) 646-5862 |
| • LAWA ATMP Safety Manager | (###) ###-#### |
| • LAWA ATMP Project Manager | (###) ###-#### |

Tier 2 – Incident Response Notification (Written)

SFJV shall provide written notification within 1 hour of an incident, regardless of the severity.

The written Initial Notification Form, at a minimum, shall include the following:

- What the nature of the incident was?
- Who was directly involved in the incident?
- The date, time, and location of the incident?
- Why the incident occurred?
- What initial actions were taken?

Within that first hour of the incident, with the exception of rescue and emergency procedures, the Contractor shall secure the area. The incident scene shall not be disturbed until it has been released by the investigating official. When necessary, the contractor in conjunction with Airport Operations will modify construction activities or lane closures in the event of an incident to maximize traffic flow.

Construction Strategies

Construction Staging

Construction staging is designed to provide the maximum working envelopes for construction activities while minimizing the effects on lane configurations on the existing operational roadways. As described in Table 1 and detailed in Appendix A, the design team has determined a preliminary construction phasing approach that divides the project construction into six stages.

Traffic Handling Plans

Traffic handling plans are prepared based on the construction staging approach. These plans provide details on temporary lane configurations (including lane widths), roadside signage, PCMS placement, overnight closures areas, and proposed work zones. Traffic handling plans are supplemented with temporary lighting plans, temporary signal plans, temporary drainage plans, and other temporary electrical elements that are affected by construction. Traffic handling will fall into two categories, long-term static

closures and off-peak dynamic closures. Long-term static closures are detailed in the MOT Staging Plans prepared in the milestone design phases. Dynamic closures will be detailed through the Area Shutdown Request (ASR)/LAWA Impact Request (LIR) and Worksite Traffic Control Plan (WTCP) processes. A chart showing the assumptions regarding hours, location, and quantity of closures is included in Appendix B.

Full Facility Closures

This strategy involves complete closure of a roadway (either in one or both directions). Full closures can minimize the duration of the project and improve worker safety. Full closures for this project will be brief (intermittent, off-peak). Full closures are anticipated along Sepulveda Boulevard, Century Boulevard, 98th Street, and 96th Street for falsework setup and bridge demolitions. Details of the anticipated full closures will be available as the preliminary phasing concept advances into detailed design, and the assumptions are detailed in Appendix B.

Night Work

To reduce the impacts to motorists, bicyclist, pedestrians, and adjacent businesses, work hours for certain construction activities will occur during the nighttime period (the end of the evening peak period to the beginning of the morning peak period). Night work allows for more lane to be closed due to lower traffic volumes, which increases work productivity and provides for a safer work zone for the contractor. Details of the anticipated night work will be available as the preliminary phasing concept advances into detailed design and are included in Appendix B.

Pedestrian/Bicycle/Transit Access Improvements

Where pedestrian, bicycle, and transit routes are temporarily blocked by construction closures, the Contractor will coordinate with the local agencies, appropriate property owners, and relevant parties in order to provide alternative access. Pedestrian, bicycle, and transit will be monitored to determine the effect of the street closures. Pedestrian facilities will be maintained whenever feasible. Temporary pedestrian facilities will comply with ADA requirements and will be clearly signed with temporary lighting as required. Temporary and permanent bus stop relocations will be coordinated with the appropriate transit agencies and route diversions will consider minimizing disruption caused by construction while preserving transfer opportunities.

Maintain Business Access

Construction activities and potential closures will be coordinated with the local agencies and property owners. When construction conflicts with a business driveway (or driveways), access will be maintained at all times on at least one driveway during construction. If only one driveway exists, the driveway construction will be staged so that one half of the driveway is open at all times. If all driveway options are exhausted, then construction activities will be planned around the business hours. In the event that access cannot be maintained, alternate routes may also be provided. Special attention has been given to the businesses directly impacted by the project including but not limited to: the Gateway LAX business district, Hyatt Regency Hotel, H Hotel, Sheraton Hotel, WallyPark, and Joe's Parking.

Coordination with Adjacent Construction Projects

SFJV will coordinate with adjacent projects as needed to support LAWA's overall program and ensure operations progress as smoothly as possible. To date SFJV has participated in coordination meetings with Terminal 9, Concourse 0, the CTA Landscaping project, LAWA's wayfinding project, Taxiway D&E, ATSAC hub relocation, among others and will continue to coordinate.

Demand Management

Transit Service Improvement

Where appropriate, transit service improvements may include the modification of transit schedules or routes, increase frequency, or the establishment of transit service in or near the project corridor. Temporary

bus stops and route diversions will be implemented as a result of project construction and closure activities. Short term bus stop closures should be coordinated with [TBD] center at XXXXXX@XXXXXXXXX or XXX.XXX.XXXX two (2) weeks prior to a change. Construction related bus stop signage and information shall be provided 3-4 weeks before construction begins at bus stops. Long term bus stop relocations or closures being affected longer than two (2) months should be coordinated with [TBD] department at XXXXXX@XXXXXXXXX or XXX.XXX.XXXX four (4) weeks prior to a change.

The existing bus stop locations within the study area is shown in Figure 4 Alternative drop off/pick up locations for the affected bus stops will be coordinated with LAWA and the affected transit agencies.

The airport patrons will be encouraged to use the APM to commute between CTA and ITF East and West.

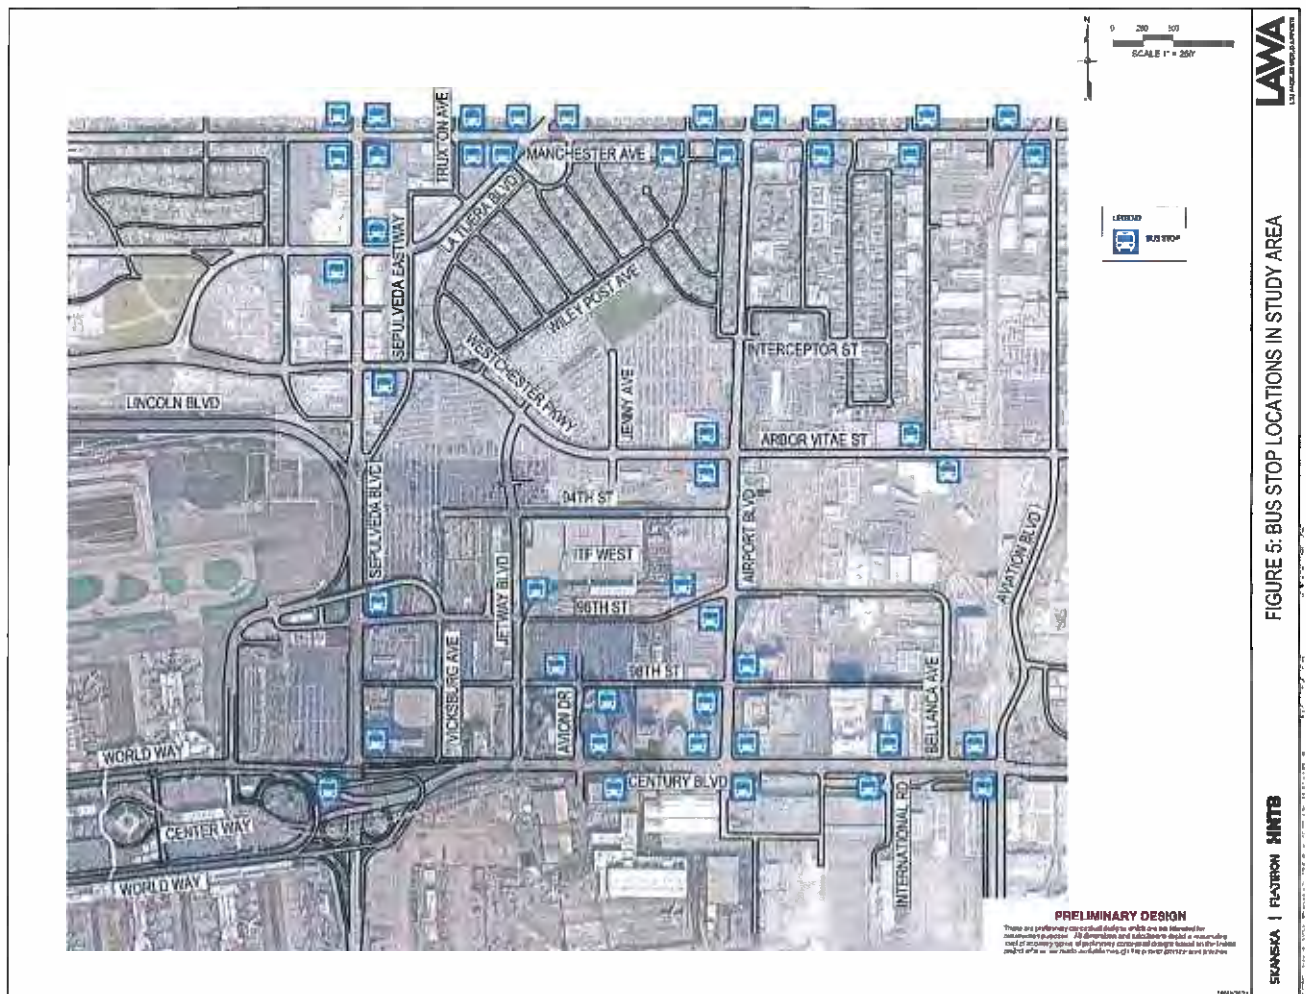

Figure 4: Bus Stops Locations

Alternate Routes and Detours

Detour and Alternative Routes

Detour routes using arterial streets are intended to minimize noise, vibration, and other possible impacts to adjacent businesses, major commercial developments, and residential neighborhoods. Detour routes can also capture regional traffic upstream of residential neighborhoods near construction zones and therefore reduce the potential for cut-through traffic. Detour routes and detour plans may be necessary to route traffic around full facility closures. These locations will be identified as the preliminary phasing plans advance into detailed design. The TMP will be continuously updated with new detour plans as they are identified.

