Re: CITADEL Project No. 0950.1022.0
Phase I Environmental Site Assessment Report
6728 Sepulveda Boulevard
Van Nuys, California 91411

Dear Ms. Amparo:

Enclosed please find Citadel EHS's Phase I Environmental Site Assessment Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted for Uncommon Developers, in accordance with Citadel's Proposal 0950.1022.P, dated May 2, 2022, and a mutually agreed upon scope of work.

If after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in Glendale at (818) 246-2707.

Sincerely,
CITADEL EHS

Mark Drollinger

Citadel EHS (Citadel) was contracted by Uncommon Developers (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

Current Site Conditions

The Site consists of undeveloped land in the north portion of the Site and asphalt-paved surface areas in the south portion of the Site. Access to the Site parking areas is in the southwest corner of the Site along Sepulveda Boulevard. At the time of the Site reconnaissance, the Site was unoccupied. Chain link fencing was observed along the perimeters of the Site. No stationary equipment was observed at the Site.

Site History

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the use of the Site as orchards. The Site appeared undeveloped by 1952 and remained relatively unchanged until the construction of a nursing home in 1972. The nursing home was demolished by April 2021.

Previous Environmental Reports

Citadel reviewed the following environmental reports for the Site:

- Patriot Environmental Laboratory Services, Inc. (Patriot) performed a Phase I ESA of the Site in August 2020. At the time of the report, the Site was occupied as an assisted living and memory care facility consisting of apartments, cafeteria, kitchen, recreation areas, laundry, offices, nursing station, mechanical rooms, and storage rooms. Patriot's assessment revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs). No further assessment was recommended; however, Patriot identified the two hydraulic elevators at the Site as de minimis conditions. No signs or reports of leaking hydraulic fluid was reportedly and no further action regarding the elevators appeared necessary at the time; however, Patriot noted that testing and disposal of impacted soils surrounding the elevators may be required when the building is demolished.

- Geocon West, Inc. (Geocon) submitted a geotechnical investigation report in September 2020 for a proposed multi-family residential development at the Site. According to the report, the proposed development will consist of constructing a five-story multi-family residential structure over one level of podium parking at or near present Site grade. The investigation consisted of advancing three borings to depths between 40.5 and 65.5 feet below ground surface (bgs). Groundwater was not encountered during the investigation.

- Patriot conducted a limited subsurface investigation in September 2020. According to the report, the Site had no known significant environmental concerns associated with recent or historical site uses; however, the property is located south of a community shopping center with multiple tenants; one of which was formerly occupied by a dry cleaner business. The presence of the former dry cleaner facility was identified as a potential environmental concern. The investigation included three soil borings along the north boundary of the Site with vapor probes set at approximately six feet bgs. Soil vapor samples were analyzed for volatile organic compounds (VOCs). Results indicated that the detected concentration of tetrachloroethylene (PCE) in all soil vapor samples exceeded current residential screening levels, suggesting a possible vapor intrusion threat that could potentially impact residents of the structure when occupied. Patriot recommended indoor air sampling for VOCs to confirm actual indoor air conditions if the structure was to be reoccupied; or the installation of a liquid boot and a passive sub-slab depressurization system for a new structure.

- Earth Science LLC (Earth Science) conducted a limited subsurface investigation at the Site in October 2020, to further investigate the known presence of VOCs in the soil vapor at the Site as a result of the dry cleaning operations at the adjacent property north of the Site. The investigation included the advancement of 10 borings to a depth of five feet bgs with soil samples collected at two and five feet bgs. Upon completion of the borings, soil vapor probes were set at five feet bgs in each boring. Two soil samples collected from two feet bgs were analyzed for organochlorine pesticides (OCPs); two soil samples collected from five feet bgs were analyzed for VOCs; and 10 soil vapor samples (and one duplicate sample) were analyzed using a mobile laboratory for VOCs.

  VOCs were not detected in the two analyzed soil samples. OCPs were not detected in the two analyzed soil samples with the exception for 4,4'-dichlorodiphenyldichloroethylene (4,4'-DDE), which was detected at a concentration of 0.0058 milligram per kilogram (mg/kg) below the screening levels of 2.0 mg/kg. PCE was detected in four of the soil vapor samples (one of which was a duplicate sample) at concentrations ranging from 23 to 51 micrograms per cubic meter (µg/m^3), and above the DTSC residential screening level of 15 µg/m^3. No other VOCs were detected in the remaining soil vapor samples.

- Citadel conducted a limited subsurface investigation at the Site in February 2021. Citadel advanced six borings to a maximum depth of 25 feet bgs. Soil samples were collected at five-foot intervals. Upon completion of the borings, soil vapor sample probes were installed in each boring at 15 feet and at the terminus of each boring (between 22 to 25 feet bgs). The collected soil samples were submitted to the laboratory and placed on hold for analysis. Twelve soil vapor samples were collected and analyzed for VOCs by EPA Method TO-15.

  PCE was detected in all soil vapor samples with concentrations exceeding the residential environmental screening levels (ESLs) of 15 µg/m^3 in five boring locations, ranging from 17 to 480 µg/m^3. Benzene was detected in 10 of the 12 soil vapor samples with concentrations exceeding the residential ESLs of 3.2 µg/m^3 in five boring locations, ranging from 3.5 to 40 µg/m^3. The remaining VOCs detected above the reporting limits were below their respective residential screening levels. Upon receipt of the soil vapor laboratory results, three soil samples were analyzed for VOCs by EPA Method 8260B and total petroleum hydrocarbons (TPH) by EPA Method 8015B. None of the detected concentrations were above residential screening levels.

  Based on the results, Citadel concluded that the Site was impacted by the presence of VOCs. The presence of PCE was consistent with dry cleaning operations and may be related to present and historical dry cleaning and laundry operations north of the Site. Citadel provided the following recommendations:

  - Preparation of a Human Health Risk Assessment (HHRA) to determine whether VOCs detected in soil vapor represents a threat to current and future human health, and to determine whether risk-control measures would be required to protect future residents and workers based on the planned residential development. The installation of a soil vapor barrier and passive venting system may be recommended based on the results of the HHRA.
  - Preparation and implementation of a SMP prior to any construction activities that require excavation of soil.

- Citadel performed a Phase I Environmental Site Assessment at the Site in May 2021. At the time of the report, the Site consisted of undeveloped land in the north portion of the

Site and asphalt-paved surface areas in the south portion of the Site. The Site was unoccupied. Citadel identified the former adjoining dry cleaner and former gasoline station as VEC concerns and RECs.

Environmental Databases

The Site was identified on the Facility Index System (FINDS), Enforcement and Compliance History Information (ECHO), Hazardous Waste Tracking System (HWTS) and Resource Conservation and Recovery Act (RCRA) Non-Generator/No Longer Regulated (NONGEN/NLR) databases. FINDS contains facility information and "pointers" to other sources that contain more detail; ECHO provides integrated compliance and enforcement information; HWTS is the Department of Toxic Substances Control's (DTSC) data repository for hazardous waste identification and manifest information; and RCRA NONGEN/NLR is the Environmental Protection Agency's (EPA) comprehensive information system that includes selective information on RCRA facilities that do not generate hazardous waste. The Site was identified on these databases due to being identified as a generator of asbestos-containing materials in December 2020 and January 2021. No violations were reported. The appearance of the Site on these databases reflects proper disposal of hazardous waste and do not represent an environmental concern.

Citadel reviewed information provided by Environmental Data Resources (EDR) regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. A former Chevron Station, located at 6810 Sepulveda Boulevard, is listed as a LUST site. According to EDR, the property is approximately 515 feet north-northwest of the Site and the non-petroleum hydrocarbon leak was reported in January 1996. The case was completed and closed by the Los Angeles Fire Department (LAFD) on September 25, 1996. Based on the case closure and distance from the Site, this case is not expected to represent a significant concern to the Site.

Three properties were identified as within 0.125-mile and upgradient of the Site on the Historical Gas Station database:

- 6734 Sepulveda Boulevard, approximately 33 feet north of the Site
  - According to EDR, this property was occupied as a gasoline service station in 1940. While EDR identifies this property as 33 feet north-northwest of the Site, this listing is associated with the adjoining property north of the Site. Citadel reviewed historic building permits for the adjoining property north of the Site. A service station was constructed at the property in 1927 and was occupied as a used car lot by 1950. The service station was converted to a vegetable stand by 1952. The structures at the property were demolished by 1964 and the current retail shopping center was constructed in 1965.
  - This property was also identified on the LAFD's UST and hazardous materials inventory listings with an inactive status. Since the property was not identified on the historical UST databases, the LAFD listing is likely associated with USTs removal. While the USTs have likely been removed, it is unclear when the USTs were removed.
  - Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a vapor encroachment condition (VEC) concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.
- 6759 Sepulveda Boulevard, approximately 225 feet northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1977 and as an automotive repair shop in 1991. According to reviewed

building permits and aerial photographs, this property appeared to be developed with a service station by 1947. A new service station was constructed in 1960. A grading permit to backfill tank hole was issued in 1989. Due to the removed UST and distance from the Site, this listing is not likely to have adversely affected the Site.

- 6810 Sepulveda Boulevard, approximately 515 feet north-northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1991; a carwash from 1988 to 2011; and a general automotive repair shop in 2010. This property was also identified as a LUST site, as discussed above. Based on the case closure and distance from the Site, this property is not likely to have adversely affected the Site.

One property was identified as within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database:

- 6754 Sepulveda Boulevard, approximately 174 feet northwest of the Site (adjoining property north of the Site)
  - According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated laundry with dry cleaning services. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site. The rear of the tenant space is located approximately 20 feet north of the Site boundary.
  - Citadel reviewed the South Coast Air Quality Management District's (SCAQMD) FINDS for information regarding the dry cleaning equipment. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site.
  - The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

RECOGNIZED ENVIRONMENTAL CONDITIONS

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on a review of historical and present records, and Site reconnaissance, Citadel believes that sufficient information was collected and evaluated for the Site to determine if a REC, HREC, CREC, or a de minimis condition exists. Based on our review, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC was identified. Citadel identified the following environmental concerns:

- A former adjoining dry cleaner operated dry cleaning equipment with PCE from 1985 until at least 2014. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.
- A former gasoline station was also located at the adjoining property north of the Site. While USTs associated with the gasoline station are likely to been removed, it is unclear when the USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.

No evidence for designating the Site as a HREC or CREC from reviews of historical documents and present Site conditions was found.

NON-ASTM SCOPE CONSIDERATIONS

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 39 tests were performed within the 91405 zip code for the presence of radon. Of

these, none were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

A potable well was not observed on-Site and the Site does not lie within a known or potential flood zone or wetlands.

1.0 INTRODUCTION

Citadel EHS (Citadel) was contracted by Uncommon Developers (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

1.1 PURPOSE

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by review of current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the Site. A Site visit was also conducted to observe existing Site conditions. This report provides the results of the Phase I ESA performed.

1.2 INVOLVED PARTIES

The involved party(s) in this study, to the best of our knowledge, is Uncommon Developers.

Citadel understands that this Phase I ESA is being requested in conjunction with due diligence activities by Uncommon Developers. Citadel recognizes that this report is to be used exclusively by Uncommon Developers and its successors, lenders, and assigns. It is a report upon which Uncommon Developers and its successors, lenders, and assigns, can rely.

This assessment and report were prepared on behalf of and for the exclusive use of Uncommon Developers, their lenders and assigns (Client) solely for its use and reliance, subject to the terms and conditions agreed upon between Citadel and the Client.

1.3 SCOPE OF SERVICES

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-13 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The scope of services for this assessment consisted of the following:

- Performed a Site inspection to verify current Site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.

- Conducted a visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the Site.

- Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Reviewed results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

- Consulted with appropriate governmental agencies having jurisdiction relative to past history of the property, complaints or incidents in the immediate area, and permits that may have been issued.

- Prepared a Phase I report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the Site based on the data search, reasonably ascertainable documents, and Site inspection.

2.0 GENERAL SITE CHARACTERISTICS

2.1 LOCATION

The rectangular-shaped Site is located approximately 0.46 mile east of the Interstate 405, locally referred to as the San Diego Freeway. The Site is bounded by commercial and retail properties to the north; Columbus Avenue to the east; a nursing home to the south; and Sepulveda Boulevard to the west. The general Site vicinity is occupied by commercial and retail properties, along with nursing homes, an elementary school, and a hospital.

According to the U.S. Geological Survey (USGS) Van Nuys Quadrangle (7.5 Minute Series), dated 2012, the Site is at an elevation of approximately 736 feet above mean sea level (AMSL) and appears to slope to the south-southeast. The Site is located at approximate coordinates of 34° 11' 34.04" North Latitude and 118° 27' 54.23" West Longitude.

A Site Location Map identified as Figure 1 is included in Appendix A.

2.2 SITE DESCRIPTION

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of one parcel legally identified as Assessor's Parcel Number (APN)2235-004-010. The Site encompasses approximately 2.18 acres of land.

The Site consists of undeveloped land in the north portion of the Site and asphalt-paved surface areas in the south portion of the Site. Access to the Site parking areas is in the southwest corner of the Site along Sepulveda Boulevard. At the time of the Site reconnaissance, the Site was unoccupied. Chain link fencing was observed along the perimeters of the Site. No stationary equipment was observed at the Site.

A Site Plan is included as Figure 2 in Appendix A. Select photographs of the Site and vicinity is included as Appendix B.

2.3 ADJACENT PROPERTIES

The immediately surrounding properties of the Site consist of the following:

Direction from Site	Address – Tenant/Use
North	Grand Plaza, consisting of the following tenants: ➢ 6734 Sepulveda Boulevard – Wingstop, a restaurant ➢ 6736 Sepulveda Boulevard – Dentistry, a dental office ➢ 6740 Sepulveda Boulevard – Subway, a restaurant ➢ 6742 Sepulveda Boulevard – MetroPCS, a cell phone store ➢ 6748 Sepulveda Boulevard – John's Watch Repair, a watch repair service ➢ 6750 Sepulveda Boulevard – Shears Barber, a hair salon ➢ 6752 Sepulveda Boulevard – Dazzle Hair & Nail Spa, a hair and nail salon ➢ 6754-6756 Sepulveda Boulevard – Van Nuys Coin Laundry ➢ 15232 Vanowen Street – Rose Bakery, a bakery ➢ 15230A Vanowen Street – Dollar King, a retail shop ➢ 15230 Vanowen Street – O'Reilly Auto Parts, an auto retail shop ➢ 15226 Vanowen Street – Oportun, a loan agency ➢ 15224 Vanowen Street – Baskin Robbins, an ice cream shop ➢ 15222 Vanowen Street – Garibay's Flowers, a florist 15220 Vanowen Street – Center for Healthy Living, an adult day health care center 15216 Vanowen Street – Multi-tenant medical building
East	6700 Columbus Avenue – Columbus Avenue Elementary School
South	6700 Sepulveda Boulevard – California Healthcare and Rehabilitation, a skilled nursing home
West	6719 Sepulveda Boulevard – Multi-family residences

2.4 UTILITIES

No electrical or gas service is currently being supplied to the Site

3.0 ENVIRONMENTAL SETTING

3.1 PHYSICAL SITE CHARACTERISTICS

Based upon the North American Datum (NAD) of 1983, the Site is at an elevation of approximately 736 feet AMSL.

The Site is identified on the geologic map of the San Fernando and Van Nuys (north half) quadrangles, Los Angeles County, California (Dibblee and Ehrenspeck, 1991) as being Holocene aged surficial sediments (Qa). The surficial sediments are described as alluvial gravel, sand, and clay of valley areas. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) National Cooperative Soil Survey identifies the Site soils as Urban Land-Grommet-Ballona complex. The Urban Land soils are described alluvial fans landform with very high runoff; the Grommet soils are described as well-drained loam with low runoff; and the Ballona soils are described as well-drained loam and clay loam with medium runoff. According to the Limited Phase II Soil Vapor Sampling Services Report, prepared by Citadel and dated March 9, 2021, soil encountered at the Site included silt, clayey silt, and silty clay.

USGS Topographic Map	Van Nuys Quadrangle
Groundwater Basin	San Fernando Valley Groundwater Basin
Nearest Surface Water to Site	Haskell Channel, approximately 0.7 mile southwest of the Site
Gradient Direction (Source)	South-southeast (topographic maps)
Estimated Depth to Groundwater (Source)	Approximately 235 feet below ground surface (bgs), approximately 0.5 mile north of the Site (GeoTracker/Delta Consultants, 2009)
Nearest Wetland to Site (Source)	Haskell Channel, approximately 0.7 mile southwest of the Site (National Wetlands Inventory)

Nearest 100 or 500-year Flood Zone	500-year flood zone, approximately 0.6 mile northwest of the Site (Federal Emergency Management Agency)

4.0 SITE RECONNAISSANCE

Citadel representative Ms. Annie Liu conducted the Phase I ESA reconnaissance on May 10, 2022. Ms. Liu was accompanied by Mr. Idan Perlman, Project Admin for Uncommon Developers. The Site reconnaissance consisted of an inspection of the Site and a perimeter survey of the surrounding properties. Ms. Shirley Lee served as the Project Manager and reviewed this Phase I ESA. Findings from the Site inspection, research and perimeter survey are presented below.

4.1 SITE RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)
	X	Identified Hazardous Materials
	X	Polychlorinated Biphenyls (PCBs) – Electric or Mechanical Equipment Likely to Contain Fluids
	X	Radioactive Man-Made Materials
	X	Pits, Ponds, and Lagoons
	X	Septic Tanks and Cesspools
	X	Wells, Cisterns, Sumps, and Drains
	X	Wastewater or Grease Interceptors
	X	Interior Stains or Corrosion
	X	Strong, Pungent, or Noxious Odors
	X	Pools of Liquid
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Other

4.2 NON-ASTM SERVICES

ASBESTOS CONTAINING MATERIALS

The EPA issued a final rule under Section 6 of Toxic Substances Control Act (TSCA) banning most asbestos-containing building materials (ACBMs) in 1989. The ban on ACBMs was vacated in 1991 allowing some building materials to continue to contain asbestos. The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities.

Building materials, coatings, and/or finishes containing asbestos may be present in any structure regardless of the date of construction. In accordance with NESHAPS and local air pollution

control district regulations, all suspect materials, finishes, and coatings that will be impacted by renovation or demolition regardless of the date of construction are required to be surveyed for the presence of asbestos by State-licensed asbestos consultants.

No structures were observed at the Site. A survey for asbestos-containing materials was not requested or conducted as part of this Phase I ESA.

LEAD-BASED/LEAD-CONTAINING PAINTS

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has greater than or equal to one milligram per square centimeter (mg/cm^2) (5,000 microgram per gram (µg/g) or 5,000 parts per million (ppm)) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. In 2009, the US Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303) banned paint containing more than 0.009% (90 ppm) lead for residential use. Buildings built before 1978 are much more likely to have LBP; however, all commercial structures regardless of the date of construction likely contain lead-based or lead-containing glazings, varnishes, stains, coatings, paints, and primers. Such materials that will be impacted by renovation, repair, or demolition should be tested beforehand and the results disclosed to trades or staff that will be doing such work. All associated waste streams should be accurately characterized for proper disposal requirements.

No structures were observed at the Site. A survey for lead containing materials was not requested or conducted as part of this Phase I ESA.

POLYCHLORINATED BIPHENYLS

Polychlorinated biphenyls (PCBs) were an ingredient added to a variety of building materials during manufacture, most notably, but not limited to, caulking, putty, and glazing, particularly around windows, door frames, and building joints. Building materials containing PCBs were used in many buildings in the 1950s through the 1970s, and potentially before the 1950s. There are significant regulations regarding the removal of these materials during demolition and/or renovation, both from an environmental protection standpoint as well as an occupational health and safety standpoint. In addition, under the Toxic Substances Control Act (TSCA), building materials that contain PCBs at or above 50 ppm are considered an "unauthorized use" of PCBs, and removal can be compelled under TSCA. The presence of PCBs may have the potential to impact a property's future land use. Based on the construction date for the Site building, building materials containing PCBs may have been used in the construction of the Site building.

No structures were observed at the Site. A survey for PCBs is beyond the required scope of ASTM E1527-13 and was not specifically requested or conducted as part of this Phase I ESA.

DRINKING WATER

The Site is supplied with municipal drinking water by the Los Angeles Department of Water and Power. An assessment of lead in drinking water was not requested or conducted as part of this Phase I ESA.

RADON

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 39 tests were performed within the 91405 zip code for the presence of radon. Of these, none were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

METHANE

In March 2004, Ordinance Number 175790 was adopted into the Los Angeles Municipal Code (Section 91.106.4.1 and Division 71, Chapter IX) to establish citywide methane mitigation requirements, and included updated construction standards to control methane intrusion into buildings. This ordinance established defined geographic areas as Methane Zones and Methane Buffer Zones, which relate to specific assessment and mitigation requirements per area, and set forth a standard of assessment and mitigation in the planning stages of all new construction in these areas.

The Site is not located within the City of Los Angeles Methane or Methane Buffer Zones recognized by the Los Angeles Department of Building and Safety.

5.0 SITE HISTORY

The purpose of the records review is to obtain and review reasonably ascertainable/standard sources that will help identify recognized environmental conditions in connection with the property. Reasonably ascertainable records from standard sources is (1) information that is publicly available, (2) information that is obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

Reasonable time and cost means that the information will be provided by the source within 20 calendar days of receiving a written, telephone, or in-person request at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 days of request.

To investigate the history of the Site, Citadel reviewed select historic aerial photographs, building permits, city directories, and Sanborn Fire Insurance Maps provided by Environmental Data Resources Inc. (EDR). In addition, Citadel reviewed client-supplied information, and oil and gas maps, and Citadel interviewed selected individuals regarding historic Site use. Citadel's reviews of these reports and interviews are discussed below.

5.1 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous material generation or storage.

Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1923, 1938	The Site appears developed as an orchard	**North:** Small structures, likely a gasoline station and three dwellings, and orchards **East:** Orchard **South:** Orchard **West:** Sepulveda Boulevard, with orchards beyond
1947	Relatively unchanged	**North:** Relatively unchanged **East:** Undeveloped land **South:** Relatively unchanged **West:** Several small structures, likely residences, appear developed
1952	Undeveloped land (no longer developed as orchard)	**North:** No longer appear developed with orchards; the area along Sepulveda Boulevard appears occupied as a surface parking lot **East:** Undeveloped land **South:** Relatively unchanged **West:** Relatively unchanged
1964	Relatively unchanged	**North:** Two of the residences appear to have been replaced with portions of the current commercial structures **East:** Several small structures, likely associated with the current school, appear developed **South:** Relatively unchanged **West:** The previously identified structures appear to have been replaced with a multi-family residence
1967	Relatively unchanged	**North:** The gasoline station and remaining residence appear to have been replaced with the current retail shopping center **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1970	Relatively unchanged	**North:** One of the commercial structures north of the Site appear to have expanded to its current configuration **East:** Columbus Avenue appears developed; several new structures appear to have replaced former structures **South:** The current nursing home facility appears developed **West:** Relatively unchanged
1977, 1983	The Site appears developed with a structure occupied as a nursing home facility with surface parking areas	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1989, 1995	The east portion of the Site appears developed with a basketball court	**North:** Relatively unchanged **East:** One of the previously identified structure appears to have been replaced with one of the current structures **South:** Relatively unchanged **West:** Relatively unchanged

Dates(s)	Site Description	Surrounding Area Descriptions
2002, 2005, 2009, 2012, 2016	Relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged

Copies of the Aerial Photographs provided by EDR can be found in Appendix C.

5.2 HISTORIC BUILDING PERMITS

EDR provides a listing of building permits for the Site and adjoining properties, if available. In addition, Citadel reviewed building permits with the City of Los Angeles Building Department. A nursing home was constructed at the Site in 1972 and demolished by April 2021.

A copy of the EDR Building Permit Report is included as Appendix D.

5.3 HISTORICAL FIRE INSURANCE MAPS

Citadel requested that EDR review its collection of Sanborn Fire Insurance Maps for potential coverage of the Site and vicinity. Sanborn Map coverage was not available for the Site.

A copy of the EDR Sanborn Map Report is included as Appendix E.

5.4 CITY PARCEL PROFILE REPORT

Citadel reviewed the on-line parcel profile report from the City of Los Angeles interactive database, NavigateLA. Alias addresses identified for the Site include:

- 6728 North Sepulveda Boulevard
- 6715 North Columbus Avenue

5.5 HISTORICAL CITY DIRECTORIES

City directories were researched by EDR in order to identify previous Site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. EDR researched city directory listings from 1920 through 2014 (non-inclusive) and provided their search results to Citadel for review. The following table summarizes information provided by the city directory search.

Dates(s)	Occupant Listed
6728 SEPULVEDA BOULEVARD	
1975, 1980	California Villa and residential listings
1985, 1991, 1994, 1995, 1999, 2004, 2006, 2009, 2014	California Villa Retirement Hotel and residential listings

A copy of the EDR City Directory Abstract is included as Appendix F.

5.6 CLIENT-SUPPLIED ENVIRONMENTAL INFORMATION

Citadel reviewed the *Phase I Environmental Site Assessment of California Green Tree Villa, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Patriot Environmental Laboratory Services, Inc., dated August 31, 2020.

> Patriot Environmental Laboratory Services, Inc. (Patriot) performed a Phase I ESA of the Site in August 2020. At the time of the report, the Site was occupied as an assisted living and memory care facility consisting of apartments, cafeteria, kitchen, recreation areas, laundry, offices, nursing station, mechanical rooms, and storage rooms. According to Patriot, the Site was used for orchards prior to 1928; the Site building was constructed in 1973. Patriot's assessment revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs). No further assessment was recommended; however, Patriot identified the two hydraulic elevators at the Site as de minimis conditions. No signs or reports of leaking hydraulic fluid was reported and no further action regarding the elevators appeared necessary at the time; however, Patriot noted that testing and disposal of impacted soils surrounding the elevators may be required when the building is demolished.

Citadel reviewed the *Geotechnical Investigation, Proposed Multi-Family Residential Development, 6728 North Sepulveda Boulevard, 6715 North Columbus Avenue, Los Angeles, California,* prepared by Geocon West, Inc., dated September 10, 2020.

> Geocon West, Inc. (Geocon) submitted a geotechnical investigation report in September 2020 for a proposed multi-family residential development at the Site. According to the report, the proposed development will consist of constructing a five-story multi-family residential structure over one level of podium parking at or near present Site grade. The investigation consisted of advancing three borings to depths between 40.5 and 65.5 feet bgs. Groundwater was not encountered during the investigation.

Citadel reviewed the *Limited Subsurface Investigation Report of California Green Tree Villa, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Patriot Environmental Laboratory Services, Inc., dated September 17, 2020.

> Patriot conducted a limited subsurface investigation in September 2020. According to the report, the Site had no known significant environmental concerns associated with recent or historical site uses; however, the property is located south of a community shopping center with multiple tenants; one of which was formerly occupied by a dry cleaner business. The presence of the former dry cleaner facility was identified as a potential environmental concern. The investigation included three soil borings along the north boundary of the Site with vapor probes set at approximately six feet bgs. Soil vapor samples were collected from each boring and analyzed for volatile organic compounds (VOCs) by EPA Method 8260B. Results indicate that tetrachloroethylene (PCE) was detected between 1.3 and 5.3 micrograms per liter (µg/L); no other VOCs were detected in any of the samples.
>
> The detected concentrations were compared to the Regional Screening Levels (RSLs) modified using attenuation factors of 0.03 (EPA) and 0.001 (Department of Toxic Substances Control [DTSC]), with the most stringent screening level as 0.015 µg/L. Results indicated that the detected concentration of PCE in all soil vapor samples exceeded

current residential screening levels, suggesting a possible vapor intrusion threat that could potentially impact residents of the structure when occupied.

Patriot recommended indoor air sampling for VOCs to confirm actual indoor air conditions if the structure was to be reoccupied; or the installation of a liquid boot and a passive sub-slab depressurization system for a new structure.

Citadel reviewed the *Limited Phase II Environmental Site Assessment Report, Former California Green Tree Villa, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Earth Science LLC, dated October 19, 2020.

Earth Science LLC (Earth Science) conducted a limited subsurface investigation at the Site in October 2020, to further investigate the known presence of VOCs in the soil vapor at the Site as a result of the dry cleaning operations at the adjacent property north of the Site. The investigation included the advancement of 10 borings to a depth of five feet bgs with soil samples collected at two and five feet bgs. Upon completion of the borings, soil vapor probes were set at five feet bgs in each boring. Two soil samples collected from two feet bgs were analyzed for organochlorine pesticides (OCPs) by EPA Method 8081; two soil samples collected from five feet bgs were analyzed for VOCs by EPA Method 8260/5035; and 10 soil vapor samples (and one duplicate sample) were analyzed using a mobile laboratory for VOCs by EPA Method 8260.

VOCs were not detected in the two analyzed soil samples. OCPs were not detected in the two analyzed soil samples with the exception for 4,4'-dichlorodiphenyldichloroethylene (4,4'-DDE), which was detected at a concentration of 0.0058 milligram per kilogram (mg/kg) below the screening levels of 2.0 mg/kg. PCE was detected in four of the soil vapor samples (one of which was a duplicate sample) at concentrations ranging from 23 to 51 micrograms per cubic meter (µg/m^3), above the DTSC residential screening level of 15 µg/m^3. No other VOCs were detected in the remaining soil vapor samples.

According to Earth Science, the results of the investigation confirmed that the dry cleaning operations at the adjacent property north of the Site was the likely source of PCE-contaminated soil vapor at the Site.

Citadel reviewed the *Limited Phase II Soil Vapor Sampling Services Report, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Citadel EHS, dated March 9, 2021.

Citadel conducted a limited subsurface investigation at the Site in February 2021. Citadel advanced six borings to a maximum depth of 25 feet bgs. Soil samples were collected at five-foot intervals. Upon completion of the borings, soil vapor sample probes were installed in each boring at 15 feet and at the terminus of each boring (between 22 to 25 feet bgs). The collected soil samples were submitted to the laboratory and placed on hold for analysis. Twelve soil vapor samples were collected and analyzed for VOCs by EPA Method TO-15.

PCE was detected in all soil vapor samples with concentrations exceeding the residential environmental screening levels (ESLs) of 15 µg/m^3 in five boring locations, ranging from 17 to 480 µg/m^3. Benzene was detected in 10 of the 12 soil vapor samples with concentrations exceeding the residential ESLs of 3.2 µg/m^3 in five boring locations, ranging from 3.5 to 40 µg/m^3. The remaining VOCs detected above the reporting limits were below their respective residential screening levels.

Upon receipt of the soil vapor laboratory results, three soil samples were analyzed for VOCs by EPA Method 8260B and total petroleum hydrocarbons (TPH) by EPA Method 8015B. Acetone was detected at a concentration of 23 micrograms per kilogram (µg/kg) in one of the soil samples; the concentration is below the residential screening level of 61,000,000 µg/kg. TPH concentrations were detected between 14 and 32 mg/kg in the three soil samples, below the residential screening level of 12,000 mg/kg.

Based on the results, Citadel concluded that the Site was impacted by the presence of VOCs. The presence of PCE was consistent with dry cleaning operations and may be related to present and historical dry cleaning and laundry operations north of the Site. Citadel provided the following recommendations:

- Preparation of a Human Health Risk Assessment (HHRA) to determine whether VOCs detected in soil vapor represents a threat to current and future human health, and to determine whether risk-control measures would be required to protect future residents and workers based on the planned residential development. The installation of a soil vapor barrier and passive venting system may be recommended based on the results of the HHRA.
- Preparation and implementation of a SMP prior to any construction activities that require excavation of soil.

Citadel reviewed the *Preliminary Report, 6728 South Sepulveda Boulevard (Van Nuys Area), Los Angeles, California 91411*, prepared by Old Republic Title Company, dated April 15, 2021.

Old Republic Title Company prepared a preliminary report for the Site. The title is vested in Judy A. Shea, Trustee of the Shea Revocable Living Trust dated May 30, 1991. A mechanical lien was listed; however, no environmental lien was identified.

Citadel reviewed the *Phase I Environmental Site Assessment, 6728 South Sepulveda Boulevard (Van Nuys Area), Los Angeles, California 91411*, prepared by Citadel EHS, dated May 6, 2021.

Citadel performed a Phase I ESA at the Site in May 2021. Citadel identified the following environmental concerns:

- A former adjoining dry cleaner operated dry cleaning equipment with PCE from 1985 until at least 2014. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.
- A former gasoline station was also located at the adjoining property north of the Site. While USTs associated with the gasoline station are likely to been removed, it is unclear when the USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.

A copy of the reviewed report can be found in Appendix G.

5.7 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps were provided by EDR in order to identify natural features and changes in development over a long period of time. The topographic maps provides the user with a regional view of changes to the Site and vicinity that other historical databases such as aerial photographs may not provide. Below are brief descriptions of observations made from the topographic maps of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1894, 1896, 1898, 1900, 1902	Undeveloped land	**North:** Undeveloped land **East:** Undeveloped land **South:** Undeveloped land **West:** Undeveloped land
1902, 1921	Relatively unchanged	**North:** Relatively unchanged; Vanowen Street and a small structure appear developed further north **East:** Relatively unchanged **South:** Relatively unchanged **West:** Sepulveda Boulevard, with undeveloped land beyond
1924, 1926	Relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged; a small structure appears developed further south **West:** Relatively unchanged
1953	Shading indicative of urban development	**North:** Shading indicative of urban development **East:** Shading indicative of urban development; the current street system further east appears developed **South:** Shading indicative of urban development **West:** Shading indicative of urban development; the current street system appears developed
1966	Undeveloped land (no longer shaded)	**North:** A portion of the current commercial structure appears developed; a hospital appears developed further northeast **East:** Relatively unchanged **South:** Relatively unchanged **West:** Undeveloped land (no longer shaded)
1972	Relatively unchanged	**North:** The current retail shopping center appears developed; the previously identified structure appears to have expanded to its current configuration **East:** Relatively unchanged **South:** The current nursing home structure appears developed **West:** Relatively unchanged
2012	Structures not depicted on this map	Structures not depicted on this map

Copies of the historical topographic maps provided by EDR are included as Appendix H.

5.8 HISTORIC OIL AND GAS MAPS

Citadel reviewed information available on-line through the California Department of Conservation's website. The Geological Energy Management Division (CalGEM) Online Mapping System (COMS) shows that there are no oil wells within a one-mile radius of the Site.

5.9 INTERVIEWS

Citadel interviewed Mr. Perlman during the Site reconnaissance. Mr. Perlman was aware of the historic recognized environmental concern of a former adjoining dry cleaner. Citadel also submitted a User Questionnaire to Uncommon Developers. The completed User Questionnaire can be found in Appendix I.

5.10 ENVIRONMENTAL LIEN

Citadel was not provided with any title reports or information regarding environmental lien search. A title search was provided in the previous Phase I ESA and is discussed above in Section 5.6. No environmental lien was identified.

5.11 SUMMARY OF SITE HISTORY

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the use of the Site as orchards. The Site appeared undeveloped by 1952 and remained relatively unchanged until the construction of a nursing home in 1972. The nursing home was demolished by April 2021.

6.0 REGULATORY AGENCY REVIEW

6.1 DATABASE REVIEW

As part of the Phase I ESA, Citadel utilized EDR of Milford, Connecticut, as an information source for regulatory agency database records.

The following summary of the database information is divided into five columns. The first column identifies the environmental database researched; the second column indicates the distance from the Site that was used for the research; the third column indicates if the Site was identified in the specified database; the fourth column lists the number of listings identified on the database within the specified distance of the Site; and the fifth column indicates if the sites identified are potential environmental concerns to the Site.

Although locations of the orphan sites are frequently unknown, Citadel attempts to evaluate the potential adverse environmental impact that these facilities may have on the Site. This evaluation consists of reviewing street names in an effort to learn whether the street on which the Site is located lies within the search distance of the subject property, a drive-by view of surrounding properties during the Site visit, and evaluating the Site type and information provided by government agencies. The orphan sites included in the following table are those Citadel identified as potentially located within the identified search distance.

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
National Priorities List	1 mile	No	0	
RCRA Corrective Action Treatment/Storage/Disposal (TSD) Facilities (CORRACTS)	1 mile	No	0	
Delisted National Priorities List	1 mile	No	0	
CERCLIS Sites	½ mile	No	0	
CERCLIS No Further Remedial Action Planned (NFRAP) Sites	½ mile	No	0	
RCRA Non-Corrective Action TSD Facilities	½ mile	No	0	
State/Tribal Voluntary Cleanup Sites	½ mile	No	0	
State/Tribal Leaking Registered Storage Tank Sites	½ mile	No	6	No
State/Tribal Brownfield Sites/CERCLIS Equivalent	1 mile	No	3	No
Historic CORTESE List	½ mile	No	2	No
State/Tribal Solid Waste Landfill Sites/Facilities	½ mile	No	0	
Federal/State/Tribal Engineering Controls Registries	½ mile	No	0	
Federal/State/Tribal Institutional Controls Registries	½ mile	No	0	
RCRA Large Quantity Generators	¼ mile	No	1	No
RCRA Small Quantity Generators	¼ mile	No	5	No
RCRA Non Generators	¼ mile	Yes	29	See discussion below
State/Tribal Registered Storage Tank Sites	¼ mile	No	7	See discussion below
HIST UST	¼ mile	No	7	No
CA FID UST	¼ mile	No	5	No
SWEEPS UST	¼ mile	No	5	No
Facility Index System (FINDS)	Site	Yes	1	No, see discussion below
HAZNET	Site	No	0	
Orphan	N/A	No	2	No

A brief discussion of select facilities and their database listings are included following the table. The full report provided by EDR and reviewed by Citadel can be found in Appendix J.

Site Name	Judy Shea
Database(s)	FINDS, ECHO, HWTS, RCRA NONGEN/NLR

Address	6728 Sepulveda Boulevard
Distance/Direction	Target Property
Comments	The Site was identified on the Facility Index System (FINDS), Enforcement and Compliance History Information (ECHO), Hazardous Waste Tracking System (HWTS) and Resource Conservation and Recovery Act (RCRA) Non-Generator/No Longer Regulated (NONGEN/NLR) databases. FINDS contains facility information and "pointers" to other sources that contain more detail; ECHO provides integrated compliance and enforcement information; HWTS is the Department of Toxic Substances Control's (DTSC) data repository for hazardous waste identification and manifest information; and RCRA NONGEN/NLR is the Environmental Protection Agency's (EPA) comprehensive information system that includes selective information on RCRA facilities that do not generate hazardous waste. The Site was identified on these databases due to being identified as a generator of asbestos-containing materials in December 2020 and January 2021. No violations were reported. The appearance of the Site on these databases reflects proper disposal of hazardous waste and do not represent an environmental concern.

Site Name	Grand Plaza, LLC
Database(s)	UST, HAZMAT
Address	6734 Sepulveda Boulevard
Distance/Direction	33 feet west-northwest of the Site
Comments	This property was identified on the Los Angeles Fire Department's (LAFD) UST and hazardous materials inventory listings with an inactive status. No further information was provided. While EDR identifies this property as 33 feet north-northwest of the Site, the listing is associated with the adjoining property north of the Site. Citadel reviewed historic building permits for the adjoining property north of the Site. A service station was constructed at the property in 1927 and was occupied as a used car lot by 1950. The service station was converted to a vegetable stand by 1952. The structures at the property were demolished by 1964 and the current retail shopping center was constructed in 1965. Since the property was not identified on the historical UST databases, the LAFD listing is likely associated with the USTs removal. While the USTs have likely been removed, it is unclear when the USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a vapor encroachment condition (VEC) concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.

Site Name	Sepulveda Cleaner, AFCO Cleaners and Laundry, Alpha Cleaners
Database(s)	DRYCLEANERS, EDR Hist Cleaner, HAZMAT
Address	6754 Sepulveda Boulevard
Distance/Direction	174 feet northwest of the Site
Comments	This property was identified on the Historical Dry Cleaners and the Drycleaners databases with several listings. According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated

	laundry with dry cleaning services. Citadel reviewed the South Coast Air Quality Management District's (SCAQMD) FINDS for information regarding the dry cleaning equipment. The following information was provided: ➢ Alpha Cleaners, Facility ID No. 46039 o An inactive permit, issued in 1985, to operate dry cleaning equipment using PCE. o A notice of violation (NOV) was issued in April 1985; no further information was provided but the case was closed in September 1985. ➢ Sepulveda Cleaners, Facility ID No. 62032 o An inactive permit, issued in 1988, to operate dry cleaning equipment using PCE. ➢ Sepulveda Cleaners, Facility ID No. 111950 o Inactive permits, issued in 1997 and 2007, to operate dry cleaning equipment using PCE. o A notice to comply (NC) was issued in April 2000 to repair vapor leaks marked on filter still and water separator greater than 300 parts per million (ppm); returned to compliance in August 2000. o A NC was issued in May 2003 to repair leak around the sight glass; returned to compliance in July 2003. o A notice of violation (NOV) was issued in August 2004 due to PCE leak at 1,045 ppm (greater than 300 ppm); the case was closed in December 2004. o A NC was issued in October 2007 to provide weekly inspection, annual mileage, PCE purchases, and hazardous water manifest records; and to provide records that all door gaskets had been replaced and condenser had been serviced; returned to compliance in December 2007. o A NC was issued in March 2011 to apply for a new permit to operate PCE dry cleaning machine and to provide records of PCE purchase orders, clothes cleaned for 2009 and 2010, and CARB certification; the facility was reinspected in July 2011 and the status indicated a change in ownership. ➢ Sepulveda Cleaners, Facility ID No. 167080 o Inactive permits, issued in 2011, to operate dry cleaning equipment using PCE. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

Maps showing the location of these facilities and additional information are provided in the Government Records Report in Appendix K.

6.2 VAPOR ENCROACHMENT CONDITION

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or

likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Tier 1 screening begins with the default area of concern (AOC) defined by the approximate minimum search distances adjusted as appropriate for local conditions, and then determining if known or suspected contaminated properties with contaminants of concern (COCs) exist within the established AOC. The default AOC is one third of a mile around the TP for COCs and one-tenth of a mile for petroleum hydrocarbon COCs. The AOC is measured from the TP boundary to a contaminated property with known or suspected COC contamination of soil or groundwater or both. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment, based on factors like groundwater flow direction, subsurface characteristics, surficial features and man-made features.

If groundwater flow direction is known or can be inferred from the Phase I ESA investigation of the TP, the default AOC in the down-gradient direction may be reduced to the area within the critical distance of 100 feet. The AOC in the cross-gradient direction may also be reduced, depending upon the critical distance and the width of the COC-contaminated plume associated with a known or likely COC-contaminated property located in a cross-gradient direction from the TP. The critical distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest TP boundary, and is equal to 100 feet for COCs or 30 feet for dissolved petroleum hydrocarbon COCs.

For a COC-contaminated property identified in Tier 1 located down-gradient from the TP, it is not necessary to have information on migrating groundwater contaminated plume dimensions as the critical distance is measured from the nearest TP boundary to the source of contamination at the off-site down-gradient property. In this case, the AOC may be reduced to the area within the critical distance.

For a contaminated property identified in Tier 1 located crossgradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspected COC-contaminated property (that is, the COC-contaminated property where the groundwater contamination originated). The environmental professional's judgment and experience can be used to estimate the width of the COC-contaminated plume that might be associated with the nearby known or suspected COC-contaminated property. If it is not possible to estimate the contaminated plume width, then the AOC cannot be reduced in the cross-gradient direction.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. A former Chevron Station, located at 6810 Sepulveda Boulevard, is listed as a LUST site. According to EDR, the property is approximately 515 feet north-northwest of the Site and the non-petroleum hydrocarbon leak was reported in January 1996. The case was completed and closed by the LAFD on September 25, 1996. Based

on the case closure and distance from the Site, this case is not expected to represent a significant concern to the Site.
EDR also provided the following listings on the Historical Gas Station and Dry Cleaners databases as within 0.125-mile and upgradient, 365 feet and cross-gradient, or 100 feet and downgradient of the Site.

Historical Gas Stations	
Site Name	Patterson
Address	15260 Vanowen Place
Distance/Direction	323 feet north of the Site
Comments	According to EDR, this property was occupied as a gasoline service station in 1940. While EDR identifies this property as 323 feet north-northwest of the Site, this listing is associated with the adjoining property north of the Site and discussed above in Section 6.1. While the USTs have likely been removed, it is unclear when the USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.
Site Name	Shaman Service Center
Address	6759 Sepulveda Boulevard
Distance/Direction	225 feet northwest of the Site
Comments	According to EDR, this property was occupied as a gasoline service station from 1969 to 1977 and as an automotive repair shop in 1991. According to reviewed building permits and aerial photographs, this property appeared to be developed with a service station by 1947. A new service station was constructed in 1960. A grading permit to backfill a tank hole was issued in 1989. Due to the removed UST and distance from the Site, this listing is not likely to have adversely affected the Site.
Site Name	Brett's Incorporated
Address	6810 Sepulveda Boulevard
Distance/Direction	515 feet north-northwest of the Site
Comments	According to EDR, this property was occupied as a gasoline service station from 1969 to 1991; a carwash from 1988 to 2011; and a general automotive repair shop in 2010. This property was also identified as a LUST site, as discussed above. Based on the case closure and distance from the Site, this property is not likely to have adversely affected the Site.

Historical Dry Cleaners	
Site Name	AFCO Cleaners and Laundry Inc.
Address	6754 Sepulveda Boulevard
Distance/Direction	174 feet northwest of the Site
Comments	According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated laundry with dry cleaning

Historical Dry Cleaners	
	services. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site and discussed above in Section 6.1. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

A copy of the vapor encroachment screen provided by EDR is included as Appendix K.

6.3 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

BUILDING DEPARTMENT

Citadel contacted the City of Los Angeles Building Department for information regarding the Site in order to identify historical tenants and property use. Please see Section 5.2 for further discussion.

FIRE DEPARTMENT

The City of Los Angeles Fire Department (LAFD) has recently issued lists of active and inactive ASTs, USTs, and hazardous materials inventories (HMI) as of January 13, 2022. The Site was not identified on these lists.

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY

The California EPA (CalEPA) Regulated Site Portal combines data of environmentally regulated sites and facilities in California into a single, searchable database. The portal provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. Citadel reviewed the Site Portal Profile for the Site address 6728 Sepulveda Boulevard. The Site was not identified in the database.

AIR QUALITY MANAGEMENT DISTRICT

Citadel reviewed information available on-line through the South Coast Air Quality Management District's Facility Information Detail (FIND) database. The Site was not identified on the database.

REGIONAL WATER QUALITY CONTROL BOARD

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage

tanks. According to GeoTracker, the former Chevron Station, located at 6810 Sepulveda Boulevard, approximately 380 feet north of the Site, is listed as a LUST Cleanup Site. According to information provided by GeoTracker, a gasoline leak was reported in January 1996. The case was completed and closed by the LAFD on September 25, 1996. Based on the distance and closure status, this property is not a significant environmental concern.

7.0 DATA GAPS

A data gap is a lack of or inability to obtain information despite good faith efforts to gather such information. A data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

The following data gaps have been identified during the course of this investigation:

- Additional governmental agencies that are not included in the Government Records report may maintain information regarding environmental conditions at the Site and nearby facilities.

With regard to these data gaps, Citadel believes that the most significant potential sources for on-site contamination have been identified during the current investigation and the Phase I ESA was performed in compliance with all appropriate inquiry, published in 40 CFR 312.

