Comments for Public Posting: I would like to advocate for limits on artificial turf in spaces used by children. The plastics degrade in LA sun and heat, and are detrimental to human health. Native grasses and mulch are superior for planet, human health, and will better mitigate affects of climate change.

Comments for Public Posting: I strongly urge the Energy and Environment Committee to support Councilmember Blumenfield's motion to reject artificial turf and invest in drought-tolerant landscaping. Artificial turf heats up to dangerous levels, injuring players, contributing to the heat island effect. Synthetic grass also sheds toxic microplastics laden with PFAS, harming groundwater, surrounding habitat and players health. Say NO to plastic grass!