Temporary Turning Restrictions

This strategy involves the restrictions of turning movements for driveways and intersections to increase roadway capacity, reduce potential congestion and delays, and improve safety. These restrictions may be applied during peak periods or all day. A full list of turning restrictions will be provided as the preliminary phasing plans is advance into detailed design.

Signal Timing/Coordination Improvements

Traffic operations will be continuously monitored throughout construction to determine if signal timing adjustments are needed.

Recommended TMP Strategies

The TMP Strategies recommended for the project are summarized in Table 2.

Table 2: Recommended TMP Strategies	
Category	Strategy
Motorist Information	<ul style="list-style-type: none"> • Changeable Message Sign (CMS) • Portable Changeable Message Sign (PCMS) • Temporary Motorist Information Signs • Mobile Applications
Incident Management	<ul style="list-style-type: none"> • Project Emergency Management • Incident Response Notification
Construction Strategies	<ul style="list-style-type: none"> • Construction Staging • Traffic Handling Plans • Full Facility Closures • Night Work • Pedestrian/Bicycle/Transit Access Improvements • Maintain Business Access • Coordination with Adjacent Construction Projects
Demand Management	<ul style="list-style-type: none"> • Transit Service Improvement • Encouragement of Airport Patrons to Use the APM to/from ITF East and West
Alternate Routes or Detours	<ul style="list-style-type: none"> • Detour and Alternative Routes • Temporary Turning Restrictions • Signal Timing/Coordination Improvements

TMP Special Procedures

Design, Plan, Schedule, and Coordinate Construction Activities to Reduce Disruptions to Vehicular and Pedestrian Movements within the CTA

SFJV will work with the LAWA Operations, LAWA Development Group, LADOT and Coordination and Logistics Management (CALM) group to help coordinate ATMP construction activities with the CTA. SFJV will participate in the Roadway Coordination & LIR Meetings, helping ensure the project is strategically approached. Through collaboration with a 3-week look ahead, a weekly traffic schedule will be developed, allowing all parties to plan appropriately, mitigating delays while managing an integrated approach to outreach and communicating to key stakeholders. Because of the impact traffic causes on LAWA and its community, this integrated approach will help ensure the maintenance of airport operations and minimize impacts.

All TMP strategies take into consideration the existing vehicular and pedestrian movements and minimize the disruption of these movements during construction.

Carrying this same approach forward to the design will enable the resolutions of conflicts before they are created. This integrated approach will allow the project team to seek out opportunities where work areas can be combined to minimize impact to the CTA vehicular and pedestrian movements. This combined approach will help address the full operational capacity of the CTA while allowing access for construction sites.

SFJV's collaboration with other partners and organizations will assist in long term planning and coordination with other projects, specifically in the disciplines of design, implementation, coordination, and highlighting high-priority needs. Tangible actions for such are partaken in a variety of continued and pre-set staff and organizational meetings, plan(s) review(s), and communication via but not limited to emails, phone calls, text messages, and face-to-face assembly(s). The variety of methodologies described above will ensure cohesion and coordination to the benefit of all key stakeholders.

Scheduling and Coordination with LAWA

SFJV has currently identified Ross Fryman (MOT Manager) and Fryman Management as the point of contact for all traffic coordination with LAWA; particularly but not limited to planning, designing, directing, monitoring, and refinement. Having one point of contact will eliminate confusion and streamline communication. The construction schedule will be utilized to identify activities 60 days prior to the start of construction. During the MOT Technical Working Group, 30 days prior to the start of construction SFJV will provide and review Traffic Control Plans, sidewalk and pedestrian impacts/detours, utility shutdowns, impacts to parking and garage access, and impacts to other LAWA facilities for all Areas Shutdown Requests and ATMP Impact Request. Any corrections or comments by the approving agency will be incorporated in the Traffic Control Plan for approval. Final Draft Areas Shutdown Requests will be submitted to the Shutdown Control Center for approval. Final draft of ATMP Impact Request will be submitted to LAWA for approval. Approved Areas Shutdown Requests and ATMP Impact Request with applicable Traffic Control Plans will be shared for record.

Fryman Management will schedule site walks with LAWA when impacting or closing a sidewalk, detouring traffic, or impacting parking/parking garage access early in our planning stages to ensure proper signage and detours to vehicular/pedestrian movements are captured in our plans.

Coordination with Local Enforcement and Emergency Agencies

Emergency access will be addressed and coordinated with APD and LAFD during the development of the Areas Shutdown Requests and ATMP Impact Requests.

Identify and Incorporate the Needs of All Airport Users and Stakeholders

The TMP is a living document that will be modified periodically as required to ensure the needs of airport users and key stakeholders are met. SFJV will meet routinely throughout the duration of the project with key stakeholders, elected officials, governmental agencies, business districts, community councils and businesses impact by the construction of the project. Utilizing ATMP Construction Traffic Task Force, meetings will ensure that comments and concerns are incorporated into the planning/design stage of the project. The team will participate and review project schedule at the Quarterly Construction Traffic Meeting or on a more frequently basis as dictated by impacts from the construction of the ATMP.

Maintenance and Replacements of Traffic Control Devices, including Pavement Markings and Traffic Barriers

Safety is the project team's greatest priority. Safety of the SFJV team and the traveling public is at the forefront of every construction activity. Traffic closures will be inspected hourly and documented in the Daily Reports. Traffic control devices will be inspected at the start and end of every shift and any devices or signs that do not meet reflectivity standards will be taken out of service. Traffic barriers and pavement markings will be inspected bi-monthly. SFJV will ensure to refresh any striping/ pavement markings affected by construction activities and temporary barrier systems and impact attenuators will be maintained per plan and replaced if damaged.

Traffic Signal Timings

The traffic closures and detours associated with the construction of the ATMP will change the traffic movement patterns at the study intersections near and adjacent to the construction work zones. This would require retiming of the traffic signals for optimum operations during peak hours. Signal retiming will be dynamically implemented by LADOT through ATSAC (Automated Traffic Surveillance and Control). ATSAC is equipped with traffic sensors which detect the passage of vehicles, vehicle speed, and the level of congestions. SFJV will then work with LADOT and design potential pre-timed packages, helping mitigate traffic impacts created by construction. Affected intersections will be monitored for 72 hours as needed, required, and/or requested after implementation for the purpose of observation and any potential modifications. All observations and modifications will be reported to LADOT within 5 business days for additional analysis and modifications. Overall, implementation of signal retiming will be done through ATSAC.

Coordination with Appropriate Governmental Entities Operating Signal Network

Traffic Signal Operations/Specifications are to be adhered to at all times. SFJV will ensure to plan, design, and implement standards and specifications. All traffic signal and/or related electrical work shall be performed and inspected under the conditions of the most current amended board of public works "Enhanced Electrical Safety Policy" as required in LADOT or other local agencies. Special Provisions and Standard Drawings for the installation and modification of traffic signals (Red Book) will be utilized as needed.

During the planning process, when a traffic signal modification is identified, it will follow the same approval and review process as a WTCP. All of such will be discussed during meetings and discussions to include but are not limited to the following: MOT TWG, Coordination Committee, and any directly affected parties and/or key stakeholders. These meetings and discussions will occur throughout the duration of the project and as requested by affected parties and/or key stakeholders.

Establishment of Haul Routes and the Safe Ingress and Egress of Construction Vehicles in the Work Zone

The SFJV MOT and Safety Team will follow the LA County Public Works Mitigation Monitoring Report Program, which outlines the approved haul routes, and ensure entering or exiting work zone exhibits are included in all Areas Shutdown Requests and ATMP Impact Request for the project. During the planning phases of developing construction staging areas, sight ingress and egress will be an integrated discussion to ensure the defined staging maximizes the needs of the project and safety of all personnel and the traveling public. SFJV will treat haul routes very much like we treat this TMP; such document will be updated and constantly maintained as material sources and needs of the project evolve. Specific haul routes are to be developed as necessary. SFJV will work with the appropriate agencies to ensure we have the necessary approvals throughout the duration of the project.

The following items will be listed and discussed in appropriate Areas Shutdown Requests approved by LAWA and appropriate parties:

- Egress/ingress vehicle plans (pertaining to parking structures, streets, and related areas to inside and outside the CTA)

- Haul Routes
- Active Work Zones
- Flaggers
- Fencing
- Cones
- Personnel

It is important to note that specific “egress/ingress-specific” signs are not explicitly included, but several traffic signs with the similar safety purpose will be provided. All of such are established in traffic control plans and Areas Shutdown Requests that are pre-approved with LAWA and appropriate parties.

Modify Plans as Needed to Adapt to Current Project Circumstances

Fryman Management maintains the most integrated approach to Traffic Management. As the MOT Manager, Ross Fryman’s involvement in daily construction operations creates an immediate flow of communication with the field team. The team is kept up-to-date with real-time needs of the project and is trained to respond and address the ever-changing needs of a project. Having the most trained, proficient personnel who are experienced with communicating with one another, the fluid dialogue and understanding of construction-related backups allows for anticipation of the problems and rapid solutions. Fryman Management’s knowledge and experience deploying traffic control in the LAWA area and in the City of Los Angeles gives the experience to understand and anticipate how the traffic will respond to modified plans. Whether it’s a long-term change or an emergency, Fryman Management has the experience to ensure plans are safe and appropriate for the area and its rapidly changing needs.