8.0 FINDINGS

Citadel EHS (Citadel) was contracted by Uncommon Developers (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

Current Site Conditions

The Site consists of undeveloped land in the north portion of the Site and asphalt-paved surface areas in the south portion of the Site. Access to the Site parking areas is in the southwest corner of the Site along Sepulveda Boulevard. At the time of the Site reconnaissance, the Site was unoccupied. Chain link fencing was observed along the perimeters of the Site. No stationary equipment was observed at the Site.

Site History

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the use of the Site as orchards. The Site appeared undeveloped by 1952 and remained relatively unchanged until the construction of a nursing home in 1972. The nursing home was demolished by April 2021.

Previous Environmental Reports

Citadel reviewed the following environmental reports for the Site:

- Patriot performed a Phase I ESA of the Site in August 2020. At the time of the report, the Site was occupied as an assisted living and memory care facility consisting of apartments, cafeteria, kitchen, recreation areas, laundry, offices, nursing station, mechanical rooms, and storage rooms. Patriot's assessment revealed no evidence of RECs, HRECs, or CRECs. No further assessment was recommended; however, Patriot identified the two hydraulic elevators at the Site as de minimis conditions. No signs or reports of leaking hydraulic fluid was reportedly and no further action regarding the elevators appeared necessary at the time; however, Patriot noted that testing and disposal of impacted soils surrounding the elevators may be required when the building is demolished.

- Geocon submitted a geotechnical investigation report in September 2020 for a proposed multi-family residential development at the Site. According to the report, the proposed development will consist of constructing a five-story multi-family residential structure over one level of podium parking at or near present Site grade. The investigation consisted of advancing three borings to depths between 40.5 and 65.5 feet bgs. Groundwater was not encountered during the investigation.

- Patriot conducted a limited subsurface investigation in September 2020. According to the report, the Site had no known significant environmental concerns associated with recent or historical site uses; however, the property is located south of a community shopping center with multiple tenants; one of which was formerly occupied by a dry cleaner business. The presence of the former dry cleaner facility was identified as a potential environmental concern. The investigation included three soil borings along the north boundary of the Site with vapor probes set at approximately six feet bgs. Soil vapor samples were analyzed for VOCs. Results indicated that the detected concentration of PCE in all soil vapor samples exceeded current residential screening levels, suggesting a possible vapor intrusion threat that could potentially impact residents of the structure when occupied. Patriot recommended indoor air sampling for VOCs to confirm actual indoor air conditions if the structure was to be reoccupied; or the installation of a liquid boot and a passive sub-slab depressurization system for a new structure.

- Earth Science conducted a limited subsurface investigation at the Site in October 2020, to further investigate the known presence of VOCs in the soil vapor at the Site as a result of the dry cleaning operations at the adjacent property north of the Site. The investigation included the advancement of 10 borings to a depth of five feet bgs with soil samples collected at two and five feet bgs. Upon completion of the borings, soil vapor probes were set at five feet bgs in each boring. Two soil samples collected from two feet bgs were analyzed for OCPs; two soil samples collected from five feet bgs were analyzed for VOCs; and 10 soil vapor samples (and one duplicate sample) were analyzed using a mobile laboratory for VOCs.

  VOCs were not detected in the two analyzed soil samples. OCPs were not detected in the two analyzed soil samples with the exception for 4,4'-DDE, which was detected at a concentration of 0.0058 mg/kg below the screening levels of 2.0 mg/kg. PCE was detected in four of the soil vapor samples (one of which was a duplicate sample) at concentrations ranging from 23 to 51 µg/m^3, and above the DTSC residential screening level of 15 µg/m^3. No other VOCs were detected in the remaining soil vapor samples.

- Citadel conducted a limited subsurface investigation at the Site in February 2021. Citadel advanced six borings to a maximum depth of 25 feet bgs. Soil samples were collected at five-foot intervals. Upon completion of the borings, soil vapor sample probes were

installed in each boring at 15 feet and at the terminus of each boring (between 22 to 25 feet bgs). The collected soil samples were submitted to the laboratory and placed on hold for analysis. Twelve soil vapor samples were collected and analyzed for VOCs by EPA Method TO-15.

PCE was detected in all soil vapor samples with concentrations exceeding the residential ESLs of 15 µg/m^3 in five boring locations, ranging from 17 to 480 µg/m^3. Benzene was detected in 10 of the 12 soil vapor samples with concentrations exceeding the residential ESLs of 3.2 µg/m^3 in five boring locations, ranging from 3.5 to 40 µg/m^3. The remaining VOCs detected above the reporting limits were below their respective residential screening levels. Upon receipt of the soil vapor laboratory results, three soil samples were analyzed for VOCs by EPA Method 8260B and TPH by EPA Method 8015B. None of the detected concentrations were above residential screening levels.

Based on the results, Citadel concluded that the Site was impacted by the presence of VOCs. The presence of PCE was consistent with dry cleaning operations and may be related to present and historical dry cleaning and laundry operations north of the Site. Citadel provided the following recommendations:

- Preparation of a HHRA to determine whether VOCs detected in soil vapor represents a threat to current and future human health, and to determine whether risk-control measures would be required to protect future residents and workers based on the planned residential development. The installation of a soil vapor barrier and passive venting system may be recommended based on the results of the HHRA.
- Preparation and implementation of a SMP prior to any construction activities that require excavation of soil.

- Citadel performed a Phase I Environmental Site Assessment at the Site in May 2021. At the time of the report, the Site consisted of undeveloped land in the north portion of the Site and asphalt-paved surface areas in the south portion of the Site. The Site was unoccupied. Citadel identified the former adjoining dry cleaner and former gasoline station as VEC concerns and RECs.

Environmental Databases

The Site was identified on the FINDS, ECHO, HWTS and RCRA NONGEN/NLR databases. FINDS contains facility information and "pointers" to other sources that contain more detail; ECHO provides integrated compliance and enforcement information; HWTS is the DTSC's data repository for hazardous waste identification and manifest information; and RCRA NONGEN/NLR is the EPA's comprehensive information system that includes selective information on RCRA facilities that do not generate hazardous waste. The Site was identified on these databases due to being identified as a generator of asbestos-containing materials in December 2020 and January 2021. No violations were reported. The appearance of the Site on these databases reflects proper disposal of hazardous waste and do not represent an environmental concern.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. A former Chevron Station, located at 6810 Sepulveda Boulevard, is listed as a LUST site. According to EDR, the property is approximately 515 feet north-northwest of the Site and the non-petroleum hydrocarbon leak was reported in January 1996. The case was completed and

closed by the LAFD on September 25, 1996. Based on the case closure and distance from the Site, this case is not expected to represent a significant concern to the Site.

Three properties were identified as within 0.125-mile and upgradient of the Site on the Historical Gas Station database:

- 6734 Sepulveda Boulevard, approximately 33 feet north of the Site
  - According to EDR, this property was occupied as a gasoline service station in 1940. While EDR identifies this property as 33 feet north-northwest of the Site, this listing is associated with the adjoining property north of the Site. Citadel reviewed historic building permits for the adjoining property north of the Site. A service station was constructed at the property in 1927 and was occupied as a used car lot by 1950. The service station was converted to a vegetable stand by 1952. The structures at the property were demolished by 1964 and the current retail shopping center was constructed in 1965.
  - This property was also identified on the LAFD's UST and hazardous materials inventory listings with an inactive status. Since the property was not identified on the historical UST databases, the LAFD listing is likely associated with USTs removal. While the USTs have likely been removed, it is unclear when the USTs were removed.
  - Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.
- 6759 Sepulveda Boulevard, approximately 225 feet northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1977 and as an automotive repair shop in 1991. According to reviewed building permits and aerial photographs, this property appeared to be developed with a service station by 1947. A new service station was constructed in 1960. A grading permit to backfill tank hole was issued in 1989. Due to the removed UST and distance from the Site, this listing is not likely to have adversely affected the Site.
- 6810 Sepulveda Boulevard, approximately 515 feet north-northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1991; a carwash from 1988 to 2011; and a general automotive repair shop in 2010. This property was also identified as a LUST site, as discussed above. Based on the case closure and distance from the Site, this property is not likely to have adversely affected the Site.

One property was identified as within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database:

- 6754 Sepulveda Boulevard, approximately 174 feet northwest of the Site (adjoining property north of the Site)
  - According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated laundry with dry cleaning services. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site. The rear of the tenant space is located approximately 20 feet north of the Site boundary.

- Citadel reviewed the SCAQMD FIND for information regarding the dry cleaning equipment. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site.
- The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

9.0 CONCLUSIONS AND RECOMMENDATIONS

According to ASTM Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-10, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on a review of historical and present records, and Site reconnaissance, Citadel believes that sufficient information was collected and evaluated for the Site to determine if a REC, HREC, CREC, or a de minimis condition exists. Based on our review, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC was identified. Citadel identified the following environmental concerns:

- A former adjoining dry cleaner operated dry cleaning equipment with PCE from 1985 until at least 2014. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.
- A former gasoline station was also located at the adjoining property north of the Site. While USTs associated with the gasoline station are likely to been removed, it is unclear when the USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.

No evidence for designating the Site as a HREC or CREC from reviews of historical documents and present Site conditions was found. Based on the previous subsurface investigations, the Site has been impacted by PCE and benzene in the soil vapor. Citadel recommends the preparation of a HHRA to determine whether the VOCs detected in soil vapor represents a threat to current and future human health, and to determine whether risk-control measures would be required to protect future tenants and workers based on the planned residential development. The installation of a soil vapor barrier and passive venting system may be recommended based on the results of the HHRA.

Citadel also recommends the preparation and implementation of a SMP prior to any construction activities that require excavation of soil.

10.0 LIMITATIONS

The information and opinions rendered in this report are exclusively for use by the Client. Citadel will not distribute this report without the Client's written consent, except as may be required by law or court order. The recommendations expressed in this report took into consideration the purpose and scope of this limited assignment. We accept responsibility for the competent performance of our duties in executing the assignment and preparing this report in accordance with the normal standards of our profession but disclaim any responsibility for consequential damages resulting from inaccuracies in information provided by the Client, federal, state, county, or local regulatory agencies.

11.0 DISCLAIMER

The services performed by Citadel Environmental Services, Inc. ("Citadel"), d.b.a. Citadel EHS, in connection with this Report were performed in accordance with generally and currently accepted engineering practices and principles; provided, however, Citadel completed such services as directed by the Client and the recommendations described in this Report are therefore limited in purpose and scope. The procedures and methodologies used by Citadel in its performance of services, and the recommendations contained herein, are not intended to meet the requirements under any specific laws or regulatory guidelines unless expressly set forth in the Proposal.

The recommendations and conclusions set forth in this Report are based on information and data available to Citadel during the course of its performance of the services. Citadel relied on the information and data provided by or on behalf of Client, including, if applicable, historical and present operations, conditions and test data, and Citadel assumed all such information and

data was correct and complete. Citadel shall not be liable for any damages or losses resulting from inaccuracies of, or omissions from, information or data provided by or on behalf of the Client, any interested third-parties, or any federal, state, county, or local governmental authority, or otherwise available in the public domain.

The information contained in this Report and conclusions resulting therefrom are based solely on information available to Citadel at the time of its performance of services, and from observations and perceived conditions and materials existing on the date of Citadel's limited survey of the site, if applicable. Citadel disclaims any inaccuracy in the Report as a result of any part or parcel of property to which Citadel was not provided access, or which was concealed, including, but not limited to, wall cavities/chases, ceiling plenums, below floor finishes, crawlspaces, below grade, beneath existing structures, or behind electrical panels.

The findings and recommendations presented in this Report are based upon observations of present conditions and may not necessarily indicate future conditions. No conclusions should be construed or inferred other than those expressly stated in this Report. EXCEPT FOR ANY WARRANTIES EXPRESSLY SET FORTH IN THE PROPOSAL OR OTHER WRITTEN AGREEMENT BETWEEN CITADEL AND CLIENT, CITADEL MAKES NO WARRANTIES HEREUNDER WITH RESPECT TO ANY INFORMATION CONTAINED IN THIS REPORT, EXPRESS OR IMPLIED, AND CITADEL HEREBY DISCLAIMS ALL OTHER WARRANTIES.

All testing and remediation methods have reliability limitations and no method nor number of sampling locations can guarantee that a hazard will be discovered if contamination or other evidence of the hazard is not encountered within the performance of the services as authorized. Reliability of testing or remediation varies according to the sampling frequency and other service variables that were selected by Client. Citadel shall not be at fault or liable for any such limitations.

The information and opinions rendered in this report are exclusively for use and reliance by the Client. The information contained herein may not be used, disclosed, or copied without written permission of the Client and may not be relied upon without the written permission of Citadel.

13.0 PROFESSIONAL CERTIFICATION

Citadel has completed a Phase I ESA of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California. The Phase I ESA was performed at the Clients request in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-2013 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

Shirley Lee
Senior Staff Environmental Specialist

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by the final All Appropriate Inquiry (AAI) Rule published in 40 CFR Part 312.10 (November 1, 2013). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting described in this Phase I ESA. I have developed and performed the AAI in conformance with the standard and care of this Rule.

OSHA 30-Hour Safety for Construction

OSHA 40-Hour Hazardous Waste Operations (HAZWOPER)

Qualified Storm Water Developer, No. 682

Radon Measurement Specialist, No. 11SS027

USACE/NavFac Construction Quality Management for Contractors

Mark Drollinger, MEng, CSP, CHMM, EiT

Director of Environmental Geology & Engineering

EXPERIENCE

With over **35 years** of experience in environmental engineering, compliance, permitting and management projects, Mr. Drollinger has a strong working knowledge of EPA, DTSC, AQMD/APCD, OSHA and DOT regulations; and with local agencies, fire departments and public works. Mr. Drollinger has provided environmental engineering, assessment and compliance, safety management, and engineering construction management services on numerous projects for the US Navy, Veterans Administration, US Department of Agriculture, Cal Trans, EPA and numerous private projects throughout the western United States. In addition, Mr. Drollinger has developed and implemented programs to train managers and staff in storm water and NPDES compliance, soil and groundwater sample collection and data interpretation, Hazcomm, IIPP, and safe-work practices such as identifying and handling hazardous materials, fall protection, confined space, traffic control, LO/TO and ergonomics; and has conducted environmental and permitting audits of facilities including health and safety assessments.

ROLE

As Director of Environmental Geology & Engineering, Mr. Drollinger's primary responsibility includes developing and implementing health and safety protocols; safety training of management, staff and subcontractor personnel; establishing and managing budgets and personnel; negotiating with local, regional, state, and federal agencies; litigation support; and coordinating tasks with multi-discipline project teams.

Mr. Drollinger works closely with, and often develops protocols for conducting assessments related to Environmentally Regulated Materials Management (ERM), Industrial Hygiene (IH), and Occupational Safety and Training (OST) departments.

EDUCATION

Mr. Drollinger has a B.S. in Applied and Natural Sciences from the University of Alabama, and a M.Eng. in Advanced Safety Engineering and Management, University of Alabama, Birmingham.

Mr. Drollinger is also a certifying board member of the American Council of Accredited Certifications (formerly known as the American Indoor Air Quality Council), and is a member of the American Society of Safety Engineers, Board of Certified Safety Professionals, Institute of Hazardous Materials Management, Institute of Industrial Engineers and International Facilities Management Association.

Citadel Employee Since:

EPA / AHERA Accredited Asbestos Contractor Supervisor / Building Inspector

University of California, Irvine, Environmental Management Certifcation

Shirley Lee

Environmental Specialist, Environmental Geology and Engineering

EXPERIENCE

Ms. Lee has **12 years** of experience as an Environmental Specialist. Her responsibilities includes performing Phase I and Phase II Environmental Site Assessments, NPDES monitoring and permitting, groundwater monitoring, indoor air quality inspections, hazardous materials inventory, and preparation of health and safety plans and hazardous materials business and contingency plans.

ROLE

As an Environmental Specialist, Ms. Lee provides on-site organization, direction, control, and coordination necessary for the successful implementation, execution, and completion of environmental geology and environmental compliance-related projects awarded to Citadel. She also assists the Director of Environmental Geology and Engineering in the completion of all assigned projects so that the client is satisfied with the finished work product and the working relationship. Her assignments include a combination of field-based activities in a number of varying environments and office-based activities.

EDUCATION

Ms. Lee holds a Bachelor of Arts in Environmental Analysis and Design from the University of California, Irvine; with a minor in Urban and Regional Planning. Ms. Lee also holds a 40-hour HAZWOPER General Site Worker Certification. She has recently received her Environmental Management Certification from the University of California, Irvine.

Annie Liu

Project Assistant, Engineering and Environmental Science

Citadel Employee Since:
2021

Entered the Industry:
2018

Education
University of California, Irvine
Irvine, California
Bachelor of Arts
Environmental Science, 2019

Professional Certifications & Affiliations

40-Hour HAZWOPER General Site Worker

American Red Cross CPR and First Aid

California UST System Operator (Designated) No. 9767704

EXPERIENCE

Ms. Liu has over **three years** of in the environmental consulting services industry. Her responsibilities include performing Phase I and Phase II Environmental Site Assessments, preparing health and safety plans, preparing NPDES reports, conducting Designated UST Operator Visual Inspections, conducting soil and air monitoring, and collecting soil and wastewater samples for various environmental compliance projects.

ROLE

As a Project Assistant for the Engineering and Environmental Sciences Department, Ms. Liu provides direct support to the Project Managers and Principals. She assists with the completion of all assigned proposals and projects so that the client is satisfied with the finished work product and the working relation. Her assignments include a combination of field-based activities in a number of varying environments and office-based activities.

EDUCATION

Ms. Liu graduated with a Bachelor of Arts in Environmental Science from the University of California, Irvine (UCI). Ms. Liu also holds a 40-hour HAZWOPER General Site Worker Certification.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

(C) UNITED EXCAVATION GROUP INC	6520 PLATT AVENUE PMB 502,	WEST HILLS, CA 91307	A	906175	

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inpection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: A License No.: 906175 Contractor: UNITED EXCAVATION GROUP INC

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(_) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(_) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: STATE COMP. INS. FUND Policy Number: 1977879

(_) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is available at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's Name (If Any): _____ Lender's Address: _____

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not auhorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration/ Lead Hazard Warning, Construction Lending Agency Declaration, and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

( ) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(•) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: State Fund Policy Number: 1977879-2020

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQ.MD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.agmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is available at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's Name (If Any): _____ Lender's Address: _____

21. FINAL DECLARATION

I certify that I have read this application INCLUDING THE ABOVE DECLARATIONS and state that the above information INCLUDING THE ABOVE DECLARATIONS is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration, and Final Declaration; and
(2) This permit is being obtained with the consent of the legal owner of the property.

AFFIRMATION OF POSTING FOR DEMOLITION OF EXISTING BUILDINGS OR STRUCTURES

LAMC Section 91.106.4.5.1

Project Address: 6728 Sepulveda Blvd Demolition Permit #: 20019-10000-04645

Affirmation of Posting

The Los Angeles Municipal Code (LAMC) Section 91.106.4.51 requires posting of a notice prior to the issuance of a permit for demolition of an existing building or structure for which the original building permit was issued more than 45 years prior to the date of submittal of the application for demolition preinspection, or where information submitted with the application indicates that the building or structure is more than 45 years old based on the date the application is submitted, the property shall be posted in a conspicuous place near the entrance of the property where demolition will occur, with public notice of the application for demolition preinspection.

I hereby affirm that the property located at 6728 Sepulveda Blvd was posted on 12/6/20 (mm/dd/yyyy) in accordance with LAMC 91.106.4.5.1 at least 30 days prior to the issuance of this permit for demolition of the existing building(s) or structure(s).

Attachment to Application for Demolition Permit: Notice and Owner's Declaration Related to CEQA and Project Scope

I. Notice to Owner

If you are applying for a demolition permit to facilitate the construction or development of the project site, you may be referred to the Planning Department for further assistance.

The California Environmental Quality Act (CEQA) directs public agencies to assess and disclose the environmental effects of the projects it approves. In determining whether a proposed project is subject to CEQA, the City is required to consider all of the parts and phases of the project and may not limit its review to the specific permits or approvals sought. (Public Resources Code Section 21065) Failure by a project applicant to disclose future construction or development activities on the project site may result in a violation of CEQA. If the City determines that an application or approval is part of a larger undisclosed project, the City may revoke and/or stay any approvals until a full and complete CEQA analysis of the whole project is reviewed and an appropriate CEQA clearance is adopted or certified.

Please contact the Planning Department if you have additional questions after reviewing this notice.

II. Owner's Project Information

Based upon the above-stated rule, is the proposed demolition part of a larger development project at the demolition site, and if so, will the larger project require any discretionary approvals from the City? (Select "Yes" or "No," and follow the related instructions)

Yes ___ A CEQA clearance from the Planning Department will be required prior to the issuance of the demolition permit for the proposed project. Return this form to a Department of Building and Safety Plan Check Engineer at the time of plan check.

No X Sign and notarize the signature at the bottom of the form and return the notarized form to a Department of Building and Safety Plan Check Engineer at the time of plan check.

III. Owner's Declaration

I own the property located at 6728 N. Sepulveda Bl. I have read the above "Notice to Owner." I understand that a "project," as defined by CEQA, is the whole of the proposed activity and is not limited to the demolition subject to this application. I further understand that CEQA prohibits treatment of each separate approval as a separate project for purposes of evaluating environmental impacts. I acknowledge and understand that should the City determine that the demolition proposed is part of a larger project requiring any discretionary permits, the City may revoke and/or stay any approvals (including certificates of occupancy) until a full and complete CEQA analysis is prepared and clearance is adopted or certified.

I certify that (i) the demolition authorized by this permit is not to facilitate the construction or development of a larger project at the project site, or (ii) the demolition is part of a larger project and, after using all reasonable efforts, including consulting with the City Planning Department, I have determined there are no discretionary permits required for the project, including but not limited to haul route permits, permits to remove protected trees, historic resource review, or any discretionary zoning or map approvals.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

1.0 SUMMARY

USH (Client) retained Patriot Environmental Laboratory Services, Inc. (PATRIOT) to perform a Phase I Environmental Site Assessment (ESA) of the approximately 2.18-acre site at 6728 Sepulveda Boulevard, in the Van Nuys community of the City of Los Angeles, in the County of Los Angeles, California, 91411 referred to herein as the "subject property."

PATRIOT has conducted this Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the subject property. Any exceptions to or deletions from this practice are described in Section 2.2 of this report. This report also meets the requirements of All Appropriate Inquiries as defined in CERCLA 42, U.S.C. 9601(35)(B). The enclosed report and opinion are based on the intent to purchase the subject property. We understand that you will rely on our opinion for such purposes.

This assessment has revealed no evidence of recognized environmental conditions, historical recognized environmental conditions, or controlled recognized environmental conditions connected with the subject property. Based on our findings, no further assessment currently appears warranted.

This assessment identified a de minimis condition associated with the hydraulic elevator on the subject property.

Two hydraulic elevators were located in the subject property building. These elevators were assumed to have been in place when the subject property building was constructed in 1973. Currently, the systems are maintained by ThyssenKrupp. The Property Manager, Mr. Brian Escalera stated that ThyssenKrupp have not reported any fluid releases or problems with the elevator systems. Although there were no reported signs or reports of leaking hydraulic fluid, it is possible that there have been releases in the past or the systems may leak in the future. This potential is exacerbated with time as the hydraulic lift systems age. If hydraulic elements from these systems leaked, or will leak, the surrounding subsurface soil may be impacted by hydraulic fluid and polychlorinated biphenyls (PCBs). Because groundwater is estimated to be more than 250 feet bgs, groundwater impact is not expected. Based on the nature of the potential release (i.e., hydraulic oil), extensive migration and impacts tend not to occur. If any hydraulic fluids have been released, the downward migration of contaminants would be minimized by the presence of the concrete foundation of the subject property building covering these areas. PATRIOT deems the possible past, or future release, of hydraulic fluid from the elevator systems to be a *de minimis condition*. *De minimis conditions* generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

It is recommended that ThyssenKrupp, or any elevator maintenance company working on the subject property, be advised to immediately notify the subject property owners if a significant loss of hydraulic fluid is noted. Testing and disposal of impacted soils surrounding the elevators may be required when the subject property building is demolished. No further action regarding the subject property elevator appears necessary at this time.

2.0 INTRODUCTION

2.1 Definitions

To assist the reader with the interpretation of this report, PATRIOT would like to provide the following definitions of significant ESA terminology as defined by ASTM E1527-13.

Recognized environmental condition

A recognized environmental condition is defined as*, "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Property: (*1*) due to any release to the environment; (*2*) under conditions indicative of a release to the environment; or (*3*) under conditions that pose a material threat of a future release to the environment."

Historical recognized environmental condition

A *historical recognized environmental condition* is defined as, *"*a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, Property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

Controlled recognized environmental condition

A controlled recognized environmental condition is defined as*, "*a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls (for example, *property* use restrictions, *activity and use limitations*, *institutional controls*, or *engineering controls*)."

De minimis condition

A de minimis condition is defined as*, "*a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *recognized environmental conditions* nor *controlled recognized environmental conditions*."

Business Environmental Risk

Business Environmental Risk is defined by ASTM as "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice (ESA, ASTM E1527-13). Consideration of *business environmental risk* issues may involve addressing one or more non-scope considerations such as asbestos, lead based paint, mold, endangered species, and other issues.

2.2 Purpose and Scope

A Phase I ESA is intended to provide a brief description of the subject property, its location and surroundings and to identify, to the extent feasible, associated r*ecognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental condition,* and *de minimis conditions* associated with the subject property or surrounding land use and to create a list of the potential human and environmental receptors. The protocol followed for this assessment is in conformance with the requirements of All Appropriate Inquiries as defined in CERCLA 42, U.S.C. 9601(35) (B) and the American Society for Testing and Materials Standard Practice for Environmental Site Assessment for Commercial Real Estate Transactions, ASTM Standard E1527-13. Any exceptions are noted in Section 2.2 – Limiting Conditions and Methodology Used. PATRIOT understands that this ESA will be used by USH to perform due diligence with respect to environmental conditions at the subject property.

2.3 Limitations, Exceptions and Methodology of Assessment

Due care was taken during the investigation process, but a Phase I ESA cannot eliminate uncertainty about a subject property's potential for Environmental Conditions. It should be noted that all Phase I ESAs are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. PATRIOT accepts no liability for hidden conditions, variations in composition of materials and identification of materials not normally found in construction use. Subsurface conditions were not field investigated as part of this study and may differ from the conditions implied by the surface observations.

PATRIOT has relied on one or more documents developed by other parties and is not liable for any conclusions drawn using these sources if their findings or procedures were erroneous. PATRIOT makes no warranty, guaranty, or certification regarding the quality, accuracy, or reliability of any prior reports reviewed and discussed in this report. PATRIOT expressly disclaims all liability for any errors or omissions contained in any prior reports provided to PATRIOT and discussed in this report. Additionally, the passage of time may result in a change in the environmental characteristics at this subject property and surrounding sites.

The scope of work for this report did not include testing of electrical equipment for the potential presence of polychlorinated biphenyls or the collection of other environmental samples. The scope of work did not include a detailed assessment of natural hazards such as naturally occurring asbestos, arsenic, radon gas or methane gas, an assessment of the potential presence of radionuclides, an assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. The scope of work for this report did not include an assessment of the environmental compliance status of the subject property, the businesses operating at the subject property, or a health-based risk assessment. The scope of work for this report did not include any wetland studies, indoor air quality assessment, or vapor intrusion assessment beyond that required under ASTM 1527-13.

Our professional services have been performed, our findings obtained, and our recommendations have been prepared in accordance with customary principles and practices in the field of environmental science and engineering. The subject property boundaries and other drawings have been compiled from the best available recorded information and have not been verified by a field survey and may vary from actual conditions.

All exterior areas of the subject property and representative areas on the interior were inspected as part of this investigation. Due to COVID-19 restrictions and the elderly tenants occupying the subject property building, not all of the interior of the subject property building was inspected.

2.4 Data Gaps

In accordance with the ASTM standard, an attempt to confirm the history and use of the subject property was performed from the present back to when the subject property was first developed with any structures or was used for residential, agricultural, commercial, industrial or governmental purposes. Referenced historical documents included all of some of the following: Sanborn fire insurance maps, historical topographic maps, historical city directories, historical aerial photographs, building department records, prior environmental reports, regulatory agency database information, and information from a subject property owner representative.

These documents were consulted to fill in data gaps dating back to 1894, the first reasonably available information. Information from the subject property owner representative, Ms. Judy Shea, dated back approximately 40-years to 1980. Aerial photographs with coverage of the subject property were reviewed from the years 1928, 1938, 1947, 1952, 1964, 1967, 1970, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2019. City Directories were reviewed in intervals of approximately five-years beginning in 1920. Historical USGS topographic maps of the subject property were reviewed from the years 1894, 1896, 1898, 1900, 1902, 1920, 1921, 1924, 1926/1927, 1953, 1966, 1972, and 2012.

Sanborn Fire Insurance Maps with coverage of the subject property were searched but no maps were made for this area. ASTM E1527-13 does not require the environmental professional to undertake a review of recorded land title records or search for environmental liens. This responsibility is placed upon the user. It is ES's understanding that a lender will engage a title company or title professional to undertake a review of reasonably ascertainable recoded land title records and lien records relating to the subject property. Per the scope of work, PATRIOT did not obtain recorded land title records or conduct an environmental lien search.

The user of this ESA did not respond to a request for an interview. Based on the residential use of the subject property, the lack of this document does not represent a data gap.

PATRIOT requested records for the subject property from the Los Angeles Regional Water Quality Control Board. As of the publication of this report, this agency has not responded to our request. Using various resources referenced in this report, PATRIOT formed an opinion on the subject property. PATRIOT does not anticipate that there are any significant records to be reviewed for the subject property at this agency. If records are received that will alter the conclusions or recommendations of this report, PATRIOT will notify the client.

All exterior areas of the subject property were inspected as part of this investigation. Due to COVID-19 restrictions and the elderly tenants occupying the subject property building, only a limited area of the interior of the subject property building was inspected. PATRIOT was able to obtain information from databases, historical records, exterior observations, and an interview with Mr. Brian Escalera who is the Property Manager working for Ms. Judy Shea, the subject property owner. Based on the information obtained and the past and current uses of the subject property, it is the opinion of PATRIOT that the ability to identify conditions indicative of releases or threatened releases has not been hampered by the lack of the visual inspection of all the interior of the subject property building.

It is the professional opinion of PATRIOT that there were no significant data gaps with regards to the ability of PATRIOT to identify conditions indicative of releases and threatened releases.

2.5 Reliance

This report was prepared for the sole use and benefit of USH. The information and opinions rendered in this report are for the exclusive use and reliance by USH. PATRIOT will not distribute or publish this report without the consent of USH except as required by law and court order. The information and opinions expressed in this report are given in response to a limited assignment by USH and should be considered and implemented only in respects to that assignment. The services provided by PATRIOT in completing this project have been provided in a manner consistent with normal standards of the profession. This report is not a legal opinion and does not offer warranties or guarantees expressed or implied.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property is approximately 2.18-acres and the street address is 6728 Sepulveda Boulevard, in the Van Nuys community of the City of Los Angeles in the County of Los Angeles, California, 91411. Other addresses that have been associated with the subject property as identified in historical document research have included 6715 Columbus Avenue. The subject property is located east of the terminus of Archwood Street at Sepulveda Boulevard. Sepulveda Boulevard delimits the subject property to the west, Columbus Avenue delimits the subject property to the east, and adjacent sites delimit the subject property to the north and south.

The approximate latitude and longitude near the center of the subject property are 34°11’34.04” north and 118°27’54.23” west, respectively. The subject property is composed of one parcel. The APN number for the subject property is 2235-004-010. The subject property is rectangular with the dimensions of approximately 575.31 feet along the north and south borders and 165 feet along the east and west borders. The subject property was occupied by a two story assisted living facility, paved parking lot, a pole sign, and landscaped grounds. The owners of the subject property were reported to be Judy Shea. PATRIOT was not provided with a legal description of the subject property.

3.2 Site and Vicinity Characteristics

3.2.1 Surface Characteristics

The general topography of the subject property sloped to the south, southeast. According to the U.S. Geological Survey (USGS) topographic map, Van Nuys California Quadrangle, the finished elevation near the center of the subject property was approximately 736 feet above Mean Sea Level (MSL). Unpaved areas included landscaped grounds around north and west sides of the subject property building.

3.2.2 Drainage Patterns/Basins

The subject property is in an area designated as "Zone X" on the FEMA Q3 Flood Insurance Rate Map, subject Los Angeles County, map number 06037C1305F dated September 26, 2008. These areas have been determined to be outside the 0.2% annual chance floodplain.

On August 22, 2020 PATRIOT researched the California Environmental Protection Agency, State Water Resources Control Board, Water Boards Storm Water Multiple Application & Report Tracking System for storm water permits related to construction, industrial, and municipal activities. There were no storm water/NPDES permits identified for the subject property.

There was no industrial water discharge from the subject property into a sanitary sewer system. There were two sources of wastewater at the subject property including sanitary sewage and stormwater runoff. The sanitary sewage discharged into the municipal system. The stormwater runoff is estimated to move via sheet flow and a concrete channel to the east, draining onto the south adjacent site. Stormwater from adjacent sites was not expected to enter the subject property under normal conditions. There were no identified or reported drinking water wells, groundwater monitoring wells, floor drains (other than in janitor closets, bathrooms, and food preparation areas), clarifiers (other than for cooking grease), sumps, septic system, or french drains noted on the subject property.

3.2.3 Geology

The subject property is located in the southeastern area of the San Fernando Basin. The San Fernando Basin is bounded to the east and northeast by the San Rafael Hills, Verdugo Mountains, and San Gabriel Mountains, to the northwest and west by the Santa Susana Mountains and Simi Hills, and to the south by the Santa Monica Mountains. The Los Angeles River drains most of the San Fernando Valley and is located approximately two miles south of the subject property. According to the *Geologic Map of California* published in 2010 by the California Geological Survey, the subject property is underlain by Quaternary Deposits composed of alluvium, lake, playa, and terrace deposits, unconsolidated and semi-consolidated.

According to the *Web Soil Survey* by the National Resources Conservation Service dated May 27, 2020, the primary soil type at the subject property is Urban land, Grommet-Ballona complex. The landform setting for this soil is described as alluvial fans with a slope of 0 to 5 percent. This soil is well drained and the depth to the water table is more than 80-inches.

3.2.4 Hydrogeology

The subject property lies within the southernmost area of the San Fernando Groundwater Basin (Upper Los Angeles River Watermaster, 2001). Water-bearing deposits in the San Fernando Valley include the Saugus Formation, and older and younger alluvium. The Saugus Formation is composed of unconsolidated continental and marine deposits of conglomerate, sand, silt, and clay, and crops out in the northern part of the valley on the southerly slopes of the San Gabriel Mountains. Groundwater within the San Fernando Valley Basin is unconfined and flows at approximately 300 feet/year to the south-southeast at the Site vicinity (Upper Los Angeles River Watermaster, 2001). Groundwater in the San Fernando Valley occurs in three principal water-bearing zones: (1) the early Quaternary Saugus Formation, (2) Late Quaternary Older Alluvium (terrace deposits), and (3) Recent Alluvium. The subsurface lithology within the Site vicinity is composed of Quaternary Alluvium, which consists of gravel, gravel and sand, sand, and clay. Groundwater for consumption (drinking and irrigation) is primarily drawn from the eastern part of the San Fernando Groundwater Basin. Under natural conditions, groundwater flows east across the western portion of the San Fernando Valley and to the southeast in the eastern portion toward the Los Angeles River Narrows. However, groundwater flow patterns are influenced by groundwater pumping for water supply. The direction of flow near these wells can change seasonally because the supply wells typically are pumped most heavily during the summer months. According to information provided by the LADPW, depth to groundwater in the observation wells within one mile of the subject property is estimated at 254.2 feet bgs (LADPW, 2008).

Based solely on the surface topography at the subject property and the well data described above, the presumed groundwater flow direction in the uppermost water-bearing unit across the subject property would be to the south, southeast. This is consistent with the surface topography that drops towards the south, southeast. South, southeast is only the presumed groundwater flow direction and only physical testing can accurately state the true groundwater flow direction.

3.2.5 Wetlands

PATRIOT screened the subject property for the presence of suspect wetlands during the site reconnaissance and by reviewing the U.S. Department of the Interior, Fish and Wildlife Service, *National Wetlands Inventory* online map researched on August 22, 2020 and the most recently available topographic map dated 2012. These sources indicated that the subject property is not in an area mapped as a potential wetlands area and there were no mapped bodies of water indicative of possible wetlands on the subject property. During PATRIOT's site reconnaissance, no suspect wetlands areas were observed on the subject property. The nearest significant surface water is a lake at the Sepulveda Basin Wildlife Area located approximately 1.38-mile south, southwest of the subject property. The Environmental Professional who performed the subject property reconnaissance is not a specialist trained in wetlands delineation.

A wetland delineation was beyond the scope of this assessment. PATRIOT notes that the Wetlands Inventory Map is prepared through the analysis of aerial photography and not by actual ground reconnaissance. It is normally used as a screening method to assess if potential wetland areas exist. No further assessment is recommended.

3.2.6 Earthquake Induced Landslides, Liquefaction, and Fault Lines

The Department of Conservation, California Geological Survey developed the Seismic Hazard Zone Report for the Van Nuys California 7.5 Minute Quadrangle map dated February 1, 1998. According to this map, the subject property is located in a designated Liquefaction Area but not in an Earthquake Induced Landslide Area. While this may affect the development of the subject property or the condition of the subject property in the event of an earthquake, it is not considered to be a Recognized Environmental Condition.

The Department of Conservation, California Geological Survey also published a fault zone map for the Van Nuys California 7.5 Minute Quadrangle map dated February 1, 1998. According to this map, the subject property is not located in an Alquist-Priolo earthquake fault zone and there were no faults located within one-quarter of a mile of the subject property. However, all of Southern California is earthquake prone.

3.2.7 Methane Zone

The City of Los Angeles, Department of Public Works, Engineering Department (LADPW) published a map dated March 31, 2004 showing areas where design standards related to construction in methane zones are required. The Los Angeles Fire Department have defined a Methane Zone as an area that has the potential to contain methane in the shallow subsurface. According to this map, the subject property is not located in a Methane Zone or in a Methane Buffer Zone. Additional oil field information and oil well data are described below in Section 5.8.

3.3 Structures, Roads and Other Improvements

The subject property was developed with a two-story assisted living facility, paved parking lot, a pole sign, and landscaped grounds. The Los Angeles County Office of the Assessor indicated that the subject property building was constructed in 1973 and is approximately 53,368 square feet. Asphalt paving covers much of the land not occupied by the subject property building. The subject property can be accessed from a driveway on Sepulveda Boulevard.

Electricity and potable water were supplied by the Department of Water and Power (DWP) and natural gas was supplied by Southern California Gas Company. Electricity and potable water were supplied by the Department of Water and Power (DWP) and natural gas was supplied by Southern California Gas Company. In a report entitled, "*2018 Drinking Water Quality Report for the Period of January 1 through December 31, 2018*," dated 2019, it was stated, "You will see that most constituents have not been detected in our water sources and those that are, are safely within the regulatory limits for drinking water." Sewer service was provided by the Sanitation Districts of Los Angeles County. Solid waste disposal services were performed by Los Angeles City contractors.

3.4 Current Uses of the Subject Property

At the time of the subject property reconnaissance on August 26, 2020, the subject property was being used as an assisted living and memory care facility. The subject property building contained apartments, a cafeteria, kitchen, recreation areas, laundry, offices, nursing station, mechanical rooms, and storage rooms. There were no significant hazardous materials or petroleum products identified with this use.

3.5 Tenant, User, and Owner Information

Tenant/Owner

During the subject property reconnaissance on August 25, 2020, PATRIOT interviewed Mr. Brian Escalera, Property Manager, for Ms. Judy Shea the subject property owner. Mr. Escalera stated he had firsthand knowledge about the subject property for the past year. Mr. Escalera stated that to the best of his knowledge, the subject property use has always been residential or assisted living. Mr. Escalera knew of no previous tenants that had used hazardous and/or petroleum products on the subject property. He stated that since he has worked on the subject property there have been no hazardous materials or petroleum products onsite. He stated that they use detergent in the laundry and have never performed any drycleaning. Mr. Escalera indicated that the emergency generator is natural gas powered.

Mr. Escalera reported that he knew of no current or past environmental liens in association with the subject property. He stated that he was not aware of any Activity or Use Limitations (ALUs) such as engineering controls, land use restrictions or institutional controls in place or on file under federal, tribal, state, or local law. He had no knowledge of any Underground Storage Tanks (USTs) or Above Ground Storage Tanks (ASTs) on the subject property. Mr. Escalera stated that to the best of his knowledge, there had never been any spills or violations on the subject property in association with hazardous materials or petroleum products. He reported that he was not aware of a reduction in the subject property value due to environmental issues.

He was aware of no soil or groundwater contamination on the subject property or on adjacent sites. He was not aware of any issues or reports on the subject property regarding environmental site assessments or soil and/or groundwater testing. Other information obtained from this interview is presented in relevant sections of this report.

Owner

Ms. Judy Shea, the subject property owner, was provided with an environmental questionnaire provided in Appendix H. In an email dated August 25, 2020, Ms. Shea stated the following:

> "I have received the Phase 1 Questionnaire for 6728 Sepulveda Blvd. Van Nuys, CA. This property has been leased for the past 40 years, and I have no first-hand knowledge to be able to respond to any of these questions. If you have further questions or response to this e-mail, please also include Brian Escalera in your response. Thank you Bill. Best regards, Judy Shea."

User

The user of this ESA did not respond to a request for an interview. Based on the residential use of the subject property, the lack of this document does not represent a data gap.

3.6 Historical Uses of the Subject Property

Historical information was obtained from aerial photographs (1928, 1938, 1947, 1952, 1964, 1967, 1970, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2019) presented in Appendix C, USGS Topographic maps (1894, 1896, 1898, 1900, 1902, 1920, 1921, 1924, 1926/1927, 1953, 1966, 1972, and 2012) presented in Appendix D, and City Directories (intervals of five years or less, where available, beginning in 1920) presented in Appendix E. Information from the subject property owner representative, Ms. Judy Shea, dated back approximately 40-years to 1980.

The subject property was undeveloped in the first reasonably available historical documentation dated 1894. Based on referenced historical documents, the first known use of the subject property was for orchards beginning sometime prior to 1928. Between 1947 and 1952, the orchards were removed from the subject property and the subject property appeared to have been fallow farmland. In 1973, the existing subject property building was constructed. A sports court was added to the east end of the subject property between 1983 and 1989. The sports court was recently replaced by the existing asphalt paved parking lot. The only use of the subject property since its first development has been residential.

There were no past tenants that would be expected to have used significant quantities of hazardous materials or petroleum products and there were no records of such uses. There were no records of spills, releases, or violations from former subject property tenants. There were no historical recognized environmental conditions or controlled recognized environmental conditions identified in the historical documents reviewed.

Because the subject property use appeared to have been agricultural from as early as 1928 through at least 1952, it is possible that pesticides have been applied to the subject property. Prior to 1972, it was a common practice to use environmentally persistent pesticides, specifically those that included DDT, DDD, DDE and Toxaphene. In general, proper pesticide applications, if any, only used small amounts. Many pesticides applied to soil were designed to be relatively immobile and were applied to remain near the surface where they were most affective and did not readily leach downward to groundwater. Because most pesticides tend to persist in the upper 1 to 2 feet of topsoil, residual pesticides in soil would be likely to have been redistributed over the subject property and surrounding area during grading activities; resulting in an overall dilution in the concentration of pesticides, if any. In addition, there were no specific indications that pesticides had been applied to the subject property. Based on this information, the amount of time that has passed since the subject property was used for agricultural purposes, and due to past grading, paving, and development of the subject property, there is a low likelihood that a recognized environmental condition exists at the subject property due to the former agricultural use. It is also PATRIOT's opinion that the potential contact to human receptors is not significant. No further action is recommended regarding the past agricultural use of the subject property.

3.6.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps with coverage of the subject property area were searched but no maps were generated in the subject property area.

3.6.2 Historical Aerial Photographs

The following are descriptions of the historical aerial photographs taken at the subject property and reviewed by PATRIOT. This review has been supplemented by geographic place names and other data obtained in other assessment activities of this ESA. These photographs can be found in Appendix C. Although it may be stated below that there were no obvious signs of the storage or disposal of hazardous materials or petroleum products in these photographs, specific uses, or the presence of materials, may not have been identifiable from the information contained in the photographs. The descriptions below are mainly limited to the subject property, however, information from these maps were used to describe the history of the adjacent sites as discussed below in Section 3.8.

1928

In the 1928 aerial photograph, the subject property appeared to have been undeveloped and was occupied by an orchard. The adjacent sites were occupied by orchards and some single-family residences. The surrounding area was mostly agricultural. Sepulveda Boulevard was visible but was unpaved. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1938 and 1947

There were no significant differences on the subject property in the 1938 and 1947 aerial photographs from the 1928 aerial photograph. Sepulveda Boulevard had been paved by 1938. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1952

In the 1952 aerial photograph, the orchards had been cleared from the subject property. The subject property was occupied by crops or was fallow land. Extensive developed of the surrounding area was evident in this photograph. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1964, 1967, and 1970

There were no significant differences on the subject property in the 1964, 1967, and 1970 aerial photographs from the 1952 aerial photograph. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in these photographs.

1977

In the 1977 aerial photograph, the subject property had been developed with the existing residential development and parking lots except for the east end which was vacant and unpaved. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in this photograph.

1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2019

With a few exceptions, there were no differences on the subject property in the 1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016, and 2019 aerial photographs from the 1977 photograph. A sports court one the east end was first visible in the 1989 photograph. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in these photographs.

3.6.3 Topographic Maps

Topographic maps from 1894, 1896, 1898, 1900, 1902, 1920, 1921, 1924, 1926/1927, 1953, 1966, 1972, and 2012 are presented in Appendix D. These maps depicted the subject property, adjacent sites, and surrounding areas as vacant, occupied by non-descript structures, or shaded as developed using house omission tint indicating dense urban development. There were no obvious signs of the storage or disposal of hazardous materials on the subject property in any of the topographic maps.

3.6.4 Environmental Liens

No environmental liens were found during this investigation. The subject property was not listed in the search of the Federal NPL Liens database. The subject property owner stated that there were no environmental liens on the subject property. For there to be an environmental lien against the subject property, it must be a suspected, or confirmed, contributor to subsurface contamination. Research conducted for this report did not find any uses that would have contributed to subsurface contamination on the subject property and no regulatory agencies identified it as such.

3.6.5 Title Report

It was not in the scope of work for PATRIOT to obtain a Title report for the subject property. The Client did not provide PATRIOT with a Title report for review.

3.6.6 Previous Subject Property Inspection Reports

The Client did not provide any previous inspection reports or Phase I Environmental Site Assessments for the subject property.

3.6.7 City Directories

PATRIOT retained Environmental Data Resources, Inc. (EDR) to perform historical city directory research of the subject property. PATRIOT reviewed the report, "*The EDR-City Directory Abstract*" by EDR dated August 21, 2020. These directory listings contain spelling errors that may appear below or in Section 3.8 that have not been corrected. The complete city directory search is presented in Appendix E. The subject property was listed as a residential retirement facility since at least 1999.