The general process and procedures to modify plans as needed to adapt to current Project circumstances include the following:

Reserved. (To be completed in subsequent TMP updates once this topic is coordinated and strategized during project task force meetings)

Communicate TMP Information to Project Public Information Personnel and Notify the Public of Maintenance of Traffic Issues

SFJV will interact and convey information to the LAWA communications team during pre- Areas Shutdown Requests and pre- ATMP Impact Request meeting(s), MOT TWG meeting(s), Coordination Committee meeting(s), and meetings and discussions with directly affected parties and/or key stakeholders—these meetings all pertain to being occurring in both official and unofficial capacities. Most importantly with such, MOT team will interreacts and communicates with the communication team daily to ensure the impacts are consistently updated. SFJV and LAWA work hand in hand to assure questions are answered in depth and in real-time.

SFJV will support LAWA’s Communication Team with distributing construction notices to the public and stakeholders. The Traffic and Construction Teams will work to ensure that the content of public communication is timely and accurate and that all closure information is reflected on the construction notices, including any detour routes. The team will also strategically place PCMS around the network to ensure the traveling public understands the detour routes and can safely navigate around the impacted area.

Contact Methods, Personnel Available, and Response Times for Any Deficiencies or Emergency Conditions Requiring Attention During Off-Work Hours

If a deficiency or traffic incident affecting the work area arises during off-peak working hours, the SFJV team, in conjunction with Fryman Management, will be able to respond rapidly to any incident. Fryman Management has key personnel with equipment on standby at all times. Ross Fryman, being the central point of contact for airport operations, will initiate the telephone tree at such events. Telephone tree is defined as a system in which information is disseminated quickly to appropriate parties via designating specific personnel to contact a number of other personnel.

The primary and main point of contact is Ross Fryman at (949) 480-7525, the primary backup contact is SFJV Construction Manager Rick Finken at 760-644-1889.

Due to the nature of a potentially changing list of personnel, the initial dissemination of information must come from Ross Fryman.

The below list is not a comprehensive list and should only be utilized in the seldom situation that Ross Fryman cannot be reached via the above number. Primary personnel are listed below, and it should be noted that this is an everchanging list that should not be considered to be an exclusive list of personnel.

- Construction Manager – Rick Finken – 760-644-1889
- Night Shift General Supt – TBD – TBD
- Day Shift General Supt – TBD – TBD

5. Key Traffic Control Personnel

SFJV's key design and construction personnel with traffic control responsibilities are shown in Table 15. SFJV has also detailed the duties and qualifications of each of these individuals who will be involved in planning, directing, implementing, and maintaining the TMP. Fryman Management - with an integrated approach to Traffic Management - allows for seamless integration of early planning and design through implementation and refinement in the field. This will be accomplished via coordination amongst appropriate parties to include but are not limited to the individuals on Table 3.

Table 3: Key Traffic Control Personnel and Duties		
Personnel	Duties	Relevant Qualifications
Civil Manager TBD XXXXXX@XXXXXX	Directly responsible for all construction, including direct management of MOT planning and implementation efforts	
MOT Manager Ross Fryman Ross@frymanmgmt.com	Responsible for developing, planning, and implementing the TMP on a daily basis.	
MOT Design Lead TBD XXXXXX@XXXXXX	Manage and oversee Fryman Management Design personnel and all MOT design-related functions; QA/QC of all design projects.	
MOT Construction Lead TBD XXXXXX@XXXXXX	Responsible for interfacing with Construction Area Manager discipline leads to ensure all operations are covered to minimize impacts.	
Traffic Control Personnel Fryman Management XXXXXX@XXXXXX	Implement daily and nightly closures throughout the project.	<ul style="list-style-type: none"> Fryman Management specializes in Traffic Control Fryman Management has been implementing closures throughout Southern California for the past 10 years with zero safety incidents

6. Contingency Plan

Contingency plans are required to handle the rise of unexpected events during construction that could impact both construction and traffic operations. A project specific contingency plan will be developed during the final design phase for each “major” construction activity prior to the start of those activities. Major construction activities include operations requiring closure of a lane, shoulder, connector, or major roadway. Contingency plans should be considered for the following potential scenarios:

- Weather related delays
- Traffic volumes above expected levels
- Delayed construction operations
- Construction equipment breakdown or delay in removing equipment from facility
- Late opening of lane and shoulder closures
- Major incidents near work zones

The following strategies should be considered in the Contingency Plans:

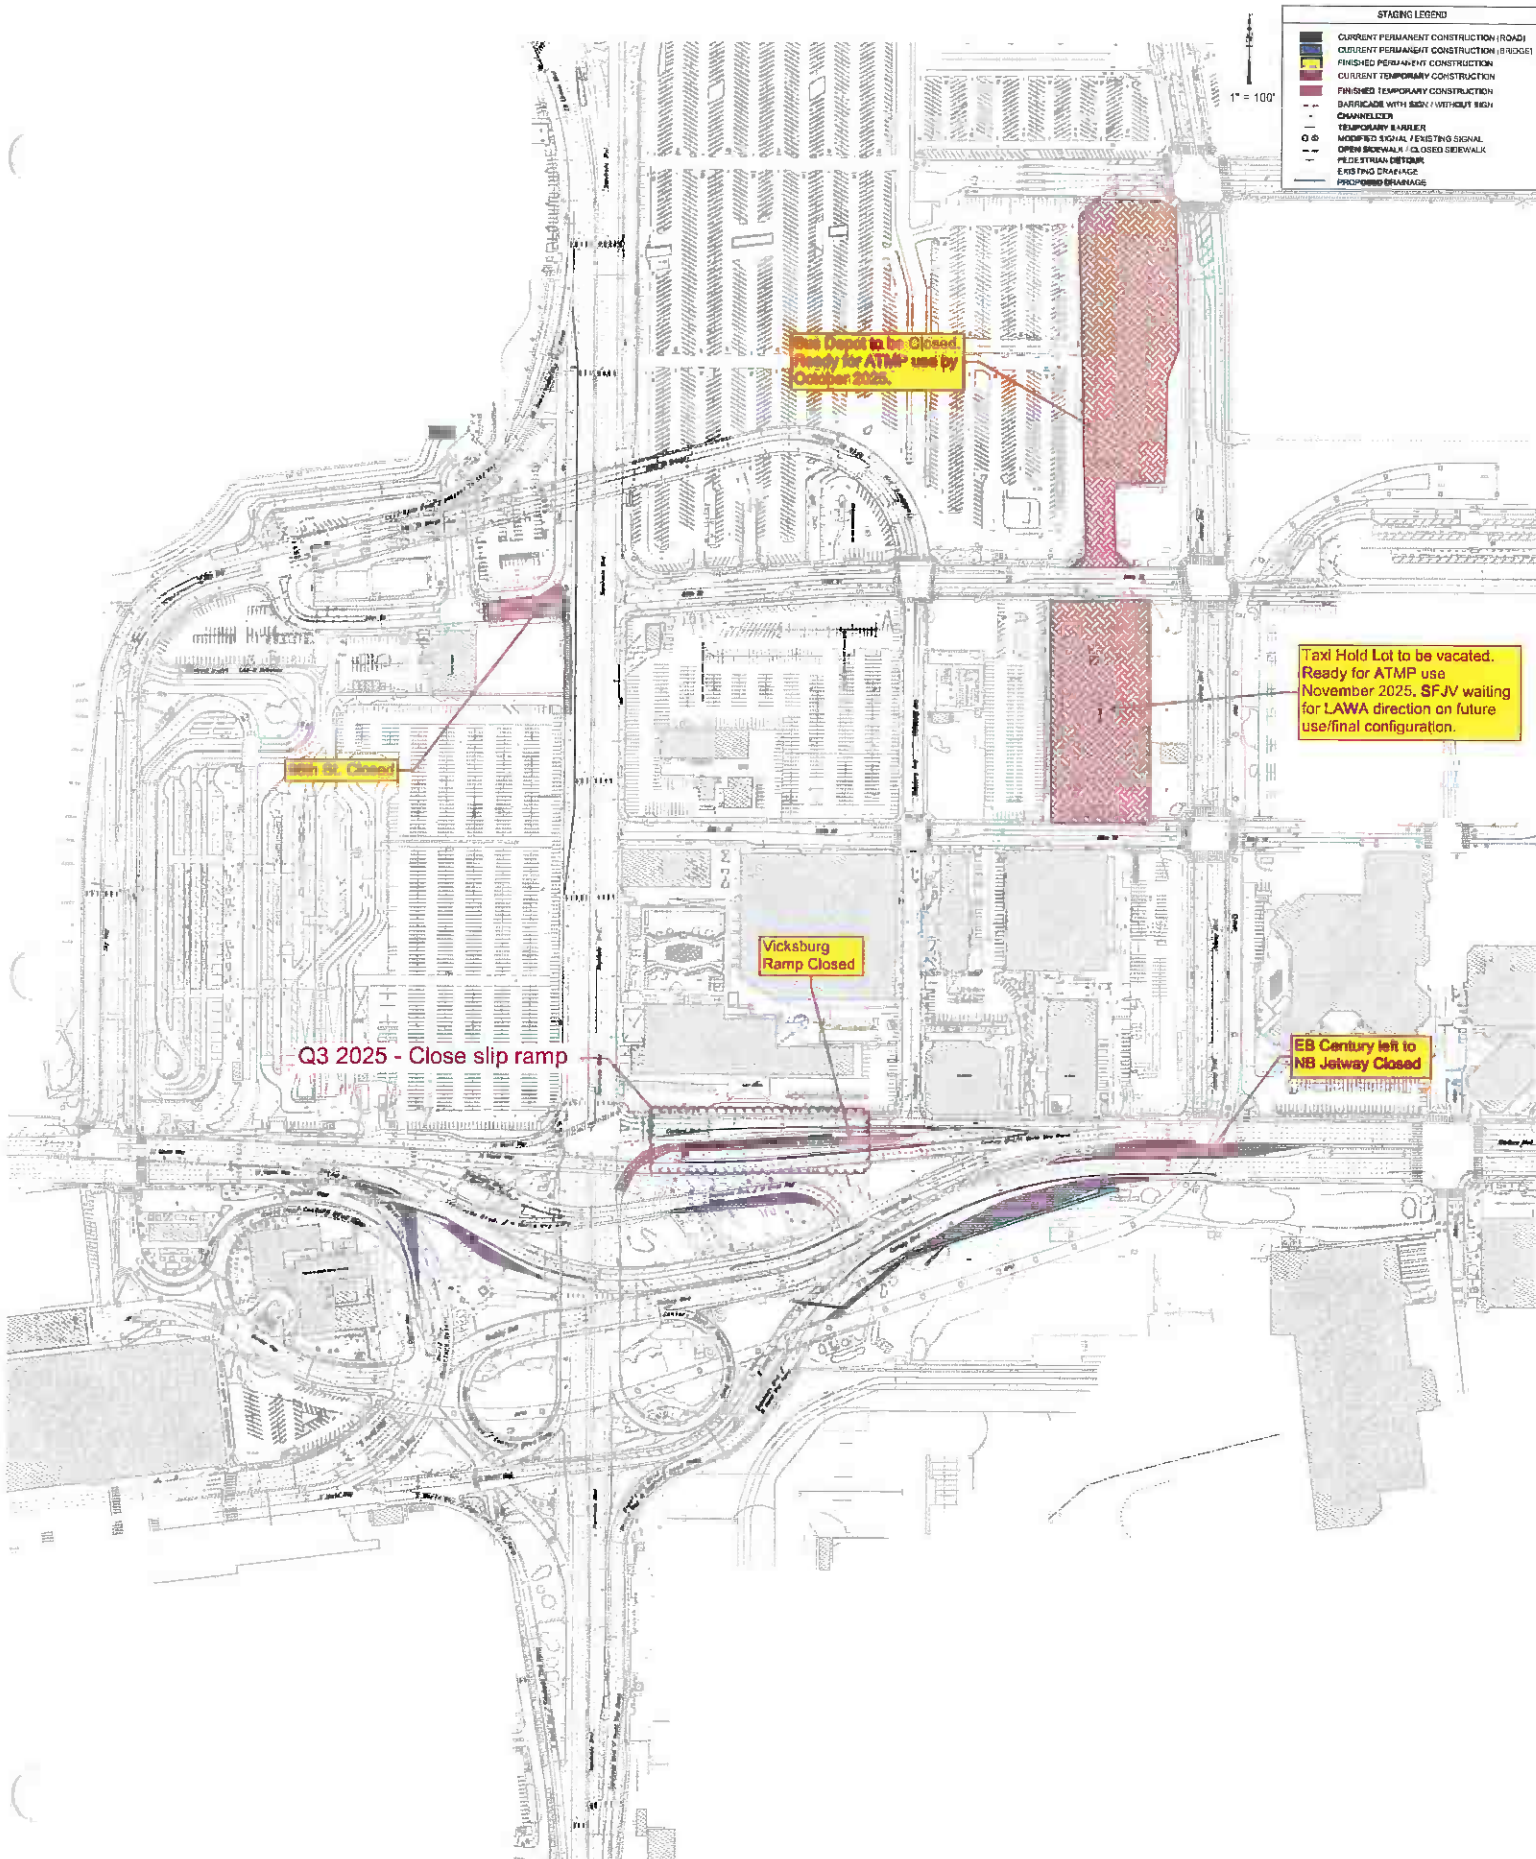

- Notify cities and other local agencies of any incident and late opening or construction delays
- Request assistance from APD
- Activate CMS and PCMS or other public information portals
- Direct traffic to detour or alternative routes
- Develop a work plan to prevent future occurrences of unexpected events
- Enable emergency response access through construction zones and during closures

Appendix 3 – Construction Area Access, Phasing and Logistics Plan (PR-03)

Construction Area Access, Phasing and Logistics Plan

SKANSKA | FLATIRON

Skanska-Flatiron Joint Venture **ATMP Construction Area Access Phasing and Logistics Plan**

Contents

1.0	Construction And Logistics Management	3
2.0	Pedestrian Safety	3
3.0	Project Constraints.....	3
4.0	Construction Work Hours.....	4
5.0	Site Office Facilities and Storage Yard Facilities	4
6.0	Construction Site Security.....	6
7.0	Traffic Management	6
8.0	Construction Parking.....	7
9.0	Dust Control and Street Sweeping	7
10.0	Construction Equipment Operation and Maintenance.....	7
11.0	Hazardous Materials Controls.....	8
12.0	Site Drainage and SWPPP.....	8
13.0	RECYCLING AND SOLID RESOURCES MANAGEMENT	8
14.0	Crane Use and Constraints (FAA Approvals)	8
15.0	Site and Material Management	9

1.0 Construction And Logistics Management

This Plan includes a general approach to the planned operational impacts, mitigation strategies, proposed implementation and contingency plans in accordance with PR-1.3.C.4.f. SFJV will provide a complete LAWA Impact Request (LIR), Area Shutdown Requests (ASR) and or Utility Shutdown Requests (USR) to LAWA's Construction and Logistics Management (CALM) Team and/or LAWA's Shutdown Control Center (SCC) at least 30 days prior to any planned area and/or utility shutdown(s). (PR-03)

SFJV will work closely with LAWA's CALM group throughout all stages of the project to ensure that all CALM and LAWA requirements are fulfilled and properly coordinated with stakeholders.

SFJV will attend the LIR Workshops and the CALM weekly roadway coordination meeting to discuss and coordinate any potential roadway or lane closures prior to submitting an Area Shutdown Request (ASR), Utility Shutdown Request (USR), or LAWA Impact Request (LIR). SFJV, or designated Subcontractor representative, will also attend the CALM nightly huddle as appropriate but minimally on the night of any closure to discuss the safety risks and operational impacts of the closure and the plans and procedures to mitigate those risks and impacts.

2.0 Pedestrian Safety

Entry and exit access for pedestrians will be maintained. Easy, simple wayfinding strategies will be applied. Barricades will be provided for wayfinding delineation when pedestrian walkways are routed through work zone areas. Overhead canopies will be provided for pedestrian protection where pedestrian walkways are located below over head bridge construction work zone areas.

For each Construction work package, prior to taking possession of an ASR/LIR work zone, SFJV will submit to LAWA the proposed Plan for pedestrian traffic circulation, including the location and types of signs to be used. SFJV will submit revised plans to LAWA for Subsequent changes in construction staging and work zone configurations. Sign panels for construction wayfinding will be provided by the LAWA CALM Sign Shop. The CALM Sign Shop signage provides program wide consistency and follows LAWA wayfinding standards. The LAWA CALM sign shop provides quick production of sign panels, typically in less than 72 hours from time of request.

Safe and adequate pedestrian access will be provided and maintained to fire hydrants, commercial and industrial establishments, parking lots, and hotels. Access to these facilities will be continuous and unobstructed unless otherwise approved by LAWA or AHJ permit.

3.0 Project Constraints

There are many substantial project constraints including:

- Interfacing Projects,
 - Concourse Zero
 - Taxiway D & E
 - Terminal 9

- ATSAC Hub Relocation
- Other Airfield improvements
- Other LAWA Enabling Projects
- Geographic Site Constraints,
 - Limited Staging and Logistics area for material recurring and handling adjacent to work zones.
 - Limited Construction Craft Employee Parking within PLA walking distance limits
- Work Schedule Constraints,
 - Restricted work hours due to Airport Operations, AHJ requirements, and municipal ordinances.
 - Weather events
 - Traffic Closure Moratorium Restrictions (LAWA and City of LA Seasonal Holidays, FIFA 2026, Superbowl 2027, Olympic Games 2028)
 - Existing levels of traffic volume/congestion
 - Operation/activities of adjacent third-party properties/businesses.

With some variation of response time depending on urgency, location, and interfacing party, SFJV will respond promptly to remove or relocate equipment if there is a conflict with vehicle traffic, interfacing LAWA operations, or interfacing projects.

4.0 Construction Work Hours

Regular daytime work shift in accordance with the PLA, SFJV will establish a uniform craft work shift Mondays through Fridays, starting at 6:00 a.m. and ending at 2:30 p.m. This will include 8 hours of regular time work, as well as required meal and rest periods. The start time of the regular work shift may be adjusted to optimize daylight hours and avoid periods of extreme high temperatures. LAWA will be notified in advance of any planned changes in the standard work shift.

If off-site parking for craft employees is needed, additional overtime periods will be necessary for the duration of craft shuttle operation before and after the regular work shift.

SFJV anticipates that a substantial volume of scheduled work will need to be performed outside of the regular daytime work shift hours. These special shifts will include night-time and weekend work hours. This will be due to the work constraints of ASR/LIRs, interfacing projects, and AHJ permits. SFJV assures compliance with ASR/LIR provisions to mitigate impacts to LAWA tenants and third party stakeholders.

5.0 Site Office Facilities and Storage Yard Facilities

SFJV anticipates that LAWA will make an effort to provide potential sites/parcels for ATMP Roadways project use in accordance with Contract Section PR-06. It is also anticipated that the area needed for the ATMP Roadways project may exceed the area that LAWA has available at the time of Construction. SFJV will collaborate with LAWA to determine the most cost-effective means to meet the project needs for laydown areas based on each phase, scope elements, and schedule.

SFJV will provide a construction field office in the ATMP staging and laydown area for LAWA's sole use as required by Contract Section PR-06. SFJV will also prefer to have a construction project management field office located within the staging and laydown area site.

Other anticipated construction support logistics temporary building/enclosures include a safety training/meeting venue, equipment management field office, subcontractor field offices, and material receiving/warehouse facility.