Historical City Directory Listings	
Year	**Tenant**
1999	California Green Tree Villa Retirement Hotel
2004	California Green Tree Villa Of Van Nuys
2006	California Green Tree Villa
2009	California Green Tree Villa Retirement Hotel
2014	California Green Tree Villa Retirement Hotel

3.7 Current Uses of Adjoining Sites

Current uses of the immediately adjacent sites and their addresses as noted on the buildings or researched on-line are as follows:

- North to the West –Shopping plaza with the following tenants, from west to east: Wing Stop, Dental Office, Subway Restaurant, Metro PCS, John's Watch Repair, Shears Barber, Dazzle Hair & Nail Spa, Coin-op Laundry and Drycleaners, Rose Bakery, Dollar King, O'Reilly Auto Parts, Opportunity (offices), Baskin Robbins, and Garibay's Flowers; 6734 to 6756 Sepulveda Boulevard and 15222 to 15244 Vanowen Street;
- North Center – Center for Health Living; 15220 Vanowen Street;
- North to the East – Medical office building; 15216 Vanowen Street;
- East – Columbus Avenue followed by the Columbus Avenue Elementary School; 6700 Columbus Avenue;
- South – California Healthcare and Rehabilitation; 6700 Sepulveda Boulevard;
- West – Sepulveda Boulevard followed by a vacant lot currently being developed;
- Northwest – Sepulveda Boulevard followed by a multitenant commercial building with tenants, from south to north: Locksmith, Sepulveda Cleaners, Renyoso's Lapidary (retail), and Bob Sands Fishing & Tackle; 6735 to 6743 Sepulveda Boulevard.

Based on observations and research, there is a low likelihood that a recognized environmental condition exists at the subject property because of the current adjacent land use to the west. PATRIOT did not detect obvious indications that this adjacent site stored large quantities of hazardous materials, hazardous waste, have USTs, or are involved in a cleanup operation.

The north site to the west, east, and south adjacent sites utilized hazardous materials and/or petroleum products and are discussed in more detail below in Section 4.1.2.

The northwest adjacent drycleaner site did not appear on any of the environmental databases researched. Based on the historical research discussed below in Section 3.8.7, it was evident that the current drycleaner operation did not occupy this suite until sometime after 2006. Based upon the depth to groundwater (more than 250 feet bgs); the lack of any reported spills, violations, or releases; the short period this site has been a drycleaner operation; the lack of reports indicating solvent use had occurred on this site; the distance of the subject property building to the drycleaner (120 feet); and its crossgradient location from the subject property; there is a low likelihood that a recognized environmental condition, or vapor intrusion issue, exists at the subject property due to this operation. No further action is recommended regarding this site at this time.

3.8 Past Uses of Adjoining Sites

3.8.1 North Adjacent Site to the West

Historical sources indicated that the site adjacent to and north of the subject property, to the west at 6734-6756 Sepulveda Boulevard and 15222-15230 Vanowen Street, was undeveloped in 1894. By 1928, this site was occupied by crops and orchards. A gasoline station existed north of the agricultural land. This site use remained agricultural until between 1952 and 1964 when the land was cleared of crops and orchards and was vacant. Between 1964 and 1967, this site was developed with the existing shopping plaza and the gasoline station was replaced by the existing parking lot. The table below contains a listing of past tenants on this adjacent site as presented in historical city directly listings.

Except for the former gasoline station and a dry cleaning operation, there were no tenants identified that are suspected of having uses significant quantities of hazardous materials or petroleum products. The drycleaning facility was listed under several different names in the 6754 Sepulveda Boulevard suite since at least 1970. This site was listed in one or more environmental databases. Specific information regarding hazardous materials or petroleum products on this site is discussed below in Section 4.1.2.

3.8.2 North Adjacent Central Site

Historical sources indicated that the center north adjacent site at 15220 Vanowen Street, was undeveloped in 1894. By 1928, this site had been developed with a single-family residence and orchard. Between 1952 and 1964, the residence was demolished, the orchard removed, and the existing commercial building was constructed. The table below contains a listing of non-residential past tenants on the north adjacent site center site as presented in historical city directly listings.

There were no tenants identified that are suspected of having uses significant quantities of hazardous materials or petroleum products. There were no signs of the storage or disposal of hazardous materials on the central north adjacent site in the historical information reviewed. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

3.8.3 North Adjacent Site to the East

Historical sources indicated that the north adjacent site to the east, at 15216 Vanowen Street, was undeveloped in 1894. By 1928, this site had been developed with a single-family residence and orchard. Between 1952 and 1964, the residence was demolished, the orchard removed, and the existing medical office building was constructed. The table below contains a listing of non-residential past tenants on the north adjacent site center site as presented in historical city directly listings.

There were no tenants identified that are suspected of having uses significant quantities of hazardous materials or petroleum products. There were no signs of the storage or disposal of hazardous materials on the north adjacent site to the east in the historical information reviewed. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

3.8.4 East

Historical sources indicated that the site adjacent to and east of the subject property, across Columbus Avenue, was undeveloped in 1894. By 1928, this site was occupied by an orchard. Crops replaced the orchards between 1928 and 1938. Between 1952 and 1964, the existing school began to be developed including its past use as a horticultural education center.

This site was listed in one or more environmental databases. Specific information regarding hazardous materials or petroleum products on this site is discussed below in Section 4.1.2.

3.8.5 South

Historical sources indicated that the site adjacent to and south of the subject property was undeveloped in 1894. By 1928, this site was occupied by an orchard. Between 1947 and 1952, the orchard had been removed and this land appeared to be fallow. This site remained fallow agricultural land unit the existing medical facility was constructed between 1967 and 1970. The table below contains a listing of non-residential past tenants on the south adjacent site as presented in historical city directly listings.

There were no tenants identified that are suspected of having uses significant quantities of hazardous materials or petroleum products on the south adjacent site. However, this site was listed in one or more environmental databases. Specific information regarding hazardous materials or petroleum products on this site is discussed below in Section 4.1.2.

3.8.6 West

Historical sources indicated that the site adjacent to and west of the subject property, across Sepulveda Boulevard, was undeveloped in 1894. By 1928, this site was occupied by an orchard. Between 1928 and 1938, the orchard had been removed and this land was occupied by crops and a single-family residence. Between 1952 and 1964, a motel was developed on this site. Between 2016 and 2019, the motel was demolished and this site was vacant.

There were no tenants identified that are suspected of having uses significant quantities of hazardous materials or petroleum products. There were no signs of the storage or disposal of hazardous materials on the west adjacent site in the historical information reviewed. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

3.8.7 Northwest

Historical sources indicated that the site adjacent to and northwest of the subject property, across Sepulveda Boulevard, was undeveloped in 1894. By 1928, this site was occupied by an orchard. Between 1928 and 1938, the orchard had been removed and this land was occupied by crops and a single-family residence. Between 1947 and 1952, this site was developed with the existing commercial building.

The north suite of the northwest adjacent building was occupied by a restaurant from at least 1950 through 1999. Between 1999 and 2006, the existing tenant, Bob Sands Fishing Tackle moved from the two south suites to the north suite. This indicates that the current drycleaner operation did not occupy this suite until sometime after 2006. The table below contains a listing of non-residential past tenants on the south suite of the northwest adjacent site as presented in historical city directly listings.

There were no tenants identified that are suspected of having uses significant quantities of hazardous materials or petroleum products. There were no signs of the storage or disposal of hazardous materials on the west adjacent site in the historical information reviewed. There were no indications from any historical sources that the subject property has been impacted from this adjacent site.

4.0 RECORDS REVIEW

4.1 Standard Environmental Record Sources, Federal and State

A Federal, State and Local Radius Profile Report from Environmental Data Resources, Inc. dated August 21, 2020 was reviewed by PATRIOT. The radius report, found in Appendix F, contains records of registered sites surrounding the subject property for the classifications and distances as required by ASTM Practice E1527-13. Descriptions of each database, their source, and publication dates are detailed in this appendix section.

4.1.1 Subject Property Environmental Database Summary

The subject property was not listed in any of the databases searched.

4.1.2 Adjacent Sites Environmental Database Summary

The adjacent sites to the west and northwest were not listed in any of the databases searched. The adjacent sites to the north, east, and south were listed in one or more of the environmental databases searched.

North Adjacent Site to the West

Grand Plaza LLC at 6734 Sepulveda Boulevard was a listing for the north adjacent site located upgradient of the subject property. This facility was listed in the HAZMAT and UST databases. The databases had no specific information other than a facility number FA0037505 and the facility was listed as inactive. PATRIOT searched for documents for this site on the ENVIROSTOR and GeoTracker websites, at the Los Angeles County Department of Public Works (DPW) Industrial Waste, Underground Storage Tanks, Stormwater Division, and from lists published by the Los Angeles Fire Department UST and Hazmat Departments. The only information found was a possible record of this site on the Los Angeles Fire Department Inactive UST list. Records were requested and were provided by this agency. Excerpts from these files are presented in Appendix I.

The removal of one 750 gallon gasoline tank was described in a report entitled, *Soils Report – UST Removal* by Partner Engineering and Science, Inc. (Partner) dated November 20, 2009. According to the drawings in this report, the UST was formerly located approximately 26 feet east of Sepulveda Boulevard and approximately 230 feet north of the subject property. According to this report, a subsurface investigation was performed in September 2009 at the former gasoline site located on this site at the corner of Sepulveda Boulevard and Vanowen Street. Seven soil borings were advanced and a geophysical survey was performed to search for any remaining USTs. All soil samples had trace to non-detectable concentrations of targeted contaminants. However, a suspect UST was identified. This tank was registered with the Los Angeles City Fire Department and its removal was permitted.

The tank was removed and soil samples collected on November 10, 2009. The soil excavated above and around the UST were reported to have not exhibited staining or odors. The soil samples were taken under the direction of Inspector Holtfreter of the Los Angeles Fire Department. Partner was directed to take two soil samples from approximately two feet below the northwest and southeast ends of the tank. The samples were analyzed for Total Petroleum Hydrocarbons as gasoline (TPH-g) by EPA Method 8015M and for benzene, toluene, ethylbenzene, and total xylenes (BTEX) and fuel oxygenates by EPA Method 8260B. None of the soil samples had detectable concentrations of any of the target compounds. Based on the Partner report, the Los Angeles Fire Department issued a no further action letter dated February 8, 2010.

There is a low likelihood that a recognized environmental condition exists at the subject property due to the former gasoline station on the north adjacent site for the following reasons: because of its distance from the subject property; there were no records of spills or releases on this site; subsurface testing performed on this site in 2010 did not identify any releases; because the depth to groundwater was reported to be more than 250 feet, migration of contaminants via groundwater to the subject property is not likely; and this site has been issued a no further action letter from the Los Angeles Fire Department. No further action is recommended regarding this site.

Sepulveda Cleaner, AFCO Cleaners & Laundry, Alpha Cleaners/1-75 Sepulveda Cleaners at 6754 Sepulveda Boulevard was a tenant located adjacent to the north and upgradient of the subject property. Historical documents indicated that this suite was occupied by a drycleaner since at least 1970. This tenant was listed as having used tetrachloroethene/ perchloroethylene (PCE) with a vapor recovery unit. There were no reports of spills or releases on this site. This site has an active permit to operate a drycleaner business from the South Coast Air Quality Management District (SCAQMD) and there have been no violations issued. A copy of their current SCAQMD permit is presented in Appendix G. Due to its physical properties, PCE is an extremely pervasive chemical and can, even during regular use and without significant spills, contaminate soil and/or groundwater. However, based on the estimated depth to groundwater which is at least 250 feet below ground surface (bgs), groundwater migration does not appear to be a path to onsite contamination. Also, the north wall of the subject property building is at least 30 feet from the wall of the north adjacent building. Based upon the depth to groundwater, the lack of any reported spills or releases, the lack of reported violations, and the distance of the subject property building to the drycleaner, there is a low likelihood that a recognized environmental condition, or vapor intrusion issue, exists at the subject property due to this tenant. No further action is recommended regarding this site at this time.

O'Reilly Auto Parts/Fresh & Easy #1083 at 15230 Vanowen Street was another tenant located on the north adjacent site, upgradient of the subject property. These tenants were listed in the RCRA NonGen/NLR, CERS HAZ WASTE, HAZNET, CERS, and HWTS databases. These tenants generated small quantities of hazardous waste and/or petroleum products for off-site disposal or recycling. This site had an air pollution permit. There were no violations issued to these tenants. There is a low likelihood that a recognized environmental condition exists at the subject property due to these tenants for the following reasons: because of their distances from the subject property; only small quantities of wastes have been generated; there were no records of spills or releases on this site; and because the depth to groundwater was reported to be more than 250 feet, any release of contaminants would not be expected to impact the subject property via groundwater. No further action is recommended regarding this site.

East Adjacent Site

Van Nuys ES No. 1/Van Nuys New Elementary at 15141 Lemay Street and 6700 Columbus Avenue was located adjacent to the east, across Columbus Avenue, and crossgradient of the subject property. This site was listed in the RCRA-LQG, FINDS, ECHO, ENVIROSTOR, SCH, and CERS databases. This site generated large quantities of hazardous waste and/or petroleum products for off-site disposal or recycling. Because this site was developed as a school, subsurface testing had been performed on this site. PATRIOT reviewed DTSC records for this site as published on the ENVIROSTOR database. An excerpt from this source is presented in Appendix G. According to the DTSC this 3.5 acre site was historically a horticultural education center. A Preliminary Endangerment Assessment (PEA) was completed in May 2000. Results from the PEA investigation indicated concentrations of metals and polyaromatic hydrocarbons (specifically creosote) were identified in soil. A removal action has been recommended. There is a low likelihood that a recognized environmental condition exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location crossgradient from the subject property; the release had been limited to the soil and is therefore not anticipated to migrate to the subject property; and because the depth to groundwater was reported to be more than 250 feet, migration of contaminants via groundwater to the subject property is not likely. No further action is recommended regarding this site.

South Adjacent Site

California Health Care at 6700 Sepulveda Boulevard was located adjacent to the south and downgradient of the subject property. This site was listed in the HAZMAT and CERS databases. This site was listed as a chemical storage facility but there were no reports of regulated wastes being generated on this site. This site received multiple violations between 2016 and 2009 for paperwork issues and for the failure to properly train employees. Although some violations were issued with respect to hazardous material paperwork and training issues, none of these were related to or indicative of a release. Collectively the available information is not considered to be indicative of a release and the known medical use of this site are not considered to constitute a recognized environmental condition. No further action is recommended regarding this site.

4.1.3 Sites Within 0.125 Miles of the Subject Property

Tesoro (USA) 63234/Chevron #9-0316T/Bretts Incorporated/ARCO/Thrifty at 6810 Sepulveda Boulevard was located approximately 515-feet north, northwest and crossgradient of the subject property. This site was listed in the HAZMAT, LUST, CORTESE, CERS, Historic Auto Stations, RCRA-SQG, FINDS, CERS HAZ WASTE, CERS TANKS, HIST UST, UST, SWEEPS UST, and CA FID UST databases. This site generated small quantities of hazardous waste and/or petroleum products for off-site disposal or recycling. This site was a gasoline station with multiple petroleum product USTs. This site had a release of solvent or non-petroleum hydrocarbon that impacted soil and possibly groundwater discovered in 1996. Testing and/or remediation have been performed on this site and its status as of 1996 has been closed. This site also had a release of hydrocarbons that impacted soil and groundwater discovered in 1996. Testing and/or remediation have been performed on this site and its current status is closed. There is a low likelihood that a recognized environmental condition exists at the subject property due to this site for the following reasons: because of its distance from the subject property; its location crossgradient from the subject property; the site status has been closed with remedial action completed or deemed unnecessary; and because the depth to groundwater was reported to be more than 250 feet, migration of contaminants via groundwater to the subject property is not likely. No further action is recommended regarding this site.

There were three sites located within 0.125-miles of the subject property that had registered USTs located at 6801 Sepulveda Boulevard, 6759 Sepulveda Boulevard, and 15107 Vanowen Street. These sites were located all located at least 230-feet from the subject property and crossgradient or downgradient of the subject property. There is a low likelihood that a recognized environmental condition exists at the subject property due to these sites for the following reasons: because of their distances from the subject property; their locations crossgradient or downgradient from the subject property; there were no records of spills or releases on these sites; and because the depth to groundwater was reported to be more than 250 feet, migration of contaminants via groundwater to the subject property is not likely. No further action is recommended regarding these sites.

There are other sites on multiple databases that are located within 0.125 miles (660 feet) of the subject property. There is a low likelihood that a recognized environmental condition exists at the subject property as a result of these sites because none of them were: adjacent, drycleaners, historical drycleaners, had USTs, were gasoline stations, or had reported spills or releases. No further action is recommended regarding these sites.

4.1.4 Sites Between 0.125 Miles and 0.25 Miles of the Subject Property

There were several sites on multiple databases that were located between 0.125 and 0.25 miles from the subject property that have a low likelihood of creating a recognized environmental condition at the subject property and no further action is recommended regarding any of these sites because of their distances from the subject property and there were no reports of spills or releases on any of these sites.

4.1.5 Sites Located More than 0.25 miles from the Subject Property

There were multiple sites on several databases that were located more than 0.25-miles from the subject property that have a low likelihood of creating a recognized environmental condition at the subject property and no further action is recommended regarding any of these for the following reasons:

- Their distances from the subject property;
- There were no reports of spills or releases, and/or;
- The releases were not of a magnitude that would be expected to impact the subject property and/or;
- The site statuses had been closed with remedial action completed or deemed unnecessary.

4.1.6 Orphan (Unmapped) Sites

There were no orphan (unmapped) sites identified in the radius report.

4.1.7 Los Angeles County Department of Public Works, Agency Records

The Los Angeles County Department of Public Works (LACDPW) maintains records of industrial waste and underground storage tank sites. These sites are not necessarily those that have had releases or spills.

The search of their online database records was limited to the subject property and the north adjacent site. The subject property and north adjacent site were not listed in the search of these records.

4.1.8 South Coast Air Quality Management District (SCAQMD)

PATRIOT performed a search of the SCAQMD Facility Information Detail database for records pertaining to the subject property. These records include air pollution permits, applications, and violations. Regularly scheduled updates are made to this database by the SCAQMD at least once per week. There were no records found pertaining to the subject property. The north adjacent site was listed for having a permit to operate a drycleaner business. The permit is active and there have been no violations issued. A copy of their current permit is presented in Appendix G.

4.1.9 Los Angeles Regional Water Quality Control Board

PATRIOT requested to review records for the subject property from the Los Angeles Regional Water Quality Control Board. As of the publication of this report, this agency had not responded to our request. Using other resources referenced in this report, PATRIOT formulated an opinion on the subject property. PATRIOT does not anticipate that there are any significant records to be reviewed for the subject property at this agency that would change our opinion. If records are received that will alter the conclusions or recommendations of this report, PATRIOT will notify the client.

4.1.10 Los Angeles County Fire Department

PATRIOT requested to review records for the subject property from the Los Angeles County Fire Department, Health Hazardous Materials Division. This agency also keeps records formerly held by the Los Angeles County Department of Public Health / Public Health Investigation unit. In an e-mail dated August 21, 2020 from the Site Administrator of the Health Hazardous Materials Division, it was stated that there were no records for the subject property.

4.1.11 City of Los Angeles Fire Department

Los Angeles Fire Department, Certified Unified Program Agency (CUPA) records were researched for the subject property. The Los Angeles Fire Department published six tables most recently dated April 3, 2018 that included all known active hazardous materials sites, inactive hazardous materials sites, active AST sites, inactive AST sites, active UST sites, and inactive UST sites. The subject property was not identified in any of these lists.

The north adjacent site was listed in the "inactive UST sites" list under the 6734 Sepulveda Boulevard address. PATRIOT requested records from this agency for the north adjacent site. Start

4.1.12 Department of Toxic Substances Control (DTSC)

DTSC Files

PATRIOT requested to review records for the subject property from the Department of Toxic Substances Control (DTSC). Ms. Ruth J. Saroian with Regional Central Files wrote in a letter dated August 24, 2020 that after a thorough review of their files, they have found no records that exist pertaining to the subject property.

Generator Information Services Section

Ms. Saroian indicated that their Hazardous Waste Tracking System (HWTS) may have manifests that were generated from the subject property. PATRIOT reviewed the HWTS listings and found this information was consistent with the waste generation information discussed above in Section 4.1.1.

EnviroStor

PATRIOT searched for the subject property and adjacent sites on the EnviroStor website published by the DTSC. This website contains listings of Federal Superfund sites, State Response sites, Voluntary Cleanup sites, School Cleanup sites, Evaluation sites, School Evaluation sites, Military Evaluation sites, Tiered Permit sites, Corrective Action sites, Operating Permit sites, Post Closure Permit sites, and Non-Operating Permit sites. The subject property and adjacent sites to the north, south, west, and northwest were not identified on the EnviroStor website. Reports published on this web site for the east adjacent site, across Columbus Avenue, are discussed above in Section 4.1.2.

4.1.13 State Water Resources Control Board (GeoTracker)

PATRIOT searched for the subject property and adjacent sites on the GeoTracker website published by the State Water Resources Control Board. GeoTracker contains lists of DTSC cleanup sites, other cleanup sites, LUST sites, UST sites, land disposal sites, military sites, and DTSC Disposal Permit sites. The subject property and adjacent sites were not identified on the GeoTracker website.

4.1.14 CalEPA Regulated Sites

PATRIOT searched for the subject property and adjacent sites on the CalEPA Regulated Site Portal. This site combines data about environmentally regulated sites and facilities in California. These activities include hazardous materials and wastes, state and federal cleanups, impacted ground and surface waters, and toxic materials. The subject property and adjacent sites to the north, east, west, and northwest were not identified in the CalEPA Regulated Site Portal. Reports published on this web site for the south adjacent site are discussed above in Section 4.1.2.

5.0 INFORMATION FROM SITE RECONNAISSANCE

5.1 Hazardous Substances Connected with Identified Uses

The site reconnaissance was performed on August 26, 2020 by Mr. Doug Kochanowski, Biologist and Project Manager that included a walk of the subject property to determine the presence of hazardous materials and environmental conditions. Mr. Kochanowski is an Environmental Professional as defined by ASTM E1527-13 and 40 CFR §312.10(b). All exterior areas of the subject property were inspected. Due to COVID-19 restrictions and the elderly tenants occupying the subject property building, the interior areas of the subject property were not inspected. Information regarding hazardous materials and petroleum products was obtained from an interview with Mr. Brian Escalera, the Property Manager for the subject property.

Except for standard maintenance and janitorial chemicals, Mr. Escalara stated that there were no hazardous materials and petroleum products being used or stored on the subject property. He indicated that they had a laundry for washing cloths and bedding but the only materials used were standard detergents. Mr. Escalara confirmed that they had an emergency generator but it was fueled by natural gas. No regulated or hazardous wastes were generated on the subject property.

There was no evidence noted of spills or releases of these materials during the site reconnaissance.

5.2 Unidentified Substance Containers

There were no unidentified substance containers observed on the subject property.

5.3 Storage Tanks

No USTs were noted on the subject property at the time of the subject property reconnaissance. There were no common indicators of USTs such as vent pipes, fill ports, manways, fuel gauges, or dispensers observed. In the regulatory information researched there were no USTs reportedly installed, removed, closed in place, or abandoned at the subject property and no common indicators of closed tanks were observed.

PATRIOT observed no ASTs on the subject property and did not identify any equipment which would require such tanks. Moreover, visual indicators of former site ASTs such as tank cradles, secondary containment structures, and tank pedestals were not observed.

5.4 Hydraulic Equipment

There were no above or below-grade hydraulic lift systems observed on the subject property.

Two hydraulic elevators were reported to be located in the subject property building. These elevators were assumed to have been in place when the subject property building was constructed in 1973. Currently, the systems are maintained by ThyssenKrupp. The Property Manager, Mr. Brian Escalera stated that ThyssenKrupp have not reported any fluid releases or problems with the elevator systems. Although there were no reported signs or reports of leaking hydraulic fluid, it is possible that there have been releases in the past or the system may leak in the future. This potential is exacerbated with time as the hydraulic lift systems age.

If hydraulic elements from these systems had leaked, or will leak, the surrounding subsurface soil may be impacted by hydraulic fluid and polychlorinated biphenyls (PCBs). Because groundwater is estimated to be more than 250 feet bgs, groundwater impact is not expected. Based on the nature of the potential release (i.e., hydraulic oil), extensive migration and impacts tend not to occur. If any hydraulic fluids have been released, the downward migration of contaminants would be minimized by the presence of the concrete foundation of the subject property building covering this area. PATRIOT deems the possible past, or future release, of hydraulic fluid from the elevator systems to be a *de minimis condition*.

De minimis conditions generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

It is recommended that ThyssenKrupp, or any elevator maintenance company working on the subject property, be advised to immediately notify the subject property owners if a significant loss of hydraulic fluid is noted. Testing and disposal of impacted soils surrounding the elevators may be required when the subject property building is demolished. No further action regarding the subject property elevators appears necessary at this time.

5.5 Indications of PCBs

There were no pole-mounted transformers or hydraulic lift systems located on the subject property.

PCBs may have been present in the hydraulic fluid of the two elevators and is discussed above in Section 5.4.

One pad-mounted electrical transformer was observed near the northwest subject property corner. PCBs were typically removed from transformers in the southern California area in the late 1970s and early 1980s. The unit appeared in good condition and evidence of leaks was not observed. The Los Angeles Department of Water and Power (DPW) is responsible for the cleanup of any leaks emanating from their transformers. No further action regarding the transformer is recommended.

The subject property building was constructed in approximately 1973, therefore, the fluorescent light ballasts may contain PCBs. However, due to renovations many, if not all, the ballasts may have been replaced. The ballasts are not an obvious threat to the environmental integrity of the subject property but their disposal may be regulated. Other than ensuring that the ballasts are properly disposed of, no further action regarding the ballasts is recommended.

5.6 Indications of Solid Waste Disposal

There was no evidence observed of buried drums, buried containers, free liquids, odors, unusual depressions, or excavations that would indicate solid waste disposal activity on the subject property. There was no evidence of fill material from an unknown source on the subject property. An area of the parking lot east of the northeast corner of the subject property building was being used as a solid waste storage area . There was no surface evidence of spills, releases, or illegal disposal noted in this area during the subject property reconnaissance.

Based on surface observations, other than typical engineered fill used in foundation construction, it did not appear that a significant amount of fill had been imported onto the subject property.

5.7 Surface Staining

There was no evidence noted of discolored soils, odors, or surface staining on the subject property during the site reconnaissance. There was no evidence of sparse, stressed, or dead vegetation (from other than insufficient water). There was no visual evidence of improper handling or disposal of hazardous chemicals or materials on the grounds of the subject property.

5.8 Physical Setting Analysis

The subject property is in an area surrounded by commercial and residential developments. The area around the subject property began to significantly develop in the 1960s.

There were no indications that the subject property or any of the adjacent sites have been affected by the presence of oil or natural gas deposits. According to a State of California, California Geologic Energy Management Division (CalGEM) Well Finder search, the subject property is not located in the proximity of an oil or gas field. In addition, there were no oil wells mapped on the subject property, on any of the adjacent sites, or within one-quarter of a mile of the subject property.

5.9 Pipelines

PATRIOT reviewed the online National Pipeline Mapping System published by the Pipeline and Hazardous Materials Safety Administration, a division of the Department of Transportation. According to this agency, one or more hazardous liquids pipelines run along Sepulveda Boulevard but no accidents(liquids) or incidents (gas) were reported near the subject property. Hazardous liquid pipelines are strictly regulated, monitored, and protected. Also, the operators of the pipelines are responsible for any releases caused by their pipelines. No further action is recommended regarding pipelines near the subject property.

6.0 NON-SCOPE ASTM CONSIDERATIONS

6.1 Asbestos

PATRIOT performed asbestos testing of the subject property building and have published a report under separate cover.

6.2 Lead Based Paint

PATRIOT performed lead based paint testing of the subject property building and have published a report under separate cover.

6.3 Radon

Based on the results of the State of California Department of Health Services' 1990 California Statewide Radon Survey, the U.S. Environmental Protection Agency (U.S. EPA) lists subject Los Angeles County as being in Radon Zone 2. Zone 2 areas have a predicated average indoor radon screening potential of between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L. The level at which the U.S. EPA considers radon levels to be unhealthful is 4.0 pCi/L in residential structures.

There can be extreme variations of indoor radon levels within a local area based upon geologic, soil structure and building characteristics. The EPA recommends testing as the definitive method in determining the radon level within a specific structure. Radon testing was not part of this project's scope of work.

6.4 Mold

PATRIOT performed asbestos testing of the subject property building and have published a report under separate cover.

6.5 Fluorescent Light Tubes

The presence of fluorescent light tubes in the subject property is not a threat to the health of the tenants or the environmental integrity of the subject property. Their disposal, however, is regulated.

In California, the California Environmental Protection Agency Department of Toxic Substances Control (DTSC) regulates the management of spent fluorescent light tubes and spent mercury vapor lamps. These are hazardous wastes because mercury is listed as a hazardous waste under Title 22, California Code of Regulations, Section 66261.126. The spent tubes and lamps typically contain enough mercury to qualify as toxic hazardous wastes under Title 22, CCR, Section 66699 when disposed of in quantity. Questions regarding this policy should be direct to the DTSC, Hazardous Waste Management Program. Although their disposal is regulated, this is not a Recognized Environmental Condition.

6.6 Mercury

The subject property was inspected for the presence of mercury containing building components. There were no suspect mercury containing components identified in the subject property building in the areas surveyed. Some of the high voltage lighting systems, such as the exterior lighting, may contain mercury vapor but these are not a threat to the environmental integrity of the subject property.

6.9 Vapor Intrusion

Based on a review of agency records, historical documents, and current site uses, there were no onsite sources identified that had the potential to have created a vapor intrusion issue on the subject property.

There were no offsite properties identified in the database research that had an open release of petroleum hydrocarbons within 528 feet (one-tenth of a mile (0.1-miles)) upgradient, 165-feet crossgradient, or 100 feet downgradient of the subject property. There were no offsite properties identified in the database research that had a documented release of other chemicals, such as VOCs, identified within 1,760-feet (one-third of a mile (⅓-mile)) upgradient, 365-feet crossgradient, or 100 feet downgradient of the subject property.

It should be noted that PATRIOT was not contracted to perform an assessment of the subject property in accordance with ASTM Standard E2600 nor does this assessment meet the requirements of said standard.

7.0 FINDINGS, OPINIONS, AND RECOMMENDATIONS

This assessment has revealed no evidence of recognized environmental conditions, historical recognized environmental conditions, or controlled recognized environmental conditions connected with the subject property. Based on our findings, no further assessment currently appears warranted.

This assessment identified a de minimis condition associated with the hydraulic elevator on the subject property.

Two hydraulic elevators were located in the subject property building. These elevators were assumed to have been in place when the subject property building was constructed in 1973. Currently, the systems are maintained by ThyssenKrupp. The Property Manager, Mr. Brian Escalera stated that ThyssenKrupp have not reported any fluid releases or problems with the elevator systems. Although there were no reported signs or reports of leaking hydraulic fluid, it is possible that there have been releases in the past or the systems may leak in the future. This potential is exacerbated with time as the hydraulic lift systems age. If hydraulic elements from these systems leaked, or will leak, the surrounding subsurface soil may be impacted by hydraulic fluid and polychlorinated biphenyls (PCBs). Because groundwater is estimated to be more than 250 feet bgs, groundwater impact is not expected. Based on the nature of the potential release (i.e., hydraulic oil), extensive migration and impacts tend not to occur. If any hydraulic fluids have been released, the downward migration of contaminants would be minimized by the presence of the concrete foundation of the subject property building covering these areas. PATRIOT deems the possible past, or future release, of hydraulic fluid from the elevator systems to be a *de minimis condition*. *De minimis conditions* generally do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

It is recommended that ThyssenKrupp, or any elevator maintenance company working on the subject property, be advised to immediately notify the subject property owners if a significant loss of hydraulic fluid is noted. Testing and disposal of impacted soils surrounding the elevators may be required when the subject property building is demolished. No further action regarding the subject property elevator appears necessary at this time.

9.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

The undersigned certifies that the professional services have been performed, our findings obtained, and our recommendations have been prepared in accordance with customary principles and practices in the field of environmental science and engineering. PATRIOT has acted in good faith and has no relationship with sellers, buyers, or agents of the subject property. There have been no conflicts of interest involved in the drawing of conclusions, which have been based solely on materials reviewed and visual inspections performed by ES. The undersigned declares that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR 312 Section 312.10. We have the specific qualifications based on education, training, and experience to assess a subject property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 with any exceptions noted in Section 2.2 - Limitations, Exceptions and Methodology of Assessment.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

SELECTED ADDRESSES

The following addresses were selected by the client, for EDR to research. An "X" indicates where information was identified.

Address	***Type***	***Findings***
6715 Sepulveda Boulevard	Client Entered	
6741 Sepulveda Boulevard	Client Entered	X
6705 Sepulveda Boulevard	Client Entered	X
6719 Sepulveda Boulevard	Client Entered	X
6700 Sepulveda Boulevard	Client Entered	X
6734 Sepulveda Boulevard	Client Entered	X
15220 Vanowen Street	Client Entered	X

FINDINGS

TARGET PROPERTY INFORMATION

ADDRESS

6728 Sepulveda Boulevard
Van Nuys, CA 91411

FINDINGS DETAIL

Target Property research detail.

FINDINGS

ADJOINING PROPERTY DETAIL

The following Adjoining Property addresses were researched for this report. Detailed findings are provided for each address.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/23/2020 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 5 UST sites within approximately 0.25 miles of the target property.

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 03/23/2020 has revealed that there are 3 Cortese sites within approximately 0.5 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 4 DRYCLEANERS sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SHAMAM SVC CTR	6759 SEPULVEDA BLVD	NW 0 - 1/8 (0.043 mi.)	A11	21
PATTERSON E E	15260 VANOWEN PL	N 0 - 1/8 (0.061 mi.)	B17	30
BRETTS INCORPORATED	6810 SEPULVEDA BLVD	NNW 0 - 1/8 (0.098 mi.)	D34	187

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site ID: 101935
Site Name: CALIFORNIA HEALTH CARE
Violation Date: 07-25-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Effective December 28, 2017, CalEPA has replaced the previously existing five federal hazard categories in CERS with twenty-four new federal hazard categories. The following federal hazard categories are now obsolete G fire, reactive, pressure release, acute health, chronic health. A review of your submittal has determined that you still have the previous federal categories selected and/or have NOT selected any of the NEW federal hazard categories for your chemical inventory.

CALIFORNIA HEALTH CARE (Continued) **S123498468**

	Please review your hazardous material inventory and complete the following steps: 1) Deselect all of the five obsolete federal hazard categories for all chemical inventory listed under your facility. 2) Update your hazardous material inventory and select all applicable federal hazard categories from the 24 newly listed categories for all chemical inventory stored at your facility. You may refer to Section 2 of a current Safety Data Sheets (SDS) (previously called an MSDS) to determine which of the [Truncated]

Violation Date: 11-21-2014
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.
Violation Notes: Returned to compliance on 11/19/2015. No overfill. Permit pulled to install Veeder Root, ATG, and Flapper

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ARCO/THIRFY/9634/SOUTH WEST PETROLEUM SVCS LLC (Continued) **S113156309**

Citation:	HSC 6.7 25291(b) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(b)
Violation Description:	Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance into the secondary containment.
Violation Notes:	Returned to compliance on 11/01/2017. OBSERVATION: The 91 STP VR-208 sensor failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. CORRECTIVE ACTION: Correct immediately by having a properly licensed, trained, and certified contractor replace the failed component with a functional component (LG 113-x listed, if applicable) and obtain a permit within 1 business day from the CUPA. If the failed component canG t be replaced immediately, there is a possibility that the 91 UST system may be red tagged to prevent fuel inputs. ** This sensor was replaced and tested 10/24/2017. A permit was applied for 10/31/2017. LAFD was able to grant this permit and retest during the annual monitor certification 11/1/2017. **

ARCO/THIRFY/9634/SOUTH WEST PETROLEUM SVCS LLC (Continued) **S113156309**

	Chapter 16, Section(s) 2636(f)(1)
Violation Description:	Failure of the double wall pressurized piping in the under dispenser containment to be continuously monitored by a method that either shuts down the flow of product to the dispenser or activates an audible/visual alarm when a leak is detected.
Violation Notes:	Returned to compliance on 01/09/2014. MC failed due to diesel fill sump sensor (208) not working. Also, overfill alarm light not working. Diesel sump had product in it from possible leaking turbine. Tester attempted to repair the turbine by tightening components, after, when the turbine turns on, the circuit breaker shuts off turbine. We were unable to see if the attempted repairs fixed the leak. Tank was closed until repairs can be verified.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 08/21/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Failure to comply with one or more of the following overfill prevention equipment requirements: Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. **** Incomplete overfill inspection report dated 9/20/2018 indicate failure to your 87 and 91 fill tube shut off. Also indicated, was that the diesel fill tube shut off was not tested. No test results for your audio / visual overfill alarm. Test results indicate no ball float installed. ball floats are installed on your 87 , 91, and diesel USTs. These ball floats will need to be inspected to ensure they do not affect the fill [Truncated]

Violation Description:	Failure of pump shut down when a leak is detected or when line leak detector is disconnected.
Violation Notes:	Returned to compliance on 01/09/2014. MC failed due to diesel fill sump sensor (208) not working. Also, overfill alarm light not working. Diesel sump had product in it from possible leaking turbine. Tester attempted to repair the turbine by tightening components, after, when the turbine turns on, the circuit breaker shuts off turbine. We were unable to see if the attempted repairs fixed the leak. Tank was closed until repairs can be verified.

Completed Document Type: Phase 1
Completed Date: 05/22/1998
Comments: Pursuant to the MOU, DTSC has reviewed a Phase I Preliminary Environmental Assessment for the San Fernando Valley Community Mental Health Center, Inc. (SFVCMHC). The subject property currently contains a one-story office building. SFVCMHC currently is leasing a major portion of the building which has been remodeled to accommodate their mental health clinic and administrative office. A portion of the building is presently vacant and will be remodeled to allow SFVCMHC to expand their clinic operations. SFVCMHC is proposing to purchase the subject property once the remodeling is completed. A Supplemental Phase I Environmental Assessment Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/12/2020
Date Data Arrived at EDR: 05/12/2020
Date Made Active in Reports: 07/27/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

CALIFORNIA VILLA PHASE I ESA
6728 SEPULVEDA BOULEVARD
VAN NUYS, CA 91411

TARGET PROPERTY COORDINATES

Latitude (North):	34.192789 - 34° 11' 34.04''
Longitude (West):	118.465065 - 118° 27' 54.23''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	365002.3
UTM Y (Meters):	3784307.5
Elevation:	736 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630789 VAN NUYS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

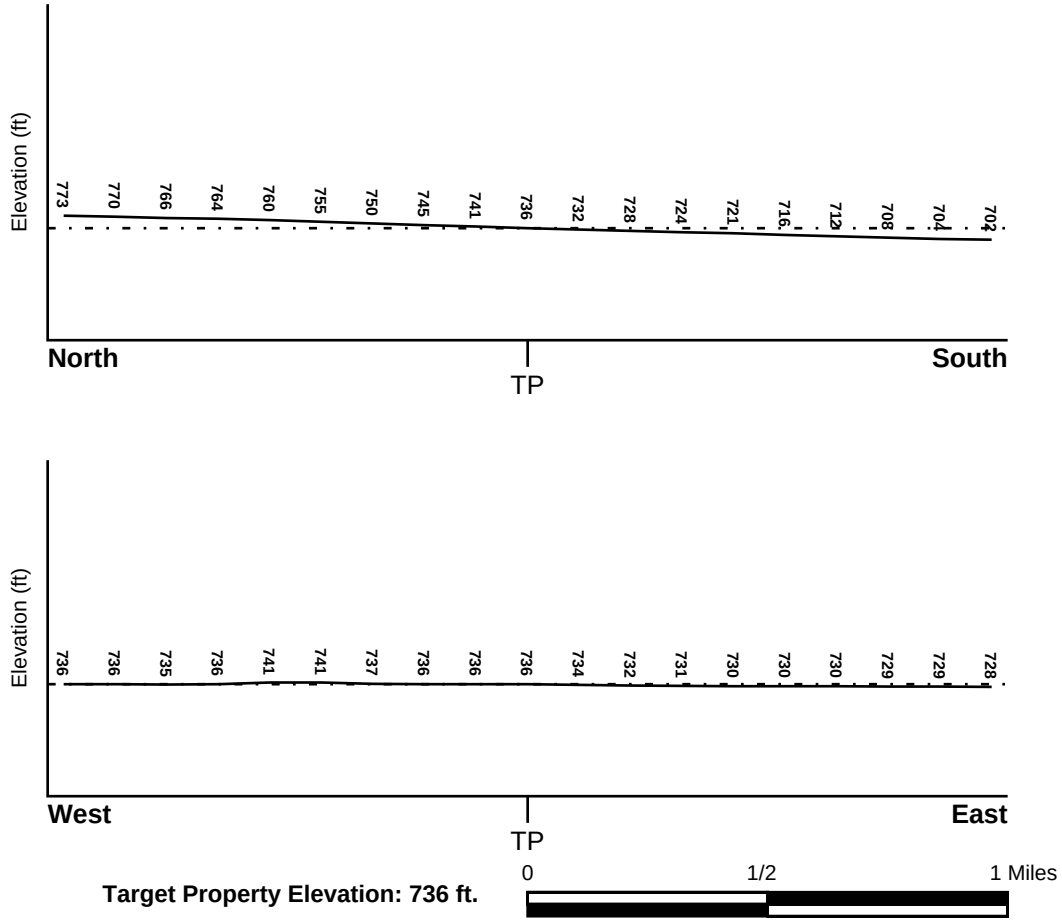
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1305F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1315F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
VAN NUYS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

Site History

This 3.5 acre site was historically a horticultural education center. A PEA was completed in May 2000. Results from the PEA investigation indicated concentrations of metals and polyaromatic hydrocarbons (specifically creosote), therefore a Removal Action was recommended.

APPENDIX H

Questionnaires

PATRIOT provided the questionnaire on the following pages to the subject property owner, Ms. Judy Shea. On August 25, 2020, PATRIOT received and email from Ms. Shea with the following response:

"Hello Bill, I have received the Phase 1 Questionnaire for 6728 Sepulveda Blvd. Van Nuys, CA. This property has been leased for the past 40 years, and I have no first-hand knowledge to be able to respond to any of these questions. If you have further questions or response to this e-mail, please also include Brian Escalera in your response. Thank you Bill. Best regards, Judy Shea."

PATRIOT ENVIRONMENTAL LABORATORY SERVICES, INC.

Patriot Environmental Laboratory Services, Inc. is conducting a Phase I ESA of the site located at 6728 Sepulveda Boulevard, Van Nuys, California hereinafter referred to as the, "Property." Please answer the following questions to the best of your knowledge, scan and e-mail to: *dougk@phaseoneesa.com or FAX to: (714) 593-0012.*

1) Is the property, past or present, been occupied by a tenant using significant amounts of hazardous materials or petroleum products?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

2) Are there any adjoining sites, past or present, occupied by a tenant using significant amounts of hazardous materials or petroleum products?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

3) Are you aware of spills or releases on the Property or adjacent sites?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

4) In regards to the Property, are there any environmental liens or Activity or Use Limitations (ALUs) such as engineering controls, land use restrictions or institutional controls in place or on file under federal, tribal, state or local law?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

5) Are there clarifiers or oil water separators on the Property? If yes, please provide the name of the firm that cleans them and how often.

YES ☐ NO/DON'T KNOW ☐ IF YES, PROVIDE NAME OF COMPANY AND HOW OFTEN CLEANED :

6) Have there been any pits, ponds, or lagoons located on the Property?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

7) Have there been any Underground Storage Tanks (USTs) or Aboveground Storage Tanks (ASTs) located on the Property?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

8) Has the sale price of the Property been discounted for any environmental reason?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

9) Have you been informed of any environmental violations with respect to the Property?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

10) Do you have knowledge of any past environmental reports performed on the Property such as: an environmental site assessment, asbestos survey, lead based paint survey, mold testing, soil and/or groundwater testing?

YES ☐ NO/DON'T KNOW ☐ IF YES, DESCRIBE THE REPORT(S) AND SEND ELECTRONIC COPY(S):

11) Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of a hazardous substance or petroleum product involving the Property?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

12) Does the Property discharge any industrial wastewater, other than stormwater, into a sanitary sewer system?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

13) What is the reason for having the Phase I Environmental Site Assessment performed?

☐ Purchase ☐ Lease ☐ Other (please attach explanation)

☐ Sale ☐ Loan

14) Are there hydraulic lifts and or elevators on the subject property? If so, please provide the number of lifts and the name of the company that has been hired to maintain the hydraulic lifts or elevators.

YES ☐ NO/DON'T KNOW ☐ IF YES, NUMBER OF LIFTS AND NAME OF MAINTENANCE COMPANY:

15) Has the hydraulic lift/elevator maintenance company ever indicated that there had been significant releases of hydraulic fluid from the system(s)?

YES ☐ NO/DON'T KNOW ☐ IF YES, EXPLAIN:

16) How many years of firsthand knowledge do you possess regarding the Property:

17) Please explain your relationship to the Property (owner, tenant, purchaser, real estate agent), the company you represent, and your title:

18) Please provide, to the best of your knowledge, a description of the present and historical uses and/or tenants on the Property:

19) Please list the Property owner's name on record along with a representative's name and phone number:

Dear Mr. Mescobi:

The Fire Department has reviewed Soil Report dated November 20, 2009, submitted by Partner Engineering and Science Incorporated

Based on the information provided to date, this Department has determined that no further action is required for this site under permit number 26900.

Please note, this correspondence does not exempt you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Additionally, you maintain responsibility to correct additional or previously unidentified conditions at the site, which cause, or may thereafter cause, pollution or nuisance, or otherwise pose a threat to water quality or public health.

If you require additional information regarding this matter, please contact Inspector Herman Quaintance of the Underground Storage Tanks – Plan Check Unit, at (213) 482-6532.

Very truly yours,

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) was retained by Bank Leumi USA on behalf of Grand Plaza, LLC (the subject property owner) to prepare for the review of the City of Los Angeles Fire Department (LAFD) the following Soils Report for an Underground Storage Tank (UST) Removal conducted at 6734 Sepulveda Boulevard in the City of Van Nuys, California.

1.1 Authorization

Bank Leumi USA provided project authorization through signed copies of Partner Proposal Number 09-63669.3 and Change Orders 09-63669.3A and p09-63669.3B.

1.2 Purpose

The purpose of the project was to remove a 750-gallon gasoline UST and collect samples to determine if impacts to the subsurface have occurred.

1.3 Scope

The scope of the UST Removal included the excavation, cleaning, degassing, removal, and disposal of one UST.

1.4 Jurisdiction

The UST Removal was conducted with oversight from the LAFD and the South Coast Air Quality Management District (AQMD).

1.5 Site Information

Please see Table 1.5-1 for a summary of pertinent contact information for this project.

Table 1.5-1: Contact Information

Subject Property	Client	Consultant
6734 Sepulveda Boulevard Van Nuys, California 91411 APN Number: 2235-004-009 Contact Person: Allen Mescobi Telephone: (323) 852-9001	Bank Leumi USA 8383 Wilshire Boulevard, Suite 1400 Los Angeles, California 90211 Contact Person: John Chato Telephone: (323) 966-4250	Partner Engineering and Science, Inc. 1990 East Grand Avenue, Suite 100 El Segundo, California 90245 Contact Person: Rodolfo Nadres, EIT Telephone: (310) 615-4500

1.6 Limitations

This Report presents a summary of work completed by Partner. The completed work includes observations of site conditions encountered and the analytical results provided by an independent third party laboratory of samples collected during the course of the project. The number and location of samples were selected to provide the required information. However, it cannot be assumed that the limited available data are representative of subsurface conditions in areas not sampled.

All conclusions and/or recommendations are based on the observations, laboratory analyses, and the governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Partner warrants that the environmental consulting services contained herein were accomplished in accordance with generally accepted practices in the environmental engineering, geology, and hydrogeology fields that existed at the time and location of work. No other warranties are implied or expressed.