SFJV will request Laydown space through LAWA's Coordination and Logistics Management (CALM) team to rent LAWA properties as provided for by Contract Section PR-06. The following is an anticipated breakdown of the various areas needed:

ATMP - Staging/Laydown Yard & Field Office Area Needed	Yard Area (SF)	Field Office Area (SF)
Craft Parking SFJV & Subcontractors, 350 s.f./vehicle x 500	175,000	
Field Management/Supervision Office	15,000	12,000
QC & AHJ Inspection Parking, 350 s.f./vehicle x 50	17,500	
Security Staff/Supervision Field Office	18,000	1,440
Equipment maintenance support field shop/office facility	60,000	1,440
Temporary Sanitary Facility - Service Area, restroom/wash station, 6.4 s.f./person	3,840	
Waste Disposal & Recycling Area, roll-off bin staging area & truck access	30,000	
Material Receiving Inspection, Distribution, & Warehouse	174,240	1,440
Safety Training Facility (& Parking, 350 s.f./vehicle x 100	35,000	4,320
Local Hire Recruitment/Intake facility (& Parking, 350 s.f./vehicle x 20)	7,000	1,440
Traffic Control Staging Yard	108,900	1,440
Falsework Staging/Storage/Fab Yard	435,600	
Formwork & Structure Hardware Staging Yard	54,450	
Underground Pipe/Civil/Shoring Materials Staging Yard	54,450	
Central Truck Delivery Staging/Vehicle Escort Staging Area	20,000	
CIDH Equipment, Casing, Tooling staging yard	87,120	
Reinforcing staging & cage fabrication Area	87,120	
P.T. Materials Staging Area	25,000	

Electrical/Signs Staging Area	50,000	
Demo/Rubble Stockpile & Crushing Area	50,000	
Concrete Batch Plant Area	50,000	
Total:	1,558,220	23,520

6.0 Construction Site Security

SFJV anticipates very minimal construction within Airside security restricted areas. For this minimal Airside work, SFJV will comply with LAWA, FAA, and TSA security requirements. The majority of the ATMP Roadways work will be performed landside.

SFJV will install, protect, and maintain any new and existing security fencing in established construction area work zones and in the vicinity of our logistics yards. SFJV's construction logistics and work area yards will have at least one gate for site access. Gated openings in the security fence to major yards will be supervised by a security guard, flagger, or craft watch person when open for access during construction hours. Gates for intermittent access will be closed except when needed for entry and must be locked when the site is not active. SFJV will work with LAWA to optimize the security requirements to balance security needs with the project budget to ensure a safe and efficient project.

SFJV will provide night security lighting at secured areas within construction limits at offices, storage facilities, temporary facilities, and excavated areas as agreed to and authorized by LAWA.

Some active construction work zones will be located in public roadways or other areas that will need to remain accessible to the public. These areas will not be conducive to perimeter security fencing but will have temporary warning signs, barricades, and/or flaggers as required by the ASR/LIR. SFJV will work with LAWA's CALM team to determine any other security measures that are needed and will implement them as needed throughout the project.

SFJV will work with LAWA's CALM team to determine any other security measures that are needed and will implement them as needed throughout the project.

7.0 Traffic Management

This section describes SFJV's approach to Construction traffic management. For staging and maintenance of public traffic, refer to the Project Traffic Management Plan. The Traffic Management Plan will be prepared in collaboration with LAWA, LADOT, Caltrans, LAXPD, and LAPD. The plan will be submitted for approval and permitted by AHJs including LADOT and Caltrans.

For construction traffic management, SFJV will identify potential construction truck haul routes and principal pedestrian access routes for craft workforce access to the work zones. Haul route maps are included with the Traffic Management Plan section of this Project Management Plan. SFJV's construction traffic management will comply with the LAWA/CALM ASR/LIR requirements for delivery hours, and moratoriums for seasonal/special events.

8.0 Construction Parking

SFJV's anticipated construction employee parking areas are shown on staging and logistics plans included with this Plan. SFJV anticipates approximately five hundred parking spaces will be needed for staff/craft employees when construction reaches the peak number of employees working on-site. If sufficient LAWA property is not available to meet the needed parking capacity then commercial/private parking lots and/or existing shuttle services, may be used. If SFJV uses shuttle buses, they will operate from the designated employee parking areas to the work sites. SFJV will plan for all employees, including those of subcontractors, vendors, suppliers, etc. at all tiers, park in the designated parking locations and not on city streets, nor in nearby neighborhoods. All construction personnel will be required to attend an airport project-specific orientation meeting that will cover where to park, where staging areas are located, construction policies, etc. Instructions regarding how to obtain parking permit hang-tags or sticker/decals will be provided at on-boarding orientation.

9.0 Dust Control and Street Sweeping

Dust Control measures will be provided by SFJV per Contract Air Pollution Control Requirements. SFJV will provide at least one (1) water truck to maintain dust control and cleaning of pavements affected by SFJV operations. Details of dust control measures are included in the Environmental Monitoring and Controls Plan.

As required by the Contract, SFJV will keep available at the job site, at all times, a minimum of three (3) self-loading operational vacuum motor sweepers, ELGIN Broom Bear, or LAWA-approved equivalent to maintain cleaning of pavements affected by SFJV operations. DESIGN-BUILDER shall use this equipment as needed to keep pavement areas swept clean of debris, to the satisfaction of LAWA.

10.0 Construction Equipment Operation and Maintenance

SFJV anticipates utilizing various units of construction equipment throughout the period of construction performance. This equipment includes:

- Vehicles for field supervision staff (SUVs and light pick-ups)
- Site maintenance equipment (street sweeper, flat-bed truck, telescopic forklift, light towers)
- Traffic Control equipment, (traffic control trucks, attenuator trucks, flashing arrow signs, portable messages signs, lane striping trucks)
- Demolition equipment (jet/vac trucks, pulverizers, cold planer/grinders, excavator/breakers, backhoe/breakers, diamond/abrasive saws, track loaders, dump trucks)
- Excavation and grading equipment (backhoes, excavators, skip loaders, loaders, scrapers, motor graders, vibratory compaction rollers, dump trucks, water trucks)
- Shoring equipment (rotary drills, vibratory pile drivers, welders)
- Foundation Pile equipment (Large cranes with oscillators, concrete pumps, and loaders)
- Structure, Bridge/Retaining Wall Support equipment (mobile cranes, telescopic forklifts, boom lifts, concrete pumps, bridge deck finishers, portable welders, generators, air compressors, abrasive blasters)
- Asphalt paving equipment (asphalt placers, material transfer machines, vibratory compaction rollers)
- Electrical support equipment (boom trucks, bucket trucks, cable reel pullers/dollies)

SFJV equipment for self-work will remain on-site for longer durations, subcontractor equipment will move in/out as needed during various stages of the work. Equipment will be serviced and maintained on-site. Equipment or mechanical components will be removed and transported off-site for major repairs. SFJV anticipates the establishment of an equipment maintenance facility to stage and service equipment as well as, provide a field office for the equipment management staff.

11.0 Hazardous Materials Controls

Details of hazardous materials control measures are included in the Environmental Monitoring and Controls Plan. SFJV does not anticipate a significant volume of hazardous materials that will warrant a specific, dedicated hazardous materials storage and handling yard.

Hazardous and contaminated soil and asbestos-containing material that may be encountered during construction have not been identified in the Contract documents and are not included as part of the SFJV's base scope of work. The LAWA Contract allowance may be utilized for the procurement of additional staging yards/facilities for storage, testing, and monitoring of hazardous materials.