All reports, both verbal and written, as they pertain to the property located at 6734 Sepulveda Boulevard in the City of Van Nuys, California, are for the sole use and benefit of the Bank Leumi USA and/or the LAFD. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of Partner.

2.0 PROJECT BACKGROUND

2.1 Site Description

The subject property consists of a 2.67-acre lot located on the southeast corner of Sepulveda Boulevard and Vanowen Street in a mixed commercial and residential area of Van Nuys. The properties immediately surrounding the subject property consist of the intersection of Sepulveda Boulevard and Vanowen Street to the northwest, beyond which is a commercial center; Vanowen Street to the north, beyond which are Thrifty Gas, a medical office building, and vacant land; a vacant commercial building to the east; a senior living facility to the south; and Sepulveda Boulevard to the west, beyond which are commercial retail stores and a used automotive sales lot. Please see Figure 2.1-1 for a site vicinity map.

The subject property is developed with a single-story multi-tenant commercial building constructed in 1966. The building is currently occupied by the various commercial tenants. The remainder of the site consists of asphalt-paved parking spaces. Please see Figure 2.1-2 for a site plan.

2.2 Site History

Partner performed a September 2009 Phase II Subsurface Investigation at the subject property to determine if a release occurred from a former on-site gasoline service station. The scope of the investigation included seven soil borings and a Geophysical Survey to determine if any USTs remain on-site and/or determine the locations of any backfilled former tankholds. All analyzed soil samples had trace ton non-detectable concentrations of all target contaminants. However, a symmetrical metallic object was detected within the footprint of the former gasoline station during the Geophysical Survey.

Partner performed an October 2009 Additional Subsurface Investigation, which included a test pit excavation to identify the source of the aforementioned anomaly. The excavation identified the presence of a partially abandoned 750-gallon UST. The UST appeared to be constructed of single-walled steel and measured approximately 9 feet long by 4 feet round. A 4-inch diameter opening was noted on the northwestern end of the UST with a single 2-inch pipe protruding from the opening. The pipe appeared to have been approximately 4 feet long and may have been used to fill the UST. The UST did not contain product and was partially filled with sand, which exhibited a strong petroleum hydrocarbon odor. Partner did not disturb the tank and backfilled the excavation with overburden soil pending the UST Removal. Please see Figure 2.2-1 for a map of the UST location.

3.0 GEOLOGY AND HYDROGEOLOGY

Based on a review of the United States Geological Survey (USGS) Van Nuys, California Quadrangle topographic map, the subject property is situated approximately 735 feet above mean sea level (amsl), and the local topography is sloping gently to the south.

Based on borings advanced during the Phase II Subsurface Investigation, the underlying subsurface consists predominantly of grayish brown to dark brown, dense, moist, silt (ML) and fine-grained sand (SP) from the ground surface to approximately 5 feet below ground surface (bgs). From 5 to 15 feet bgs, the subsurface consists predominantly of medium brown, dense, moist clay (CL) with varying percentages of silt. From 15 to 20 feet bgs, the subsurface consists predominantly of medium brown, dense, silt (ML) and fine-grained sand (SP). Light brown, loose, well-graded sand (SW) was typically encountered at 25 feet bgs.

Based on regional topography, the assumed flow direction of groundwater at the subject property is to the south. According to the Los Angeles County Department of Public Works (LACDPW) Groundwater Well Website, the nearest groundwater well (Well Number 3740A) is located approximately 0.34 mile east of the subject property. The well was last gauged on December 8, 2008, and the depth to groundwater was recorded at 211 feet bgs. Groundwater was not encountered during this investigation.

4.0 FIELD ACTIVITIES

4.1 Permitting

Prior to the UST Removal, Partner secured a Division 5 Permit from the LAFD (Permit Number SR0026900) and issued an AQMD Various Locations Rule 1166 Contaminated Soil Mitigation Plan Notification (Plan Number 494849 and Reference Number 229549). Please see Appendix A for copies of the permits secured for this project.

4.2 Excavation

Partner notified Underground Services Alert (USA) to clear public utility lines as required by law at least 48 hours prior to drilling activities. Partner already had an active ticket for the site, so USA issued an update to ticket number A92470348 for the project.

Partner conducted the UST Removal on November 10 and 11, 2009. Partner subcontracted with Dependable Equipment (Dependable) to provide and operate heavy equipment.

On November 10, 2009, Partner subcontracted with Penhall Company (Penhall) to sawcut the asphalt paving overlying the excavation area. Dependable used a backhoe to remove overlying ground cover and excavate the overburden and surrounding soil to expose the crown (terminal depth of approximately 4 feet bgs) and the northwestern, southwestern and southeastern faces to the invert (terminal depth of approximately 8 feet bgs) of the UST. The tank was situated approximately 55 feet south of the northern property line along Vanowen Street and 26 feet east of the western property line along Sepulveda Boulevard and trending northwest-southeast. The final dimensions of the excavation measured approximately 13 feet wide at the east end and 15 feet wide at the west end by 17 feet long by 10 feet bgs. Please see Figure 2.2-1 for a map of the UST excavation.

4.3 Soil Stockpile Management

Partner field-screened all excavated soil approximately every 15 minutes with a photoionization detector (PID) per the SCAQMD Various Locations Rule 1166 Contaminated Soil Mitigation Plan. None of the PID readings suggested the presence of elevated volatile organic compounds (VOCs) as defined by the SCAQMD.

The soil excavated above and around the UST did not exhibit staining or an odor and was isolated into a visqueen-lined stockpile surrounding the excavation.

4.4 Cleaning

Partner subcontracted with Adams Services (Adams) to clean the UST on November 10, 2009. Adams degassed the tank through the UST fillport by air purging with the proper grounding and bonding in place. Field instruments were used to confirm that combustible vapor concentrations were below the lower explosive limit (LEL). Upon confirmation that combustible vapor concentrations were below LELs, Adams cut away the crown of the UST using non-sparking tools to provide access to the tank interior. Dependable used the backhoe to remove the majority of the tank sand without compromising the integrity of the UST The remainder of the sand was manually removed from the UST using shovels.

The tank sand was directly containerized into 55-gallon drums atop visqueen, which were sealed and properly labeled.

Upon removal of the tank sand, Adams pressure-rinsed clean the interior of the UST using water and removed the resulting rinsate using a vacuum truck. Approximately 50 gallons of rinsate were generated for this project, which was transported off-site on November 10, 2009, under proper waste manifest to Demenno/Kerdoon in the City of Compton, California, for recycling and/or disposal as non-Resource Conservation & Recovery Act (non-RCRA) hazardous waste. Please see Appendix B for a copy of the waste manifest.

Partner subcontracted with Analytical Consulting Group, Inc. (ACg) to inspect the UST on November 10, 2009. The ACg Certified Industrial Hygienist (CIH) inspected the condition of the UST and measured the LEL and oxygen level of the tank interior. Based on the inspection, ACg certified that the UST was clean and issued a tank certification report. Please see Appendix C for a copy of the CIH clean tank certification.

4.5 Removal

The certified clean UST was removed on November 10, 2009, which was overseen by Inspector Brian Holtfreter of the LAFD. The UST was connected to the backhoe arm using chains, placed atop a flatbed truck, and secured with straps. Partner visually inspected the UST and noted evidence of some corrosion and some small holes on the northwest end of the UST. The UST was transported off-site on November 10, 2009, and transported to E.L.S. Inc. (E.L.S.) in the City of Huntington Park, California, for recycling as scrap metal. Please see Appendix D for a copy of the tank destruction certificate.

4.6 Soil Sampling Locations

UST soil sampling was conducted on November 10, 2009, under the direction of Inspector Holtfreter of the LAFD. Inspector Holtfreter directed Partner to collect soil samples from approximately 2 feet below the northwest and southeast ends (approximately 10 feet bgs) of the invert of the removed UST (PES-B1 and PES-B2, respectively). Please see Figure 4.6-1 for a map of sampling locations.

4.7 Soil Sampling Methodology

Confirmation samples from the UST excavation were collected using the backhoe arm. At the desired sampling location and depth, Partner collected each sample by manually transferring soil from the backhoe bucket into a laboratory-supplied, 4-ounce, wide-mouth, unpreserved glass jar, which was filled to capacity to minimize headspace and reduce the potential for volatilization; sealed with a threaded, Teflon-lined lid; and labeled for identification. Each sample was additionally collected using a dedicated disposable plastic syringe and retained in two sodium bisulfate-preserved volatile organics analysis vials (VOAs) in accordance with Environmental Protection Agency (EPA) Method 5035. The VOAs were labeled for identification and stored in an iced cooler along with the glass jars.

4.8 Soil Disposal

Dependable loaded the asphalt generated from the project into a 20-cubic yard capacity temporary roll-off bin and the tank sand into four 55-gallon drums on November 10, 2009. Partner subcontracted with Environmental Recovery Services, Inc. (Enviroserv) to profile, manifest, and dispose of the generated

waste. Enviroserv collected the roll-off bin on November 11, 2009, which was subsequently transported Earthshine in the City of Compton, California for recycling, and the drums on November 11, 2009, which were subsequently transported under proper waste manifest to TPS Technologies (TPS) in the City of Adelanto, California, for recycling and/or disposal as non-hazardous waste. Please see Appendix B for a copy of the asphalt shipping bill and soil waste manifest.

4.9 Excavation Backfill

The excavation was backfilled on November 11, 2009. The excavation was first prepared for backfill by removing loose soil from the excavation bottom to establish a competent base. Backfilling took place in approximately 1-foot loose lifts that were compacted to approximately 90% relative compaction using a compaction wheel attached to the backhoe. The deeper depths of the excavation were backfilled with the stockpiles of clean overburden soil generated during the excavation while the shallow depths were backfilled with approximately 6 tons of class II aggregate base imported on-site from West Cost Sand & Gravel based in the City of Buena Park, California. The fill material was conditioned as necessary with water to achieve the optimum moisture content. The excavation was backfilled to approximately 6 inches bgs. Ground cover resurfacing was conducted independently by contractors engaged directly by the subject property owner.

5.0 ANALYSIS AND RESULTS

The two soil samples collected on November 10, 2009, were transported in an iced cooler under proper chain-of-custody protocol to Alpha Scientific Corporation (ASC), a state-certified laboratory [California Department of Health Services (DHS) Environmental Laboratory Accreditation Program (ELAP) certificate number 2633] in the City of Cerritos, California, for analysis on the same day. Each sample was analyzed as directed by the LAFD for total petroleum hydrocarbons as gasoline (TPH-g) via EPA Method 8015M and for benzene, toluene, ethylbenzene, and total xylenes (collectively, BTEX) and fuel oxygenates via EPA Method 8260B. Please see Appendix E for a copy of the UST Abandonment Report, which was provided by the LAFD Inspector and specified the laboratory analysis scope for this project.

ASC reported the laboratory analysis results on November 10, 2009. Please see Tables 5.0-1 and 5.0-2 for a summary of the TPH-cc and BTEX/fuel oxygenates laboratory analysis results, respectively. Please note that Partner analyzed the soil samples for the full range of TPH in lieu of just TPH-g.

Table 5.0-1: TPH-cc Laboratory Analysis Results (mg/kg)

Sample Identification	Sample Location	TPH-g	TPH-d	TPH-o
PES-B1	Beneath Northwest End of UST	< 0.2	< 1	< 20
PES-B2	Beneath Southeast End of UST	< 0.2	< 1	< 20

Notes
TPH-cc = carbon chain total petroleum hydrocarbons
mg/kg = milligrams per kilogram
TPH-g = total petroleum hydrocarbons as gasoline
TPH-d = total petroleum hydrocarbons as diesel
TPH-o = total petroleum hydrocarbons as oil
UST = underground storage tank
< = not detected above indicated laboratory Method Detection Limit (MDL)

Table 5.0-2: BTEX and Fuel Oxygenates Laboratory Analysis Results (mg/kg)

Sample Identification	Sample Location	B	T	E	X	MTBE	ETBE	DIPE	TAME	TBA
PES-B1	Beneath Northwest End of UST	< 0.001	< 0.001	< 0.001	< 0.002	< 0.002	< 0.002	< 0.002	< 0.002	< 0.020
PES-B2	Beneath Southeast End of UST	< 0.001	< 0.001	< 0.001	< 0.002	< 0.002	< 0.002	< 0.002	< 0.002	< 0.020

Notes.
mg/kg = milligrams per kilogram
B = benzene
T = toluene
E = ethylbenzene
X = xylenes
MTBE = methyl tertiary butyl ether
ETBE = ethyl tertiary butyl ether
DIPE = diisopropyl ether
TAME = tertiary amyl methyl ether
TBA = tertiary butyl alcohol
UST = underground storage tank
< = not detected above indicated laboratory Method Detection Limit (MDL)

Please see Appendix F for the full laboratory analysis reports, which include chain-of-custody and laboratory quality assurance/quality control (QA/QC) documentation. All laboratory QA/QC data were within acceptable limits.

6.0 DISCUSSION

None of the confirmation soil samples had detectable concentrations of any target contaminants.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Partner conducted a UST Removal at the subject property. The project scope included the removal of a 750-gallon gasoline UST.

Partner properly removed the UST from the subject property with LAFD and AQMD oversight. The certified clean UST was transported to E.L.S. for recycling as scrap metal. Rinsate generated during the tank cleaning was transported under proper waste manifest to Demenno/Kerdoon for recycling and/or disposal as non-RCRA hazardous waste. The fill sand encountered in the UST was containerized in four 55-gallon drums and transported under proper waste manifest to TPS for recycling and/or disposal.

All confirmation samples from the UST excavation had non-detectable concentrations of all target contaminants. Based on the project results, Partner recommends no further investigation with respect to the former UST and requests case closure status from the LAFD.

8.0 SIGNATURES OF PARTICIPATING PROFESSIONALS

Thank you for the opportunity to be of service. If you have any questions regarding this investigation, please contact the undersigned at (310) 615-4500.

Sincerely,

Terri Men
Staff Engineer

VARIOUS LOCATIONS
RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

Reference is made to your application (A/N 494849) for the excavation and handling of VOC contaminated soil at **various locations** within the South Coast Air Quality Management District.

In accordance with Rule 1166 (c), this approved plan is required prior to commencing excavation of any area, site, or location which has previously been used to store or transfer volatile organic compounds (VOC) or during the excavation, handling, or storage of VOC contaminated soils.

The rights and privileges granted through the issuance of this plan are restricted exclusively to the plan holder to whom it was issued, and are non-transferable, even with the written or expressed consent of the plan holder listed above.

A VARIOUS LOCATIONS PLAN can be used at a site to excavate and remove a maximum of 2000 cubic yards of VOC contaminated soil at the site. Any treatment or additional excavation of VOC contaminated soil at the site will require the issuance of a SITE SPECIFIC plan by the AQMD. Multiple use of VARIOUS LOCATIONS PLANS to excavate over 2000 cubic yards of contaminated soil on the same site is prohibited per Rule 1166.

This excavation and mitigation plan has been approved under the provisions of Rule 1166 of the Rules and Regulations of the AQMD and is subject to the following conditions:

THIS PLAN WILL EXPIRE ONE YEAR FROM THE ISSUE DATE AND THERE IS NO AUTOMATIC RENEWAL PROCESS.

TO MAINTAIN A CURRENT PLAN AFTER THE EXPIRATION DATE, FILE AN APPLICATION FOR A NEW PLAN AT LEAST ONE MONTH PRIOR TO EXPIRATION. CALL (909) 396- 2682 OR E-MAIL rvishwanath@aqmd.gov FOR AN APPLICATION PACKAGE AND CURRENT FEE INFORMATION.

PLAN CONDITIONS

SECTION I – GENERAL REQUIREMENTS

1. A SIGNED COPY OF THIS PLAN SHALL BE PRESENT AT EACH EXCAVATION SITE AT ALL TIMES AND SHALL BE MADE AVAILABLE TO AQMD PERSONNEL UPON REQUEST.

2. THIS PLAN IS NOT VALID FOR THE EXCAVATION OF VOC CONTAMINATED SOILS AT LANDFILLS OR SITES USED FOR DISPOSAL OF REFUSE OR OTHER TYPES OF WASTE.

3. THIS PLAN DOES NOT ALLOW THE TREATMENT OF VOC-CONTAMINATED SOIL BY THERMAL, CHEMICAL, OR MECHANICAL PROCESSES. ANY OF THE ABOVE TREATMENT PROCESSES REQUIRES A PERMIT TO OPERATE FROM THE AQMD AND A SITE-SPECIFIC RULE 1166 PLAN.

4. THIS PLAN DOES NOT ALLOW BACK-FILLING OF TREATED VOC CONTAMINATED SOIL. BACK-FILLING OF TREATED VOC CONTAMINATED SOIL MAY BE ALLOWED UNDER A SITE SPECIFIC RULE 1166 PLAN.

5. AT THE TOTAL QUANTITY OF VOC CONTAMINATED SOIL EXCAVATED AND HANDLED AT EACH SITE SHALL NOT EXCEED **2,000 CUBIC YARDS**. THIS TOTAL INCLUDES ANY VOC CONTAMINATED SOILS EXCAVATED FROM THIS LOCATION UNDER A VARIOUS LOCATION PLAN WITHIN THE LAST TWELVE (12) CALENDAR MONTHS. EXCAVATIONS INVOLVING QUANTITIES IN EXCESS OF 2000 CUBIC YARDS OF VOC CONTAMINATED SOIL REQUIRES THE APPLICATION SUBMITTAL FOR A SITE SPECIFIC RULE 1166 EXCAVATION PLAN.

6. THE AQMD SHALL BE IMMEDIATELY NOTIFIED OF ANY COMPLAINTS RECEIVED AS A RESULT OF ACTIVITIES CONDUCTED UNDER THIS PLAN. SUCH NOTIFICATION SHALL INCLUDE THE NATURE OF THE COMPLAINT, NUMBER OF COMPLAINANTS AND THE ACTION TAKEN BY THE PLAN HOLDER TO MITIGATE THE SOURCE OF THE COMPLAINT.

7. DURING EACH STEP OF THE PROCESS UP TO AND INCLUDING THE REMOVAL AND DISPOSAL PROCESS, ALL PRECAUTIONS AND MEASURES SHALL BE TAKEN TO MINIMIZE THE RELEASE OF VOC, ODOR AND DUST. THIS INCLUDES BUT IS NOT LIMITED TO: THE USE OF ADDITIONAL PLASTIC SHEETING ON STOCKPILES, USE OF SUPPRESSANTS ON EXPOSED SOIL SURFACES & WORK AREAS AND MAINTAINING PAVED PUBLIC STREETS FREE OF SOIL DEPOSITS.

8. FOR THE PURPOSES OF RULE 1166 AND THIS PLAN, SOIL MEASURED PURSUANT TO RULE 1166 AS VOC CONTAMINATED SOIL, IS CONSIDERED AS VOC CONTAMINATED SOIL FROM THE TIME OF MEASUREMENT ONWARD, UNTIL THE SOIL IS TREATED PURSUANT TO AN APPROVED AQMD TREATMENT PROCESS.

SECTION II – PRIOR TO EXCAVATION

9. AT LEAST 24 HOURS PRIOR TO COMMENCING EXCAVATION OR GRADING OF SOIL AT THE SITE, THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED OF THE EXCAVATION BY FAX USING A FORM APPROVED BY THE EXECUTIVE OFFICER WHICH IS FULLY COMPLETED AND INCLUDING THE NAME OF THE COMPANY PERFORMING THE EXCAVATION, AND THE APPLICATION NUMBER LISTED ON THIS MITIGATION PLAN. THE NOTIFICATION SHALL BE MADE BY FAXING THE NOTIFICATION FORM AT (909) 396-3342. FAX NOTIFICATIONS WILL RECEIVE A REFERENCE NUMBER BY RETURN FAX OR CAN BE OBTAINED REFERENCING THE FAX NOTIFICATION BY PHONE TUESDAY THROUGH FRIDAY DURING BUSINESS HOURS AT 909 396-2326. THE REFERENCE NUMBER SHALL BE RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT.

REFERENCE NO 229549 NOTIFICATION DATE 11/9/09

10. COMPLETE VERIFICATION INFORMATION IN CONDITION NO. 30 AND OBTAIN REQUIRED SIGNATURES PRIOR TO COMMENCING EXCAVATION.

SECTION III – MONITORING

11. DURING THE EXCAVATION PROCESS, AN ORGANIC VAPOR ANALYZER (OVA) SHALL BE ON SITE AT ALL TIMES. THE OVA SHALL BE MAINTAINED IN GOOD WORKING ORDER AT ALL TIMES AND SHALL BE CALIBRATED BY THE MANUFACTURER AT LEAST ONCE EVERY THREE MONTHS. THE CALIBRATION OF THE OVA SHALL BE VERIFIED USING CERTIFIED CALIBRATION GAS AT THE BEGINNING OF EACH WORKING DAY WITH THE PROCEDURES SPECIFIED BY THE MANUFACTURER. IF A CALIBRATION GAS OTHER THAN HEXANE IS USED, EACH MEASURED READING SHALL BE CORRELATED TO AND EXPRESSED AS HEXANE, USING EQUIVALENCY FACTORS PROVIDED BY THE MANUFACTURER.

12. ALL MONITORING SHALL BE CONDUCTED AT A DISTANCE NO MORE THAN 3 INCHES ABOVE THE SOIL SURFACE USING AN OVA DESCRIBED IN CONDITION NO. 11 ABOVE. **MONITORING SHALL BE CONDUCTED AT A MINIMUM FREQUENCY OF ONE READING FOR EVERY TWO CUBIC YARDS OF SOIL EXCAVATED, NOT TO EXCEED FIFTEEN MINUTES BETWEEN READINGS. ALL READINGS SHALL BE TAKEN NO LATER THAN THREE (3) MINUTES AFTER EACH LOAD OF SOIL IS EXCAVATED.**

13. ALL MONITORING SHALL BE CONDUCTED BY TRAINED PERSONNEL WHO ARE PROFICIENT IN THE USE OF THE HYDROCARBON MONITOR SELECTED FOR USE AT THIS SITE.

14. WRITTEN RECORDS OF OVA MONITORING AND CALIBRATIONS REQUIRED ABOVE SHALL BE KEPT IN A FORMAT APPROVED BY THE AQMD. THE APPROVED FORMAT IS INCLUDED ON PAGE 7 OF THIS PLAN. THE CERTIFICATION ON ALL RECORDS SHALL BE SIGNED AND DATED ON THE DAY THE MEASUREMENTS ARE OBSERVED.

15. UPON DETECTION OF VOC CONTAMINATED SOIL (READINGS 50 PPM OR GREATER), THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED **WITHIN 24 HOURS** OF THE FIRST DETECTION OF VOC CONTAMINATION. THE NOTIFICATION SHALL BE MADE BY FAXING THE NOTIFICATION FORM TO (909) 396-3342 OR CALLING (909) 396-2326. A REFERENCE NUMBER WILL BE FAXED BACK OR WILL BE ISSUED WHEN THE PHONE NOTIFICATION IS RECEIVED. ALL PHONE NOTIFICATIONS SHALL BE FOLLOWED BY MAILING THE NOTIFICATION FORM TO THE DISTRICT POSTMARKED **WITHIN 48 HOURS**. THE REFERENCE NUMBER WILL BE RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT.

REFERENCE NO _____ NOTIFICATION DATE _____

SECTION II – HANDLING AND STORAGE

16. ALL VOC CONTAMINATED SOIL BELOW 1000 PPM SHALL BE STOCKPILED, COVERED WITH PLASTIC SHEETING AND STORED SEPARATELY FROM NON-VOC-CONTAMINATED SOIL, OR IMMEDIATELY TRANSPORTED TO A TREATMENT FACILITY.

17. A STOCKPILE SHALL NOT CONTAIN MORE THAN 4000 CUBIC YARDS OF SOIL.

18. IF THE OVA MEASUREMENT IS GREATER THAN 50 PPMV BUT LESS THAN 1000 PPMV

    A) THE AFFECTED WORK AREA AND LOAD OF SOIL SHALL BE SPRAYED WITH WATER AND/OR APPROVED VAPOR SUPPRESSANT

    B) CONTAMINATED SOIL IN STOCKPILES SHALL BE COVERED WITH PLASTIC SHEETING WHICH OVERLAP A MINIMUM OF TWENTY-FOUR INCHES AND ARE SECURED SO THAT NO PORTION OF THE CONTAMINATED SOIL IS EXPOSED TO THE ATMOSPHERE. IN THE COURSE OF HANDLING THE STOCKPILE, ONLY THE WORKING FACE OF THE STOCKPILE MAY BE UNCOVERED.

19. IF THE OVA MEASUREMENT EQUALS OR IS GREATER THAN 1000 PPM, STOP EXCAVATION, TO NOTIFY THE DISTRICT IMMEDIATELY OR WITHIN ONE HOUR OF DETECTION AND,

    A) THE AFFECTED SOIL AND WORKING AREA SHALL BE IMMEDIATELY SPRAYED WITH WATER OR AN APPROVED VAPOR SUPPRESSANT, AND EITHER

    B) THE CONTAMINATED SOIL EXCAVATED SHALL BE IMMEDIATELY PLACED IN AQMD APPROVED SEALED CONTAINERS, OR

    C) DIRECTLY LOADED IN TRUCKS, SPRAYED WITH ADDITIONAL WATER OR APPROVED VAPOR SUPPRESSANT, COVERED, AND TRANSPORTED IMMEDIATELY OFF SITE AS PER CONDITION #25 OF THIS PLAN, OR,

    D) OTHER ALTERNATIVE STORAGE METHODS WITH PRIOR WRITTEN APPROVAL FROM THE AQMD

20. DURING EXCAVATION, THE ONLY EXPOSED VOC CONTAMINATED SOIL SHALL BE RESTRICTED TO THE IMMEDIATE WORKING AREA OF THE SITE OR STOCKPILE. ALL OTHER PORTIONS OF THE STOCKPILE SHALL BE COVERED WITH PLASTIC SHEETING, WITH SEAMS WHICH OVERLAP A MINIMUM OF TWENTY-FOUR INCHES AND ARE SECURED WITH DUCT TAPE. ANY EXPOSED VOC-CONTAMINATED SOIL SURFACES (WORK FACE) SHALL BE KEPT MOIST WITH WATER OR OTHER APPROVED SUPPRESSANTS AT ALL TIMES, AND SHALL BE RE-COVERED DURING PERIODS OF INACTIVITY LONGER THAN ONE (1) HOUR. AT THE END OF EACH WORKING DAY, ALL STOCKPILES SHALL BE COMPLETELY COVERED AND SECURELY ANCHORED TO PREVENT ANY EXPOSURE OF SOIL TO THE ATMOSPHERE.

21. ONCE COVERED WITH PLASTIC SHEETING STOCKPILES SHALL REMAIN UNDISTURBED UNTIL REMOVED FROM SITE.

22. DAILY INSPECTIONS SHALL BE CONDUCTED OF ALL COVERED VOC-CONTAMINATED STOCKPILES TO ENSURE THE INTEGRITY OF THE PLASTIC COVER. SUCH INSPECTIONS SHALL INCLUDE A VISUAL INSPECTION OF ALL SEAMS AND PLASTIC COVER SURFACES. ANY HOLES, TEARS OR ANY OTHER POTENTIAL SOURCES OF FUGITIVE VOC EMISSIONS SHALL BE REPAIRED IMMEDIATELY. DAILY RECORDS SHALL BE MAINTAINED TO ENSURE COMPLIANCE WITH THIS CONDITION.

23. VOC CONTAMINATED SOIL SHALL NOT BE SPREAD ON-SITE OR OFF-SITE. THIS INCLUDES ANY UNNECESSARY MOVEMENT OR AGITATION OF SOIL THAT MAY CAUSE THE UNCONTROLLED EVAPORATION OF VOC'S INTO THE ATMOSPHERE, INCLUDING THE RESHAPING OR RELOCATION OF STOCKPILES.

SECTION V – SOIL REMOVAL AND DISPOSAL

24. ALL EXCAVATED VOC-CONTAMINATED SOIL SHALL BE REMOVED FROM THE SITE WITHIN THIRTY (30) DAYS OF ITS EXCAVATION.

25. ALL VOC-CONTAMINATED SOIL REMOVED FROM THE SITE SHALL COMPLY WITH THE FOLLOWING:

A) BE TRANSPORTED TO AN APPROVED TREATMENT/DISPOSAL FACILITY. IT SHALL BE THE RESPONSIBILITY OF THE PLAN HOLDER TO ENSURE THAT THE RECEIVING TREATMENT/DISPOSAL FACILITY HAS RECEIVED APPROVAL FROM THE APPROPRIATE ENVIRONMENTAL OVERSIGHT AGENCIES TO HANDLE AND TREAT VOC CONTAMINATED SOILS.

B) WHEN LOADING IS COMPLETED AND DURING TRANSPORTATION, NO EXCAVATED MATERIAL SHALL EXTEND ABOVE THE SIDES OR REAR OF THE TRUCK OR TRAILER.

C) PRIOR TO COVERING/TARPING, LOADED CONTAMINATED SOIL SHALL BE WETTED BY SPRAYING WITH MIST INHIBITORS.

D) THE TRUCK OR TRAILER SHALL BE COMPLETELY COVERED/TARPED PRIOR TO LEAVING THE SITE TO PREVENT PARTICULATE EMISSIONS TO THE ATMOSPHERE.

E) THE EXTERIOR OF THE TRUCKS (INCLUDING THE TIRES) SHALL BE CLEANED OFF PRIOR TO THE TRUCKS LEAVING THE EXCAVATION SITE.

SECTION VI - RECORDS AND REPORTING

26. A WRITTEN REPORT SHALL BE PROVIDED TO THE AQMD WITHIN 40 DAYS OF INITIAL DETECTION OF CONTAMINATED SOIL, WHICH INCLUDES THE FOLLOWING INFORMATION:

A) THE STATUS OF THE EXCAVATION PIT, AND ANY VOC CONTAMINATED SOIL REMAINING ON SITE.

C) A BRIEF SUMMARY INDICATING IF ADDITIONAL CLEAN UP EFFORTS ARE NECESSARY, THE ADDITIONAL QUANTITY OF VOC CONTAMINATED SOILS TO BE EXCAVATED AND THE PROJECTED SCHEDULE OF THE EXCAVATION.

27. RECORDS OF DISPOSAL SHALL BE MAINTAINED FOR ALL VOC-CONTAMINATED SOIL REMOVED FROM THIS SITE. SUCH RECORDS SHALL BE CLEARLY LABELED "SCAQMD RULE 1166-VOC CONTAMINATED SOIL" AND SHALL INCLUDE THE IDENTIFICATION AND THE LOCATION OF: 1) THE GENERATOR, 2) TRANSPORTER AND 3) RECEIVING FACILITY. IN ADDITION, SUCH RECORDS SHALL BE SIGNED AND DATED BY EACH OF THE ABOVE PARTIES INDICATING RECEIPT OR RELINQUISHMENT OF THE VOC-CONTAMINATED SOIL AT THE TIME CUSTODY IS TRANSFERRED.

28. RECORDS OF DISPOSAL OF VOC-CONTAMINATED SOIL SHALL BE MAINTAINED ON SITE DURING THE EXCAVATION AND LATER MAINTAINED FOR A PERIOD OF TWO (2) YEARS. THE RECORDS SHALL BE MADE AVAILABLE TO AQMD PERSONNEL UPON REQUEST.

29. WITHIN THIRTY (30) DAYS AFTER THE EXCAVATION AT THE SITE IS COMPLETED, THE WRITTEN RECORDS UNDER CONDITIONS NO. 14, 22 AND 27 SHALL BE SUBMITTED TO THE AQMD AT THE FOLLOWING ADDRESS:

SOUTH COAST AIR QUALITY MGMT DISTRICT
ENGINEERING & COMPLIANCE DIVISION
TOXICS & WASTE MANAGEMENT UNIT
(RULE 1166 COMPLIANCE)
21865 COPLEY DR.
DIAMOND BAR, CA. 91765-4182

SECTION VII – VERIFICATION AND SIGNATURE

NO THIS PLAN IS NOT VALID UNTIL ALL PARTIES HAVE REVIEWED AND SIGNED THE VERIFICATION STATEMENT BELOW

Grand Plaza LLC	Shopping Center	
6701 Sepulveda Blvd Van Nuys		91411
Grand Plaza LLC		

I CERTIFY THAT I HAVE REVIEWED AND UNDERSTAND THE CONDITIONS CONTAINED WITHIN THIS PLAN. IN SIGNING BELOW, I ACKNOWLEDGE THAT UNDER THE PROVISIONS OF RULE 66, I CAN BE HELD RESPONSIBLE FOR THE REQUIREMENTS SET FORTH IN THIS PLAN.

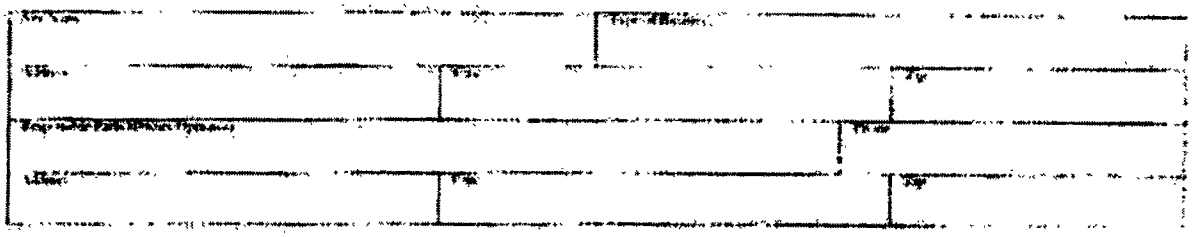
Partner Esi		11/10/09
Dependable Equipment	David Bailey	11/10/09
Partner Esi		11/10/09

DEFINITIONS

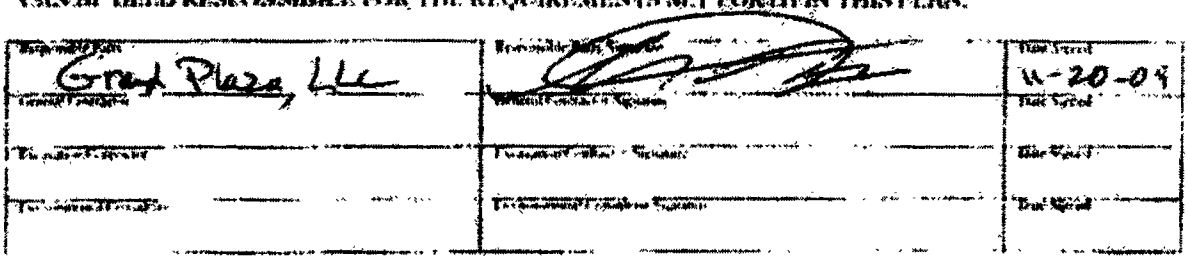
Excavation	Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil
Organic Vapor Analyzer (OVA)	For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS" MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV
Responsible Party	For the purposes of this plan, Responsible Party is the party financially responsible for initiating the excavation. This may include the property owner or the tank operator. This excludes contractors working for the property owner or operator, and any other party that lacks the direct authority to immediately treat all VOC contaminated soils generated at the excavation site
VOC Contaminated Soil	Is soil that registers a concentration of 50 PPM or greater of volatile organic compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane
Volatile Organic Compound (VOC)	Is any carbon compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds are as defined in Rule 102 Definitions of Terms.

SECTION VII – VERIFICATION AND SIGNATURE

30. THIS PLAN IS NOT VALID UNTIL ALL PARTIES HAVE REVIEWED AND SIGNED THE VERIFICATION STATEMENT BELOW.



I CERTIFY THAT I HAVE REVIEWED AND UNDERSTAND THE CONDITIONS CONTAINED WITHIN THIS PLAN. IN SIGNING BELOW, I ACKNOWLEDGE THAT UNDER THE PROVISIONS OF RULE 1166, I CAN BE HELD RESPONSIBLE FOR THE REQUIREMENTS SET FORTH IN THIS PLAN.



DEFINITIONS

Excavation	Is the process of digging out and removing materials including any material necessary to that process such as the digging out and removal of asphalt or concrete necessary to expose, dig out and remove known VOC contaminated soil.
Organic Vapor Analyzer (OVA)	For the purposes of this plan, an OVA is an hydrocarbon monitor utilizing flame ionization, photo ionization or other analytical methods complying with 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS. The monitor shall be capable of being calibrated using hexane at a range of 0 parts per million by volume (PPMV) to 50 PPMV, and at a detection range of at least 30 PPMV to 1100 PPMV
Responsible Party	For the purposes of this plan, Responsible Party is the party financially responsible for initiating the excavation. This may include the property owner or the tank operator. This excludes contractors working for the property owner or operator, and any other party that lacks the direct authority to immediately treat all VOC contaminated soils generated at the excavation site.
VOC Contaminated Soil	Is soil that registers a concentration of 50 PPM or greater of volatile organic compounds as measured before suppression materials have been applied and at a distance of no more than three inches from the surface of the excavated soil with an organic vapor analyzer calibrated with hexane.
Volatile Organic Compound (VOC)	Is any volatile compound of carbon, excluding methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonate, and exempt compounds. Exempt compounds are as defined in Rule 102 Definitions of Terms

Once issued, this plan is subject to further review by the AQMD and may be revoked if excavation activities are found in violation of plan conditions or AQMD's Rules and Regulations. Failure to comply with one or more of the conditions contained within this plan constitutes a violation of Rules 221 and 1166.

Other governmental agencies may require approval before any excavation begins. It shall be the responsibility of the applicant to obtain that approval. The South Coast Air Quality Management District shall not be responsible or liable for any losses because of measures required or taken pursuant to the requirements of this approved Rule 1166 Contaminated Soil Mitigation Plan.

Questions regarding this plan should be directed to Ranjit Vishwanath at (909) 396-2082.

PERMIT NO. SR-00 26900 DATE 11-10-2009

The soils report should follow the Los Angeles Fire Department's General Report submittal guidelines. To assist you the guidelines are available at http://www.lafd.org/prevention/pdfforms/report_guidelines . The following documentation should be included as part of your report.

A. Include a copy of the Los Angeles City Fire Department Division 5-Permit
B. Provide a Marine Chemist Certificate
C. Provide a copy of the Hazardous Waste Manifest for Disposal of Tank's Rinsate
D. Provide a Certificate of Tank Disposal/Destruction and associated piping
E. Provide soil manifest for soil removed from the site
F. Provide a scaled plot plan, clearly illustrating the location and depth of all the samples collected
G. All analytical results should be presented in milligram per kilogram (mg/kg)
H. The names in the chain of custody must be legible

Laboratory Reports

Alpha Scientific Corporation
Environmental Laboratories

11-10-2009

Mr. Brad Mullner
Partner Engineering & Science
1990 Grand Ave, Suite 100
El Segundo, CA 90245

Project: 63669.4
Project Site: 6734 N. Sepulveda Blvd., Van Nuys, CA 91411
Sample Date: 11-10-2009
Lab Job No.: PA911037

Dear Mr. Mullner:

Enclosed please find the analytical report for the sample(s) received by Alpha Scientific Corporation on 11-10-2009 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)
EPA 8260B (BTEX & Oxygenates by GC/MS)

The sample(s) arrived in good conditions and with a chain of custody record attached.

All analyses have met the QA/QC criteria of this laboratory.

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

Alpha Scientific Corporation is a CA DHS certified laboratory (Certificate Number 2633). Thank you for giving us the opportunity to serve you. Please feel free to call me at (562) 809-8880 if our laboratory can be of further service to you.

Sincerely,

Roger Wang, Ph. D.
Laboratory Director

Re: UST Removal at 6734 Sepulveda Boulevard, Van Nuys, CA 91411

Inspector Holtfreter:

Attached are the laboratory results for the two soil samples collected on November 10, 2009. Laboratory results indicate non-detectable concentrations of all analytes. We will be sending over the full UST Removal Report for your review within two weeks. Please let me know if you have any questions.

Sincerely,

Terri Men

Important Policy Notice - Soils Report Requirement

January 3, 2007

Dear Facility Owner/Responsible Party/Consultant:

You were issued a Division 5 Permit for future work regarding underground storage tanks (USTs) at your site. **This permit *may require* soil sampling and submission of a soils report.** Your field inspector will determine if soil samples and a soil report are required and will explain the requirements to you. **It is the policy of the Los Angeles Fire Department that all soil reports must be submitted within 30 calendar days of the date soil samples are taken.**

When a soil report is required, please mail the report to:

Los Angeles Fire Department
Underground Storage Tank- Enforcement Unit
200 North Main Street, Suite No. 1700
Los Angeles, CA 90012

If the soils report is not received within 30 days of the date soil samples are taken, you will be in violation of State regulations and Department policy. The City Attorney or District Attorney (for City agencies) will review violations for potential civil or criminal prosecution. State of California codes specify that liability may be enforced "for civil penalties of not less than $500 or more than $5,000 for each UST for each day of violation" [Health and Safety Code Sec. 25299(a), 3 & 6 and Section 25299(b), 4, & 5].

Please schedule a Fire Inspector to witness the soils sampling related to the permit for underground storage tank actions at your facility. If you have any questions regarding this matter, feel free to contact the Underground Storage Tanks/Enforcement Unit at (213) 978-3710. You can also access Internet information by logging onto: www.lafd.org/prevention/underground/tank_abandonment.html.

Thank you for your cooperation and timely submission of your required soils report.

Very truly yours,

Jimmy H. Hill
Fire Marshal

PROPOSED MULTI FAMILY RESIDENTIAL DEVELOPMENT
6728 N. SEPULVEDA BOULEVARD & 6715 N. COLUMBUS AVENUE
LOS ANGELES, CALIFORNIA
TRACT: TR 24408, LOT: 1

Dear Mr. Orenstein:

In accordance with your authorization of our proposal dated May 28, 2020, we have performed a geotechnical investigation for the proposed multi-family residential development located at 6728 N. Sepulveda Boulevard & 6715 N. Columbus Avenue in the Van Nuys area of the City of Los Angeles, California. The accompanying report presents the findings of our study, and our conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction. Based on the results of our investigation, it is our opinion that the project can be developed as proposed, provided the recommendations of this report are followed and implemented during design and construction.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOTECHNICAL INVESTIGATION

1. PURPOSE AND SCOPE

This report presents the results of a geotechnical investigation for the proposed multi-family residential development located at 6728 N. Sepulveda Boulevard & 6715 N. Columbus Avenue in the Van Nuys area of the City of Los Angeles, California (see Vicinity Map, Figure 1). The purpose of the investigation was to evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of design and construction.

The scope of this investigation included a site reconnaissance, field exploration, laboratory testing, engineering analysis, and the preparation of this report. The site was explored on July 23, 2020 by excavating three 8-inch diameter borings to depths between 40½ and 65½ feet below the existing ground surface using a truck-mounted hollow-stem auger drilling machine. The locations of the exploratory borings are depicted on the Site Plan (see Figure 2). A detailed discussion of the field investigation, including boring logs, is presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to determine pertinent physical and chemical soil properties. Appendix B presents a summary of the laboratory test results.

The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions. References reviewed to prepare this report are provided in the *List of References* section.

If project details vary significantly from those described herein, Geocon should be contacted to determine the necessity for review and possible revision of this report.

2. SITE AND PROJECT DESCRIPTION

The subject site is located at 6728 N. Sepulveda Boulevard and 6715 N. Columbus Avenue in the Van Nuys area of the City of Los Angeles, California. The site is currently occupied by an existing multi-family structure, a recreation area, and asphalt paved parking areas. The site is bounded by an alley way to the north, N. Sepulveda Boulevard to the west, N. Columbus Avenue to the east, and a single-story structure to the south. The site slopes very gently to the north. Surface water drainage at the site appears to be by sheet flow along the existing ground contours to the city streets. Vegetation on the property consists of grasses and tress scattered through the greenspace.

Based on the information provided by the Client, it is our understanding that the proposed project will consist of constructing a five-story multi-family residential structure over one level of podium parking (see Site Plan, Figure 2). The development will be constructed at or near present site grade.

Based on the preliminary nature of the design at this time, wall and column loads were not available. It is anticipated that column loads for the proposed structure will be up to 700 kips, and wall loads will be up to 8 kips per linear foot.

Once the design phase and foundation loading configuration proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Any changes in the design, location or elevation of any structure, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

3. GEOLOGIC SETTING

The site is located in the south-central portion of the San Fernando Valley, an alluvial-filled basin approximately 23 miles wide and 12 miles long (Hitchcock & Wills, 2000). The alluvium within the San Fernando Valley is derived from the Santa Monica Mountains to the south, the Santa Susana Mountains to the north, the Simi Hills to the west, the San Gabriel Mountains to the northeast, and the Verdugo Mountains to the east, and locally from the Los Angeles River.

4. SOIL AND GEOLOGIC CONDITIONS

Based on our field investigation and published geologic maps of the area, the site is underlain Quaternary age alluvial deposits consisting of fine-grained clay, silt and sand (Dibblee, 1991; California Geological Survey, 2012). Detailed stratigraphic profiles of the materials encountered at the site are provided on the boring logs in Appendix A.

4.1 Artificial Fill

Artificial fill was encountered in both subsurface explorations to maximum depth of 2 to $5^1/_2$ feet. The artificial consists of light brown to dark brown sandy silt which can be characterized as soft to firm and dry to slightly moist. The fill is likely the result of past grading or construction activities at the site. Deeper fill may exist between excavations and in other portions of the site that were not directly explored.

4.2 Alluvium

Quaternary age alluvium was encountered in our subsurface borings, drilled to a maximum depth of 65½ feet below the existing ground surface. The alluvium generally consists of interbedded light-yellowish brown to dark brown silty sand, silt, and clay of varying amounts which can be characterized as dry to moist and loose to medium dense or soft to stiff.

5. GROUNDWATER

Review of the Seismic Hazard Zone Report for the Van Nuys Quadrangle (California Division of Mines and Geology [CDMG], 1997) indicates the historically highest groundwater level in the area is approximately 40 feet beneath the ground surface. Groundwater information presented in this document is generated from data collected in the early 1900's to the late 1990s. Based on current groundwater basin management practices, it is unlikely that groundwater levels will ever exceed the historic high levels.

Groundwater was not encountered in our borings drilled to a maximum depth of 65½ feet below the existing ground surface. Considering the lack of groundwater in the subsurface borings at the site, and the depth of the proposed construction, it is unlikely that groundwater will be encountered during construction. However, it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity. Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the S*urface Drainage* section of this report (see Section 7.19).

6. GEOLOGIC HAZARDS

6.1 Surface Fault Rupture

The numerous faults in Southern California include active, potentially active, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS, formerly known as CDMG) for the Alquist-Priolo Earthquake Fault Zone Program (CGS, 2018). By definition, an active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A potentially active fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years), but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive.

The site is not within a state-designated Alquist-Priolo Earthquake Fault Zone (CGS, 2019a and 2019b; CGS, 2014) nor a city-designated Preliminary Fault Rupture Study Area (City of Los Angeles, 2019) for surface fault rupture hazards. No active or potentially active faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low. However, the site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The faults in the vicinity of the site are shown in Figure 3, Regional Fault Map.

The closest surface trace of an active fault to the site is the Northridge fault located approximately 3.0 miles to the north. Other nearby active faults are the Verdugo Fault, the Mission Hills segment of the San Fernando fault zone, and the Hollywood Fault located approximately 5.2 miles northeast, 5.8 miles north, and 7.9 miles south-southeast of the site, respectively (Ziony and Jones, 1989). The active San Andreas Fault Zone is located approximately 31 miles northeast of the site.