12.0 Site Drainage and SWPPP

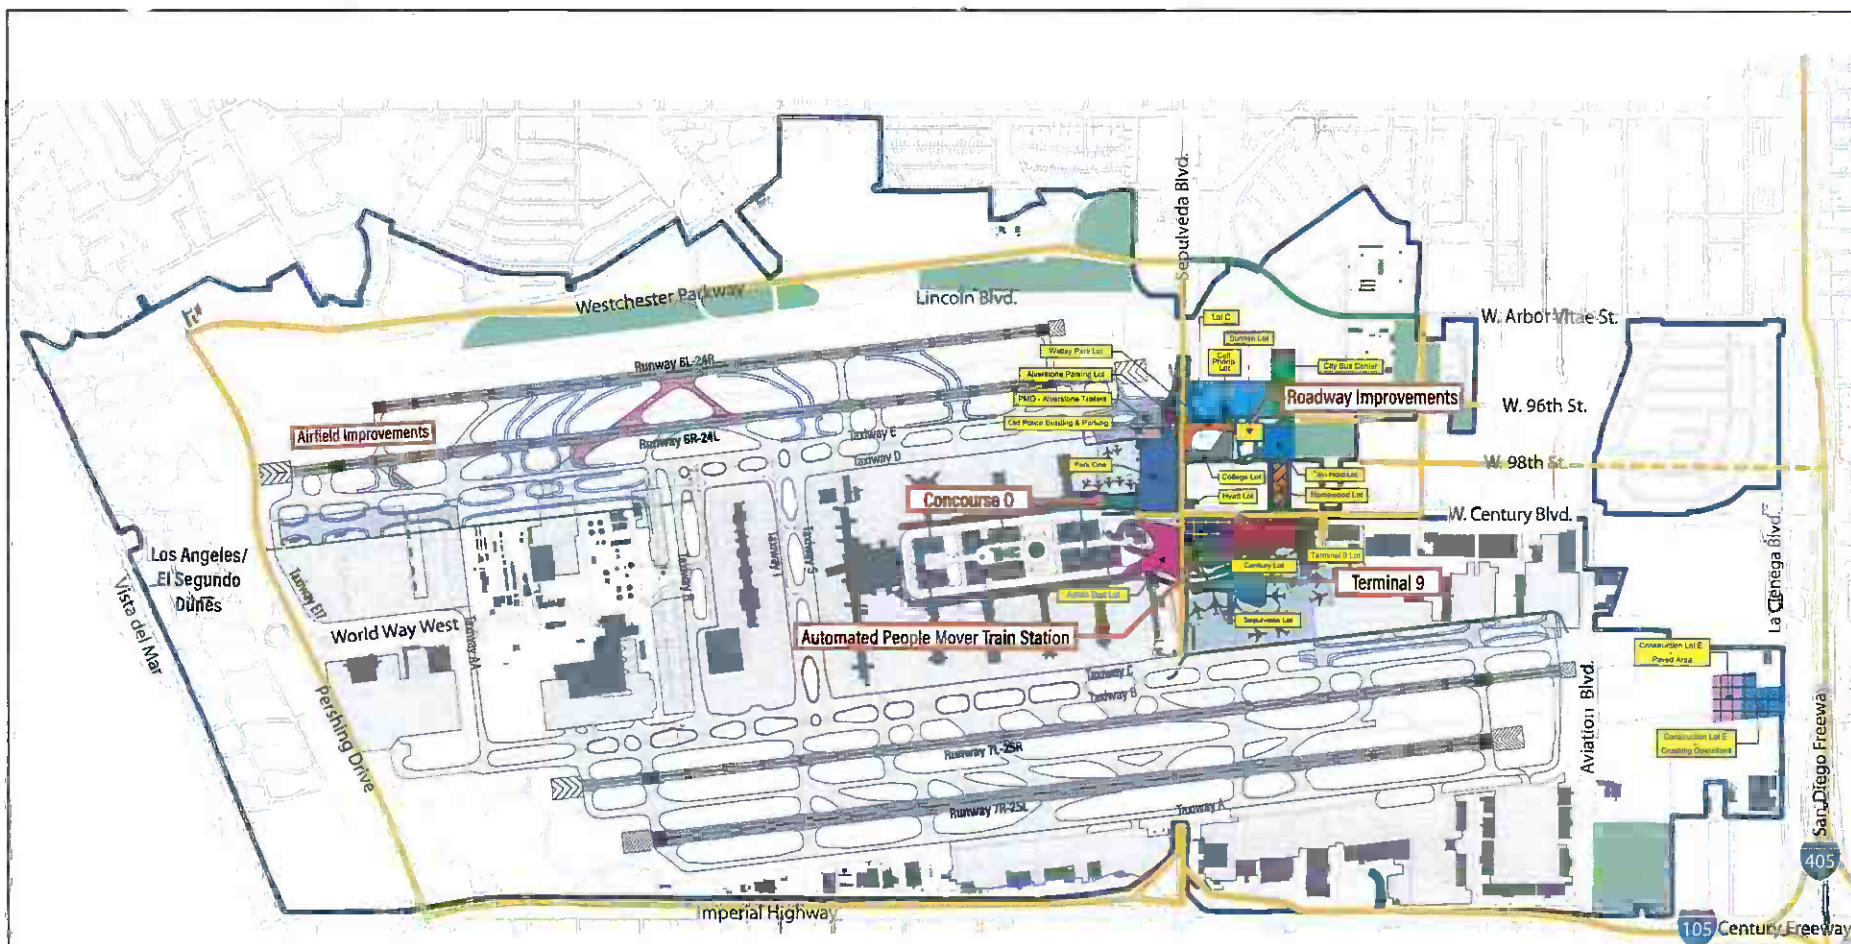

Details of temporary site drainage and water pollution control measures will be included in the Environmental Monitoring and Controls Plan. As part of the scope of a subsequent task order and prior to construction, SFJV will provide a drainage control plan included in the Environmental Monitoring and Control Plan. SFJV will provide temporary methods to allow for drainage during construction phases. The location and type of temporary drainage facilities will be identified in subsequent design development.

13.0 RECYCLING AND SOLID RESOURCES MANAGEMENT

SFJV has identified anticipated locations for placing roll-off container vessels, bins, and dumpsters. These locations will provide for segregated recyclable materials and general solid waste. Demolished concrete and asphalt will be stockpiled at the crusher site. General solid waste trash, wood, and green waste will be located at an adequate distance from the crusher site to separate these facilities and to reduce the risk of contamination. In compliance with Contract environmental requirements, SFJV will implement methods to recycle a minimum of 85% of waste materials generated during construction. The largest portion of recycled material will be excavated soil, demolished concrete/asphalt, steel, and green waste. Details of temporary solid waste management will be included in the Environmental Monitoring and Controls Plan. SFJV will Limit the height of the material stockpiles.{

14.0 Crane Use and Constraints (FAA Approvals)

SFJV plans to use a variety of mobile cranes and concrete pumps for shoring, foundation piles, and bridge construction. The location of mobile cranes and concrete pumps will be changing frequently but the cranes will be located within planned work zones and permitted as required by FAA requirements(and LAWA Air Operations requirements. SFJV will Limit the height of mobile cranes and concrete pumps in conformance with approved FAA Airspace Determinations (7460).

SKANSKA | FLATIRON

Safety Plan

1. Who's Safety Program do I follow?

SFJV will meet all safety and security requirements as required by law, in compliance with LAWA's Construction Safety Requirements Design and Construction Handbook, Cal/OSHA safe practices and regulations, FAA rules and as required by corporate safety policies of Skanska, Flatiron. Objective is to eliminate all injuries to persons and damage to property - In the event of a conflict in policy of any of the above the most stringent application will be met.

2. Care For Life

SFJV team members will also follow Skanska's Care for Life brand of safety. Our commitment to Care For life is unparalleled in the construction industry, going far beyond the standard safety program. It is a way of life and culture, which values the worth and total well-being of all individuals on our jobsite and extends to their families.

An Incident Prevention Plan (IPP) will be developed specifically for this project, based on our corporate Care For Life guidelines and the best practices developed on similar projects. We have developed extensive safety programs that produce results and have contributed to OSHA VPP Star recognition. Some components of the IPP include:

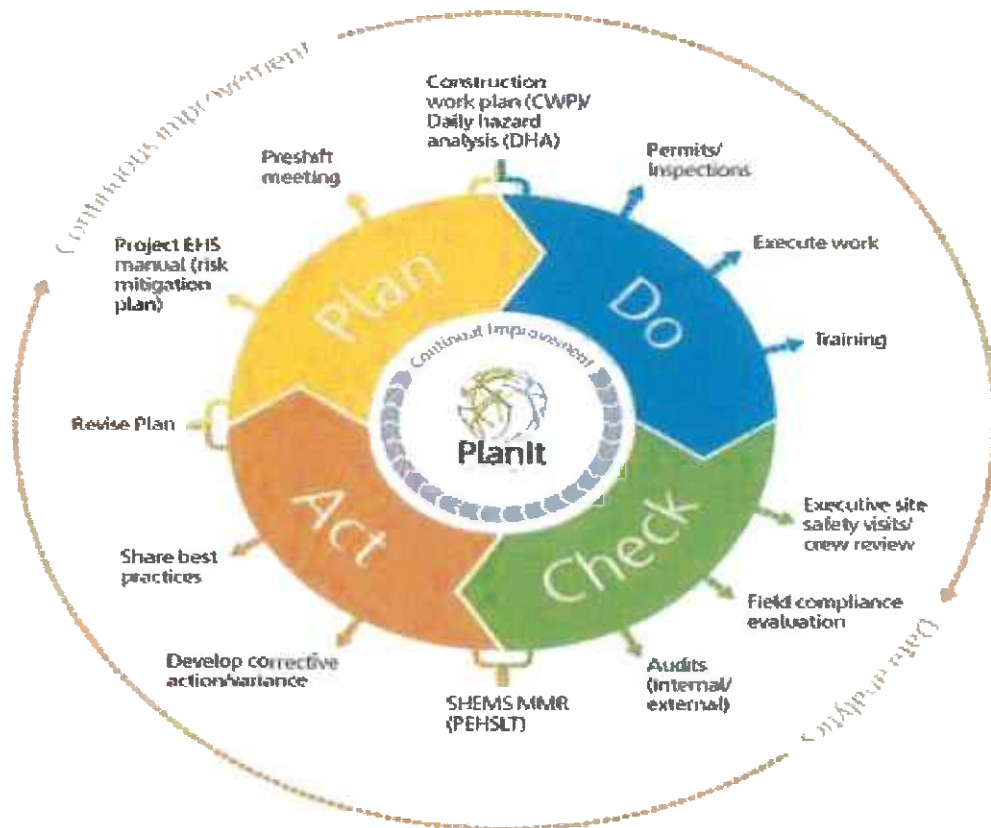

- Incident response plan (Emergencies)
- Site specific safety plan
- Employee orientation
- Drug testing
- OSHA 10HR course – Retain every 4yrs (**All Field Workers – Required on any LAWA Project**)
- OSHA 30HR course – Retain every 4yrs (**All Supervisory Staff – Required on any LAWA Project**)

- Job hazard analysis
- Hot work permit procedures
- Confined space permit procedures
- Project safety committee to include trade representation
- Safety incentive and recognition
- Evacuation planning and drills
- Training
- Safety inspections, interviews and audits
- Weekly safety report (**As required – Recurring deliverable to LAWA**)
- Site Specific Safety Plan
- Environmental monitoring

3. Plan – Do – Check - Act

The Plan-Do-Check-Act spells out the goals SFJV establishes for the operations of the project regarding environmental responsibility, safety, ethics, quality and the use of sound financial practices to choose the right projects and deliver positive results. These qualitative targets reflect our core values and provide the basis for incentive systems at various levels within the company.

1. Hazard Recognition
2. Continuous Training & Improvements
3. Construction Work Plans
4. Craft/Management Engagements
5. Stop Work Authority

4. Safety Program

SFJV strives to achieve first class safety results. The fundamentals of our safety program are employee involvement, management commitment, visible leadership, proactive preplanning, setting expectations, open lines of communication, and continual improvement. Employees from top management down must be committed to working safely and be held accountable for their actions. Each employee is empowered to stop work in the event that they see an unsafe act and is held accountable if they fail to do so. This is accomplished with supportive leadership, open lines of communication, and a personal commitment to safety as a value. SFJV commits the necessary resources to provide adequate training and education.

Our safety program begins with safety pre-planning prior to commencing a field activity when a preliminary Safety Health Environmental Management System (SHEMS) is developed. Once a task is identified, the SHEMS is further refined. Construction Work Plans (CWP's), which include Job Hazard Analysis, are developed for craft specific, job specific, and task specific activities. CWP's are developed with the employees who are going to perform the work, enabling employees to take ownership of their safety and that of their co-workers.

SFJV recognizes that the training of our workforce is critical to safe work and we will provide extensive in-house training. When work begins, the entire project management team participates in our in-house Safety Leadership Training. This training module reinforces SFJV corporate commitment to Zero Incidents and re-emphasizes the safety expectations that senior management has for all employees.

SFJV Team Members are expected to create and maintain a culture of behavior. We are all expected to create a climate of accountability and responsibility for safe performance at all levels of the company. SFJV Safety Leaders work to create a climate of teamwork within the project. Formal site orientation is held for all new hires. SFJV requires that all employees receive an orientation to the safety rules and policy upon initial employment. All employees also receive task training. During construction operations we will hold daily and weekly safety briefings for project employees, including subcontractors. In addition, SFJV will coordinate weekly meetings with LAWA to go over the following items listed below as part of LAWA safety requirements:

1. Review weekly reports.
2. Discuss current conditions.
3. Tour the project
4. Preview look-ahead schedule for upcoming work

During these safety meetings, project management has an opportunity to communicate expectations as well as discuss possible issues. SFJV has a safety suggestion system that is incorporated into our daily job briefings. This gives the front-line supervisor an opportunity to view his/her employee's suggestions and address them either individually or in a tailgate safety meeting.

The SFJV Executive Safety Committee includes senior management, operations, project management, and the safety department. The Safety Committee continually works to improve safety programs by developing new safety strategies, eliminating unsafe conditions and behaviors, stopping unsafe work, and informing key operating personnel throughout the Joint Venture staff.

The SFJV Safety Program is a living program. It has the ability to change and adapt to different conditions as the project progresses. The ultimate goal of our program is to ensure everyone goes home safely at the end of each day.

Care for Life

1. In 2003, Skanska implemented an Injury-Free Environment (IFE®) initiative on all our projects. IFE is the shared corporate and individual belief that safety is a value, not compromised by cost or schedule. The program is designed to create for all workers a mindset intolerant of any frequency or severity of injury or incident.
2. To further enhance IFE, Skanska adopted Care for Life as the number one core value in 2016. Skanska has embraced the Plan, Do, Check, Act model of continuous improvement as an integral component to live this value.
3. Everyone involved on projects, from craft workers to our client partners, has ownership of the EHS program and is held accountable for its implementation. The core principles of our Care for Life value include the following:
 - We care for life of people and the environment.
 - We work safely or not at all.
 - We never walk by if we notice unsafe actions.
 - We support health and well-being.
 - We promote green solutions, and we run our operations in a green way.
 - We are accountable for future generations.
4. We manage our Care for Life through training and participation. All subcontractors and workers entering our jobsites are encouraged to attend Care for Life training, which focuses on workers' personal relationship to safety and three skills:
 - Assigning injury-free work
 - Recognizing and reinforcing safe work
 - Constructively correcting at-risk work

Environmental Health and Safety Policy Statement

SKANSKA

Environmental, Health and Safety Policy

Skanska is attuned to the potential safety, health and environmental impacts of its operations and activities. In keeping with Skanska AB policies, which are incorporated here by reference, Skanska's management has established, implemented and maintains a safety, health and environmental management system to address these potential impacts and to carry out operations and activities in a manner that is protective of human health and the environment. This management system is designed to make safety, health and environmental care an integral part of all projects and a responsibility of all employees and any persons working for, or on behalf of, Skanska. It allocates appropriate resources and provides the training necessary to ensure the achievement of established safety, health and environmental objectives and targets.

Senior Skanska management is committed to keeping this system effective for its intended purpose and to continually improving it as a framework to achieve the following results:

Regulatory Compliance

We will evaluate and comply with all applicable federal, state and local laws and regulations and any other requirements at each location where we conduct business.

Prevention of Accidents

We will strive to identify and assess risk in all our activities and take actions to mitigate any high-risk conditions.

Prevention of Pollution

We will seek first to cost-effectively avoid the creation of pollution and waste from our projects and operations, and second, to manage remaining waste through safe and responsible methods.

Conservation

We will strive to reduce our consumption of natural resources through cost-effective use of recycled and reused materials and conservation of energy and water.

Emissions and Effluents

We will work to diminish our emissions and effluents by employing cost-effective operational controls, by diligently monitoring operational indicators and by implementing corrective and preventive actions where necessary.

Ecology and Habitat

We will protect habitats, wetlands and other sensitive ecological resources in accordance with applicable regulations and local ordinances.

Hazardous and Toxic Substances

We will exercise caution when using hazardous materials and not use toxic substances if we cannot assess their human, ecological or environmental risks.

Communication

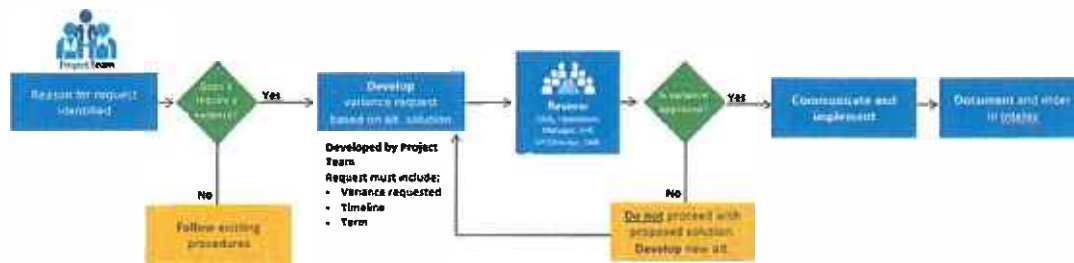

We will communicate this policy to all employees, make it available to the public and establish procedures to receive and respond to inquiries from external interested parties. We will also alert potentially affected individuals and authorities of any safety, health or environmental incidents in a timely and effective manner. Thorough investigations will be conducted and corrective and preventive actions implemented and monitored. Senior management at Skanska believes that how we care for people and the environment today affects both current and future generations. We accept our responsibility for doing our best to maintain awareness and to minimize adverse safety, health and environmental impacts from our operations.

November 2018

EHS POLICIES

1. These EHS policies address Skanska's expectations to protect the environment and the health and safety of everyone at or nearby Skanska project sites. To the extent these EHS policies relate to Skanska employees, Skanska has direct responsibility for enforcing these policies.¹ To the extent the policies relate to subcontractors and their employees, workers or other personnel on a site at the behest of a subcontractor, the subcontractors are responsible for ensuring that their workers comply with these expectations.²
2. Skanska further reserves the right to supplement, modify or alter these policies at any time.

Process for Variance Request

In situations where a gap in the system has been identified, or when an element of the program is not applicable or must be modified to address the risk effectively and comply with the SHEMS, a variance to the requirements contained in the manual may be granted. A written variance request must outline the initial requirement, the proposed variance, and a timeline for implementation and termination.

Variances may be granted through agreement of the Regional General Manager, Regional Operations Manager and the regional EH&S Vice President/Director and applicable subject matter experts.

When a variance request is generated, granted, or rejected, a notification to the EH&S National level leadership must be made.

In the event that a variance decision cannot be made, the National EH&S VP in conjunction with the REO/EVP will assist till resolution.

The variance request and regional decision must be documented in writing and included in the Monthly Management Review at the project and regional level.

EHS Manual Definitions

1. The term "employee" is defined as a person employed by Skanska USA Civil, Inc., and, in the case of a joint venture includes all individuals employed by the joint venture or working at a project on behalf of the joint venture while remaining in the employ of a joint venture partner.
2. The term "subcontractor" is defined as a business or person of any tier below Skanska USA Civil, Inc. that performs any part of the labor or material requirements of a contract for construction, alteration or repair on the project.
3. The term "subcontractor employee" is defined as a person employed by a subcontractor. The definition of project "subcontractor employee" shall apply to every tier of subcontractor, its employees, independent contractors, agents, suppliers, and all workers who enter the project and perform a portion of the contract involving labor.
4. The terms "site personnel" and "worker" are defined to include employees of Skanska USA Civil, Inc. as well as subcontractor employees performing work at the project site. Subcontractors maintain all responsibility for managing, controlling and setting the terms and conditions of work for subcontractor personnel. To the extent that a subcontractor of any tier performs any part of the contract scope of work, it assumes responsibility for complying with the applicable provisions of this EHS Manual.

¹ As to Skanska employees, as stated in the applicable Employee Handbook, employment with Skanska is employment at will. This means that employment may be terminated for any or no reason, with or without cause or notice, at any time by an employee or by Skanska. Nothing in this EHS Manual or in any other document or oral statement shall limit the right to terminate at will. This employment at will policy is the sole and entire agreement between any Skanska employee and Skanska, as to the duration of employment and the circumstances under which employment may be terminated.

² Nothing in the EHS Manual is intended to or should be deemed to give Skanska the right to control any site personnel who are not Skanska employees. This EHS Manual does not create any joint employment relationship, either direct or implied, between Skanska and any subcontractor worker.