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin and San Fernando Valley at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987, M_w 5.9 Whittier Narrows earthquake and the January 17, 1994, M_w 6.7 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. These thrust faults and others in the Los Angeles area are not exposed at the surface and do not present a potential surface fault rupture hazard at the site; however, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site.

6.2 Seismicity

As with all of Southern California, the site has experienced historic earthquakes from various regional faults. The seismicity of the region surrounding the site was formulated based on research of an electronic database of earthquake data. The epicenters of recorded earthquakes with magnitudes equal to or greater than 5.0 in the site vicinity are depicted on Figure 4, Regional Seismicity Map. A partial list of moderate to major magnitude earthquakes that have occurred in the Southern California area within the last 100 years is included in the following table.

LIST OF HISTORIC EARTHQUAKES

Earthquake (Oldest to Youngest)	Date of Earthquake	Magnitude	Distance to Epicenter (Miles)	Direction to Epicenter
Near Redlands	July 23, 1923	6.3	70	E
Long Beach	March 10, 1933	6.4	49	SE
Tehachapi	July 21, 1952	7.5	64	NW
San Fernando	February 9, 1971	6.6	15	NNE
Whittier Narrows	October 1, 1987	5.9	23	ESE
Sierra Madre	June 28, 1991	5.8	26	E
Landers	June 28, 1992	7.3	115	E
Big Bear	June 28, 1992	6.4	93	E
Northridge	January 17, 1994	6.7	5	WNW
Hector Mine	October 16, 1999	7.1	128	ENE
Ridgecrest	July 5, 2019	7.1	119	NNE

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be mitigated if the proposed structures are designed and constructed in conformance with current building codes and engineering practices.

6.3 Seismic Design Criteria

The following table summarizes site-specific design criteria obtained from the 2019 California Building Code (CBC; Based on the 2018 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application *Seismic Design Maps*, provided by OSHPD. The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2019 CBC and Table 20.3-1 of ASCE 7-16. The values presented below are for the risk-targeted maximum considered earthquake (MCE_R).

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2019 CBC Reference
Site Class	D	Section 1613.2.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	2.055g	Figure 1613.2.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.733g	Figure 1613.2.1(2)
Site Coefficient, F_A	1.0	Table 1613.2.3(1)
Site Coefficient, F_V	1.7*	Table 1613.2.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	2.055g	Section 1613.2.3 (Eqn 16-36)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	1.246g*	Section 1613.2.3 (Eqn 16-37)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.37g	Section 1613.2.4 (Eqn 16-38)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.831*	Section 1613.2.4 (Eqn 16-39)

Note:

*Per Section 11.4.8 of ASCE/SEI 7-16, a ground motion hazard analysis shall be performed for projects for Site Class "E" sites with Ss greater than or equal to 1.0g and for Site Class "D" and "E" sites with S1 greater than 0.2g. Section 11.4.8 also provides exceptions which indicates that the ground motion hazard analysis may be waived provided the exceptions are followed. Using the code based values presented in the table above, in lieu of a performing a ground motion hazard analysis, requires the exceptions outlined in ASCE 7-16 Section 11.4.8 be followed.

The table below presents the mapped maximum considered geometric mean (MCE_G) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-10 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-10 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.855g	Figure 22-7
Site Coefficient, F_{PGA}	1.1	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	0.94g	Section 11.8.3 (Eqn 11.8-1)

The Maximum Considered Earthquake Ground Motion (MCE) is the level of ground motion that has a 2 percent chance of exceedance in 50 years, with a statistical return period of 2,475 years. According to the 2019 California Building Code and ASCE 7-16, the MCE is to be utilized for the evaluation of liquefaction, lateral spreading, seismic settlements, and it is our understanding that the intent of the Building code is to maintain "Life Safety" during a MCE event. The Design Earthquake Ground Motion (DE) is the level of ground motion that has a 10 percent chance of exceedance in 50 years, with a statistical return period of 475 years.

Deaggregation of the MCE peak ground acceleration was performed using the USGS online Unified Hazard Tool, 2014 Conterminous U.S. Dynamic edition (v4.2.0). The result of the deaggregation analysis indicates that the predominant earthquake contributing to the MCE peak ground acceleration is characterized as a 6.79 magnitude event occurring at a hypocentral distance of 11.06 kilometers from the site.

Deaggregation was also performed for the Design Earthquake (DE) peak ground acceleration, and the result of the analysis indicates that the predominant earthquake contributing to the DE peak ground acceleration is characterized as a 6.65 magnitude occurring at a hypocentral distance of 13.44 kilometers from the site.

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

6.4 Liquefaction Potential

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations.

The current standard of practice, as outlined in the "Recommended Procedures for Implementation of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California" and "Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California" requires liquefaction analysis to a depth of 50 feet below the lowest portion of the proposed structure. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction.

The Seismic Hazards Zone Map for the Van Nuys 7.5 Minute Quadrangle (CDMG, 1998) indicates that the site is located within an area considered liquefiable. In addition, the County of Los Angeles Safety Element (Leighton, 1990) indicates that the site is located in an area that is identified as having a potential for liquefaction. The historic high groundwater level in the area is reported to be less than 40 feet beneath the existing ground surface (CDMG, 1997).

Liquefaction analysis of the soils underlying the site was performed using an updated version of the spreadsheet template LIQ2_30.WQ1 developed by Thomas F. Blake (1996). This program utilizes the 1996 NCEER method of analysis. This semi-empirical method is based on a correlation between values of Standard Penetration Test (SPT) resistance and field performance data.

The liquefaction analysis was performed for a Design Earthquake level by using a historic high groundwater table of 40 feet below the ground surface, a magnitude 6.65 earthquake, and a peak horizontal acceleration of 0.684g ($⅔PGA_M$). The enclosed liquefaction analyses, included herein for borings B1 and B2, indicate that the alluvial soils below the historic high groundwater level would be susceptible up to 1.7 and 1.8 inches, respectively, of liquefaction settlement during Design Earthquake ground motion (see enclosed calculation sheets, Figures 5 through 8).

It is our understanding that the intent of the Building Code is to maintain "Life Safety" during Maximum Considered Earthquake level events. Therefore, additional analysis was performed to evaluate the potential for liquefaction during a MCE event. The structural engineer should evaluate the proposed structure for the anticipated MCE liquefaction induced settlements and verify that anticipated deformations would not cause the foundation system to lose the ability to support the gravity loads and/or cause collapse of the structure.

The liquefaction analysis was also performed for the Maximum Considered Earthquake level by using a historic high groundwater table of 40 feet below the ground surface, a magnitude 6.79 earthquake, and a peak horizontal acceleration of 0.94g (PGA_M). The enclosed liquefaction analyses, included herein for borings B1 and B2, indicate that the alluvial soils below the historic high groundwater level would be susceptible up to 1.8 inches of liquefaction settlement during Maximum Considered Earthquake ground motion (see enclosed calculation sheets, Figures 9 through 12).

6.5 Seismically Induced Settlement

Dynamic compaction of dry and loose sands may occur during a major earthquake. Typically, settlements occur in thick beds of such soils. The seismically-induced settlement calculations were performed in accordance with the American Society of Civil Engineers, Technical Engineering and Design Guides as adapted from the US Army Corps of Engineers, No. 9.

The calculations provided herein for borings B1 and B2 indicate that the soil above the historic high groundwater level of 40 feet could be susceptible to less than 0.35 and 0.31 inches of settlement as a result of the Design Earthquake peak ground acceleration ($⅔PGA_M$), respectively.

The calculations provided herein for borings B1 and B2 indicate that the soil above the historic high groundwater level of 38 feet could be susceptible to less than 0.72 and 0.81 inches of settlement as a result of the Maximum Considered Earthquake peak ground acceleration (PGA_M), respectively.

Calculation of the anticipated seismically induced settlements is provided as Figures 13 through 16.

6.6 Slope Stability

The topography at the site is flat. The site is not located within a City of Los Angeles Hillside Grading Area or a Hillside Ordinance Area (City of Los Angeles, 2019). Additionally, the site is not located within an area identified as having a potential for seismic slope instability (CDMG, 1998). There are no known landslides near the site, nor is the site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low.

6.7 Earthquake-Induced Flooding

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. Based on a review of the Los Angeles County Safety Element (Leighton, 1990), the site is located within a potential inundation area for an earthquake-induced dam failure from Los Angeles Reservoir, Lopez Dam, and Pacoima Reservoir. However, these reservoirs, as well as others in California, are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Current design and construction practices and ongoing programs of review, modification, or total reconstruction of existing dams are intended to ensure that all dams are capable of withstanding the maximum considered earthquake (MCE) for the dam site. Therefore, the potential for inundation at the site as a result of an earthquake-induced dam failure is considered low.

6.8 Tsunamis, Seiches, and Flooding

The site is not located within a coastal area. Therefore, tsunamis are not considered a significant hazard at the site.

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Therefore, flooding resulting from a seismically-induced seiche is considered unlikely.

The site is within an area of minimal flooding (Zone X) as defined by the Federal Emergency Management Agency (FEMA, 2019; LACDPW, 2019b).

6.9 Oil Fields & Methane Potential

Based on a review of the California Division of Oil, Gas and Geothermal Resources (DOGGR) Well Finder Website, the site is not located within the limits of an oilfield and there are no active or inactive oil or gas wells within a 1-mile radius of the site (DOGGR, 2019). However, due to the voluntary nature of record reporting by the oil well drilling companies, wells may be improperly located or not shown on the location map and undocumented wells could be encountered during construction. Any wells encountered will need to be properly abandoned in accordance with the current requirements of the DOGGR.

The site is not located within the boundaries of a city-designated Methane Zone or Methane Buffer Zone (City of Los Angeles, 2019). Since the site is not located within the boundaries of a known oil field, the potential for the presence of methane or other volatile gases to occur at the site is considered low. However, should it be determined that a methane study is required for the proposed development it is recommended that a qualified methane consultant be retained to perform the study and provide mitigation measures as necessary.

6.10 Subsidence

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. The site is not located within an area of known ground subsidence. No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the site or in the general site vicinity. There appears to be little or no potential for ground subsidence due to withdrawal of fluids or gases at the site.

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 General

7.1.1 It is our opinion that neither soil nor geologic conditions were encountered during the investigation that would preclude the construction of the proposed development provided the recommendations presented herein are followed and implemented during design and construction.

7.1.2 Up to 5½ feet of existing artificial fill was encountered during site exploration. The existing fill encountered is believed to be the result of past grading, construction, and demolition activities at the site. Deeper fill may exist in other areas of the site that were not directly explored. It is our opinion that the existing fill, in its present condition, is not suitable for direct support of proposed foundations or slabs. The existing fill and site soils are suitable for re-use as engineered fill provided the recommendation in the *Grading* section of this report are followed (see Section 7.4).

7.1.2 The enclosed seismically induced settlement analyses indicate that the site soils could be susceptible to approximately 2.1 inches of total settlement as a result of the Design Earthquake peak ground acceleration ($^{2}/_{3}PGA_{M}$). The differential settlement at the foundation level is anticipated to be less than 1.1 inches over a distance of 30 feet.

7.1.3 The results of the laboratory testing indicate that some of the upper alluvial soils, primarily above a depth of approximately 22 feet, are subject to hydro-consolidation upon saturation (see Figures B6 through B14). Hydro-consolidation is the tendency of a soil structure to collapse upon saturation, resulting in the overall settlement of the effected soils and any overlying soils or foundations supported therein.

7.1.4 Based on the potential for hydro-consolidation maintaining proper surface drainage is critical to future performance of foundations. Recommendations for drainage are provided in the S*urface Drainage* section of this report (see Section 7.18).

7.1.5 The foundation system for the proposed structure must be able to provide sufficient support for the structure and minimize the effects of differential settlement resulting from a liquefaction event. Based on these considerations, it is recommended that the proposed structures be supported on a reinforced concrete mat foundation deriving support on a blanket of newly placed engineered fill.

7.1.6 It is recommended that the upper 6 feet of existing earth materials within the building footprint areas be excavated and properly compacted for foundation and slab support. Deeper excavations should be conducted as needed to remove any encountered fill or soft soils as necessary at the direction of the Geotechnical Engineer (a representative of Geocon). Proposed building foundations should be underlain by a minimum of 4 feet of newly placed engineered fill. The excavation should extend laterally a minimum distance of 3 feet beyond the building footprint areas, including building appurtenances, or a distance equal to the depth of fill below the foundation, whichever is greater. The limits of existing fill and/or soft soil removal will be verified by the Geocon representative during site grading activities. Recommendations for earthwork are provided in the *Grading* section of this report (see Section 7.4).

7.1.7 It should be noted that implementation of the recommendations presented herein is not intended to completely prevent damage to the structure during the occurrence of strong ground shaking as a result of nearby earthquakes. It is intended that the structure be designed in such a way that the amount of damage incurred as a result of strong ground shaking be minimized.

7.1.8 It is recommended that flexible utility connections be utilized for all rigid utilities to minimize or prevent damage to utilities from minor differential movements.

7.1.9 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon). Prior to placing any fill, the upper 12 inches of the excavation bottom must be scarified, moistened, and proof-rolled with heavy equipment in the presence of the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.1.10 It is anticipated that stable excavations for the recommended grading associated with the proposed structure can be achieved with sloping measures. However, if excavations in close proximity to an adjacent property line and/or structure are required, special excavation measures may be necessary in order to maintain lateral support of offsite improvements. Excavation recommendations are provided in the *Temporary Excavations* section of this report (Section 7.17).

7.1.11 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed or is undesirable, foundations may derive support directly in the competent undisturbed alluvial soils at or below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.1.12 Where new paving is to be placed, it is recommended that all existing fill and soft alluvial soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing fill and soft alluvial soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable alluvial soil may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of subgrade soil should be scarified and properly compacted for paving support. Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.12).

7.1.13 Based on the potential for liquefaction of the site soils and the potential for hydro-consolidation in the upper alluvial soils, stormwater infiltration is not recommended for this project. It is suggested that stormwater be retained, filtered and discharged in accordance with the requirements of the local governing agency.

7.1.14 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Based on the final foundation loading configurations, the potential for settlement should be reevaluated by this office.

7.1.15 Any changes in the design, location or elevation, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

7.2 Soil and Excavation Characteristics

7.2.1 The in-situ soils can be excavated with moderate effort using conventional excavation equipment. Some caving should be anticipated in unshored excavations, especially where granular soils are present.

7.2.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly sloped, shored and maintained in accordance with applicable OSHA rules and regulations to maintain safety and maintain the stability of adjacent existing improvements.

7.2.3 All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load. Penetrations below this 1:1 projection will require special excavation measures such as sloping and shoring. Excavation recommendations are provided in the *Temporary Excavations* section of this report (see Section 7.17).

7.2.4 The upper 5 feet of existing site soils encountered during this investigation are considered to have a "low" expansive potential (EI = 30 & 33); and are classified as "expansive" based on the 2019 California Building Code (CBC) Section 1803.5.3. The recommendations presented herein assume that proposed foundations and slabs will derive support in these materials.

7.3 Minimum Resistivity, pH and Water-Soluble Sulfate

7.3.1 Potential of Hydrogen (pH) and resistivity testing, as well as chloride content testing, were performed on representative samples of on-site soil to generally evaluate the corrosion potential to surface utilities. The tests were performed in accordance with California Test Method Nos. 643 and 422 and indicate that the soils are considered "corrosive" with respect to corrosion of buried ferrous metals on site. The results are presented in Appendix B (Figure B25) and should be considered for design of underground structures. Due to the corrosive potential of the soils, it is recommended that corrosion-resistant ABS pipes (or equivalent) be utilized in lieu of cast-iron for subdrains and retaining wall drains beneath the structure.

7.3.2 Laboratory tests were performed on representative samples of the site materials to measure the percentage of water-soluble sulfate content. Results from the laboratory water-soluble sulfate tests are presented in Appendix B (Figure B25) and indicate that the on-site materials possess a sulfate exposure class of "S0" to concrete structures as defined by 2019 CBC Section 1904 and ACI 318-14 Table 19.3.1.1.

7.3.3 Geocon West, Inc. does not practice in the field of corrosion engineering and mitigation. If corrosion sensitive improvements are planned, it is recommended that a corrosion engineer be retained to evaluate corrosion test results and incorporate the necessary precautions to prevent premature corrosion of buried metal pipes and concrete structures in direct contact with the soils.

7.4 Grading

7.4.1 Earthwork should be observed, and compacted fill tested by representatives of Geocon West, Inc. The existing fill and alluvial soil encountered during exploration is suitable for reuse as engineered fill, provided any encountered oversize material (greater than 6 inches) and any encountered deleterious debris are removed.

7.4.2 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer, geotechnical engineer, and building official in attendance. Special soil handling requirements can be discussed at that time.

7.4.3 Grading should commence with the removal of all existing vegetation and existing improvements from the area to be graded. Deleterious debris such as wood and root structures should be exported from the site and should not be mixed with the fill soils. Asphalt and concrete should not be mixed with the fill soils unless approved by the Geotechnical Engineer. All existing underground improvements planned for removal should be completely excavated and the resulting depressions properly backfilled in accordance with the procedures described herein. Once a clean excavation bottom has been established it must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.) and the City of Los Angeles Inspector.

7.4.4 As a minimum, it is recommended that the upper 6 feet of existing earth materials within the proposed building footprint area be excavated and properly compacted for foundation and slab support. Deeper excavations should be conducted as necessary to remove deeper artificial fill or soft alluvial soil at the direction of the Geotechnical Engineer (a representative of Geocon). All foundations must be underlain by a minimum of 4 feet of newly placed engineered fill. The excavation should extend laterally a minimum distance of 3 feet beyond the building footprint area, including building appurtenances, or a distance equal to the depth of fill below the foundation, whichever is greater. The limits of existing fill and/or soft alluvial soils removal will be verified by the Geocon representative during site grading activities.

7.4.5 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon). Prior to placing any fill, the upper 12 inches of the excavation bottom must be scarified, moistened, and proof-rolled with heavy equipment in the presence of the Geotechnical Engineer (a representative of Geocon West, Inc.). If determined to be excessively soft, stabilization of the bottom of the excavation may be required in order to provide a firm working surface upon which engineered fill can be placed and heavy equipment can operate.

7.4.6 If subgrade stabilization is required at the excavation bottom, tire equipment should not be allowed in the excavation bottom until it is stabilized or extensive soil disturbance could result. It is suggested that excavation and grading be performed during the summer season to promote moisture control of the soils. In addition, the use of track equipment should be considered to minimize disturbance to the soils if they become wet at the excavation bottom. Bottom stabilization, if necessary, may be achieved placing a thin lift of 3- to 6-inch-diameter crushed angular rock into the soft excavation bottom. The use of crushed concrete will also be acceptable. The crushed rock should be spread thinly across the excavation bottom and pressed into the soils by track rolling or wheel rolling with heavy equipment. It is very important that voids between the rock fragments are not created so the rock must be thoroughly pressed or blended into the soils. All subgrade soils must be properly compacted and proof-rolled in the presence of the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.4.7 The City of Los Angeles Department of Building and Safety requires a minimum compactive effort of 95 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition) where the soils to be utilized in the fill have less than 15 percent finer than 0.005 millimeters. Soils with more than 15 percent finer than 0.005 millimeters may be compacted to 90 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition). Based on the soils encountered during this investigation, it is anticipated that 95 percent relative compaction will be required. All fill and backfill soils should be placed in horizontal loose layers approximately 6 to 8 inches thick, moisture conditioned to optimum moisture content, and properly compacted to the required degree of compaction in accordance with ASTM D 1557 (latest edition).

7.4.8. Where new paving is to be placed, it is recommended that all existing fill and soft alluvium be excavated and properly compacted for paving support. As a minimum, the upper 12 inches of soil should be scarified, moisture conditioned to optimum moisture content, and compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.12).

7.4.9 It is anticipated that stable excavations for the recommended grading can be achieved with sloping measures. However, if excavations in close proximity to an adjacent property line and/or structure are required, special excavation measures may be necessary in order to maintain lateral support of the existing offsite improvements. Excavation recommendations are provided in the *Temporary Excavations* section of this report (Section 7.17).

7.4.10 Foundations for small outlying structures, such as block walls up to 6 feet high, planter walls or trash enclosures, which will not be tied to the proposed building, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and proper compaction cannot be performed or is undesirable, foundations may derive support directly in the undisturbed alluvial soils at or below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.4.11 Utility trenches should be properly backfilled in accordance with the requirements of the Green Book (latest edition). The pipe should be bedded with clean sands (Sand Equivalent greater than 30) to a depth of at least 1 foot over the pipe, and the bedding material must be inspected and approved in writing by the Geotechnical Engineer (a representative of Geocon). The use of gravel is not acceptable unless used in conjunction with filter fabric to prevent the gravel from having direct contact with soil. The remainder of the trench backfill may be derived from onsite soil or approved import soil, compacted as necessary, until the required compaction is obtained. The use of minimum 2-sack slurry as backfill is also acceptable (see Section 7.5). Prior to placing any bedding materials or pipes, the excavation bottom must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon).

7.4.12 All imported fill shall be observed, tested, and approved by Geocon West, Inc. prior to bringing soil to the site. Rocks larger than 6 inches in diameter shall not be used in the fill. If necessary, import soils used as structural fill should have an expansion index less than 30 and corrosivity properties that are equally or less detrimental to that of the existing onsite soils (see Figure B25). Import soils placed in the building area should be placed uniformly across the building pad or in a manner that is approved by the Geotechnical Engineer (a representative of Geocon).

7.4.13 All trench and foundation excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing bedding materials, fill, steel, gravel, or concrete.

7.5 Controlled Low Strength Material (CLSM)

7.5.1 Controlled Low Strength Material (CLSM) may be utilized in lieu of compacted soil as engineered fill where approved in writing by the Geotechnical Engineer. Where utilized within the City of Los Angeles use of CLSM is subject to the following requirements:

Standard Requirements

1. CLSM shall be ready-mixed by a City of Los Angeles approved batch plant;
2. CLSM shall not be placed on uncertified fill, on incompetent natural soil, nor below water;
3. CLSM shall not be placed on a sloping surface with a gradient steeper than 5:1 (horizontal to vertical);
4. Placement of the CLSM shall be under the continuous inspection of a concrete deputy inspector;
5. The excavation bottom shall be accepted by the soil engineer and the City Inspector prior to placing CLSM.

Requirements for CLSM that will be used for support of footings

1. The cement content of the CLSM shall not be less than 188 pounds per cubic yard (min. 2 sacks);
2. The excavation bottom must be level, cleaned of loose soils and approved in writing by Geocon prior to placement of the CLSM;
3. The ultimate compressive strength of the CLSM shall be no less than 100 pounds per square inch (psi) when tested on the 28th-day per ASTM D4832 (latest edition), Standard Test Method for Preparation and Testing of Controlled Low Strength Material Test Cylinders. Compression testing will be performed in accordance with ASTM C39 and City of Los Angeles requirements;
4. Samples of the CLSM will be collected during placement, a minimum of one test (two cylinders) for each 50 cubic yards or fraction thereof;
5. Overexcavation for CLSM placement shall extend laterally beyond the footprint of any proposed footings as required for placement of compacted fill, unless justified otherwise by the soil engineer that footings will have adequate vertical and horizontal bearing capacity.

7.6 Shrinkage

7.6.1 Shrinkage results when a volume of material removed at one density is compacted to a higher density. A shrinkage factor between 15 and 22 percent should be anticipated when excavating and compacting the upper 5 feet of existing earth materials on the site to an average relative compaction of 95 percent.

7.4.2 If import soils will be utilized in the building pad, the soils must be placed uniformly and at equal thickness at the direction of the Geotechnical Engineer (a representative of Geocon West, Inc.). Soils can be borrowed from non-building pad areas and later replaced with imported soils.

7.7 Mat Foundation Design

7.7.1 Subsequent to the recommended grading, it is recommended that a reinforced concrete mat foundation be utilized for support of the proposed structure. The reinforced concrete mat foundation should derive support in the newly placed engineered fill and be underlain by at least 4 feet of newly placed engineered fill.

7.7.2 The recommended maximum allowable bearing value for the design of a reinforced concrete mat foundation is 3,000 pounds per square foot (psf). The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.7.3 It is recommended that a modulus of subgrade reaction of 150 pounds per cubic inch (pci) be utilized for the design of the mat foundation bearing in newly placed engineered fill. This value is a unit value for use with a one-foot square footing. The modulus should be reduced in accordance with the following equation when used with larger foundations:

$$K_R = K\left[\frac{B+1}{2B}\right]^2$$

where: K_R = reduced subgrade modulus
K = unit subgrade modulus
B = foundation width (in feet)

7.7.4 The thickness of and reinforcement for the mat foundation should be designed by the project structural engineer.

7.7.5 For seismic design purposes, a coefficient of friction of 0.35 may be utilized between concrete slab and subgrade soils without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

7.7.6 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.7.7 This office should be provided a copy of the final construction plans so that the recommendations presented herein could be properly reviewed and revised if necessary.

7.8 Foundation Settlement

7.8.1 The enclosed seismically-induced settlement analyses indicate that the site soils could be susceptible to approximately 2.1 inches of total settlement as a result of the Design Earthquake peak ground acceleration (⅔PGA_M). The differential settlement at the foundation level is anticipated to be less than 1.1 inches over a distance of 30 feet. These settlements are in addition to the static settlements indicated below and must be considered in the structural design.

7.8.2 The maximum expected static settlement for a structure supported on a reinforced concrete mat foundation with a maximum allowable bearing pressure of 3,000 psf and deriving support in the recommended bearing material is estimated to be less than 1¼ inches and occur below the heaviest loaded structural element. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is expected to be less than ⅔ inch between the center and corner of the mat foundation. Based on seismic considerations, the proposed structure should be designed for a combined static and seismically-induced differential settlement of 1¾ inches over a distance of 30 feet.

7.8.3 Once the design and foundation loading configurations for the proposed structures proceeds to a more finalized plan, the estimated settlements presented in this report should be reviewed and revised, if necessary. If the final foundation loading configurations are greater than the assumed loading conditions, the potential for settlement should be reevaluated by this office.

7.9 Miscellaneous Foundations

7.9.1 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures which will not be tied to the proposed structure may be supported on conventional foundations bearing on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed or is undesirable, such as adjacent to property lines, foundations may derive support in the undisturbed alluvial soils at or below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials.

7.9.2 If the soils exposed in the excavation bottom are soft, compaction of the soft soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative. Miscellaneous foundations may be designed for a bearing value of 1,500 psf, and should be a minimum of 12 inches in width, 24 inches in depth below the lowest adjacent grade and 12 inches into the recommended bearing material. The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.9.3 Foundations supported in the undisturbed alluvial soils are subject potential settlement due to excessive hydro-consolidation of the soils upon saturation. It is critical that proper drainage be maintained at all times to prevent saturation of the soils.

7.9.4 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated.

7.10 Lateral Design

7.10.1 Resistance to lateral loading may be provided by friction acting at the base of foundations, slabs and by passive earth pressure. An allowable coefficient of friction of 0.35 may be used with the dead load forces in the competent alluvial soils or in properly compacted engineered fill.

7.10.2 Passive earth pressure for the sides of foundations and slabs poured against properly compacted engineered fill or competent alluvial soils may be computed as an equivalent fluid having a density of 240 pcf with a maximum earth pressure of 2,400 psf. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third.

7.11 Exterior Concrete Slabs-on-Grade

7.11.1 Concrete slabs-on-grade subject to vehicle loading should be designed in accordance with the recommendations in the *Preliminary Pavement Recommendations* section of this report (Section 7.12).

7.11.2 Slabs-on-grade at the ground surface that may receive moisture-sensitive floor coverings or may be used to store moisture-sensitive materials should be underlain by a vapor retarder placed directly beneath the slab. The vapor retarder and acceptable permeance should be specified by the project architect or developer based on the type of floor covering that will be installed. The vapor retarder design should be consistent with the guidelines presented in Section 9.3 of the American Concrete Institute's (ACI) Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials (ACI 302.2R-06) and should be installed in general conformance with ASTM E 1643 (latest edition) and the manufacturer's recommendations. A minimum thickness of 15 mils extruded polyolefin plastic is recommended; vapor retarders which contain recycled content or woven materials are not recommended. The vapor retarder should have a permeance of less than 0.01 perms demonstrated by testing before and after mandatory conditioning. The vapor retarder should be installed in direct contact with the concrete slab with proper perimeter seal. If the California Green Building Code requirements apply to this project, the vapor retarder should be underlain by 4 inches of clean aggregate. It is important that the vapor retarder be puncture resistant since it will be in direct contact with angular gravel. As an alternative to the clean aggregate suggested in the Green Building Code, it is our opinion that the concrete slab-on-grade may be underlain by a vapor retarder over 4 inches of clean sand (sand equivalent greater than 30), since the sand will serve a capillary break and will minimize the potential for punctures and damage to the vapor barrier.

7.11.3 Exterior slabs, not subject to traffic loads, should be at least 4 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions, positioned near the slab midpoint. Prior to construction of slabs, the upper 12 inches of subgrade should be moistened to optimum moisture content and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Crack control joints should be spaced at intervals not greater than 10 feet and should be constructed using saw-cuts or other methods as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. The project structural engineer should design construction joints as necessary.

7.11.4 The moisture content of the slab subgrade should be maintained and sprinkled as necessary to maintain a moist condition as would be expected in any concrete placement.

7.11.5 The recommendations of this report are intended to reduce the potential for cracking of slabs due to settlement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

7.12 Preliminary Pavement Recommendations

7.12.1 Where new paving is to be placed, it is recommended that all existing fill and soft or unsuitable alluvial materials be excavated and properly recompacted for paving support. The client should be aware that excavation and compaction of all existing artificial fill and soft alluvium in the area of new paving is not required; however, paving constructed over existing unsuitable material may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper twelve inches of paving subgrade should be scarified, moisture conditioned to optimum moisture content, and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.12.2 The following pavement sections are based on an assumed R-Value of 20. Once site grading activities are complete an R-Value should be obtained by laboratory testing to confirm the properties of the soils serving as paving subgrade, prior to placing pavement.

7.12.3 The Traffic Indices listed below are estimates. Geocon does not practice in the field of traffic engineering. The actual Traffic Index for each area should be determined by the project civil engineer. If pavement sections for Traffic Indices other than those listed below are required, Geocon should be contacted to provide additional recommendations. Pavement thicknesses were determined following procedures outlined in the *California Highway Design Manual* (Caltrans). It is anticipated that the majority of traffic will consist of automobile and large truck traffic.

PRELIMINARY PAVEMENT DESIGN SECTIONS

Location	Estimated Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
Automobile Parking And Driveways	4.0	3.0	4.0
Trash Truck & Fire Lanes	7.0	4.0	12.0

7.12.4 Asphalt concrete should conform to Section 203-6 of the "*Standard Specifications for Public Works Construction"* (Green Book). Class 2 aggregate base materials should conform to Section 26-1.02A of the "*Standard Specifications of the State of California, Department of Transportation"* (Caltrans). The use of Crushed Miscellaneous Base in lieu of Class 2 aggregate base is acceptable. Crushed Miscellaneous Base should conform to Section 200-2.4 of the "*Standard Specifications for Public Works Construction"* (Green Book).

7.12.5 Unless specifically designed and evaluated by the project structural engineer, where exterior concrete paving will be utilized for support of vehicles, it is recommended that the concrete be a minimum of 5 inches of concrete reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 95 percent relative compactions determined by ASTM Test Method D 1557 (latest edition).

7.12.6 The performance of pavements is highly dependent upon providing positive surface drainage away from the edge of pavements. Ponding of water on or adjacent to the pavement will likely result in saturation of the subgrade materials and subsequent cracking, subsidence and pavement distress. If planters are planned adjacent to paving, it is recommended that the perimeter curb be extended at least 12 inches below the bottom of the aggregate base to minimize the introduction of water beneath the paving.

7.13 Retaining Wall Design

7.13.1 The recommendations presented below are generally applicable to the design of rigid concrete or masonry retaining walls having a maximum height of 5 feet. In the event that walls significantly higher than 5 feet are planned, Geocon should be contacted for additional recommendations.

7.13.2 Retaining wall foundations may be designed in accordance with the recommendations provided in the *Mat Foundation Design* section of this report (see Section 7.7).

7.13.3 Retaining walls with a level backfill surface that are not restrained at the top should be designed utilizing a triangular distribution of pressure (active pressure) of 30 pcf.

7.13.4 Restrained walls are those that are not allowed to rotate more than 0.001H (where H equals the height of the retaining portion of the wall in feet) at the top of the wall. Where walls are restrained from movement at the top, walls may be designed utilizing a triangular distribution of pressure (at-rest pressure) of 64 pcf.

7.13.5 The wall pressures provided above assume that the proposed retaining walls will support relatively undisturbed alluvial soils or engineered fill derived from onsite soils. If import soil will be used to backfill proposed retaining walls, revised earth pressures may be required to account for the geotechnical properties of the import soil used as engineered fill. This should be evaluated once the use of import soil is established. All imported fill shall be observed, tested, and approved by Geocon West, Inc. prior to bringing soil to the site.

7.13.6 The wall pressures provided above assume that the retaining wall will be properly drained preventing the buildup of hydrostatic pressure. If retaining wall drainage is not implemented, the equivalent fluid pressure to be used in design of undrained walls is 90 pcf. The value includes hydrostatic pressures plus buoyant lateral earth pressures.

7.13.7 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses. Once the design becomes more finalized, an addendum letter can be prepared revising recommendations and addressing specific surcharge conditions throughout the project, if necessary.

7.14 Retaining Wall Drainage

7.14.1 Retaining walls should be provided with a drainage system extended at least two-thirds the height of the wall. At the base of the drain system, a subdrain covered with a minimum of 12 inches of gravel should be installed, and a compacted fill blanket or other seal placed at the surface (see Figure 17). The clean bottom and subdrain pipe, behind a retaining wall, should be observed by the Geotechnical Engineer (a representative of Geocon), prior to placement of gravel or compacting backfill.

7.14.2 As an alternative, a plastic drainage composite such as Miradrain or equivalent may be installed in continuous, 4-foot wide columns along the entire back face of the wall, at 8 feet on center. The top of these drainage composite columns should terminate approximately 18 inches below the ground surface, where either hardscape or a minimum of 18 inches of relatively cohesive material should be placed as a cap (see Figure 18). These vertical columns of drainage material would then be connected at the bottom of the wall to a collection panel or a 1-cubic-foot rock pocket drained by a 4-inch subdrain pipe.

7.14.3 Subdrainage pipes at the base of the retaining wall drainage system should outlet to an acceptable location via controlled drainage structures. Drainage should not be allowed to flow uncontrolled over descending slopes.

7.14.4 Moisture affecting below grade walls is one of the most common post-construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.15 Elevator Pit Design

7.15.1 The elevator pit slab and retaining wall should be designed by the project structural engineer. Elevator pit walls may be designed in accordance with the recommendations in the *Foundation Design* and *Retaining Wall Design* sections of this report (see Sections 7.7 and 7.13).

7.15.2 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent foundations and should be designed for each condition as the project progresses.

7.15.3 If retaining wall drainage is to be provided, the drainage system should be designed in accordance with the *Retaining Wall Drainage* section of this report (see Section 7.14).

7.15.4 Subdrainage pipes at the base of the retaining wall drainage system should outlet to a location acceptable to the building official.

7.15.5 It is suggested that the exterior walls and slab be waterproofed to prevent excessive moisture inside of the elevator pit. Waterproofing design and installation is not the responsibility of the geotechnical engineer.

7.16 Elevator Piston

7.16.1 If a plunger-type elevator piston is installed for this project, a deep drilled excavation will be required. It is important to verify that the drilled excavation is not situated immediately adjacent to a foundation, or the drilled excavation could compromise the existing foundation support, especially if the drilling is performed subsequent to the foundation construction.

7.16.2 Caving may occur especially where granular soils are encountered. The contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. Continuous observation of the drilling and installation of the elevator piston by the Geotechnical Engineer (a representative of Geocon West, Inc.) is required.

7.16.3 The annular space between the piston casing and drilled excavation wall should be filled with a minimum of 1½-sack slurry pumped from the bottom up. As an alternative, pea gravel may be utilized. The use of soil to backfill the annular space is not acceptable.

7.17 Temporary Excavations

7.17.1 Excavations on the order of 6 feet in height will be required during grading operations. The excavations are expected to expose artificial fill and alluvial soils, which are suitable for vertical excavations up to 5 feet in height where loose soils or caving sands are not present, and where not surcharged by adjacent traffic or structures.

7.17.2 Vertical excavations greater than 5 feet or where surcharged by existing structures will require sloping or shoring measures in order to provide a stable excavation. Where sufficient space is available, temporary unsurcharged embankments could be sloped back at a uniform 1:1 slope gradient or flatter up to maximum height of 10 feet. A uniform slope does not have a vertical portion.

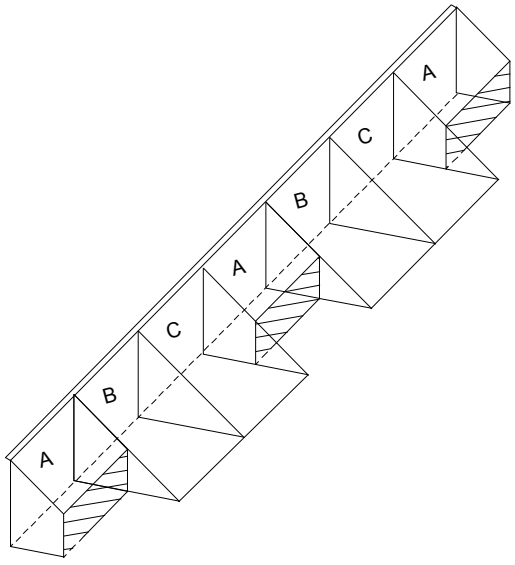
7.17.3 If excavations in close proximity to an adjacent property line and/or structure are required, special excavation measures such as slot-cutting or shoring may be necessary in order to maintain lateral support of offsite improvements. Recommendations for slot cutting are provided in Section 7.18 of this report.

7.17.4 Where sloped embankments are utilized, the top of the slope should be barricaded to prevent vehicles and storage loads at the top of the slope within a horizontal distance equal to the height of the slope. If the temporary construction embankments are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. Geocon personnel should inspect the soils exposed in the cut slopes during excavation so that modifications of the slopes can be made if variations in the soil conditions occur. All excavations should be stabilized within 30 days of initial excavation.

7.18 Slot Cutting

7.18.1 The slot-cutting method employs the earth as a buttress and allows the earth excavation to proceed in phases. Where slot-cutting is used for foundation construction, the proposed construction techniques should be discussed with the structural engineer so that appropriate modifications can be made to the foundation design; such as additional reinforcing or details for doweling.

7.18.2 It is recommended that the initial temporary excavation along the property line be sloped back at a uniform 1:1 (H:V) slope gradient or flatter for excavation of the existing soils to the necessary depth. The temporary excavation should not extend below the surcharge area of any adjacent foundations. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation. The temporary slope may then be excavated using the slot-cutting (see illustration below).



7.18.3 Alternate "A" slots of 6 feet in width may be worked. The remaining earth buttresses ("B" and "C" slots) should also be 6 feet in width. The wall, foundation, or backfill should be completed in the "A" slots to a point where support of the offsite property and/or any existing structures is restored before the "B" slots are excavated. After completing the wall, foundation, or backfill in the "B" slots, finally the "C" slots may be excavated. Slot-cutting is not recommended for vertical excavations greater than 6 feet in height. A surcharge load of 500 pounds per linear foot is included in the slot-cut calculation to account for miscellaneous minor surcharges. The slot-cut calculation should be revised as needed for each surcharge condition as the project progresses. A slot-cut calculation is provided on the following page.

Slot Cut Calculation

Input:

Height of Slots	(H)	6.0	feet
Unit Weight of Soils	(γ)	125.0	pcf
Friction Angle of Soils	(ϕ)	29.1	degrees
Cohesion of Soils	(c)	152.0	psf
Factor of Safety	(FS)	1.25	

Factor of Safety = Resistance Force/Driving Force

Design Equations

$b = H/(\tan \alpha)$

$A = 0.5*H*b$

$W = 0.5*H*b*\gamma$ *(per lineal foot of slot width)*

$F_1 = d*W*(\sin \alpha)$

$R_1 = d*[W*(\cos\alpha)*(\tan \phi)+(c*b)]$

$R_2 = 2*[(0.5*H*b)*c]$

FS = Resistance Force/Driving Force

FS = $(R_1+R_2)/(F_1)$

Surcharge Pressure:

Line Load	(q_L)	500.0	plf
Distance Away from Edge of Excavation	(X)	0.0	feet

Failure Angle (α) degrees	Width of Failure Wedge (b) feet	Area of Failure Wedge (A) feet^2	Weight of Failure Wedge (W) lbs/lineal foot	**Driving Force** Wedge + Surcharge per lineal foot of Slot Wdith	**Resisting Force** Failure Wedge per lineal foot of Slot Width	**Resisting Force** Side Resistance Force lbs	**Allowable Width of Slots*** (d) feet

* Width of Slots to achieve a minimum of 1.25 Factor of Safety, with a Maximum Allowable Slot Width of 8-feet.

Critical Slot Width with Factor of Safety equal or exceeding 1.25:

d_{allow} = 6.1 feet

7.19 Surface Drainage

7.19.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the original designed engineering properties. Proper drainage should be maintained at all times.

7.19.2 All site drainage should be collected and controlled in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. The site should be graded and maintained such that surface drainage is directed away from structures in accordance with 2019 CBC 1804.4 or other applicable standards. In addition, drainage should not be allowed to flow uncontrolled over any descending slope. Discharge from downspouts, roof drains and scuppers are not recommended onto unprotected soils within 5 feet of the building perimeter. Planters which are located adjacent to foundations should be sealed to prevent moisture intrusion into the soils providing foundation support. Landscape irrigation is not recommended within 5 feet of the building perimeter footings except when enclosed in protected planters.

7.19.3 Positive site drainage should be provided away from structures, pavement, and the tops of slopes to swales or other controlled drainage structures. The building pad and pavement areas should be fine graded such that water is not allowed to pond.

7.19.4 Landscaping planters immediately adjacent to paved areas are not recommended due to the potential for surface or irrigation water to infiltrate the pavement's subgrade and base course. Either a subdrain, which collects excess irrigation water and transmits it to drainage structures, or an impervious above-grade planter boxes should be used. In addition, where landscaping is planned adjacent to the pavement, it is recommended that consideration be given to providing a cutoff wall along the edge of the pavement that extends at least 12 inches below the base material.

7.20 Plan Review

7.20.1 Grading, foundation, and, if applicable, shoring plans should be reviewed by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The recommendations of this report pertain only to the site investigated and are based upon the assumption that the soil conditions do not deviate from those disclosed in the investigation. If any variations or undesirable conditions are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geocon West, Inc. should be notified so that supplemental recommendations can be given. The evaluation or identification of the potential presence of hazardous or corrosive materials was not part of the scope of services provided by Geocon West, Inc.

2. This report is issued with the understanding that it is the responsibility of the owner, or of his representative, to ensure that the information and recommendations contained herein are brought to the attention of the architect and engineer for the project and incorporated into the plans, and the necessary steps are taken to see that the contractor and subcontractors carry out such recommendations in the field.

3. The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

4. The firm that performed the geotechnical investigation for the project should be retained to provide testing and observation services during construction to provide continuity of geotechnical interpretation and to check that the recommendations presented for geotechnical aspects of site development are incorporated during site grading, construction of improvements, and excavation of foundations. If another geotechnical firm is selected to perform the testing and observation services during construction operations, that firm should prepare a letter indicating their intent to assume the responsibilities of project geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for their records. In addition, that firm should provide revised recommendations concerning the geotechnical aspects of the proposed development, or a written acknowledgement of their concurrence with the recommendations presented in our report. They should also perform additional analyses deemed necessary to assume the role of Geotechnical Engineer of Record.

Geologic Time Scale			Years Before Present (Approx.)	Fault Symbol	Recency of Movement	DESCRIPTION	
						ON LAND	OFFSHORE
Quaternary	Late Quaternary	Historic	200			Displacement during historic time (e.g. San Andreas fault 1906). Includes areas of known fault creep.	
		Holocene	11,700			Displacement during Holocene time.	Fault offsets seafloor sediments or strata of Holocene age.
	Early Quaternary	Pleistocene	700,000			Faults showing evidence of displacement during late Quaternary time.	Fault cuts strata of Late Pleistocene age.
			1,600,000*			Undivided Quaternary faults - most faults in this category show evidence of displacement during the last 1,600,000 years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age.	Fault cuts strata of Quaternary age.
Pre-Quaternary			4.5 billion (Age of Earth)			Faults without recognized Quaternary displacement or showing evidence of no displacement during Quaternary time. Not necessarily inactive.	Fault cuts strata of Pliocene or older age.

* Quaternary now recognized as extending to 2.6 Ma (Walker and Geissman, 2009). Quaternary faults in this map were established using the previous 1.6 Ma criterion.

EMPIRICAL ESTIMATION OF LIQUEFACTION POTENTIAL
DESIGN EARTHQUAKE

NCEER (1996) METHOD
EARTHQUAKE INFORMATION:

Earthquake Magnitude:	6.65
Peak Horiz. Acceleration PGA_M (g):	0.940
2/3 PGA_M (g):	0.627
Calculated Mag.Wtg.Factor:	0.739
Historic High Groundwater:	40.0
Groundwater Depth During Exploration:	65.0

By Thomas F. Blake (1994-1996)
ENERGY & ROD CORRECTIONS:

Energy Correction (CE) for N60:	1.25
Rod Len.Corr.(CR)(0-no or 1-yes):	1.0
Bore Dia. Corr. (CB):	1.15
Sampler Corr. (CS):	1.20
Use Ksigma (0 or 1):	1.0

LIQUEFACTION CALCULATIONS:

Unit Wt. Water (pcf): 62.4

Depth to Base (ft)	Total Unit Wt. (pcf)	Water (0 or 1)	FIELD SPT (N)	Depth of SPT (ft)	Liq.Sus. (0 or 1)	-200 (%)	Est. Dr (%)	CN Factor	Corrected (N1)60	Eff. Unit Wt. (psf)	Resist. CRR	rd Factor	Induced CSR	Liquefac. Safe.Fact.

TECHNICAL ENGINEERING AND DESIGN GUIDES AS ADAPTED FROM THE US ARMY CORPS OF ENGINEERS, NO. 9
EVALUATION OF EARTHQUAKE-INDUCED SETTLEMENTS IN DRY SANDY SOILS
DESIGN EARTHQUAKE

DE EARTHQUAKE INFORMATION:

Earthquake Magnitude:	6.65
Peak Horiz. Acceleration (g):	0.627

Fig 4.1 Fig 4.2 Fig 4.4

APPENDIX A

APPENDIX A

FIELD INVESTIGATION

The site was explored on July 23, 2020 by excavating three 8-inch diameter borings to depths between 40½ and 65½ feet below the existing ground surface using a truck-mounted hollow-stem auger drilling machine. Representative and relatively undisturbed samples were obtained by driving a 3-inch, O. D., California Modified Sampler into the "undisturbed" soil mass with blows from a 140-pound auto-hammer falling 30 inches. The California Modified Sampler was equipped with 1-inch by 2$^{3}/_{8}$-inch diameter brass sampler rings to facilitate soil removal and testing. Standard Penetration Tests (SPTs) were also performed in borings B1 and B2. Bulk samples were obtained. The location of the borings are shown on Figure 2.

The soil conditions encountered in the borings were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The logs of the borings are presented on Figures A1 through A3. The logs depict the soil and geologic conditions encountered and the depth at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the logs were revised based on subsequent laboratory testing.

APPENDIX B

APPENDIX B

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the International ASTM, or other suggested procedures. Selected samples were tested for direct shear strength, consolidation characteristics, plasticity indices, grain-size, corrosivity, in-place dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B25. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

1.0 INTRODUCTION

Judy Shea (Client) retained Patriot Environmental Laboratory Services, Inc. (Patriot) to perform a limited subsurface investigation of the approximately 2.18-acre site at 6728 Sepulveda Boulevard, in the Van Nuys community of the City of Los Angeles, in the County of Los Angeles, California, 91411 referred to herein as the "subject property" (Appendix A, Figure 1). In September 2020, Patriot conducted a Limited Subsurface Investigation at the subject property in response to this request.

The subject property is located on the east side of Sepulveda Boulevard south of Vanowen Street in a mixed use commercial/residential area of Van Nuys. The subject property was developed with a multi-tenant residential community that was vacant and is being considered for a potential property sale. The layout of the subject property and sample locations are indicated on Figure 2 in Appendix A.

The subject property has no known significant environmental concerns associated with recent or historical site uses; however, the property lies just south of a community shopping center that includes multiple tenants. Based on records research, one of these tenant spaces was formerly occupied by a dry cleaner business and is now a coin laundry. The presence of the former dry cleaner facility was identified as a potential environmental concern. The Client requested that Patriot perform a preliminary subsurface investigation to determine if there were possible vapor intrusion impacts emanating from this off-site facility.

The current investigation is an independent assessment of the property that was constrained by time and cost factors as part of a self-directed effort. The objective of this work was to determine the current representative subsurface conditions in targeted areas along the northern property line nearest to the former dry cleaners. This investigation was not intended to meet the more stringent requirements of a regulatory driven assessment. The investigation included installation of 3 soil gas sampling probes, soil gas sampling, laboratory analysis, and preparation of this report. Soil gas sampling was chosen for this project because possible sources of subsurface contamination by volatile chemicals can migrate through soil in a vapor phase.

2.0 GEOLOGY/HYDROGEOLOGY

Based on the drilling logs, shallow soils beneath the subject property consisted primarily of clayey silt and silt with minor fractions of sand and fine gravel from near surface to 6 feet below grade, the maximum depth of exploration. Groundwater was not encountered to the maximum depth of drilling (6 feet). Based on information available from the Los Angeles County Department of Public Works, groundwater in a monitoring well located within a mile of the site lies at approximately 250 feet below grade. Descriptions of the sediments encountered during drilling are presented in the drilling logs (Appendix C).

3.0 SITE INVESTIGATION

On September 12, 2020, Patriot installed 3 soil borings in accessible areas of the subject property targeted along the north property line near the suspected former dry cleaner location. The borings were installed using hand powered tools to total depths of 6 feet below grade. During drilling, the soil column was logged by Mr. Dan Louks, a California Professional Geologist (#4883), and the soil was screened in the field for volatile emissions during drilling with a photo-ionization detector (PID) calibrated to hexane.

The borings were completed as soil gas sampling probes (SG1-SG3) with sampling tips set at maximum depth (6 feet below grade). The probes consist of plastic micro-porous vapor implants that are approximately 2 inches long with a 0.5-inch outside diameter, connected to 0.25-inch outside diameter nylaflow tubing that extended above the surface. The annulus around the vapor implants was backfilled with approximately 1 foot of screen-washed #3 sand to maximize exposure to the native sediment. The probes were sealed using bentonite placed immediately above each sand pack to provide a secure borehole seal. The probes were finished with gas-tight fittings at the surface pending vapor purging and sampling.

The probes were allowed to equilibrate for at least 48 hours before purging and sampling. Prior to vapor sampling, shut-in and leak tests were conducted on the probes. Each probe head was attached to the sampling train assembly of Teflon tubing, valves, and fittings and connected to a purge pump. The pump was used to evacuate the sealed system using an applied minimum vacuum of 100 inches of water column (in. WC). The vacuum on each probe was monitored for 90 seconds with the sampling train system sealed. After the shut-in test was validated, the sampling train was leak tested. Liquid iso-propyl alcohol was applied with a spray around all connections in the sampling train to evaluate whether the system was sealed from ambient air leaks. A detection of 10 times the reporting limit of this compound might suggest that ambient air leakage had occurred.

The purpose of purging is to remove stagnant air from the vapor sampling train to ensure representative samples are obtained. Each probe was purged of three purge volumes of soil vapor (a purge volume includes the volume of tubing plus the void space of the sand pack around the probe) using an adjustable vacuum pump. The purge rate was set at 200 mL/minute. During purging, the soil gas was monitored for VOC using a PID. The soil gas monitoring data is presented in Appendix B.

After purging three volumes through the system, vapor samples were collected from each probe on September 14, 2020. During sampling, the purge pump was operated at 200 mL/minute, and the vacuum was monitored to ensure it was below 100 in. WC. Vacuum applied below this level helps ensure chemical partitioning from pore water to soil gas and the stress on the air seals are both minimized. The samples were containerized in Tedlar gas sampling bags, stored in a sealed cooler, and delivered to the laboratory for analysis. The soil gas samples were tested for VOC by EPA Method 8260B by A&R Laboratories.

4.0 LABORATORY RESULTS

Results from soil gas sampling indicated each probe had detectable concentrations of tetrachloroethene (PCE), a common dry cleaning solvent, ranging from 1.3 to 5.3 *u*g/L. No other VOC was detected in any of the samples. The detected concentrations were compared to the Regional Screening Levels (RSLs) for soil gas which are based on human health risk factors for residential and commercial settings and are commonly used as screening tools. The screening criteria uses defined indoor air concentrations based on human health risk factors that are modified using attenuation factors provided by EPA (0.03) and DTSC (0.001). DTSC policy on which attenuation factor to use is currently under review, but our understanding is that the current accepted screening levels for residential applications for PCE is 0.23 *u*g/L. The more stringent screening levels (if applied) would be 0.015 *u*g/L. Results indicated all of the detected concentrations exceed both screening levels. The laboratory results are summarized in Table 1. The laboratory report is presented in Appendix D.

TABLE 1

*Notes: ND - Not Detected. DCE=dichloroethene. EPA Regional Screening Levels (RSLs) are human health risk based screening levels used by EPA and DTSC to determine Health Risk in residential and commercial settings. *-Values modified for California by DTSC HERO Note 3. Screening levels for soil gas calculated using indoor air values and attenuation factor provided by EPA (0.03) and DTSC (0.001). Please refer to lab report for complete results.*

5.0 CONCLUSIONS

Records indicated the subject property had no known environmental concerns related to current or historical site uses; however, the subject property lies in proximity to a former dry cleaner business which could potentially be a source of human health concerns via vapor intrusion. Based on these facts a subsurface investigation was requested.

In September 2020, Patriot conducted a limited subsurface investigation that included installation of 3 soil gas probes in accessible locations along the north property line, nearest to the former dry cleaner business. The sediment beneath the subject property consisted of silt based deposits to 6 feet below grade, the maximum depth of exploration. Results from soil gas sampling indicated detectable concentrations of PCE in each soil gas sample that exceed current residential screening levels. This suggests a possible vapor intrusion threat that could potentially impact residents of the structure, when occupied.

Based on these results, it is very likely that building controls will be necessary beneath this existing structure, or any new structure. If the existing structure is to be reoccupied, indoor air sampling for VOCs is advised to confirm actual indoor air conditions.

If a new structure will replace the existing structure, controls suggested would consist of a liquid boot that is applied beneath the building slab and a passive sub-slab depressurization system which consists of a gravel bed with perforated pipe that is exposed to the atmosphere. This feature should be developed with the possibility of converting it to an active system in case it becomes necessary in the future.

Finally, another option is to install more vapor probes and utilize a toxicologist to model the potential vapor intrusion risk from the contaminants below. If the risk is less than a residential standard, the use of building controls may be unnecessary, but the success of this scenario is unlikely given the concentrations measured.

6.0 LIMITATIONS

This Limited Subsurface Investigation was performed in accordance with generally and currently accepted engineering practices and principles; however, the procedures and methodologies used in this investigation are not intended to meet all specific regulatory guidelines as this work was completed as a self-directed effort. The investigation was necessarily limited by time and expense to the number of sample locations and laboratory analyses completed. Although efforts were made to investigate the most probable areas that might have subsurface contamination, this assessment should not be construed as a comprehensive investigation of the entire property. Although the data in this report is indicative of subsurface conditions in areas investigated, no further conclusions regarding the absence or presence of subsurface contamination at the site should be construed or inferred other than those expressly stated in this report. The conclusions made are based on information obtained from field observations, independent laboratory analytical results, and from relevant Federal, State, regional, and local agencies.

7.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

The undersigned certifies that the professional services have been performed, our findings obtained, and our recommendations have been prepared in accordance with customary principles and practices in the field of environmental science and engineering. Patriot has acted in good faith and has no relationship with sellers, buyers, or agents of the subject property. There have been no conflicts of interest involved in the drawing of conclusions, which have been based solely on materials reviewed and visual inspections performed by Patriot.

QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.
B1 = BOD dilution water is over specifications . The reported result may be biased high.
D = Surrogate recoveries are not calculated due to sample dilution.
E = Estimated value; Value exceeds calibration level of instrument.
H = Analyte was prepared and/or analyzed outside of the analytical method holding time
I = Matrix Interference.
J = Analyte concentration detected between RL and MDL.
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.
S = Customer provided specification limit exceeded.

ABBREVIATIONS

DF = Dilution Factor
RL = Reporting Limit, Adjusted by DF
MDL = Method Detection Limit, Adjusted by DF
Qual = Qualifier
Tech = Technician

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

Subject: Limited Phase II Environmental Site Assessment Report
Former California Green Tree Villa
6728 Sepulveda Boulevard
Van Nuys, California 91411
Project Number: 20-1626

Earth Science LLC is pleased to provide Shea Revocable Living Trust (SRLT) with the results of this Limited Phase II Environmental Site Assessment Report (Report) for the property located at 6728 Sepulveda Boulevard, Van Nuys, California 91411.

The activities documented in this Report were performed in conformance with the scope and limitations detailed in our proposal dated October 2, 2020 (proposal number: 20-1626).

We appreciate the opportunity to provide environmental services to SRLT. If you have any questions concerning this Report, please contact our office at (949) 441-0433.

Respectfully,

Sean Rakhshani
Principal

C LABORATORY ANALYTICAL REPORTS

1 INTRODUCTION

Earth Science LLC (Earth Science) has prepared this Limited Phase II Environmental Site Assessment (ESA) Report (Report) on behalf of Shea Revocable Living Trust (SRLT) for the property located at 6728 Sepulveda Boulevard, Van Nuys, California 91411 (Site); please refer to **Figure 1** for the ***Site Vicinity Map***.

This Report was prepared following the scope of work presented in the Limited Phase II ESA proposal dated October 2, 2020 (prepared by Earth Science).

The primary objective of this project was to further investigate the known presence of volatile organic compounds (VOCs) in soil gas at the Site as a result of the north-adjacent dry cleaning operations. Additionally, limited soil sampling for was performed at the Site for health and safety, soil management, and waste profiling purposes in anticipation of future soil grading and offsite soil disposal activities associated with the proposed redevelopment of the Site for residential use.

This Report documents the investigation activities performed at the Site, including the advancement of 10 borings (B-1 through B-10) to a terminal depth of 5.0 feet below ground surface (bgs); the installation of 10 temporary soil gas monitoring probes; and the collection and analysis of soil and soil gas samples.

The following sections provide information detailing the Site background; local geology and hydrogeology; Site investigation scope of work; Site investigation results; Report summary; and Report certifications and limitations.

2 SITE BACKGROUND

The following sections provide details regarding the Site description and previous investigations performed at the Site to date.

2.1 SITE DESCRIPTION

The Site is located in a commercial and residential area of Van Nuys, California. The Site is bound to the north and south by commercial developments; to the east by Columbus Avenue; and to the west by Sepulveda Boulevard. The Site consists of an approximately 2.18-acre parcel which is improved with a 53,368 square foot, two-story commercial building formerly occupied by an assisted living operation (California Green Tree Villa), asphalt-paved drive lanes and parking areas, and landscaping. Access to the Site is available from Sepulveda Boulevard located along the western boundary.

According to available historical information, the Site was undeveloped land from at least 1894 up to 1973 when the present-day commercial building was first constructed at the Site. Based on a review of available aerial photographs, the Site was used as an orchard from at least 1928 up to at least 1947, and the orchard was removed from the Site sometime prior to 1952 when the Site was undeveloped land. A 1972 aerial shows the Site as being mass-graded prior to the construction of the present-day commercial building.

Several offsite properties in the vicinity of the Site represent a potential environmental concern, including the facility located adjacent to the north of the Site (under the address of 6754 Sepulveda Boulevard) which operated as a dry cleaner from at least 1970 up to at least 2012. Currently the north-adjacent facility operates as a laundry mat and cleaners (under the address of 6756 Sepulveda Boulevard). Available regulatory records indicate that the north-adjacent dry cleaning operations generated large quantities of halogenated solvent wastes, including wastes from the storage and use of tetrachloroethene (PCE).

A dry cleaning facility also operated at the property located adjacent to the northwest of the Site (at the address of 6739 Sepulveda Boulevard) in at least 1950, and from at least 2014 up to the present day.

2.2 PREVIOUS ENVIRONMENTAL SITE INVESTIGATIONS

The following is a summary of the relevant, previous environmental investigations conducted at the Site, based on information made available to Earth Science as of the date of this Report.

The following reports were reviewed prior to developing and implementing the Limited Phase II ESA scope of work:

- ***Limited Subsurface Investigation Report of: California Green Tree Village, 6728 Sepulveda Boulevard, Van Nuys, California 91411, September 17, 2020.*** Patriot Environmental Laboratory Services, Inc. (Patriot Environmental) prepared this report on behalf of Judy Shea. The key findings and conclusions of the above-referenced report included the following:

    - Patriot Environmental installed three soil gas probes (each screened at a depth of 6.0 feet bgs) in the northern portion of the Site, south of the north-adjacent dry cleaning operation.

    - PCE was detected in all three soil gas probes installed the Site at concentrations ranging from 1,300 to 5,300 micrograms per cubic meter (µg/m^3), exceeding the applicable regulatory screening level of 15 µg/m^3.

- ***Phase I Environmental Site Assessment of: California Green Tree Village, 6728 Sepulveda Boulevard, Van Nuys, California 91411, August 31, 2020.*** Patriot Environmental prepared this report on behalf of Universal Standard Housing (USH). The key findings and conclusions of the above-referenced report included the following:

    - The assessment revealed no recognized environmental conditions in connection with the Site.

    - Based on the findings of the report, Patriot Environmental recommended no further assessment of the Site.

3 LOCAL GEOLOGY AND HYDROGEOLOGY

The Site is located at an elevation of approximately 737 feet above mean sea level and the topography in the vicinity of the Site gradually slopes towards the south/southeast (United States Geological Survey 7.5 Minute Topographic Map, Van Nuys Quadrangle, 2018).

The Site is located in the southeastern area of the San Fernando Basin. The San Fernando Basin is bounded to the east and northeast by the San Rafael Hills, Verdugo Mountains, and San Gabriel Mountains; to the northwest and west by the Santa Susana Mountains and Simi Hills; and to the south by the Santa Monica Mountains. The Los Angeles River drains most of the San Fernando Valley and is located approximately two miles south/southwest of the Site. Based on information obtained from the National Cooperative Soil Survey prepared by the United States Department of Agriculture Soil Conservation Service, the soil in the vicinity of the Site is classified as Urban Land-Grommet-Ballona complex with 0.0 to 5.0 percent slopes. Urban Land-Grommet-Ballona complex soil is considered to be prime farmland if irrigated and is formed in alluvial fans.

The Site lies within the southernmost area of the San Fernando Groundwater Basin (Upper Los Angeles River Area [ULARA], 2001). Water-bearing deposits in the San Fernando Valley include the Saugus Formation, and older and younger alluvium. The Saugus Formation is composed of unconsolidated continental and marine deposits of conglomerate, sand, silt, and clay, and crops out in the northern part of the valley on the southerly slopes of the San Gabriel Mountains. Groundwater within the San Fernando Valley Basin is unconfined and flows at approximately 300 feet per year to the south-southeast at the Site vicinity (ULARA, 2001). Groundwater in the San Fernando Valley occurs in three principal water-bearing zones: (1) the early Quaternary Saugus Formation, (2) Late Quaternary Older Alluvium (terrace deposits), and (3) Recent Alluvium. The subsurface lithology within the Site vicinity is composed of Quaternary Alluvium, which consists of gravel, gravel and sand, sand, and clay.

Groundwater for consumption (drinking and irrigation) is primarily drawn from the eastern part of the San Fernando Groundwater Basin. Under natural conditions, groundwater flows east across the western portion of the San Fernando Valley and to the southeast in the eastern portion toward the Los Angeles River Narrows. However, groundwater flow patterns are influenced by groundwater pumping for water supply. The direction of flow near these wells can change seasonally because the supply wells typically are pumped most heavily during the summer months (United States Environmental Protection Agency [USEPA], 1993). According to information provided by the Los Angeles Department of Public Works (LADPW), the approximate depth to groundwater in a nearby observation well is 254 feet bgs (LADPW, 2008).

Based on the information obtained during the advancement of borings at the Site as part of this Limited Phase II ESA, the encountered geology includes silty fine-grained sands and clayey silts (with varying amounts of gravel) which are dry to slightly moist and are brown in color. Groundwater was not encountered down to the maximum investigation depth of 5.0 feet bgs.

Please refer to the ***Boring Logs*** in **Appendix A** for additional information regarding the encountered geology and soil conditions.

4 SITE INVESTIGATION SCOPE OF WORK

The following sections detail the scope of work performed as part of this Site investigation.

4.1 HEALTH AND SAFETY PLAN

A Site-specific Health and Safety Plan was prepared and reviewed with all onsite personnel involved in the project prior to the commencement of field activities.

4.2 WORK PLAN

A Site-specific Work Plan was prepared and reviewed with all onsite personnel involved in the project prior to the commencement of field activities.

4.3 UTILITY CLEARANCE

The Site and boring locations were marked-out and Underground Service Alert (USA) was notified prior to performing fieldwork activities in order to clear public utilities, as required by law. The Site owner was also provided prior notice of the planned investigation activities to commence on October 8, 2020. Please refer to the ***Utility Clearance Checklist*** in **Appendix B** for additional information regarding the utility clearance activities conducted at the Site.

4.4 DRILLING EQUIPMENT

On October 8, 2020, Earth Science mobilized the required drilling equipment and personnel to the Site in order to advance the 10 borings. The borings were advanced at the Site using a hand-operated, direct-push environmental sampling probe (ESP). The drilling equipment was cleaned using a high-pressure washer prior to beginning field work. All sampling equipment was decontaminated between samples and boreholes to prevent cross-contamination.

4.5 BORING LOCATIONS AND DEPTHS

10 borings (B-1 through B-10) were advanced to a terminal depth of 5.0 feet bgs at the Site. The boring locations were selected based on field conditions/observations, prior environmental reports prepared for the Site, and the identified areas of concern (AOCs), which included the location of the north-adjacent dry cleaning operation. Please refer to **Figure 2** for the ***Boring Location Map***. The 10 borings were advanced at the Site to 5.0 feet bgs at the following locations:

- Borings B-1 and B-2 were advanced in the eastern portion of the Site, in the parking lot median.
- Boring B-3 was advanced in the southeastern portion of the Site, near the southern drive lane and trash dumpsters.
- Boring B-4 was advanced in the northern portion of the Site, in the central yard.
- Boring B-5 was advanced in the western portion of the Site, in the western courtyard.
- Boring B-6 was advanced in the central portion of the Site, in the eastern courtyard.
- Boring B-7 was advanced in the northwestern portion of the Site, in the western yard.
- Boring B-8 was advanced in the southwestern portion of the Site, southeast of the building and near the southern drive lane.
- Boring B-9 was advanced in the southern portion of the Site, south of the building and near the southern drive lane.
- Boring B-10 was advanced in the eastern portion of the Site, in the parking lot.

4.6 SOIL AND SOIL GAS SAMPLING METHODOLOGY

Soil samples were continuously logged from grade down to the terminal boring depth in each of the 10 borings advanced at the Site. Soil samples were collected using a sampler located within the ESP. All collected soil samples were visually inspected for discoloration, monitored for odors, classified in accordance with the Unified Soil Classification System (USCS), and field-screened for VOCs using a photo-ionization detector (PID) calibrated to isobutylene. Soil samples to be analyzed for VOCs were collected from the undisturbed soils using Terra Core™ samplers and volatile organic analysis (VOA) vials with both methanol and sodium bisulfate preservative solutions in accordance with USEPA Method 5035. None of the collected soil samples exhibited any evidence of discoloration/staining or odors. All VOC concentrations detected during the screening of soil samples with the PID were 0.0 parts per million (ppm).

After the completion of soil logging, screening, and sampling activities, temporary soil gas probes screened at 5.0 feet bgs were constructed at the Site within all 10 boring locations (B-1 through B-10).

In each boring, new 1/2-inch diameter polyvinyl chloride (PVC) casing was inserted into the borehole to the terminal depth, and new 1/4-inch diameter Nylaflow® nylon tubing with a 1/4-inch diameter polypropylene filter at the terminal end was inserted into the borehole through the PVC casing to the desired sampling depths at each boring location. The PVC casing was used as a guide for the tubing to ensure that the desired sampling depth was achieved. Number 3 sand was poured into the boring annulus through the PVC casing to form an approximately 1.0-foot long sand pack around the polypropylene filter. A minimum of 6.0-inches of dry granular Bentonite was installed as a transition seal and a Bentonite annular seal was placed up to grade. The sampling end of the tubing was fitted with an open/shut valve and each probe was labeled for identification.

Soil gas samples were collected in accordance with the "*Advisory – Active Soil Gas Investigations, July 2015*" prepared by the California Department of Toxic Substances Control (DTSC). Baseline Analytical Services (BAS), an environmental analytical laboratory, was present during the Site investigation to analyze all soil gas samples using their mobile laboratory. The mobile laboratory was calibrated at the beginning of the day prior to the first analysis. Each temporary soil gas probe was allowed to equilibrate for at least two hours after installation prior to sampling with gas-tight glass syringes. Shut-in tests were performed for all collected samples. Three purge volumes were removed from each soil gas probe prior to collecting the samples. The sample collection rate for the soil gas samples was 200 milliliters per minute (mL/min).

In addition to the 10 soil gas samples collected from the Site, one duplicate sample (from boring B-7) was collected for quality assurance and quality control (QA/QC) purposes. An equipment blank sample, consisting of an assembled blank probe, tip, and tubing was sampled, and the results were non-detect for all contaminants. Tracer gas (isopropyl alcohol) was placed around each probe at the ground surface while sampling to detect ambient air intrusion. The tracer gas was not detected in any of the samples, indicating that the integrity of the Bentonite seal was maintained. Additionally, recovery of all surrogate compounds included with each analysis was within acceptable limits, indicating that the sampling containers and analysis equipment did not leak.

Following completion of all sampling activities, all temporary soil gas probes were removed and the boreholes were patched to match the existing ground cover. Please refer to **Table 1**, ***Investigation Summary*** for a description of the soil and soil gas sampling performed at the Site.

4.7 SOIL AND SOIL GAS ANALYSIS

The collected soil samples were immediately transferred into a cooler packed with ice and delivered on October 8, 2020 under chain-of-custody procedures to SunStar Laboratories, Inc., a State-certified environmental analytical laboratory. The soil samples collected from the Site at the depth intervals with the greatest likelihood of containing contamination (based on the encountered field conditions/observations and the prior environmental reports prepared for the Site) were prepared for laboratory analysis, which included soil samples collected from 2.0 and 5.0 feet bgs in borings B-2 and B-7. The soil samples collected from 2.0 feet bgs in borings B-2 and B-7 were analyzed for organochlorine pesticides (OCPs) in accordance with USEPA Method 8081 for waste profiling purposes and to investigate potential impacts from the historic orchard operations at the Site. The soil samples collected from 5.0 feet bgs in borings B-2 and B-7 were analyzed for VOCs in accordance with USEPA Method 8260/5035 for waste profiling purposes and to investigate potential impacts from the north-adjacent dry cleaning operation.

Soil gas samples were collected and analyzed on October 8, 2020 via a mobile laboratory operated by BAS. A total of 11 soil gas samples (consisting of 10 samples and one duplicate sample) collected from the 10 temporary soil gas probes were prepared for laboratory analysis. All soil gas samples were analyzed for VOCs in accordance with USEPA Method 8260.

Please refer to **Table 1**, ***Investigation Summary*** for a description of the selected soil and soil gas samples which were analyzed.

4.8 QUALITY ASSURANCE AND QUALITY CONTROL

QA/QC and chain-of-custody protocols were followed for all sampling and sample handling activities. QC is achieved through considered procedures and steps which are employed to ensure that the QA objectives are met.

The QA objectives of data validation are to ensure that sampling, analysis, and reporting activities provide data that are accurate, precise, representative, and legally defensible. The QC steps and protocols include:

- Procedures for the collection of field samples, discussed above;
- Appropriate methods and protocols for the analysis of samples, discussed above, and;
- Data validation.

All laboratory analytical method detection limits (MDLs) and reporting limits (RLs) met the regulatory standards for residential developments (i.e., the MDLs and RLs were below their respective residential regulatory screening limits for each compound analyzed).

No findings which significantly affected the quality of the samples collected or the laboratory analytical results were identified. Please refer to the ***Laboratory Analytical Reports*** in **Appendix C** for further information regarding the laboratory QC methods, protocols, and results.

4.9 WASTE MANAGEMENT

Due to the use of a small-diameter, direct-push ESP, no significant amounts of derived wastes were generated during this investigation. Any remnants of the samples submitted to the analytical laboratories will be held until the maximum sample hold times at which time the sample remnants will be disposed of by the analytical laboratories in a manner consistent with applicable regulations.

5 SITE INVESTIGATION RESULTS

The following sections present the soil and soil gas analysis results from the Site investigation and the applicable regulatory screening levels.

5.1 LABORATORY ANALYTICAL REPORTS

Please refer to the ***Laboratory Analytical Reports*** in **Appendix C** for the results of the analyzed soil and soil gas samples. The laboratory results are summarized in **Table 2** (***Soil Analysis Results -- Organochlorine Pesticides***), **Table 3** (***Soil Analysis Results – Volatile Organic Compounds***), and **Table 4** (***Soil Gas Analysis Results – Volatile Organic Compounds***). The laboratory results are mapped in **Figure 3** (***Mapped Soil Analysis Results***) and **Figure 4** (***Mapped Soil Gas Analysis Results***).

5.2 COMPARISON OF THE INVESTIGATION RESULTS AND REGULATORY SCREENING LEVELS

All soil analysis results were compared to the applicable DTSC and USEPA screening levels. All soil gas analysis results were compared to the applicable DTSC screening levels.

5.2.1 CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL

The DTSC Human and Ecological Risk Office (HERO) Human Health Risk Assessment (HHRA) Note 3 Modified Screening Levels (DTSC SLs) were developed based on the USEPA Regional Screening Levels (RSLs) for use in the HHRA process at hazardous waste sites and permitted facilities. HERO has a long history of working with the USEPA Region 9 office to integrate California-specific risk assessment concerns into the Preliminary Remediation Goal (PRG) listing and the PRG-screening risk assessment process. The most recent revision of HHRA Note 3 (dated June 2020) incorporates HERO recommendations based on a review of the USEPA RSL tables.

In February of 2020, the DTSC released a "Public Draft Guidance for Screening and Evaluating Vapor Intrusion" to promote State-wide standard practice and consistency for screening buildings for vapor intrusion and to establish appropriate sampling to protect building occupants from vapors off-gassing from contaminated sources. The 2020 Guidance document provides recommended attenuation factors which can be used to calculate Supplemental Screening Levels (SSLs) for the evaluation of soil gas impacts.

5.2.2 UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

USEPA RSLs (last updated in May of 2020), formerly known as PRGs, are generic, risk-based chemical concentrations developed by the USEPA for use in initial screening-level evaluations of soil and air. RSLs combine human health toxicity values with standard exposure factors to estimate contaminant concentrations that are considered to be health protective of human exposures over a lifetime through direct exposure pathways (e.g., via inhalation and/or ingestion of and/or dermal contact with, impacted soil). RSLs are not legally enforceable standards, but rather are considered guidelines to determine if potential risks associated with encountered contamination may warrant further evaluation.

5.2.3 SOIL ANALYSIS RESULTS

All analytes detected in the analyzed soil samples were at concentrations below the applicable residential use regulatory screening levels. The following analyte was detected in the analyzed soil samples collected from the Site.

- 4,4'-DDE was detected in soil sample B-7-2 (collected from boring B-7 at 2.0 feet bgs) at a concentration of 0.0058 milligrams per kilogram (mg/kg). The residential use DTSC SL and residential use USEPA RSL for 4,4'-DDE in soil is 2.0 mg/kg.

No other analytes were detected in any of the analyzed soil samples collected from the Site.

5.2.4 SOIL GAS ANALYSIS RESULTS

All detections of PCE in the analyzed soil gas samples were at concentrations above the applicable residential use regulatory screening level. No other analytes were detected in the analyzed soil gas samples at concentrations above the applicable residential use regulatory screening levels. The following analyte was detected in the analyzed soil gas samples collected from the Site.

- PCE was detected in soil gas samples B-5-SG5, B-7-SG5, B-7-SG5 DUP, and B-8-SG5 (collected from borings B-5, B-7, and B-8 at 5.0 feet bgs) at concentrations of 36, 23, 26, and 51 µg/m^3, respectively. The residential use DTSC SSL for PCE in soil gas is 15 µg/m^3.

No other analytes were detected in any of the analyzed soil gas samples collected from the Site.

6 SUMMARY

The primary objective of this project was to further investigate the known presence of VOCs in soil gas at the Site as a result of the north-adjacent dry cleaning operations. Additionally, limited soil sampling for was performed at the Site for health and safety, soil management, and waste profiling purposes in anticipation of future soil grading and offsite soil disposal activities associated with the proposed redevelopment of the Site for residential use.

This Report documents the investigation activities performed at the Site, including the advancement of 10 borings (B-1 through B-10) to a terminal depth of 5.0 feet bgs; the installation of 10 temporary soil gas monitoring probes; and the collection and analysis of soil and soil gas samples.

6.1 FINDINGS

None of the collected soil samples exhibited any evidence of discoloration/staining or odors. All VOC concentrations detected during the screening of soil samples with the PID were 0.0 ppm.

All analytes detected in the analyzed soil samples were at concentrations below the applicable residential use regulatory screening levels.

PCE was detected in four of the 11 of the analyzed soil gas samples collected from the Site at concentrations ranging from 23 to 51 µg/m^3, exceeding the residential use DTSC SSL for PCE in soil gas of 15 µg/m^3.

6.2 CONCLUSIONS

The results of this Limited Phase II ESA indicate the presence of low concentrations of 4,4'-DDE in soil and PCE in soil gas at Site.

There is a potential that agricultural-related hazardous materials, such as OCPs, may have been stored and used at the Site during the historical orchard operations. No records documenting the storage or use of agricultural-related hazardous materials at the Site were available at the time of this assessment.

Based on the limited soil sampling performed as part of this investigation, only one OCP (4,4'-DDE) was detected at a very low concentration (well below the residential use regulatory screening level) in one of the two shallow soil samples analyzed for OCPs.

Additionally, during the previous development activities conducted in the early 1970s, shallow soils (where residual agricultural-related hazardous materials would most likely have been present at the highest concentrations) were likely disturbed during grading and/or may have been mixed with backfill material. Given the age of the orchard operations (ending approximately 70 years ago) and the prior grading activities conducted at the Site, the potential presence of agricultural-related hazardous materials at the Site is not a significant concern at this time.

This Phase II ESA was intended to serve as a limited scope investigation for due diligence purposes and to support the proposed sale of the Site; therefore, the extent of contamination at the Site has not been fully delineated and further investigation of the Site is warranted.

The results of this investigation and prior environmental investigations confirm that the north-adjacent dry cleaning operation is the likely source of PCE-contaminated soil gas at the Site. A release of PCE to the subsurface of the north-adjacent dry cleaning operation likely caused PCE-contaminated soil gas to migrate onto to the Site (which is commonly referred to as a vapor encroachment condition).

The primary responsible parties (RPs) for the contamination at the Site are the owners and all associated entities of the north-adjacent strip mall where the dry cleaning operation (the source of the PCE release) is located, and all of the operators and all associated entities of the dry cleaning operation. There may be multiple other potential RPs, such as the former dry cleaning operation located adjacent to the northwest of the Site (at the address of 6739 Sepulveda Boulevard).

Earth Science recommends that a Potentially Responsible Party (PRP) Search Report be prepared to identify the potential RPs in the area which may have caused or contributed to the contamination at the Site. The PRP Search Report can be used by an environmental regulatory agency to assign responsibility to the RPs and to pursue the RPs in an effort to further investigate and to remediate the Site and any nearby properties which are impacted. The PRP Search Report can also be used by attorneys to support the identification and pursuit of the RPs as part of any future legal actions initiated by the owner of the Site.

Earth Science recommends that the appropriate regulatory agency (e.g., the DTSC) be notified regarding the soil gas impacts at the Site, with prior consultation from an environmental attorney. Any further investigation, remediation, or mitigation activities should be conducted under the oversight of the regulatory agency until a "No Further Action" ("NFA") determination and approval for the redevelopment of the Site for residential use is issued by the regulatory agency.

Detections of OCPs in soil and VOCs in soil gas may pose a concern to Site workers during the proposed redevelopment of the Site. It is advisable that precautionary measures be implemented to minimize worker exposure to the contaminated Site soils (through inhalation/ingestion of airborne dust or dermal contact) and to minimize the potential for the contaminated soils to impact the environment (through airborne dust or surface water runoff).

Therefore, Earth Science recommends that a Site-Specific Health and Safety Plan (HASP) and a Site-Specific Soil Management Plan (SMP) be prepared by a qualified environmental professional detailing these precautionary measures for use by the General Contractor, subcontractors, and other Site workers during construction.

7 CERTIFICATIONS AND LIMITATIONS

This Report was prepared under the direction and review of the professionals listed below. The work described herein was prepared in accordance with generally accepted environmental practices. The completed work includes observations of the Site conditions encountered and the analytical results from samples analyzed by an independent, third-party laboratory during the course of the project. The number and location of samples were selected to provide the required information; however, it cannot be assumed that the limited available data are representative of subsurface conditions in areas not sampled.

The results, findings, and conclusions in this Report are based on the conditions encountered at in the areas explored at the Site at the time of the Earth Science's investigation; in the event that varying conditions are encountered in other areas of the Site during grading and/or construction activities that pose a potential environmental concern, additional investigation and/or testing of the Site may be warranted.

All conclusions and/or recommendations are based on observations, laboratory analyses, and governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Earth Science warrants that the environmental consulting services contained herein were accomplished in accordance with generally accepted practices in the environmental industry that existed at the time and location of work. No other warranties are implied or expressed.

All reports, both verbal and written, as they pertain to the above-referenced property are for the sole use and benefit of SRLT. This Report has no other purpose and may not be relied upon by any other person or entity without the prior written consent of Earth Science.

Should you have any questions or comments concerning this Report, please contact our office at (949) 441-0433.

Respectfully,

Sean Rakhshani

DTSC SLs = California Department of Toxic Substances Control, Human and Ecological Risk Office, Human Health Risk Assessment Note Number: 3, Modified Screening Levels, June 2020

NA = not applicable

RSLs = Regional Screening Levels with a Target Hazard Quotient of 1.0, May 2020

TABLE 4: SOIL GAS ANALYSIS RESULTS – VOLATILE ORGANIC COMPOUNDS

Table 4: Soil Gas Analysis Results - Volatile Organic Compounds

Analysis Method	USEPA 8260	
Units	Micrograms Per Cubic Meter (µg/m³)	
Sample Identification	Tetrachloroethene (PCE)	All Other Analyzed VOCs
B-1-SG5	ND	ND
B-2-SG5	ND	ND
B-3-SG5	ND	ND
B-4-SG5	ND	ND
B-5-SG5	36	ND
B-6-SG5	ND	ND
B-7-SG5	23	ND
B-7-SG5 DUP	26	ND
B-8-SG5	51	ND
B-9-SG5	ND	ND
B-10-SG5	ND	ND
DTSC SSLs - Residential	15	NA

Notes:

USEPA = United States Environmental Protection Agency

VOCs = volatile organic compounds

ND = not detected above the laboratory method detection limit

Values in **RED** = exceeds the applicable regulatory screening level

DUP = duplicate sample

DTSC SSLs = California Department of Toxic Substances Control, Supplemental Screening Levels, Supplemental Guidance: Screening and Evaluating Vapor Intrusion, February 2020, with a recommended attenuation factor of 0.03 for soil gas (contaminant source)

NA = not applicable

APPENDIX A: BORING LOGS

Boring Number:	B-1		
Location:	Eastern portion, in the parking lot median	**Date Started:**	10/8/2020

SOIL CLASSIFICATION CHART

MAJOR DIVISIONS			SYMBOLS GRAPH	SYMBOLS LETTER	TYPICAL DESCRIPTIONS
COARSE GRAINED SOILS — MORE THAN 50% RETAINED ON NO. 200 SIEVE	GRAVEL AND GRAVELLY SOILS — MORE THAN 50% OF COARSE FRACTION RETAINED ON NO. 4 SIEVE	CLEAN GRAVELS (LITTLE OR NO FINES)		GW	WELL-GRADED GRAVELS, GRAVEL - SAND MIXTURES
				GP	POORLY-GRADED GRAVELS, GRAVEL - SAND MIXTURES
		GRAVELS WITH FINES (APPRECIABLE AMOUNT OF FINES)		GM	SILTY GRAVELS, GRAVEL - SAND - SILT MIXTURES
				GC	CLAYEY GRAVELS, GRAVEL - SAND - CLAY MIXTURES
	SAND AND SANDY SOILS — MORE THAN 50% OF COARSE FRACTION PASSING NO. 4 SIEVE	CLEAN SANDS (LITTLE OR NO FINES)		SW	WELL-GRADED SANDS, GRAVELLY SANDS
				SP	POORLY-GRADED SANDS, GRAVELLY SAND
		SANDS WITH FINES (APPRECIABLE AMOUNT OF FINES)		SM	SILTY SANDS, SAND - SILT MIXTURES
				SC	CLAYEY SANDS, SAND - CLAY MIXTURES
FINE GRAINED SOILS — MORE THAN 50% PASSING NO. 200 SIEVE	SILTS AND CLAYS	LIQUID LIMIT LESS THAN 50		ML	INORGANIC SILTS, ROCK FLOUR, CLAYEY SILTS WITH SLIGHT PLASTICITY
				CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
				OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILTS AND CLAYS	LIQUID LIMIT GREATER THAN 50		MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS SILTY SOILS
				CH	INORGANIC CLAYS OF HIGH PLASTICITY
				OH	ORGANIC CLAYS AND SILTS OF MEDIUM TO HIGH PLASTICITY
HIGHLY ORGANIC SOILS				PT	PEAT, HUMUS, SWAMP SOILS WITH HIGH ORGANIC CONTENTS

NOTE: Multiple symbols are used to indicate borderline or dual soil classifications

ADDITIONAL MATERIAL SYMBOLS

SYMBOLS GRAPH	SYMBOLS LETTER	TYPICAL DESCRIPTIONS
	CC	Cement Concrete
	AC	Asphalt Concrete
	CR	Crushed Rock/ Quarry Spalls
	TS	Topsoil/ Forest Duff/Sod

- Measured groundwater level in exploration, well, or piezometer
- Groundwater observed at time of exploration
- Perched water observed at time of exploration

Graphic Log Contact

- Distinct contact between soil strata or geologic units
- Approximate location of soil strata change within a geologic soil unit

Material Description Contact

- Distinct contact between soil strata or geologic units
- Approximate location of soil strata change within a geologic soil unit

Sampler Symbol Descriptions

- Standard Penetration Test (SPT)
- Shelby tube
- Piston
- Direct-Push
- Bulk or grab

Blowcount is recorded for driven samplers as the number of blows required to advance sampler 12 inches (or distance noted). See exploration log for hammer weight and drop.

A "P" indicates sampler pushed using the weight of the drill rig.

Laboratory / Field Tests

%F	Percent fines
AL	Atterberg limits
CA	Chemical analysis
CP	Laboratory compaction test
CS	Consolidation test
DS	Direct shear
HA	Hydrometer analysis
MC	Moisture content
MD	Moisture content and dry density
OC	Organic content
PM	Permeability or hydraulic conductivity
PP	Pocket penetrometer
SA	Sieve analysis
TX	Triaxial compression
UC	Unconfined compression
VS	Vane shear

NOTE: The reader must refer to the discussion in the report text and the logs of explorations for a proper understanding of subsurface conditions. Descriptions on the logs apply only at the specific exploration locations and at the time the explorations were made; they are not warranted to be representative of subsurface conditions at other locations or times.

Notes and Definitions

M-02	Multiple analysis yielded poor internal standard and/or surrogate recoveries due to matrix effect. Results reported are from the most complete recovery of internal standards, however, recoveries were not within the acceptable limits of the method.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

(1) Site Conditions: At 1430, skies are clear; no precipitation

(2) Vapor Well Construction:

A probe tip is set in a sand pack; the probe tip is attached to tubing that leads to the surface. The tubing ends are sealed with gas-tight plugs.

Sand Pack Specification:

			Converts to (cm)
Diameter:	2.0	inches	5.08
Height:	1.0	feet	30.48

Material: sand

Tubing Specification:

			Converts to (cm)
Outer Diameter:	0.25	inches	0.635
Inner Diameter:	0.19	inches	0.483
Lengths:	6	feet (1' added for lead)	

(3) Purge Volume & Time Calculation

Component	Diameter (cm)	X-sect Area (cm^2)	Length or Height (ft)	Length or Height (cm)	Volume (ml)	Sand Pack Volume Times 0.35 Porosity (ml)	Tubing Purge Volumes 1PV (ml)	3 PV's (ml)	10 PV's (ml)
5' bgs tubing	0.483	0.183	6.0	183	33.4	---	33.4	100	334
Bentonite	5.08	20.26	1.0	30.5	617	216	216	648	2161
Sand Pack	5.08	20.26	1.0	30.5	617	216	216	648	2161
Total Pack Volume	---	---	---	---	---	---	432	1297	4322
						Purge flow rate (ml/min):	200	200	200
						5' bgs Purge Time (minutes):	2.3	7.0	23.3

Purge Time Calculation

Total PV = Sand Pack Volume + Tubing Volume

Purge Time = Total PV/Purge flow rate

Purge Time (minutes):

Porosity use for bentonite: 0.35

Total Pack volume equals sum of sand and bentonite pack volumes

Purge Volume: Based on the 7/15/15 DTSC Soil Gas Advisory, remove 3 purge volumes prior to each sample collection (purge times shown above).

(4) Pump Specifications

Pump Model: AIRCHEK SAMPLER

Vender: SKC, Inc.

Model #: 224-PCXR4

Description: A portable battery-powered pump with an adjustable flow-rate and a built-in flow indicator, meter, & timer. The flow was set for a fixed rate of 200ml/min.

Re: CITADEL Proposal No. 0950.1013.0
Limited Phase II Soil Vapor Sampling Services Report
6728 Sepulveda Boulevard
Van Nuys, California 91411

Dear Mr. Benrimon:

Citadel EHS (Citadel) is pleased to provide you with this Limited Phase II Soil Vapor Sampling Services Report for the above-referenced location.

The Phase II Limited Soil Vapor Sampling Services was completed for Uncommon Developers (Client) in general accordance with Citadel's Proposal 0950.1013.P, dated February 12, 2021, and mutually agreed upon scope of work.

If, after your review, you have any questions or require additional information, please do not hesitate to telephone me at (562) 547-3061.

Sincerely,
CITADEL EHS

1.0 INTRODUCTION

Citadel EHS (Citadel) has prepared this Limited Phase II Subsurface Investigation Report for the property located at 6728 Sepulveda Boulevard in the City of Van Nuys, California (Site). The Site consists of a single 2.18 acre parcel developed with a multi-unit assisted living facility, paved parking area, and associated landscaping. Available records indicate the Site was developed with the existing 53,368 square foot (SF) structure in 1973. The property is currently unoccupied and is to be demolished to make way for new Site development. Refer to Figure 1 for a Site Location Map.

This investigation was limited to exterior locations of the Site. No borings were advanced within the footprint of the building, which occupies approximately half of the Site.

2.0 BACKGROUND

Citadel reviewed a Limited Phase II Environmental Site Assessment (Phase II ESA) report prepared by Earth Science, LLC (Earth Science) dated October 19, 2020. The following is a summary of Earth Science's findings and conclusions:

- Several offsite properties in the vicinity of the Site represent a potential environmental concern, including the facility located adjacent to the north of the Site at 6754 Sepulveda Boulevard, which operated as a dry cleaner from at least 1970 up to at least 2012; and the facility at 6756 Sepulveda Boulevard which operates as a laundry mat and cleaners. A review of available regulatory records indicated that the north-adjacent dry cleaning operations generated large quantities of halogenated solvent waste, including wastes from the storage and use of tetrachloroethene (PCE). A dry cleaning facility also operated at the property located adjacent to and northwest of the Site at 6739 Sepulveda Boulevard from at least 1950, and from at least 2014 up to at least October 2020.
- On October 2, 2020, Earth Science advanced 10 borings across the Site to a depth of five feet below ground surface (bgs); installed soil vapor monitoring probes; and collected soil vapor and soil samples. PCE was detected in soil vapor samples from three borings at concentrations between 23 and 51 micrograms per cubic meter (µg/m^3), exceeding the applicable regulatory screening level of 15 µg/m^3. A 4,4- Dichloro-diphenyl-dichloroethylene (DDE) concentration of 0.0058 milligrams per kilogram (mg/kg) was detected in one soil sample, below the residential screening level of 1.8 mg/kg.
- Earth Science reviewed the results of a Limited Subsurface Investigation conducted by Patriot Environmental Laboratory Services, Inc. (Patriot) dated September 17, 2020. Patriot installed soil vapor probes in three borings at a depth of six feet. PCE was detected in soil vapor from two of the borings with reported concentrations between 1,300 and 5,300 µg/m^3.

A closed Leaking Underground Storage Tank (LUST) Cleanup Site exists approximately 635 feet north of the Site at a former Chevron gas station located at 6810 Sepulveda Boulevard. According to the online GeoTracker database a solvent or non-petroleum hydrocarbon leak was reported on January 22, 1996. The case received closure from the Los Angeles Regional Water Quality Control Board (LARWQCB) on September 25, 1996.

3.0 GEOLOGY/HYDROGEOLOGY

The Site elevation is approximately 730 feet above mean sea level and slopes to the south-southeast (USGS, 2018). The Site is identified on the geologic map of the of the Van Nuys quadrangle, Southern California as being Holocene-aged alluvial gravel, sand, silt and clay (Yerks, 1996).

The Site is located within the southern part of the San Fernando Valley Groundwater Basin (No. 4-12), Los Angeles County (California Natural Resources Agency, 2003). The basin is bounded on the north and northwest by the Santa Susana Mountains, on the north and northeast by the San Gabriel Mountains, on the east by the San Rafael Hills, on the south by the Santa Monica Mountains and Chalk Hills, and on the west by the Simi Hills. The valley is drained by the Los Angeles River and its tributaries. The water-bearing sediments consist of the lower Pleistocene Saugus Formation, and Pleistocene and Holocene age alluvium. The ground-water in this basin is mainly unconfined with some confinement within the Saugus Formation in the western part of the basin and in the Sylmar and Eagle Rock areas.