SHEMS

SHEMS Program

Corporate Organization Structure

Skanska USA Civil, Inc. is a construction and development firm that encounters factors such as, occupational health and safety risk along with potential environmental aspects that influence the way we perform our work.

These factors often have the potential to influence the outcome of our projects by exposing our employees to unnecessary hazards and potentially having negative impacts to the environment. It is the obligation of all levels and functions within the organization to identify and mitigate potential negative impacts while being committed to promoting positive impacts through continual improvements to the program.

Skanska's Safety, Health and Environmental Management System (SHEMS) provides the format to conduct work on projects managed by Skanska in the context of increasingly stringent legislation, the development of economic policies and other measures that foster both safety and environmental protection. The program has been developed and is based on continual improvement associated with increased concern expressed by interested stakeholders regarding environmental matters and sustainable development.

The scope of Skanska's SHEMS applies to all sizes and types of projects where Skanska maintains operational and financial control. It is in this context that Skanska has developed a Corporate Safety, Health and Environmental Management System (SHEMS), which conforms to both the ISO 45001:2018 and the ISO 14001:2015 standards.

The following table illustrates how Skanska complies with both the ISO 45001:2018 and the ISO 14001:2015 standards:

ISO 14001 / ISO 45001 Standards SHEMS Procedures Correlation Table

ISO 14001-2015 Elements	ISO 45001:2018 Elements	SHEMS Section
4.0 Context of Organization	4.0 Context of Organization	SHEMS Program

8.1 Operational planning and control	8.1 Operational planning and control	Identification and Management of EHS Impacts
	8.1.2 Eliminating hazards and reducing OH&S risks	
	8.1.3 Management of change	
	8.1.4 Procurement	
	8.1.4.2 Contractors	
	8.1.4.3 Outsourcing	
8.2 Emergency preparedness and response	8.2 Emergency preparedness and response	Emergency Preparedness
9.0 Performance Evaluation	9.0 Performance Evaluation	
9.1 Monitoring, measurement, analysis and evaluation	9.1 Monitoring, measurement, analysis and evaluation	Management Review
9.1.2 Evaluation of compliance	9.1.2 Evaluation of compliance	Communication, Management Review
9.2 Internal Audit	9.2 Internal Audit	Audits
9.3 Management Review	9.3 Management Review	Management Review

10.0 Improvement	10.0 Improvement	
10.2 Nonconformity and corrective action	10.2 Incident, Nonconformity and corrective action	Incident Investigation, Nonconformance, Corrective Actions and Preventative Action
10.3 Continual Improvement	10.3 Continual Improvement	Communication, Management Review

Through elements of the Skanska USA Civil, Inc. Safety, Health and Environmental Management System (SHEMS) each requirement of both standards is satisfied. As part of the auditing process these elements of SHEMS are internally and externally audited to verify compliance with both ISO standards as well as to identify opportunities for improvement as part of the Plan>Do>Check>Act cycle.

The corporate management system is developed from policies and procedures established and endorsed by senior leadership in our policy statement. The program serves as the foundation for the management of all occupational health and safety risk as well as significant environmental aspects encountered during the development and construction of our projects in the US.

The scope of the Skanska USA Civil, Inc. (SHEMS) applies for all Skanska construction projects where Skanska maintains operational and financial control.

As such, the context for each project's SHEMS reflects client requirements. The project team also takes into consideration external and internal issues as they relate to the needs and expectations of all stakeholders such as employees, clients, investors, contractors, government agencies and the immediate community associated with each project.

The program is a prescriptive approach to mitigate occupational health, safety and environmental risk and the program is managed at three levels.

USA Inc. / Business Unit Executive Leadership

The foundation of Skanska's SHEMS is based on an executive review of potential occupational health and safety risks in addition to potential environmental aspects (our inputs) associated with our work to develop corporate controlled programs to ensure success (our outputs). This is accomplished through the SHEMS and analysis of leading and lagging indicators.

USA/BU Level	
Advise, review, prioritize and review EHS initiative	Governance Committee
Establish and ensure implementation of EH&S program. Maintain, measure and continually improve EH&S program.	Senior Leadership Team, SHEMS Director
Leadership and commitment/EH&S Policy	Senior Leadership Team
Responsibilities and Authorities	Senior Leadership Team
Coordinate External Audit process and ensure closeout of non-conformances	SHEMS Director
Review and determine adequacy of resources to successfully implement the program	Senior Leadership Team
Identify and develop applicable communication plans	Senior Leadership Team
Schedule and prepare for the execution of EHS specific meetings (Annual Management Review, etc.)	Chief of EH&S Officer
Responsible for Communication to HQ and Regional level	Senior Leadership Team

Regional/Operating Unit Leadership

It is the responsibility for each region/operating units Senior Leadership Team to ensure the SHEMS is implemented and maintained on all projects within their control. The status of the SHEMS is reviewed on a monthly basis utilizing a Regional/Operating Unit level leading indicator dashboard which highlights each group's performance. Any potential for continual improvements, gaps in the system and action plans are meant to be addressed at this level and used as inputs into the senior level meetings.

Regional Level	
Implement, maintain, measure and continually improve EH&S program	Regional Leadership

Identify and comply with legal and other requirements	Regional Safety Leadership Team
Leadership and commitment	Regional Leadership Team
Review and determine adequacy of resources to successfully implement the program	Regional Leadership Team
Responsible for Communication to Corporate and Project level	Regional Leadership Team
Ensure current documents are used and that records are properly prepared, maintained, retained and disposed	EHS VPs/EHS Directors
Sustainability Indicators track/report (e.g., office energy, fuel use for business travel)	Regional Leadership Team
Schedule and prepare for the execution of EHS specific meetings (Annual Management Review, Monthly Regional Review, etc.)	Regional Leadership Team
Ensure Internal Audits and PAS audits are conducted as required	EHS VP/EHS Director
Establish, measure and communicate performance indicators aligned with national targets of EH&S program	Regional Safety Leadership Team

Project Leadership

This system is implemented at the project level by Project Leadership and supported by Regional/Operating Unit Leadership.

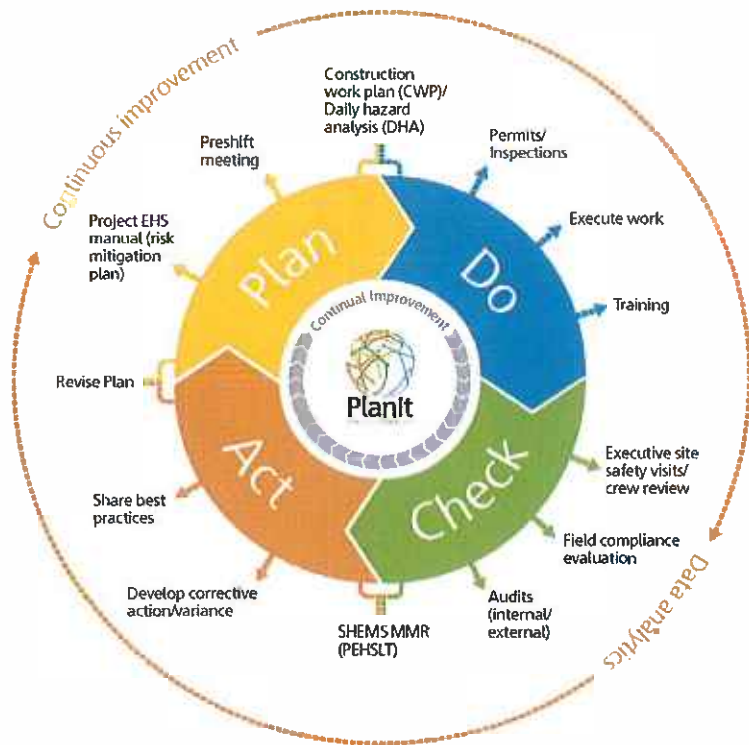

Project teams identify EHS risks utilizing Skanska's PlanIt tool. The PlanIt tool is used to create an EHS Manual complete with Skanska corporate controls which serve as the project SHEMS and is applicable to whoever performs work on Skanska's behalf. This document is specific to the scope of work and the basis for the project specific SHEMS.

During the design phase of alternative delivery projects, the SHEMS gives us the opportunity to control and influence environmental performance and provide our clients with a life cycle perspective associated with the project. These opportunities are evaluated using various sustainable rating systems (i.e. LEED, Envision, etc.) or other similar means (Skanska's Green Color Palette).

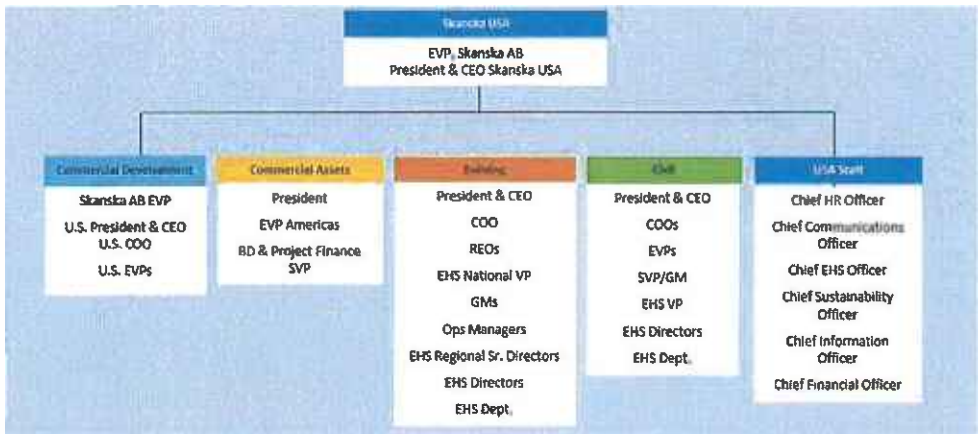

Project Level