According to a Geotechnical Investigation report prepared by GEOCON West, LLC (GEOCON) dated September 11, 2020, the historical maximum groundwater height in the basin is approximately 40 feet bgs. Groundwater was not encountered in borings drilled to a maximum depth of 65.5 feet bgs during GEOCON's investigation.

4.0 PRE-FIELD ACTIVITIES

A Site-specific health and safety plan (HASP) was prepared prior to on-site activities. This HASP identified existing and potential hazards for workers during drilling and sample collection activities. The HASP was discussed with the Citadel team and subcontractors each day prior to performing the fieldwork. A copy of the HASP is included in Appendix A.

To screen the boring sites for potential utilities, Citadel marked the proposed boring locations and contacted Underground Service Alert (USA) for marking of utilities. Boring clearances were completed using a hand auger to approximately five feet bgs to avoid impacting subsurface anomalies not associated with underground utilities that may have been present at each boring location.

5.0 SOIL VAPOR AND SOIL SAMPLING

On February 23, 2021 Citadel advanced six borings identified as B1 through B6 across the Site. Each boring was advanced to a depth of approximately 25 feet bgs. Refer to Figure 2 for a Site Map showing the boring locations. Refer to Appendix B for copies of Boring Logs, and Appendix C for a copy of Citadel's field notes.

Soil samples were collected in acetate sleeves at approximate five-foot intervals beginning at five feet bgs. Each sample was labeled according to the boring number and the sample depth. For example, B1-5 is the five-foot sample from boring B1. The soil borings were logged under the supervision of a California Professional Geologist, and soil samples collected from each boring were field screened with a photoionization detector (PID) to monitor the vapor space for the presence of volatile organic compounds (VOCs).

Soil vapor sampling probes were installed in each boring at 15 feet and at the terminus of each boring. Gas tight fittings were placed at the end of the probes at the surface. Soil vapor samples were collected in one-liter Tedlar bags at least two hours after the probe installation. Following the collection of soil vapor samples, the tubing was removed. The boring locations were backfilled with hydrated bentonite and the surface finished to match the surrounding surface.

Soil samples were placed in a chilled cooler, and soil vapor samples were placed in a cooler without ice to insulate the samples from sun light and kept at room temperature to prevent condensation. Samples were delivered to Eurofins Calscience, LLC., a state-certified laboratory, under standard Chain-of-Custody (COC) protocols.

Twelve soil vapor samples were analyzed for VOCs by EPA Method 8260B and TPH as gasoline by EPA Method TO-3.

Thirty soil samples were submitted to the laboratory and placed on hold for analysis if deemed necessary. The criteria for analyzing these samples were based on results of the soil vapor analysis, and field PID measurements.

6.0 SCREENING LEVELS

Laboratory results above the reporting limits (RLs) for each sample were compared to the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB, 2019) Environmental Screening Levels (ESLs); the California Department of Toxic Substances Controls (DTSC) Human and Ecological Risk Office (HERO) Note 3 Screening Levels (SLs, 2020); and from the US Environmental Protection Agency's (EPA) Regional Screening Levels (RSLs, 2020). The DTSC SLs and EPA RSLs were compared to the results when the SFBRWQCB ESLs were not available for that constituent. The soil vapor ESLs for evaluating soil vapor intrusion are based on indoor air concentrations over an attenuation factor (AF) of 0.03. This represents a very conservative approach to establishing future risk.

7.0 RESULTS

This section presents a summary and comparison of the results to the appropriate screening levels for soil and soil vapor. VOCs in soil vapor are summarized in Table 1. VOCs and TPH in soil is summarized in Table 2. Copies of the laboratory reports are presented in Appendix C.

Twelve soil vapor samples were analyzed for VOCs. VOCs were detected above laboratory RLs in one or more samples including 1,1-Dichloroethene, 1,2-Dichloropropane, 2-Butanone (MEK), 4-Methyl-2-pentanone, acetone, benzene, chloroethane, chloromethane, dichlorodifluoromethane, di-isopropyl ether (DIPE), ethylbenzene, isopropanol, m,p-xylene, methylene chloride (DCM), o-xylene, tert-butyl alcohol (TBA), PCE, toluene, trichloroethene (TCE), and trichlorofluoromethane.

- PCE was detected in all samples. The highest concentrations were reported from borings B2, B3, B4, B5 and B6 between 17 and 480 µg/m^3, exceeding the residential screening level of 15 µg/m^3. PCE concentrations in samples B1-15 and B1-25 were reported at 4.0 and 5.1 µg/m^3, respectively, below the residential screening level of 15 µg/m^3.

- Benzene was detected in all samples with the exception of B3-15 and B5-15. Benzene concentrations were reported from borings B1, B2, B3, B4 and B5 between 3.5 and 40 µg/m^3, exceeding the residential screening level of 3.2 µg/m^3.
- The remaining VOCs identified above the reporting limit were below the residential screening levels.

Thirty soil samples were submitted to the laboratory and placed on hold for analysis pending results of the soil vapor analysis, and field PID measurements. The criteria for these analyses are used to investigate potential sources of contaminants found in soil vapor. In this investigation, B2-5 contained visible staining and odor, and a VOC concentration of 4.829 ppm$_v$ was detected using the PID. Citadel therefore recommended that the soil sample from B2-5 be analyzed for VOCs and TPH. Soil samples from B3-15 and B3-25 where also analyzed.

- Acetone was reported with a concentration of 23 micrograms per kilogram (µg/kg) for sample B4-22. This concentration is below the residential screening level of 61,000,000 µg/kg.
- TPH concentrations in soil between 5.6 and 32 mg/kg were detected in seven samples. These results are below the residential screening level of 12,000 mg/kg.

8.0 CONCLUSIONS AND RECOMMENDATIONS

The current investigation was intended to provide assessment and delineation of soil vapor risks at the Site. Twelve soil vapor samples were analyzed for VOCs, and three soil samples were analyzed for VOCs and TPH. Based on the findings of this investigation and analytical results, Citadel concludes the following:

- PCE concentrations in soil vapor exceeded residential ESLs in borings B2, B3, B4, B5 and B6.
- Concentrations of benzene exceeded residential ESLs in soil vapor samples from borings B1, B2, B3, B4 and B5.
- TPH was detected in soil samples from borings B2 and B4 in concentrations below current residential screening levels.

Based on this investigation, the Site is impacted by the presence of VOCs. The presence of PCE is consistent with dry cleaning operations and may be related to present and historical dry cleaning and laundry operations at the facilities located north of the Site. Solvent and fuel-related VOCs are present in soil vapor. Concentrations of TPH in soil are well below residential screening levels and are unlikely to be a source for the VOCs detected in soil vapor. The presence of VOCs in all samples indicate the majority of the site is impacted.

Citadel understands that the Site is planned for redevelopment into multi-family residential use. Due to the presence of VOCs in soil vapor laterally and vertically across the Site, Citadel recommends that a Human Health Risk Assessment (HHRA) be conducted for the Site. The HHRA will be prepared by a qualified Toxicologist and would determine whether VOCs detected in soil vapor represents a threat to current and future human health, and determine whether risk-control measures would be required to protect future residents and workers based on the planned residential development. If the results of the HHRA indicate a cancer risk greater than 1x10^{-6} or a health hazard index greater than 1, Citadel will recommend the installation of a soil vapor barrier and passive venting system for the ground floor residential units.

In addition, Citadel recommends the preparation and implementation of a Soil Management Plan (SMP) prior to any construction activities that require excavation of soil. The purpose of the SMP is to describe specific soil-handling controls required for complying with local, state and federal overseeing agencies; prevent unacceptable exposure to contaminated soil and prevent the improper disposal of contaminated soils. This SMP applies to soil-disturbing activities performed at the Site. Soil-disturbing activities include excavation, grading, trenching, asphalt removal, utility installation or repair, and any other human activities that could potentially bring contaminated soil or soil vapor to the surface. The plan applies to such work regardless of the entity performing the work.

Prior to soil excavation activities, implementation of South Coast Air Quality Management District (SCAQMD) Rule 1166 monitoring is required due to the presence of VOCs. AQMD Rule 1166 monitoring includes overseeing removal of VOC-impacted soil with an organic vapor analyzer instrument, as per the 1166 permit. After completion of the earthwork activities, Citadel will prepare and submit a written report to SCAQMD that will document the monitoring and mitigation activities performed at the Site.

10.0 LIMITATIONS

This Investigation was performed in accordance with generally and currently accepted engineering practices and principles. Although the data in this report is indicative of subsurface conditions in areas investigated, no further conclusions regarding the absence or presence of

subsurface contamination at the site should be construed or inferred other than those expressly stated in this report. The conclusions made are based on information obtained from field observations, and from relevant Federal, State, regional, and local agencies.

11.0 DISCLAIMER

The services performed by Citadel Environmental Services, Inc. ("Citadel"), d.b.a. Citadel EHS, in connection with this Report were performed in accordance with generally and currently accepted engineering practices and principles; provided, however, Citadel completed such services as directed by the Client and the recommendations described in this Report are therefore limited in purpose and scope. The procedures and methodologies used by Citadel in its performance of services, and the recommendations contained herein, are not intended to meet the requirements under any specific laws or regulatory guidelines unless expressly set forth in the Proposal.

The recommendations and conclusions set forth in this Report are based on information and data available to Citadel during the course of its performance of the services. Citadel relied on the information and data provided by or on behalf of Client, including, if applicable, historical and present operations, conditions and test data, and Citadel assumed all such information and data was correct and complete. Citadel shall not be liable for any damages or losses resulting from inaccuracies of, or omissions from, information or data provided by or on behalf of the Client, any interested third-parties, or any federal, state, county, or local governmental authority, or otherwise available in the public domain.

The information contained in this Report and conclusions resulting therefrom are based solely on information available to Citadel at the time of its performance of services, and from observations and perceived conditions and materials existing on the date of Citadel's limited survey of the site, if applicable. Citadel disclaims any inaccuracy in the Report as a result of any part or parcel of property to which Citadel was not provided access, or which was concealed, including, but not limited to, wall cavities/chases, ceiling plenums, below floor finishes, crawlspaces, below grade, beneath existing structures, or behind electrical panels.

The findings and recommendations presented in this Report are based upon observations of present conditions and may not necessarily indicate future conditions. No conclusions should be construed or inferred other than those expressly stated in this Report. EXCEPT FOR ANY WARRANTIES EXPRESSLY SET FORTH IN THE PROPOSAL OR OTHER WRITTEN AGREEMENT BETWEEN CITADEL AND CLIENT, CITADEL MAKES NO WARRANTIES HEREUNDER WITH RESPECT TO ANY INFORMATION CONTAINED IN THIS REPORT, EXPRESS OR IMPLIED, AND CITADEL HEREBY DISCLAIMS ALL OTHER WARRANTIES.

All testing and remediation methods have reliability limitations and no method nor number of sampling locations can guarantee that a hazard will be discovered if contamination or other evidence of the hazard is not encountered within the performance of the services as authorized. Reliability of testing or remediation varies according to the sampling frequency and other service variables that were selected by Client. Citadel shall not be at fault or liable for any such limitations.

The information and opinions rendered in this report are exclusively for use and reliance by the Client. The information contained herein may not be used, disclosed, or copied without written permission of the Client and may not be relied upon without the written permission of Citadel.

1.0 SITE DESCRIPTION

Citadel EHS (Citadel) has prepared this Health and Safety Plan (HASP) for use during Phase II Subsurface Investigation activities to be conducted at the property located at 6728 Sepulveda Boulevard in the City of Van Nuys, California (Site). Activities conducted under Citadel's direction at the Site will be in compliance with applicable Occupational Safety and Health Administration (OSHA) regulations, particularly those in Title 8 California Code of Regulations (CCR) 5192, and other applicable federal, state, and local laws, regulations, and statutes. A copy of this HASP will be kept onsite during scheduled field activities.

2.0 BACKGROUND

Uncommon Developers (Client) has requested Citadel to conduct soil vapor sampling on the Site where a large multi-residential complex is planned for development. Citadel understands that the development will be above a ground level podium with a partial subterranean parking to approximately eight to twelve feet below ground surface (bgs). To assess the Site for the presence of volatile organic compounds (VOCs), Citadel's investigation will include the collection of soil and soil vapor samples to approximately 25 feet below ground surface (bgs).

3.0 SAFETY POLICY

Safety will be given primary importance in the planning and operation of this project. The safety policy shall strictly adhere to current EPA and OSHA standards, and local government agency requirements having authority over the project as regards to Client employees, as well as to public safety. Some of the applicable health and safety standards are listed below:

- 40 Code of Federal Regulations Part 261, Identification and Listing of Hazardous Waste;
- Health and Safety Code, Division 20, Chapter 6.5, California Hazardous Waste Control Act;
- Title 8, California Code of Regulations, Section 1510, Safety Instruction for Employees;
- Title 8, California Code of Regulations, Section 3380, Personal Protective Equipment;
- Title 8, California Code of Regulations, Section 5144, Respiratory Protection;
- Title 8, California Code of Regulations, Section 5194, Hazard Communication; and
- Title 22, California Code of Regulations, Division 4.5, Environmental Health Standards for the Management of Hazardous Waste.

Each subcontracting firm will assume primary responsibility for the safety of their own work in regard to their employees and other persons. Subcontractors will assume the duty to comply with OSHA, and all other federal, state and local regulations.

The subcontractors work will be monitored by Client project managers for implementation of this HASP, while adhering to their own safety program. The Client will retain the authority and power to enforce this HASP during the progress of the work. Any deficiencies in safe work practices will be brought to the attention of the subcontractor firm's supervisor for immediate corrective action. If the subcontractor fails or refuses to take corrective action promptly, a stop work order shall be issued and the subcontractor or the subcontractor employee may be removed from the Site.

4.0 WORK DESCRIPTION

SOIL SAMPLING

To evaluate the current subsurface conditions, Citadel will advance six borings across the Site. The borings will be advanced to a depth of approximately 25 feet below ground surface (bgs) using a direct push drill rig. Soil samples will be collected in acetate sleeves at approximate five-foot intervals. The soil borings will be logged by, or under the supervision of a California Professional Geologist, and soil samples collected from each boring will be field screened with a photoionization detector (PID) or equivalent to monitor the vapor space for the presence of volatile organic compounds (VOCs). Citadel will collect 30 soil samples for transportation to a state approved analytical laboratory.

SOIL VAPOR SAMPLING

After collection of soil samples, Citadel will install soil vapor probes in each boring at depths of 15 and 25 feet bgs. All soil vapor sampling probes will be installed in accordance with the California Environmental Protection Agency's (Cal EPA) Department of Toxic Substance Control (DTSC) – Active Soil Gas Investigation[1] and Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air[2]. Soil vapor probe tips will be placed within a sand pack at the proposed sampling depths. Approximately six inches of dry bentonite chips will be placed over the sand pack, followed by placement of hydrated bentonite. Gas tight fittings will be placed at the end of the probes at the surface. Soil vapor samples will be collected in one-liter Tedlar bags following the procedure of the Cal EPA's Active Soil Gas Investigation Authority approximately two hours after the probes have been installed. Citadel will collect 12 soil vapor samples for transportation to a state approved analytical laboratory. Following the collection of soil and soil vapor samples, the boring locations will be backfilled with hydrated bentonite.

5.0 KEY PROJECT PERSONNEL AND RESPONSIBILITIES

Project Manager	Scott Grasse (Citadel)
Site Safety Officer (SSO)/Project Monitor	Tim Lambert (Citadel)
Subcontractor Personnel	Samuel Miller (Choice Drilling)

PROJECT MANAGER

The Project Manager has the ultimate responsibility for the health and safety of personnel at the Site. The Project Manager is responsible for:

- Ensuring that project personnel review and understand the requirements of this HASP;
- Keeping on-site personnel informed of the expected hazards and appropriate protective measures at the Site; and
- Providing resources necessary for maintaining a safe and health work environment.

[1] Advisory Active Soil Gas Investigations, California Environmental Protection Agency, Department of Toxic Substance Control, Los Angeles Regional Water Quality Control Board, San Francisco Regional Water Quality Control Board, July 2015.

[2] Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air, Department of Toxic Substance Control, California Environmental Protection Agency, October 2011.

SITE SAFETY OFFICER/PROJECT MONITOR

The SSO is responsible for enforcing the requirements of this HASP once site work begins. The SSO has the authority to immediately correct situations where noncompliance with this HASP is noted and to immediately stop work in cases where an immediate danger to site workers or the environment is perceived. Responsibilities of the SSO also include:

- Obtaining and distributing personal protective equipment (PPE) and air monitoring equipment necessary for this project;
- Limiting access at the Site to authorized personnel;
- Communicating unusual or unforeseen conditions at the Site to the Project Manager;
- Supervising and monitoring the safety performance of site personnel to evaluate the effectiveness of health and safety procedures and correct deficiencies;
- Conducting daily tailgate safety meetings before each day's activities begin; and
- Conducting a site safety inspection prior to the commencement of each day's field activities.

SUBCONTRACTOR PERSONNEL

Subcontractor personnel are expected to comply with the minimum requirements specified in this HASP. Failure to do so may result in the dismissal of the subcontractor or any of the subcontractor's workers from the job site. Subcontractors may employ health and safety procedures that afford them a greater measure of personal protection than those specified in this plan as long as they do not pose additional hazards to themselves, the environment, or others working in the area.

6.0 SITE CONTROL MEASURES

The SSO or Project Manager has been designated to coordinate access and security on site. The Client is responsible for general Site safety.

7.0 STANDARD OPERATING PROCEDURES

GENERAL SAFETY

- Maintain good housekeeping at all times in all project work areas.
- Check the work area to determine what problems or hazards may exist.
- Designate specific areas for the proper storage of materials.
- Store tools, equipment, materials, and supplies in an orderly manner.
- Provide containers for collecting trash and other debris.
- Clean up all spills quickly.
- Report unsafe conditions or unsafe acts to your supervisor immediately.
- Report all occupational illnesses, injuries, and vehicle accidents.
- Do not wear loose clothing, wristwatches, and other loose accessories when within arm's reach of moving machinery.
- Emergency exits and evacuation areas should be clearly marked during work activities.
- Personnel fall protection is required when climbing to perform maintenance six feet or higher above ground.
- Inspect hand tools and use proper PPE.
- Ensure proper grounding and guarding of equipment.

- Keep hands and fingers out of pinch points.
- Use good ergonomic posturing when working with heavy items.

COMMUNICATION PROCEDURES

Due to the close proximity of all field crew members, the necessity for radio communication is not necessary.

The following standard hand signals will be used:

Hand drawn across throat .....Cease operation immediately
Hand gripping throat .....Out of air, cannot breathe
Grip partner's wrist or both hands around waist ..... Leave area immediately
Hands on top of head .....Need assistance
Thumbs up ..... OK, I am alright, understood
Thumbs down.....No, negative

FIELD VEHICLES

- Equip vehicles with emergency supplies and equipment.
- Maintain both a first aid kit and fire extinguisher in the field vehicle at all times.
- Utilize a rotary beacon on vehicle if working adjacent to active roadway.
- Always wear seatbelt while operating vehicle.
- Tie down loose items.

MANUAL LIFTING

- Personnel shall seek assistance when performing manual lifting tasks that appear beyond their physical capabilities.
- Assess the situation before lifting, ensure good lifting and body positioning practices, and ensure good carrying and setting down practices.

HEAT EXPOSURE

- Limit exposure to the sun or take extra precautions when the UV index rating is high.
- Take lunch and breaks in shaded areas.
- Create shade by using umbrellas, tents, and canopies.
- Wear proper clothing: long sleeved shirts with collars, long pants, and UV-protective sunglasses or safety glasses.
- Apply sunscreen generously to all exposed skin surfaces at least 20 minutes before exposure. Re-apply sunscreen at least every 2 hours, and more frequently when sweating or performing activities where sunscreen may be wiped off.
- Communicate any concerns regarding heat stress to a supervisor.
- Keep hydrated throughout the day (about 4 cups per hour).

- OHSA's Heat Index:

Heat Index	Risk Level	Protective Measures
Less than 91°F	Lower (Caution)	Basic heat safety and planning
91°F to 103°F	Moderate	Implement precautions and heighten awareness
103°F to 115°F	High	Additional precautions to protect workers
Greater than 115°F	Very High to Extreme	Triggers even more aggressive protective measures

Utilities (Under Ground and Above Ground): Low Hazard. All boring locations will be hand drilled and stop work will be enforced if any utilities are encountered.

Biological Hazards: Low to Medium Hazard. Beware of spiders, insects and other possible animals.

Site Instability: Low to Medium Hazard. The Site will be inspected prior to equipment placement and closely monitored. Any settling of the equipment will cause the work to stop immediately.

Equipment Refueling: Low Hazard. Equipment shall not be refueled with the engine running. Cigarettes, open flames, or other ignition sources are not allowed within 50 feet of the fueling location.

Personnel Injury: Upon notification of an injury, the Project Field Leader should evaluate the nature of the injury, and the affected person should be decontaminated to the extent possible prior to movement. The Project Field Leader shall initiate the appropriate first aid, and contact should be made for an ambulance and with the designated medical facility (if required).

Fire/Explosion: The fire department shall be alerted, and all personnel moved to a safe distance from the involved area.

Other Equipment Failure: If any other equipment on site fails to operate properly, the Project Team Leader shall be notified and then determine the effect of this failure on continuing operations on site. If the failure affects the safety of personnel or prevents completion of the Work Plan tasks, work will cease until the situation is evaluated and appropriate actions taken.

COVID-19 FIELD WORK PREVENTION GUIDELINES

The following guidelines were prepared to prevent COVID-19 transmission while performing essential field work activities at the Site:

1. **Stay at least 6 feet from others** whenever possible. Avoid, or at least **minimize close contact with others**. Close contact means being within 6 feet of someone else for more than 15 minutes. By CDC guidelines, it doesn't matter if you are wearing face covering or not to be consider as being in close contact. Even with face covering, being close for extended periods of time, can greatly increase your risk of exposure. *Keep your distance even when wearing face covering or PPE.*

2. **Wear face covering in public and anytime you will interface with others**, regardless of time. *Distance and face covering are likely the two best methods available to minimize exposures.*

3. **Wash your hands frequently and avoid touching your face, nose and mouth with unwashed hands.** Also, don't be fooled into a false sense of security, believing gloves will fully protect you from COVID-19. Even when you wear gloves for protection against chemicals, you still need to wash your hands to minimize exposure.

   Be careful when putting on and taking off PPE to be sure we do not contaminate our hands in the process and then touch our face, nose or mouth with unwashed hands. In doing so, we defeat the purpose of wearing PPE. *Also, don't overdo the hand sanitizer – choose to use soap and water as much as possible.*

4. **Clean and disinfect surfaces you come into contact and minimize touching commonly used surfaces whenever possible.** Cleaning and disinfecting surfaces would not be as important if everyone were wearing face covering and washing their hands more regularly. But because individual behaviors vary quite a bit, we need to do what we can to protect ourselves and others by routinely cleaning and disinfecting the things we touch. How often will depend on how often you touch a surface or object and whether others are likely to come into contact with it as well. *Cleaning and disinfecting helps reduce exposure, but don't rely on it as a replacement for distancing, face covering and hand washing.*

5. **Monitor your own health** for COVID-19 symptoms and **stay at home**, away from others, if symptoms develop. The sooner you self-isolate, the more you lessen the chance of spreading it to others, regardless of whether it is COVID-19, the flu or some other contagion.

8.0 EXPOSURE MONITORING

The following substances are known or suspected to be on site. The primary hazards of each are identified as follow:

Substances	Concentration	Primary Hazards
Volatile Organic Compounds	Various	Ingestion, inhalation, skin
Total Petroleum Hydrocarbons	Various	Ingestion, inhalation, skin

VOCs: VOCs include a variety of chemicals, some of which may have short- and long-term adverse health effects. Health effects include eye, nose, and throat irritation, headaches, loss of coordination, nausea, and damage to liver, kidney, and central nervous system. Some organics are known to cause cancer in humans.

The SSO will monitor on-site worker exposure to airborne contaminants during intrusive site activities. Measurements should be taken within the breathing zones of workers. A photoionization device (PID) will be used to monitor changes in exposure to VOCs. The PID shall be calibrated daily in the field and undergo annual maintenance including calibration by a certified provider.

TPH: A complex blend of petroleum-derived normal and branched-chain alkane, cycloalkane, alkene, and aromatic hydrocarbons. May include benzene and its derivatives, sulfur, and naphthalene. Danger of serious damage to health by prolonged exposure in contact with skin. Possible risk of harm to the unborn child. Repeated exposure may cause skin dryness or cracking. Breathing of high vapor concentrations may cause dizziness, light-headedness, headache, nausea, and loss of co-ordination. Continued inhalation may result in unconsciousness. Prolonged or repeated contact with skin may cause redness, itching, irritation, eczema/chapping and oil acne.

Components of the product may be absorbed into the body through the skin. Prolonged and repeated contact with the product may cause skin cancer. May cause damage to the liver. Use proper PPE when handling TPH impacted matrials.

ACTION LEVELS AND EXPOSURE LIMITS

VOCs:
According to OSHA (29 CFR 1926.55 Appendix A, Footnote (A (3)), the composition of TPH varies greatly and thus a single Threshold Limit Value (TLV) for all types of these materials is not applicable. The OHSA Permissible Exposure Limit (PEL) for compounds commonly present in TPH-impacted soil is listed below; these concentrations must not be exceeded when working in areas where these hazardous compounds may be present:

Volatile Organic Compounds (VOCs): 100 ppm_v PEL

If these concentrations are exceeded and cannot be controlled by local methods, an evacuation of the immediate area and possibly the Site will be ordered in accordance with the evacuation route in Section 11.0.

9.0 PERSONAL PROTECTIVE EQUIPMENT

The purpose of PPE is to protect employees from hazards and potential hazards they are likely to encounter during site activities. The amount and type of PPE used will be based on the nature of the hazard encountered or anticipated. Respiratory protection will be utilized when an airborne hazard has been identified using real-time air monitoring devices, or as a precautionary measure in areas designated by the SSO, elevating to level C. If this occurs, contractor personnel shall be respirator-approved.

Dermal protection, primarily in the form of chemical-resistant gloves and coveralls, will be worn whenever contact with chemically affected materials (e.g. soils, groundwater, sludge) is anticipated, without regard to the level of respiratory protection required.

Based on evaluation of potential hazards, the following levels of personal protection have been designated for the applicable work areas or tasks:

Location	Job Function	Level of Protection
Controlled Area	All Workers	A B C (D) Other

Specific protective equipment for each level of protection is as follows:

Level A
Fully-encapsulating suit
SCBA
Disposable coveralls

Level C
Splash gear
Half-face canister respirator with H_2S/VOC cartridge
Mouth/nose canister respirator
Efficiency 100 (HEPA)

Level B

Splash gear
SCBA

Level D

Hard hat
Ear plugs
Neoprene or leather gloves - nitrile gloves
Safety vests and Glasses
Hard toe boots

NO CHANGES TO THE SPECIFIED LEVELS OF PROTECTION SHALL BE MADE WITHOUT THE APPROVAL OF THE SSO OR PROJECT MANAGER.

10.0 DECONTAMINATION PROCEDURES

Despite protective procedures, personnel may come in contact with potentially hazardous compounds while performing work tasks. If so, decontamination needs to take place using an Alconox or tri-sodium phosphate (TSP), followed by a rinse with clean water. Standard decontamination procedure for levels C and D are as follows:

- Equipment drop
- Boot cover and outer glove wash and rinse
- Boot cover and out glove removal
- Suit wash and rinse
- Suit removal
- Safety boot wash and rinse
- Inner glove wash and rinse
- Respirator removal
- Inner glove removal
- Field wash of hands and face

Workers should employ only applicable steps in accordance with level of PPE worn and extent of contamination present. The SSO shall maintain adequate quantities of clean water to be used for personal decontamination (i.e. field wash of hands and face) whenever a suitable washing facility is not located in the immediate vicinity of the work area. Disposable items will be disposed of in an appropriate container. Wash and rinse water generated from decontamination activities will be handled and disposed of properly. Non-disposable items may need to be sanitized before reuse. Each site worker is responsible for the maintenance, decontamination, and sanitizing of his/her own PPE.

Used equipment may be decontaminated as follows:

- An Alconox or TSP and water solution will be used to wash the equipment.
- The equipment will then be rinsed with clean water.

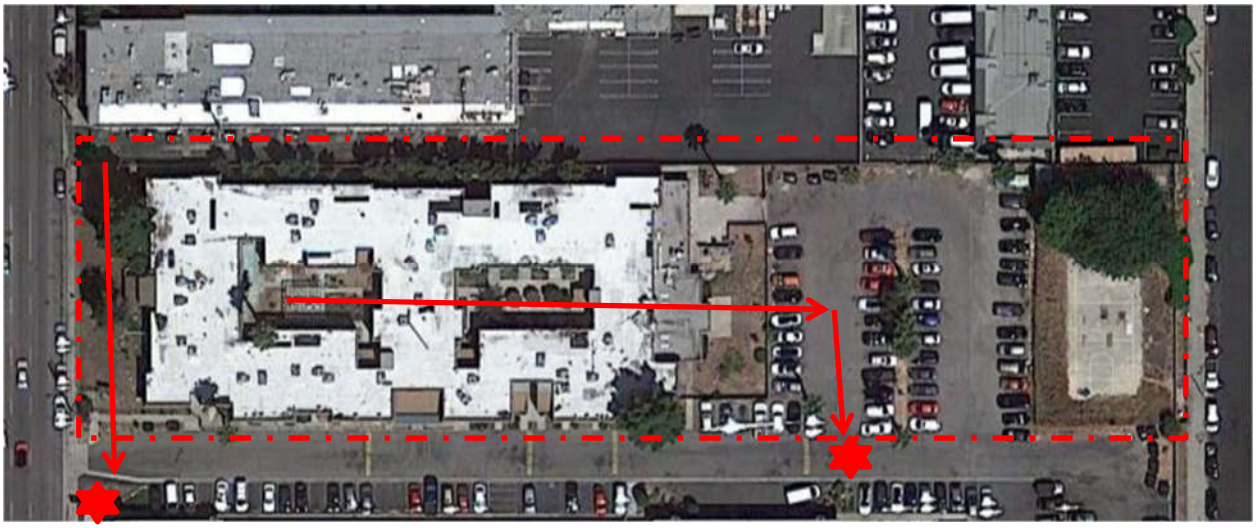
Each person must follow these procedures to reduce the potential for transferring chemically affected materials offsite.

11.0 EMERGENCY PROCEDURES

In the event of an emergency, site personnel will signal distress with three blasts of a horn (a vehicle horn will be sufficient), or other predetermined signal. Communication signals, such as hand signals, must be established where communication equipment is not feasible or in areas of loud noise.

The SSO will designate evacuation routes and refuge areas to be used in the event of an emergency. Site personnel will stay upwind from vapors or smoke and upgradient from spills. Workers should exit through the established decontamination areas wherever possible. If evacuation cannot be done through an established decontamination area, site personnel will go to the nearest safe location and remove contaminated clothing there. Personnel will assemble at the predetermined refuge following evacuation and decontamination. The SSO will count and identify site personnel to verify that all personnel have been evacuated safely. Please refer to Figure 1.0 for the evacuation route and refuge location.

FIGURE 1.0 – EVACUATION ROUTE AND REFUGE AREA



= Approximate Site Boundaries

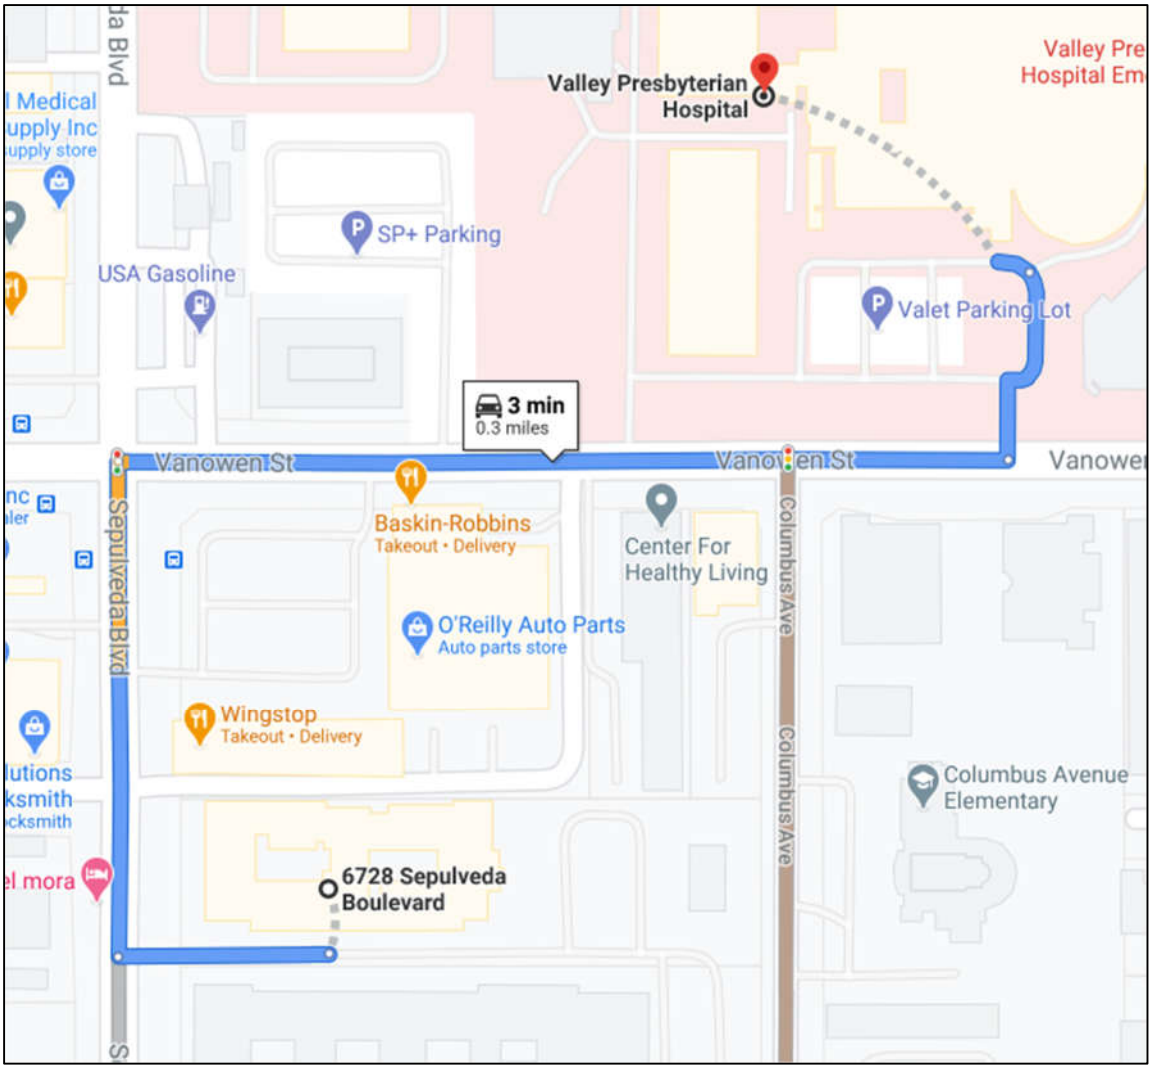
= Refuge Area

= Excavation Route

FIGURE 2.0 – DESIGNATED MEDICAL FACILITY

The designated medical facility is:

Valley Presbyterian Hospital
15107 Vanowen Street
Van Nuys, California 91405
Telephone: (818) 782-6600



Directions:

Head west toward Sepulveda Blvd	
Turn right onto Sepulveda Blvd	489 feet
Turn Right onto Vanowen St	0.2 miles
Turn left into hospital parking lot	207 feet
Destination with be to your front	

Local ambulance service is available from:

Name: Local Paramedics
Phone: 911

First-aid equipment is available in the SSO's vehicle.

List of emergency phone numbers:

Agency/Facility	**Phone**
Police/Fire	911
Hospital	(805) 497-2727

PROJECT DOCUMENTATION

CITADEL EHS

CLIENT	UNCOMMON DEVELOPERS	**PAGE**	1 OF 2
PROJECT NUMBER	0950.1013.0	**CITADEL FIELD REPRESENTATIVE**	Tim Lambert (818) 749-0819
PROJECT NAME	Phase II Subsurface Investigation	**CONTRACTOR**	Choice Drilling
PROJECT WORK AREA	Two story residential with courtyards, and asphalt parking lot	**CITADEL PROJECT MANAGER**	Scott Grasse (562) 547-3061
PROJECT LOCATION	8728 Sepulveda Blvd, Van Nuys		

TIME	FIELD NOTES
0640	Citadel on site. Meet with owner, Brian, and walk the site to survey boring locations and discuss logistics.
0700	Choice arrives on site. Discuss scope of work. Conduct safety meeting and review HASP.
0710	Begin setup.
0727	Drilling begins at B1. Second crew begins setup and hand auger at B4 in the west courtyard.
0800	Drilling begins at B4. Begin setting probes at B1.
0815	B1 probes set at 15' & 25'.
0831	Drilling complete at B4. Begin setting probes.
0835	Drilling begins at B2. B4 refusal at 22'.
0855	B2 is complete. Begin setting probes. Drilling begins at B3.
0940	B3 is complete. Begin setting probes. During hand augering at B5, the crew encountered a solid obstruction. This is located at the transformer approx. 4' east. The obstruction is at 3' depth. Crew begins hand augering at the alternate location approx. 40' to the SW.
1016	B5 is complete. Begin setting probes. Begin hand augering B6.
1025	Drilling begins at B6.
1100	Full depth is reached though there was no soil recovery at the depths.
1110	Crew begins hand augering the alternate location for B6 at the SW corner of the property.

Definitions/Glossary

Client: Citadel Environmental Services Inc
Project/Site: 8728 Sepulveda Blvd.

Job ID: 570-51910-1

Qualifiers

Air - GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Citadel Environmental Services Inc
Project/Site: 8728 Sepulveda Blvd.

Job ID: 570-51910-2

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 570-51910-2

Narrative

Job Narrative
570-51910-2

Comments
No additional comments.

Receipt
The samples were received on 2/23/2021 5:34 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.5º C.

GC/MS VOA
Method 8260B: The following analyte recovered outside control limits for the LCS associated with preparation batch 570-132342 and analytical batch 570-132363: 1,2-Dichloropropane. This is not indicative of a systematic control problem because this was a random marginal exceedance. Qualified results have been reported.

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-132342 and analytical batch 570-132363 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Citadel Environmental Services Inc
Project/Site: 8728 Sepulveda Blvd.

Job ID: 570-51910-2

Client Sample ID: B2-5 — Lab Sample ID: 570-51910-6

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
C33-C36	5.6		5.0		mg/Kg	1		8015B	Total/NA

Don,

Please analyze the following soil samples for VOC by 8260B and TPH full range with 72-hour TAT. I understand results will be available Monday morning or possible Friday afternoon.

B2-5
B4-15
B4-25

Thank you, Scott

Scott,

$45 for TPH full range (C6-C44)
$75 for VOCs full list

Thank you.

Don

Scott,

If the samples are here by 7pm tonight, we can get results to you by end of Friday for the 72-hour TAT. If we get the samples before noon tomorrow, we can have results to you before noon on Monday for the 72-hour TAT. Do you want be to cancel the courier sample pickup tomorrow? Thanks.

Don

Thanks Don. If we get them early enough Monday morning we are ok. What is the latest tomorrow morning we could get you the samples and still get results by Monday morning with 72 hour turn around time. If we get them to you tonight before 7pm could we get results just as early or earlier on Monday morning with 72 hour TAT?

Scott,

I will get the sample pickup scheduled for tomorrow. The TAT starts when the samples get back to the lab. So results Thursday would be 1-day TAT; results Friday would be a 2-day TAT (50%); results Monday would be a 3-day TAT (25%). Thank you.

Don

Don,

We have 12 tedlar bags with vapor samples that need analysis. Would you be able to pick them up from the Glendale office tomorrow?

We would also like to have them analyzed for VOCs by TO-15 since your pricing is the same as 8260 at $125. We need the results by Friday afternoon. Is that possible with a pickup tomorrow and a 72-hour +25% surcharge?

Thanks Scott

Re: CITADEL Project No. 0950.1017.0
Phase I Environmental Site Assessment Report
6728 Sepulveda Boulevard
Van Nuys, California 91411

Dear Mr. Benrimon:

Enclosed please find Citadel EHS's Phase I Environmental Site Assessment Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted for Uncommon Developers, in accordance with Citadel's Proposal 09501.1017.P, dated April 14, 2021, and a mutually agreed upon scope of work.

If after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in Glendale at (818) 246-2707.

Sincerely,
CITADEL EHS

Mark Drollinger

Citadel EHS (Citadel) was contracted by Uncommon Developers (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

Current Site Conditions

The Site consists of undeveloped land in the north portion of the Site and asphalt-paved surface areas in the south portion of the Site. Access to the Site parking areas is in the southwest corner of the Site along Sepulveda Boulevard. At the time of the Site reconnaissance, the Site was unoccupied. Chain link fencing was observed along the perimeters of the Site. No stationary equipment was observed at the Site.

Site History

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the use of the Site as orchards. The Site appeared undeveloped by 1952 and remained relatively unchanged until the construction of a nursing home in 1972. The nursing home was demolished by April 2021.

Previous Environmental Reports

Citadel reviewed the following environmental reports for the Site:

- Patriot Environmental Laboratory Services, Inc. (Patriot) performed a Phase I ESA of the Site in August 2020. At the time of the report, the Site was occupied as an assisted living and memory care facility consisting of apartments, cafeteria, kitchen, recreation areas, laundry, offices, nursing station, mechanical rooms, and storage rooms. Patriot's assessment revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs). No further assessment was recommended; however, Patriot identified the two hydraulic elevators at the Site as de minimis condition. No signs or reports of leaking hydraulic fluid was reportedly and no further action regarding the elevators appeared necessary at the time; however, Patriot noted that testing and disposal of impacted soils surrounding the elevators may be required when the building is demolished.

- Geocon West, Inc. (Geocon) submitted a geotechnical investigation report in September 2020 for a proposed multi-family residential development at the Site. According to the report, the proposed development will consist of constructing a five-story multi-family residential structure over one level of podium parking at or near present Site grade. The investigation consisted of advancing three borings to depths between 40.5 and 65.5 feet below ground surface (bgs). Groundwater was not encountered during the investigation.

- Patriot conducted a limited subsurface investigation in September 2020. According to the report, the Site had no known significant environmental concerns associated with recent or historical site uses; however, the property is located south of a community shopping center with multiple tenants; one of which was formerly occupied by a dry cleaner business. The presence of the former dry cleaner facility was identified as a potential environmental concern. The investigation included three soil borings along the north boundary of the Site with vapor probes set at approximately six feet bgs. The soil vapor samples were analyzed for volatile organic compounds (VOCs). Results indicated that the detected concentration of tetrachloroethylene (PCE) in all soil vapor sample exceeded current residential screening levels, suggesting a possible vapor intrusion threat that could potentially impact residents of the structure when occupied. Patriot recommended indoor air sampling for VOCs to confirm actual indoor air conditions if the

structure was to be reoccupied; or the installation of a liquid boot and a passive sub-slab depressurization system for a new structure.

- Earth Science LLC (Earth Science) conducted a limited subsurface investigation at the Site in October 2020, to further investigate the known presence of VOCs in the soil vapor at the Site as a result of the north-adjacent dry cleaning operations. The investigation included the advancement of 10 borings to a depth of five feet bgs with soil samples collected at two and five feet bgs. Upon completion of the borings, soil vapor probes were set at five feet bgs in each boring. Two soil samples collected from two feet bgs were analyzed for organochlorine pesticides (OCPs); two soil samples collected from five feet bgs were analyzed for VOCs; and 10 soil vapor samples (and one duplicate sample) were analyzed using a mobile laboratory for VOCs.

  VOCs were not detected in the two analyzed soil samples. OCPs were not detected in the two analyzed soil samples with the exception for 4,4'-dichlorodiphenyldichloroethylene (4,4'-DDE), which was detected at a concentration of 0.0058 milligram per kilogram (mg/kg) below the screening levels of 2.0 mg/kg. PCE was detected in four of the soil vapor samples (one of which was a duplicate sample) at concentrations ranging from 23 to 51 micrograms per cubic meter (µg/m^3), and above the residential use DTSC screening level of 15 µg/m^3. No other VOCs were detected in the remaining soil vapor samples. Earth Science recommended the preparation of a Potentially Responsible Party (PRP) Search Report, a Health and Safety Plan (HASP), and a Soil Management Plan (SMP); and notification of the appropriate regulatory agency regarding the soil vapor impacts at the Site.

- Citadel conducted a limited subsurface investigation at the Site in February 2021. Citadel advanced six borings to a maximum depth of 25 feet bgs. Soil samples were collected at five-foot intervals. Upon completion of the borings, soil vapor sample probes were installed in each boring at 15 feet and at the terminus of each boring (between 22 to 25 feet bgs). The collected soil samples were submitted to the laboratory and placed on hold for analysis. Twelve soil vapor samples were collected and analyzed for VOCs by EPA Method TO-15.

  PCE was detected in all soil vapor samples with concentrations exceeding the residential environmental screening levels (ESLs) of 15 µg/m^3 in five boring locations, ranging from 17 to 480 µg/m^3. Benzene was detected 10 of the 12 soil vapor samples with concentrations exceeding the residential ESLs at 3.2 µg/m^3 in five boring locations, ranging from 3.5 to 40 µg/m^3. The remaining VOCs detected above the reporting limits were below their respective residential screening levels. Upon receipt of the soil vapor laboratory results, three soil samples were analyzed for VOCs by EPA Method 8260B and total petroleum hydrocarbons (TPH) by EPA Method 8015B. None of the detected concentrations were above residential screening levels.

  Based on the results, Citadel concluded that the Site was impacted by the presence of VOCs. The presence of PCE was consistent with dry cleaning operations and may be related to present and historical dry cleaning and laundry operations north of the Site. Citadel provided the following recommendations:

  - Preparation of a Human Health Risk Assessment (HHRA) to determine whether VOCs detected in soil vapor represents a threat to current and future human health, and to determine whether risk-control measures would be required to protect future residents and workers based on the planned residential development. The installation of a soil vapor barrier and passive venting system may be recommended based on the results of the HHRA.

- Preparation and implementation of a SMP prior to any construction activities that require excavation of soil.

Environmental Databases

The Site was identified on the Enforcement and Compliance History Information (ECHO) and the Hazardous Waste Tracking System (HWTS) databases. ECHO provides integrated compliance and enforcement information; and HWTS is the Department of Toxic Substances Control's (DTSC) data repository for hazardous waste identification and manifest information. The Site was identified on these databases due to being identified as a generator of asbestos-containing materials in December 2020 and January 2021. No violations were reported. The appearance of the Site on these databases reflects proper disposal of hazardous waste and do not represent an environmental concern.

Citadel reviewed information provided by Environmental Data Resources (EDR) regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. A former Chevron Station, located at 6810 Sepulveda Boulevard, is listed as a LUST site. According to EDR, the property is approximately 515 feet north-northwest of the Site and the non-petroleum hydrocarbon leak was reported in January 1996. The case was completed and closed by the Los Angeles Fire Department (LAFD) on September 25, 1996. Based on the case closure and distance from the Site, this case is not expected to represent a significant concern to the Site.

Three properties were identified as within 0.125-mile and upgradient of the Site on the Historical Gas Station database:

- 6734 Sepulveda Boulevard, approximately 323 feet north of the Site
  - According to EDR, this property was occupied as a gasoline service station in 1940. While EDR identifies this property as 323 feet north-northwest of the Site, this listing is associated with the adjoining property north of the Site. Citadel reviewed historic building permits for the adjoining property north of the Site. A service station was constructed at the property in 1927 and was occupied as a used car lot by 1950. The service station was converted to a vegetable stand by 1952. The structures at the property were demolished by 1964 and the current retail shopping center was constructed in 1965.
  - This property was also identified on the LAFD's UST and hazardous materials inventory listings with an inactive status. Since the property was not identified on the historical UST databases, the LAFD listing is likely associated with USTs removal. While the USTs have likely been removed, it is unclear when the USTs were removed.
  - Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a vapor encroachment condition (VEC) concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.
- 6759 Sepulveda Boulevard, approximately 225 feet northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1977 and as an automotive repair shop in 1991. According to reviewed building permits and aerial photographs, this property appeared to be developed with a service station by 1947. A new service station was constructed in 1960. appeared to be da service station was constructed at the property in 1960. A grading permit to backfill tank hole was issued in 1989. Due to the removed UST and distance from the Site, this listing is not likely to have adversely affected the Site.

- 6810 Sepulveda Boulevard, approximately 515 feet north-northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1991; a carwash from 1988 to 2011; and a general automotive repair shop in 2010. This property was also identified as a LUST site, as discussed above. Based on the case closure and distance from the Site, this property is not likely to have adversely affected the Site.

One property was identified as within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database:

- 6754 Sepulveda Boulevard, approximately 174 feet northwest of the Site (adjoining property north of the Site)
  - According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated laundry with dry cleaning services. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site. The rear of the tenant space is located approximately 20 feet north of the Site boundary.
  - Citadel reviewed the South Coast Air Quality Management District's (SCAQMD) Facility Information Detail (FIND) for information regarding the dry cleaning equipment. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site.
  - The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

RECOGNIZED ENVIRONMENTAL CONDITIONS

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to

any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on a review of historical and present records, and Site reconnaissance, Citadel believes that sufficient information was collected and evaluated for the Site to determine if a REC, HREC, CREC, or a de minimis condition exists. Based on our review, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC was identified. Citadel identified the following environmental concerns:

- A former adjoining dry cleaner operated dry cleaning equipment with PCE from 1985 until at least 2014. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.
- A former gasoline station was also located at the adjoining property north of the Site. While USTs associated with the gasoline station are likely to been removed, it is unclear when USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.

No evidence for designating the Site as a HREC or CREC from reviews of historical documents and present Site conditions was found.

NON-ASTM SCOPE CONSIDERATIONS

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 39 tests were performed within the 91405 zip code for the presence of radon. Of these, none were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

A potable well was not observed on-Site and the Site does not lie within a known or potential flood zone or wetlands.

1.0 INTRODUCTION

Citadel EHS (Citadel) was contracted by Uncommon Developers (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

1.1 PURPOSE

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by review of current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the Site. A Site visit was also conducted to observe existing Site conditions. This report provides the results of the Phase I ESA performed.

1.2 INVOLVED PARTIES

The involved party(s) in this study, to the best of our knowledge, is Uncommon Developers; 6728 Sepulveda QOZB LLC; Yellowstone Investments, LLC; Bedrock Properties, LLC; and Uncommon Builders.

Citadel understands that this Phase I ESA is being requested in conjunction with due diligence activities by Uncommon Developers; 6728 Sepulveda QOZB LLC; Yellowstone Investments, LLC; Bedrock Properties, LLC; and Uncommon Builders. Citadel recognizes that this report is to be used exclusively by Uncommon Developers; 6728 Sepulveda QOZB LLC; Yellowstone Investments, LLC; Bedrock Properties, LLC; Uncommon Builders; and their successors, lenders, and assigns. It is a report upon which Uncommon Developers; 6728 Sepulveda QOZB LLC; Yellowstone Investments, LLC; Bedrock Properties, LLC; Uncommon Builders; and their successors, lenders, and assigns, can rely.

This assessment and report were prepared on behalf of and for the exclusive use of Uncommon Developers; 6728 Sepulveda QOZB LLC; Yellowstone Investments, LLC; Bedrock Properties, LLC; Uncommon Builders; their lenders and assigns (Client) solely for its use and reliance, subject to the terms and conditions agreed upon between Citadel and the Client.

1.3 SCOPE OF SERVICES

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-13 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The scope of services for this assessment consisted of the following:

- Performed a Site inspection to verify current Site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.

- Conducted a visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the Site.

- Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Reviewed results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

- Consulted with appropriate governmental agencies having jurisdiction relative to past history of the property, complaints or incidents in the immediate area, and permits that may have been issued.

- Prepared a Phase I report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the Site based on the data search, reasonably ascertainable documents, and Site inspection.

2.0 GENERAL SITE CHARACTERISTICS

2.1 LOCATION

The rectangular-shaped Site is located approximately 0.46 mile east of the Interstate 405, locally referred to as the San Diego Freeway. The Site is bounded by commercial and retail properties to the north; Columbus Avenue to the east; a nursing home to the south; and Sepulveda Boulevard to the west. The general Site vicinity is occupied by commercial and retail properties, along with nursing homes, an elementary school, and a hospital.

According to the U.S. Geological Survey (USGS) Van Nuys Quadrangle (7.5 Minute Series), dated 2012, the Site is at an elevation of approximately 736 feet above mean sea level (AMSL) and appears to slope to the south-southeast. The Site is located at approximate coordinates of 34° 11' 34.12" North Latitude and 118° 27' 54.31" West Longitude.

A Site Location Map identified as Figure 1 is included in Appendix A.

2.2 SITE DESCRIPTION

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of one parcel legally identified as Assessor's Parcel Number (APN) 2235-004-010. The Site encompasses approximately 2.18 acres of land.

The Site consists of undeveloped land in the north portion of the Site and asphalt-paved surface areas in the south portion of the Site. Access to the Site parking areas is in the southwest corner of the Site along Sepulveda Boulevard. At the time of the Site reconnaissance, the Site was unoccupied. Chain link fencing was observed along the perimeters of the Site. No stationary equipment was observed at the Site.

A Site Plan is included as Figure 2 in Appendix A. Select photographs of the Site and vicinity is included as Appendix B.

2.3 ADJACENT PROPERTIES

The immediately surrounding properties of the Site consist of the following:

Direction from Site	Address – Tenant/Use
North	Grand Plaza, consisting of the following tenants: ➢ 6734 Sepulveda Boulevard – Wingstop, a restaurant ➢ 6736 Sepulveda Boulevard – Dentistry, a dental office ➢ 6740 Sepulveda Boulevard – Subway, a restaurant ➢ 6742 Sepulveda Boulevard – MetroPCS, a cell phone store ➢ 6748 Sepulveda Boulevard – John's Watch Repair, a watch repair service ➢ 6750 Sepulveda Boulevard – Shears Barber, a hair salon ➢ 6752 Sepulveda Boulevard – Dazzle Hair & Nail Spa, a hair and nail salon ➢ 6754-6756 Sepulveda Boulevard – Van Nuys Coin Laundry ➢ 15232 Vanowen Street – Rose Bakery, a bakery ➢ 15230A Vanowen Street – Dollar King, a retail shop ➢ 15230 Vanowen Street – O'Reilly Auto Parts, an auto retail shop ➢ 15226 Vanowen Street – Oportun, a loan agency ➢ 15224 Vanowen Street – Baskin Robbins, an ice cream shop ➢ 15222 Vanowen Street – Garibay's Flowers, a florist 15220 Vanowen Street – Center For Healthy Living, an adult day health care center 15216 Vanowen Street – Multi-tenant medical building
East	6700 Columbus Avenue – Columbus Avenue Elementary School
South	6700 Sepulveda Boulevard – California Healthcare and Rehabilitation, a skilled nursing home
West	6719 Sepulveda Boulevard – In construction

2.4 UTILITIES

No electrical or gas service is currently being supplied to the Site.

3.0 ENVIRONMENTAL SETTING

3.1 PHYSICAL SITE CHARACTERISTICS

Based upon the National American Datum (NAD) of 1983, the Site is at an elevation of approximately 736 feet AMSL.

The Site is identified on the geologic map of the San Fernando and Van Nuys (north half) quadrangles, Los Angeles County, California (Dibblee and Ehrenspeck, 1991) as being Holocene aged surficial sediments (Qa). The surficial sediments are described as alluvial gravel, sand, and clay of valley areas. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) National Cooperative Soil Survey identifies the Site soils as Urban Land-Grommet-Ballona complex. The Urban Land soils are described alluvial fans landform with very high runoff; the Grommet soils are described as well-drained loam with low runoff; and the Ballona soils are described as well-drained loam and clay loam with medium runoff. According to the Limited Phase II Soil Vapor Sampling Services Report, prepared by Citadel and dated March 9, 2021, soil encountered at the Site included silt, clayey silt, and silty clay.

USGS Topographic Map	Van Nuys Quadrangle
Groundwater Basin	San Fernando Valley Groundwater Basin
Nearest Surface Water to Site	Haskell Channel, approximately 0.7 mile southwest of the Site
Gradient Direction (Source)	South-southeast (topographic maps)
Estimated Depth to Groundwater (Source)	Approximately 235 feet below ground surface, approximately 0.5 mile north of the Site (GeoTracker/Delta Consultants, 2009)
Nearest Wetland to Site (Source)	Haskell Channel, approximately 0.7 mile southwest of the Site (National Wetlands Inventory)
Nearest 100 or 500-year Flood Zone	500-year flood zone, approximately 0.6 mile northwest of the Site (Federal Emergency Management Agency)

4.0 SITE RECONNAISSANCE

Citadel representative Ms. Alexandria Reed conducted the Phase I ESA reconnaissance on April 22, 2021. Ms. Reed was unescorted during the Site reconnaissance, which consisted of an inspection of the Site and a perimeter survey of the surrounding properties. Findings from the Site inspection, research and perimeter survey are presented below.

4.1 SITE RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)
	X	Identified Hazardous Materials
	X	Polychlorinated Biphenyls (PCBs) – Electric or Mechanical Equipment Likely to Contain Fluids
	X	Radioactive Man-Made Materials
	X	Pits, Ponds, and Lagoons
	X	Septic Tanks and Cesspools
	X	Wells, Cisterns, Sumps, and Drains
	X	Wastewater or Grease Interceptors
	X	Interior Stains or Corrosion
	X	Strong, Pungent, or Noxious Odors
	X	Pools of Liquid
	X	Stained Soil or Pavement
	X	Stressed Vegetation
	X	Other

4.2 NON-ASTM SERVICES

ASBESTOS CONTAINING MATERIALS

The EPA issued a final rule under Section 6 of Toxic Substances Control Act (TSCA) banning most asbestos-containing building materials (ACBMs) in 1989. The ban on ACBMs was vacated in 1991 allowing some building materials to continue to contain asbestos. The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-

containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities.

Building materials, coatings, and/or finishes containing asbestos may be present in any structure regardless of the date of construction. In accordance with NESHAPS and local air pollution control district regulations, all suspect materials, finishes, and coatings that will be impacted by renovation or demolition regardless of the date of construction are required to be surveyed for the presence of asbestos by State-licensed asbestos consultants.

No structures were observed at the Site. A survey for asbestos-containing materials was not requested or conducted as part of this Phase I ESA.

LEAD-BASED/LEAD-CONTAINING PAINTS

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has greater than or equal to one milligram per square centimeter (mg/cm^2) (5,000 microgram per gram (µg/g) or 5,000 parts per million (ppm)) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. In 2009, the US Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303) banned paint containing more than 0.009% (90 ppm) lead for residential use. Buildings built before 1978 are much more likely to have LBP; however, all commercial structures regardless of the date of construction likely contain lead-based or lead-containing glazings, varnishes, stains, coatings, paints, and primers. Such materials that will be impacted by renovation, repair, or demolition should be tested beforehand and the results disclosed to trades or staff that will be doing such work. All associated waste streams should be accurately characterized for proper disposal requirements.

No structures were observed at the Site. A survey for lead containing materials was not requested or conducted as part of this Phase I ESA.

DRINKING WATER

The Site is supplied with municipal drinking water by the Los Angeles Department of Water and Power. An assessment of lead in drinking water was not requested or conducted as part of this Phase I ESA.

RADON

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 39 tests were performed within the 91405 zip code for the presence of radon. Of these, none were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

METHANE

In March 2004, Ordinance Number 175790 was adopted into the Los Angeles Municipal Code (Section 91.106.4.1 and Division 71, Chapter IX) to establish citywide methane mitigation requirements, and included updated construction standards to control methane intrusion into buildings. This ordinance established defined geographic areas as Methane Zones and Methane Buffer Zones, which relate to specific assessment and mitigation requirements per area, and set forth a standard of assessment and mitigation in the planning stages of all new construction in these areas.

The Site is not located within the City of Los Angeles Methane or Methane Buffer Zones recognized by the Los Angeles Department of Building and Safety.

5.0 SITE HISTORY

The purpose of the records review is to obtain and review reasonably ascertainable/standard sources that will help identify recognized environmental conditions in connection with the property. Reasonably ascertainable records from standard sources is (1) information that is publicly available, (2) information that is obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

Reasonable time and cost means that the information will be provided by the source within 20 calendar days of receiving a written, telephone, or in-person request at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 days of request.

To investigate the history of the Site, Citadel reviewed select historic aerial photographs, building permits, city directories, and Sanborn Fire Insurance Maps provided by Environmental Data Resources Inc. (EDR). In addition, Citadel reviewed client-supplied information, and oil and gas maps, and Citadel interviewed selected individuals regarding historic Site use. Citadel's reviews of these reports and interviews are discussed below.

5.1 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous material generation or storage. Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1928, 1938	The Site appears developed as an orchard	**North:** Small structures, likely a gasoline station and three dwellings, and orchards **East:** Orchard **South:** Orchard **West:** Sepulveda Boulevard, with orchards beyond

Dates(s)	Site Description	Surrounding Area Descriptions
1947	Relatively unchanged	**North:** Relatively unchanged **East:** Undeveloped land **South:** Relatively unchanged **West:** Several small structures, likely residences, appear developed
1952	Undeveloped land (no longer developed as orchard)	**North:** No longer appear developed with orchards; the area along Sepulveda Boulevard appears occupied as a surface parking lot **East:** Undeveloped land **South:** Relatively unchanged **West:** Relatively unchanged
1964	Relatively unchanged	**North:** Two of the residences appear to have been replaced with portions of the current commercial structures **East:** Several small structures, likely associated with the current school, appear developed **South:** Relatively unchanged **West:** The previously identified structures appear to have been replaced with a multi-family residence
1967	Relatively unchanged	**North:** The gasoline station and remaining residence appear to have been replaced with the current retail shopping center **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1970	Relatively unchanged	**North:** One of the commercial structures north of the Site appear to have expanded to its current configuration **East:** Columbus Avenue appears developed; several new structures appear to have replaced former structures **South:** The current nursing home facility appears developed **West:** Relatively unchanged
1977, 1983	The Site appears developed with a structure occupied as a nursing home facility with surface parking areas	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1989, 1995	The east portion of the Site appears developed with a basketball court	**North:** Relatively unchanged **East:** One of the previously identified structure appears to have been replaced with one of the current structures **South:** Relatively unchanged **West:** Relatively unchanged
2002, 2005, 2009, 2012, 2016	Relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged

Copies of the Aerial Photographs provided by EDR can be found in Appendix C.

5.2 HISTORIC BUILDING PERMITS

EDR provides a listing of building permits for the Site and adjoining properties, if available. In addition, Citadel reviewed building permits with the City of Los Angeles Building Department. A nursing home was constructed at the Site in 1972 and demolished by April 2021.

Copies of select building permits is included as Appendix D.

5.3 HISTORICAL FIRE INSURANCE MAPS

Citadel requested that EDR review its collection of Sanborn Fire Insurance Maps for potential coverage of the Site and vicinity. Sanborn Map coverage was not available for the Site.

A copy of the EDR Sanborn Map Report is included as Appendix E.

5.4 CITY PARCEL PROFILE REPORT

Citadel reviewed the on-line parcel profile report from the City of Los Angeles interactive database, NavigateLA. Alias addresses identified for the Site include:

- 6728 North Sepulveda Boulevard
- 6715 North Columbus Avenue

5.5 HISTORICAL CITY DIRECTORIES

City directories were researched by EDR in order to identify previous Site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. EDR researched city directory listings from 1920 through 2014 (non-inclusive) and provided their search results to Citadel for review. The following table summarizes information provided by the city directory search.

Dates(s)	Occupant Listed
6828 SEPULVEDA BOULEVARD	
1975, 1980	California Villa and residential listings
1985, 1991, 1994, 1995, 1999, 2004, 2006, 20009, 2014	California Villa Retirement Hotel and residential listings

No listings were associated with 6715 North Columbus Avenue.

A copy of the EDR City Directory Abstract is included as Appendix F.

5.6 CLIENT-SUPPLIED ENVIRONMENTAL INFORMATION

Citadel reviewed the *Phase I Environmental Site Assessment of California Green Tree Villa, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Patriot Environmental Laboratory Services, Inc., dated August 31, 2020.

> Patriot Environmental Laboratory Services, Inc. (Patriot) performed a Phase I ESA of the Site in August 2020. At the time of the report, the Site was occupied as an assisted living and memory care facility consisting of apartments, cafeteria, kitchen, recreation areas, laundry, offices, nursing station, mechanical rooms, and storage rooms. According to Patriot, the Site was used for orchards prior to 1928; the Site building was constructed in

1973. Patriot's assessment revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), or controlled recognized environmental conditions (CRECs). No further assessment was recommended; however, Patriot identified the two hydraulic elevators at the Site as de minimis condition. No signs or reports of leaking hydraulic fluid was reportedly and no further action regarding the elevators appeared necessary at the time; however, Patriot noted that testing and disposal of impacted soils surrounding the elevators may be required when the building is demolished.

Citadel reviewed the *Geotechnical Investigation, Proposed Multi-Family Residential Development, 6728 North Sepulveda Boulevard, 6715 North Columbus Avenue, Los Angeles, California,* prepared by Geocon West, Inc., dated September 10, 2020.

Geocon West, Inc. (Geocon) submitted a geotechnical investigation report in September 2020 for a proposed multi-family residential development at the Site. According to the report, the proposed development will consist of constructing a five-story multi-family residential structure over one level of podium parking at or near present Site grade. The investigation consisted of advancing three borings to depths between 40.5 and 65.5 feet bgs. Groundwater was not encountered during the investigation.

Citadel reviewed the *Limited Subsurface Investigation Report of California Green Tree Villa, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Patriot Environmental Laboratory Services, Inc., dated September 17, 2020.

Patriot conducted a limited subsurface investigation in September 2020. According to the report, the Site had no known significant environmental concerns associated with recent or historical site uses; however, the property is located south of a community shopping center with multiple tenants; one of which was formerly occupied by a dry cleaner business. The presence of the former dry cleaner facility was identified as a potential environmental concern. The investigation included three soil borings along the north boundary of the Site with vapor probes set at approximately six feet bgs. The soil vapor samples were collected from each boring and analyzed for volatile organic compounds (VOCs) by EPA Method 8260B. Results indicate that tetrachloroethylene (PCE) was detected between 1.3 and 5.3 micrograms per liter (µg/L); no other VOCs were detected in any of the samples.

The detected concentrations were compared to the Regional Screening Levels (RSLs) modified using attenuation factors of 0.03 (EPA) and 0.001 (Department of Toxic Substances Control [DTSC]), with the most stringent screening level as 0.015 µg/L. Results indicated that the detected concentration of PCE in all soil vapor sample exceeded current residential screening levels, suggesting a possible vapor intrusion threat that could potentially impact residents of the structure when occupied.

Patriot recommended indoor air sampling for VOCs to confirm actual indoor air conditions if the structure was to be reoccupied; or the installation of a liquid boot and a passive sub-slab depressurization system for a new structure.

Citadel reviewed the *Limited Phase II Environmental Site Assessment Report, Former California Green Tree Villa, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Earth Science LLC, dated October 19, 2020.

Earth Science LLC (Earth Science) conducted a limited subsurface investigation at the Site in October 2020, to further investigate the known presence of VOCs in the soil vapor at the Site as a result of the north-adjacent dry cleaning operations. The investigation included the advancement of 10 borings to a depth of five feet bgs with soil samples collected at two and five feet bgs. Upon completion of the borings, soil vapor probes were set at five feet bgs in each boring. Two soil samples collected from two feet bgs were analyzed for organochlorine pesticides (OCPs) by EPA Method 8081; two soil samples collected from five feet bgs were analyzed for VOCs by EPA Method 8260/5035; and 10 soil vapor samples (and one duplicate sample) were analyzed using a mobile laboratory for VOCs by EPA Method 8260.

VOCs were not detected in the two analyzed soil samples. OCPs were not detected in the two analyzed soil samples with the exception for 4,4'-dichlorodiphenyldichloroethylene (4,4'-DDE), which was detected at a concentration of 0.0058 milligram per kilogram (mg/kg) below the screening levels of 2.0 mg/kg. PCE was detected in four of the soil vapor samples (one of which was a duplicate sample) at concentrations ranging from 23 to 51 micrograms per cubic meter (µg/m^3), and above the residential use DTSC screening level of 15 µg/m^3. No other VOCs were detected in the remaining soil vapor samples.

According to Earth Science, the results of the investigation confirmed that the north-adjacent dry cleaning operations was the likely source of PCE-contaminated soil vapor at the Site. Earth Science recommended the following:

- Preparation of a Potentially Responsible Party (PRP) Search Report to identify potential responsible parties (RPs) in the area which may have caused or contributed to the contamination at the Site.
- Notification of the appropriate regulatory agency regarding the soil vapor impacts at the Site. Any further investigation, remediation, or mitigation activities should be conducted under the oversight of the regulatory agency until a No Further Action (NFA) determination and approval for the redevelopment of the Site for residential use is issued by the regulatory agency.
- Preparation of a Health and Safety Plan (HASP) and a Soil Management Plan (SMP) to implement measures to minimize worker exposure to the contaminated Site soils and to minimize the potential for the contaminated soils to impact the environment.

Citadel reviewed the *Limited Phase II Soil Vapor Sampling Services Report, 6728 Sepulveda Boulevard, Van Nuys, California 91411,* prepared by Citadel EHS, dated March 9, 2021.

Citadel conducted a limited subsurface investigation at the Site in February 2021. Citadel advanced six borings to a maximum depth of 25 feet bgs. Soil samples were collected at five-foot intervals. Upon completion of the borings, soil vapor sample probes were installed in each boring at 15 feet and at the terminus of each boring (between 22 to 25 feet bgs). The collected soil samples were submitted to the laboratory and placed on hold for analysis. Twelve soil vapor samples were collected and analyzed for VOCs by EPA Method TO-15.

PCE was detected in all soil vapor samples with concentrations exceeding the residential environmental screening levels (ESLs) of 15 µg/m^3 in five boring locations, ranging from 17 to 480 µg/m^3. Benzene was detected 10 of the 12 soil vapor samples with concentrations

exceeding the residential ESLs at 3.2 µg/m^3 in five boring locations, ranging from 3.5 to 40 µg/m^3. The remaining VOCs detected above the reporting limits were below their respective residential screening levels.

Upon receipt of the soil vapor laboratory results, three soil samples were analyzed for VOCs by EPA Method 8260B and total petroleum hydrocarbons (TPH) by EPA Method 8015B. Acetone was detected at a concentration of 23 micrograms per kilogram (µg/kg) in one of the soil samples; the concentration is below the residential screening level of 61,000,000 µg/kg. TPH concentrations were detected between 14 and 32 mg/kg in the three soil samples, below the residential screening level of 12,000 mg/kg.

Based on the results, Citadel concluded that the Site was impacted by the presence of VOCs. The presence of PCE was consistent with dry cleaning operations and may be related to present and historical dry cleaning and laundry operations north of the Site. Citadel provided the following recommendations:

- Preparation of a Human Health Risk Assessment (HHRA) to determine whether VOCs detected in soil vapor represents a threat to current and future human health, and to determine whether risk-control measures would be required to protect future residents and workers based on the planned residential development. The installation of a soil vapor barrier and passive venting system may be recommended based on the results of the HHRA.
- Preparation and implementation of a SMP prior to any construction activities that require excavation of soil.

A copy of the reviewed report can be found in Appendix G.

5.7 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps were provided by EDR in order to identify natural features and changes in development over a long period of time. The topographic maps provides the user with a regional view of changes to the Site and vicinity that other historical databases such as aerial photographs may not provide. Below are brief descriptions of observations made from the topographic maps of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1894, 1896, 1898, 1900, 1902	Undeveloped land	**North:** Undeveloped land **East:** Undeveloped land **South:** Undeveloped land **West:** Undeveloped land
1902, 1921	Relatively unchanged	**North:** Relatively unchanged; Vanowen Street and a small structure appear developed further north **East:** Relatively unchanged **South:** Relatively unchanged **West:** Sepulveda Boulevard, with undeveloped land beyond
1924, 1926	Relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged; a small structure appears developed further south **West:** Relatively unchanged

Dates(s)	Site Description	Surrounding Area Descriptions
1953	Shading indicative of urban development	**North:** Shading indicative of urban development **East:** Shading indicative of urban development; the current street system further east appears developed **South:** Shading indicative of urban development **West:** Shading indicative of urban development; the current street system appears developed
1966	Undeveloped land (no longer shaded)	**North:** A portion of the current commercial structure appears developed; a hospital appears developed further northeast **East:** Relatively unchanged **South:** Relatively unchanged **West:** Undeveloped land (no longer shaded)
1972	Relatively unchanged	**North:** The current retail shopping center appears developed; the previously identified structure appears to have expanded to its current configuration **East:** Relatively unchanged **South:** The current nursing home structure appears developed **West:** Relatively unchanged
2012	Structures not depicted on this map	Structures not depicted on this map

Copies of the historical topographic maps provided by EDR are included as Appendix H.

5.8 HISTORIC OIL AND GAS MAPS

Citadel reviewed information available on-line through the California Department of Conservation's website. The Geological Energy Management Division (CalGEM) Online Mapping System (COMS) shows that there are no oil wells within an one-mile radius of the Site.

5.9 INTERVIEWS

Citadel submitted a User Questionnaire to the Client. The User Questionnaire was completed by Yellowstone Investments LLC; 6728 Sepulveda QOZB LLC; Bedrock Properties Group LLC; and Uncommon Builders LLC. The completed User Questionnaires can be found in Appendix I.

5.10 ENVIRONMENTAL LIEN

Citadel was not provided with a title search for the Site. No environmental lien was identified for the Site.

5.11 SUMMARY OF SITE HISTORY

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the use of the Site as orchards. The Site appeared undeveloped by 1952 and remained relatively unchanged until the construction of a nursing home in 1972. The nursing home was demolished by April 2021.

6.0 REGULATORY AGENCY REVIEW

6.1 DATABASE REVIEW

As part of the Phase I ESA, Citadel utilized EDR of Milford, Connecticut, as an information source for regulatory agency database records.

The following summary of the database information is divided into five columns. The first column identifies the environmental database researched; the second column indicates the distance from the Site that was used for the research; the third column indicates if the Site was identified in the specified database; the fourth column lists the number of listings identified on the database within the specified distance of the Site; and the fifth column indicates if the sites identified are potential environmental concerns to the Site.

Although locations of the orphan sites are frequently unknown, Citadel attempts to evaluate the potential adverse environmental impact that these facilities may have on the Site. This evaluation consists of reviewing street names in an effort to learn whether the street on which the Site is located lies within the search distance of the subject property, a drive-by view of surrounding properties during the Site visit, and evaluating the Site type and information provided by government agencies. The orphan sites included in the following table are those Citadel identified as potentially located within the identified search distance.

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
National Priorities List	1 mile	No	0	
RCRA Corrective Action Treatment/Storage/Disposal (TSD) Facilities (CORRACTS)	1 mile	No	0	
Delisted National Priorities List	1 mile	No	0	
CERCLIS Sites	½ mile	No	0	
CERCLIS No Further Remedial Action Planned (NFRAP) Sites	½ mile	No	0	
RCRA Non-Corrective Action TSD Facilities	½ mile	No	0	
State/Tribal Voluntary Cleanup Sites	½ mile	No	0	
State/Tribal Leaking Registered Storage Tank Sites	½ mile	No	6	No, based on distance and case closure status
State/Tribal Brownfield Sites/CERCLIS Equivalent	1 mile	No	3	No, based on distance
Historic CORTESE List	½ mile	No	2	No, based on distance
State/Tribal Solid Waste Landfill Sites/Facilities	½ mile	No	0	
Federal/State/Tribal Engineering Controls Registries	½ mile	No	0	
Federal/State/Tribal Institutional Controls Registries	½ mile	No	0	
RCRA Large Quantity Generators	¼ mile	No	1	No

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
RCRA Small Quantity Generators	¼ mile	No	6	No
RCRA Non Generators	¼ mile	No	22	
State/Tribal Registered Storage Tank Sites	¼ mile	No	5	See discussion below
HIST UST	¼ mile	No	7	No
CA FID UST	¼ mile	No	5	No
SWEEPS UST	¼ mile	No	5	No
Facility Index System (FINDS)	Site	No	0	
HAZNET	Site	No	0	
Orphan	N/A	No	2	No

A brief discussion of select facilities and their database listings are included following the table. The full report provided by EDR and reviewed by Citadel can be found in Appendix J.

Site Name	Judy Shea
Database(s)	HWTS, ECHO
Address	6728 Sepulveda Boulevard
Distance/Direction	Target Property
Comments	The Site was identified on the Enforcement and Compliance History Information (ECHO) and the Hazardous Waste Tracking System (HWTS) databases. ECHO provides integrated compliance and enforcement information; and HWTS is the Department of Toxic Substances Control's (DTSC) data repository for hazardous waste identification and manifest information. The Site was identified on these databases due to being identified as a generator of asbestos-containing materials in December 2020 and January 2021. No violations were reported. The appearance of the Site on these databases reflects proper disposal of hazardous waste and do not represent an environmental concern.

Site Name	Grand Plaza, LLC
Database(s)	UST, HAZMAT
Address	6734 Sepulveda Boulevard
Distance/Direction	33 feet west-northwest of the Site
Comments	This property was identified on the Los Angeles Fire Department's (LAFD) UST and hazardous materials inventory listings with an inactive status. No further information was provided. While EDR identifies this property as 33 feet north-northwest of the Site, the listing is associated with the adjoining property north of the Site. Citadel reviewed historic building permits for the adjoining property north of the Site. A service station was constructed at the property in 1927 and was occupied as a used car lot by 1950. The service station was converted to a vegetable stand by 1952. The structures at

	the property were demolished by 1964 and the current retail shopping center was constructed in 1965. Since the property was not identified on the historical UST databases, the LAFD listing is likely associated with the USTs removal. While the USTs have likely been removed, it is unclear when the USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a vapor encroachment condition (VEC) concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.

Site Name	Sepulveda Cleaner, AFCO Cleaners and Laundry, Alpha Cleaners
Database(s)	DRYCLEANERS, EDR Hist Cleaner, HAZMAT
Address	6754 Sepulveda Boulevard
Distance/Direction	174 feet northwest of the Site
Comments	This property was identified on the Historical Dry Cleaners and the Drycleaners databases with several listings. According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated laundry with dry cleaning services. Citadel reviewed the South Coast Air Quality Management District's (SCAQMD) Facility Information Detail (FIND) for information regarding the dry cleaning equipment. The following information was provided: o Alpha Cleaners, Facility ID No. 46039 o An inactive permit, issued in 1985, to operate dry cleaning equipment using PCE. o A notice of violation (NOV) was issued in April 1985; no further information was provided but the case was closed in September 1985. o Sepulveda Cleaners, Facility ID No. 62032 o An inactive permit, issued in 1988, to operate dry cleaning equipment using PCE. o Sepulveda Cleaners, Facility ID No. 111950 o Inactive permits, issued in 1997 and 2007, to operate dry cleaning equipment using PCE. o A notice to comply (NC) was issued in April 2000 to repair vapor leaks marked on filter still and water separator greater than 300 parts per million (ppm); returned to compliance in August 2000. o A NC was issued in May 2003 to repair leak around the sight glass; returned to compliance in July 2003. o A notice of violation (NOV) was issued in August 2004 due to PCE leak at 1,045 ppm (greater than 300 ppm); the case was closed in December 2004. o A NC was issued in October 2007 to provide weekly inspection, annual mileage, PCE purchases, and hazardous water manifest records; and to provide records that all door gaskets had been replaced and condenser had been serviced; returned to compliance in December 2007. o A NC was issued in March 2011 to apply for a new permit to operate PCE dry cleaning machine and to provide records of PCE purchase orders, clothes cleaned for 2009 and 2010, and CARB certification; the facility was reinspected in July 2011 and the status indicated a change in ownership.

	○ Sepulveda Cleaners, Facility ID No. 167080 ○ Inactive permits, issued in 2011, to operate dry cleaning equipment using PCE. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

Maps showing the location of these facilities and additional information are provided in the Government Records Report in Appendix J.

6.2 VAPOR ENCROACHMENT CONDITION

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Tier 1 screening begins with the default area of concern (AOC) defined by the approximate minimum search distances adjusted as appropriate for local conditions, and then determining if known or suspected contaminated properties with contaminants of concern (COCs) exist within the established AOC. The default AOC is one third of a mile around the TP for COCs and one-tenth of a mile for petroleum hydrocarbon COCs. The AOC is measured from the TP boundary to a contaminated property with known or suspected COC contamination of soil or groundwater or both. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment, based on factors like groundwater flow direction, subsurface characteristics, surficial features and man-made features.

If groundwater flow direction is known or can be inferred from the Phase I ESA investigation of the TP, the default AOC in the down-gradient direction may be reduced to the area within the critical distance of 100 feet. The AOC in the cross-gradient direction may also be reduced, depending upon the critical distance and the width of the COC-contaminated plume associated with a known or likely COC-contaminated property located in a cross-gradient direction from the TP. The critical distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest TP boundary, and is equal to 100 feet for COCs or 30 feet for dissolved petroleum hydrocarbon COCs.

For a COC-contaminated property identified in Tier 1 located down-gradient from the TP, it is not necessary to have information on migrating groundwater contaminated plume dimensions as the critical distance is measured from the nearest TP boundary to the source of contamination

at the off-site down-gradient property. In this case, the AOC may be reduced to the area within the critical distance.

For a contaminated property identified in Tier 1 located crossgradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspected COC-contaminated property (that is, the COC-contaminated property where the groundwater contamination originated). The environmental professional's judgment and experience can be used to estimate the width of the COC-contaminated plume that might be associated with the nearby known or suspected COC-contaminated property. If it is not possible to estimate the contaminated plume width, then the AOC cannot be reduced in the cross-gradient direction.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. A former Chevron Station, located at 6810 Sepulveda Boulevard, is listed as a LUST site. According to EDR, the property is approximately 515 feet north-northwest of the Site and the non-petroleum hydrocarbon leak was reported in January 1996. The case was completed and closed by the LAFD on September 25, 1996. Based on the case closure and distance from the Site, this case is not expected to represent a significant concern to the Site.

EDR also provided the following listings on the Historical Gas Station and Dry Cleaners databases as within 0.125-mile and upgradient, 365 feet and cross-gradient, or 100 feet and downgradient of the Site.

Historical Gas Stations	
Site Name	Patterson
Address	15260 Vanowen Place
Distance/Direction	323 feet north of the Site
Comments	According to EDR, this property was occupied as a gasoline service station in 1940. While EDR identifies this property as 323 feet north-northwest of the Site, this listing is associated with the adjoining property north of the Site and discussed above in Section 6.1. While the USTs have likely been removed, it is unclear when the USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.
Site Name	Shaman Service Center
Address	6759 Sepulveda Boulevard
Distance/Direction	225 feet northwest of the Site
Comments	According to EDR, this property was occupied as a gasoline service station from 1969 to 1977 and as an automotive repair shop in 1991. According to reviewed building permits and aerial photographs, this property appeared to be developed with a service station by 1947. A new service station was constructed in 1960. appeared to be da service station was constructed at the property in 1960. A

Historical Gas Stations	
	grading permit to backfill tank hole was issued in 1989. Due to the removed UST and distance from the Site, this listing is not likely to have adversely affected the Site.
Site Name	Brett's Incorporated
Address	6810 Sepulveda Boulevard
Distance/Direction	515 feet north-northwest of the Site
Comments	According to EDR, this property was occupied as a gasoline service station from 1969 to 1991; a carwash from 1988 to 2011; and a general automotive repair shop in 2010. This property was also identified as a LUST site, as discussed above. Based on the case closure and distance from the Site, this property is not likely to have adversely affected the Site.

Historical Dry Cleaners	
Site Name	AFCO Cleaners and Laundry Inc.
Address	6754 Sepulveda Boulevard
Distance/Direction	174 feet northwest of the Site
Comments	According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated laundry with dry cleaning services. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site and discussed above in Section 6.1. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

A copy of the vapor encroachment screen provided by EDR is included as Appendix K.

6.3 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

BUILDING DEPARTMENT

Citadel contacted the City of Los Angeles Building Department for information regarding the Site in order to identify historical tenants and property use. Please see Section 5.2 for further discussion.

FIRE DEPARTMENT

The City of Los Angeles Fire Department (LAFD) has recently issued lists of active and inactive ASTs, USTs, and hazardous materials inventories (HMI) as of June 1, 2019. The Site was not identified on these lists.

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY

The California EPA (CalEPA) Regulated Site Portal combines data of environmentally regulated sites and facilities in California into a single, searchable database. The portal provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. Citadel reviewed the Site Portal Profile for the Site. The Site was not identified in the database.

AIR QUALITY MANAGEMENT DISTRICT

Citadel reviewed information available on-line through the South Coast Air Quality Management District's Facility Information Detail (FIND) database. The Site was not identified on the database.

REGIONAL WATER QUALITY CONTROL BOARD

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. According to GeoTracker, the former Chevron Station, located at 6810 Sepulveda Boulevard, approximately 380 feet north of the Site, is listed as a LUST Cleanup Site. According to information provided by GeoTracker, a gasoline leak was reported in January 1996. The case was completed and closed by the LAFD on September 25, 1996. Based on the distance and closure status, this property is not a significant environmental concern.

7.0 DATA GAPS

A data gap is a lack of or inability to obtain information despite good faith efforts to gather such information. A data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

The following data gaps have been identified during the course of this investigation:

- Additional governmental agencies that are not included in the Government Records report may maintain information regarding environmental conditions at the Site and nearby facilities.

With regard to these data gaps, Citadel believes that the most significant potential sources for on-site contamination have been identified during the current investigation.

8.0 FINDINGS

Citadel was contracted by Uncommon Developers (Client) to perform a Phase I ESA of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

Current Site Conditions

The Site consists of undeveloped land in the north portion of the Site and asphalt-paved surface areas in the south portion of the Site. Access to the Site parking areas is in the southwest corner of the Site along Sepulveda Boulevard. At the time of the Site reconnaissance, the Site was unoccupied. Chain link fencing was observed along the perimeters of the Site. No stationary equipment was observed at the Site.

Site History

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the use of the Site as orchards. The Site appeared undeveloped by 1952 and remained relatively unchanged until the construction of a nursing home in 1972. The nursing home was demolished by April 2021.

Previous Environmental Reports

Citadel reviewed the following environmental reports for the Site:

- Patriot performed a Phase I ESA of the Site in August 2020. At the time of the report, the Site was occupied as an assisted living and memory care facility consisting of apartments, cafeteria, kitchen, recreation areas, laundry, offices, nursing station, mechanical rooms, and storage rooms. Patriot's assessment revealed no evidence of RECs, HRECs, or CRECs. No further assessment was recommended; however, Patriot identified the two hydraulic elevators at the Site as de minimis condition. No signs or reports of leaking hydraulic fluid was reportedly and no further action regarding the elevators appeared necessary at the time; however, Patriot noted that testing and disposal of impacted soils surrounding the elevators may be required when the building is demolished.

- Geocon submitted a geotechnical investigation report in September 2020 for a proposed multi-family residential development at the Site. According to the report, the proposed development will consist of constructing a five-story multi-family residential structure over one level of podium parking at or near present Site grade. The investigation consisted of advancing three borings to depths between 40.5 and 65.5 feet bgs. Groundwater was not encountered during the investigation.

- Patriot conducted a limited subsurface investigation in September 2020. According to the report, the Site had no known significant environmental concerns associated with recent or historical site uses; however, the property is located south of a community shopping center with multiple tenants; one of which was formerly occupied by a dry cleaner business. The presence of the former dry cleaner facility was identified as a potential environmental concern. The investigation included three soil borings along the north boundary of the Site with vapor probes set at approximately six feet bgs. The soil vapor samples were analyzed for VOCs. Results indicated that the detected

concentration of PCE in all soil vapor sample exceeded current residential screening levels, suggesting a possible vapor intrusion threat that could potentially impact residents of the structure when occupied. Patriot recommended indoor air sampling for VOCs to confirm actual indoor air conditions if the structure was to be reoccupied; or the installation of a liquid boot and a passive sub-slab depressurization system for a new structure.

- Earth Science conducted a limited subsurface investigation at the Site in October 2020, to further investigate the known presence of VOCs in the soil vapor at the Site as a result of the north-adjacent dry cleaning operations. The investigation included the advancement of 10 borings to a depth of five feet bgs with soil samples collected at two and five feet bgs. Upon completion of the borings, soil vapor probes were set at five feet bgs in each boring. Two soil samples collected from two feet bgs were analyzed for OCPs; two soil samples collected from five feet bgs were analyzed for VOCs; and 10 soil vapor samples (and one duplicate sample) were analyzed using a mobile laboratory for VOCs.

  VOCs were not detected in the two analyzed soil samples. OCPs were not detected in the two analyzed soil samples with the exception for 4,4'-DDE, which was detected at a concentration of 0.0058 mg/kg below the screening levels of 2.0 mg/kg. PCE was detected in four of the soil vapor samples (one of which was a duplicate sample) at concentrations ranging from 23 to 51 µg/m^3, and above the residential use DTSC screening level of 15 µg/m^3. No other VOCs were detected in the remaining soil vapor samples. Earth Science recommended the preparation of a PRP Search Report, a HASP, and a SMP; and notification of the appropriate regulatory agency regarding the soil vapor impacts at the Site.

- Citadel conducted a limited subsurface investigation at the Site in February 2021. Citadel advanced six borings to a maximum depth of 25 feet bgs. Soil samples were collected at five-foot intervals. Upon completion of the borings, soil vapor sample probes were installed in each boring at 15 feet and at the terminus of each boring (between 22 to 25 feet bgs). The collected soil samples were submitted to the laboratory and placed on hold for analysis. Twelve soil vapor samples were collected and analyzed for VOCs by EPA Method TO-15.

  PCE was detected in all soil vapor samples with concentrations exceeding the residential ESLs of 15 µg/m^3 in five boring locations, ranging from 17 to 480 µg/m^3. Benzene was detected 10 of the 12 soil vapor samples with concentrations exceeding the residential ESLs at 3.2 µg/m^3 in five boring locations, ranging from 3.5 to 40 µg/m^3. The remaining VOCs detected above the reporting limits were below their respective residential screening levels. Upon receipt of the soil vapor laboratory results, three soil samples were analyzed for VOCs by EPA Method 8260B and TPH by EPA Method 8015B. None of the detected concentrations were above residential screening levels.

  Based on the results, Citadel concluded that the Site was impacted by the presence of VOCs. The presence of PCE was consistent with dry cleaning operations and may be related to present and historical dry cleaning and laundry operations north of the Site. Solvent and fuel-related VOCs were also present in soil vapor. Citadel provided the following recommendations:

  - Preparation of a HHRA to determine whether VOCs detected in soil vapor represents a threat to current and future human health, and to determine

whether risk-control measures would be required to protect future residents and workers based on the planned residential development. The installation of a soil vapor barrier and passive venting system may be recommended based on the results of the HHRA.

- Preparation and implementation of a SMP prior to any construction activities that require excavation of soil.

Environmental Databases

The Site was identified on the ECHO and the HWTS databases. ECHO provides integrated compliance and enforcement information; and HWTS is the DTSC's data repository for hazardous waste identification and manifest information. The Site was identified on these databases due to being identified as a generator of asbestos-containing materials in December 2020 and January 2021. No violations were reported. The appearance of the Site on these databases reflects proper disposal of hazardous waste and do not represent an environmental concern.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. A former Chevron Station, located at 6810 Sepulveda Boulevard, is listed as a LUST site. According to EDR, the property is approximately 515 feet north-northwest of the Site and the non-petroleum hydrocarbon leak was reported in January 1996. The case was completed and closed by the LAFD on September 25, 1996. Based on the case closure and distance from the Site, this case is not expected to represent a significant concern to the Site.

Three properties were identified as within 0.125-mile and upgradient of the Site on the Historical Gas Station database:

- 6734 Sepulveda Boulevard, approximately 323 feet north of the Site
  - According to EDR, this property was occupied as a gasoline service station in 1940. While EDR identifies this property as 323 feet north-northwest of the Site, this listing is associated with the adjoining property north of the Site. Citadel reviewed historic building permits for the adjoining property north of the Site. A service station was constructed at the property in 1927 and was occupied as a used car lot by 1950. The service station was converted to a vegetable stand by 1952. The structures at the property were demolished by 1964 and the current retail shopping center was constructed in 1965.
  - This property was also identified on the LAFD's UST and hazardous materials inventory listings with an inactive status. Since the property was not identified on the historical UST databases, the LAFD listing is likely associated with USTs removal. While the USTs have likely been removed, it is unclear when the USTs were removed.
  - Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.
- 6759 Sepulveda Boulevard, approximately 225 feet northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1977 and as an automotive repair shop in 1991. According to reviewed building permits and aerial photographs, this property appeared to be developed with a service station by 1947. A new service station was constructed in 1960. appeared to be da service station was constructed at the property in

1960. A grading permit to backfill tank hole was issued in 1989. Due to the removed UST and distance from the Site, this listing is not likely to have adversely affected the Site.

- 6810 Sepulveda Boulevard, approximately 515 feet north-northwest of the Site
  - According to EDR, this property was occupied as a gasoline service station from 1969 to 1991; a carwash from 1988 to 2011; and a general automotive repair shop in 2010. This property was also identified as a LUST site, as discussed above. Based on the case closure and distance from the Site, this property is not likely to have adversely affected the Site.

One property was identified as within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database:

- 6754 Sepulveda Boulevard, approximately 174 feet northwest of the Site
  - According to EDR, the property was occupied by a garment pressing and cleaners' agents from 1973 to 1980; and a dry cleaning plant from 1982 to 2014. The facility is currently operating as a coin-operated laundry with dry cleaning services. While EDR identifies this property as 174 feet northwest of the Site, this listing is associated with a tenant space at the adjoining property north of the Site. The rear of the tenant space is located approximately 20 feet north of the Site boundary.
  - Citadel reviewed the SCAQMD's FIND for information regarding the dry cleaning equipment. The facility has operated dry cleaning equipment with PCE from 1985 until at least 2014. No dry cleaning equipment is currently listed; the current dry cleaning service is likely off-Site.
  - The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.

9.0 CONCLUSIONS AND RECOMMENDATIONS

According to ASTM Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-10, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on a review of historical and present records, and Site reconnaissance, Citadel believes that sufficient information was collected and evaluated for the Site to determine if a REC, HREC, CREC, or a de minimis condition exists. Based on our review, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC was identified. Citadel identified the following environmental concerns:

- A former adjoining dry cleaner operated dry cleaning equipment with PCE from 1985 until at least 2014. The historic use of PCE and its proximity to the Site represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the PCE in soil vapor is likely from the former adjoining dry cleaner and represents a REC.
- A former gasoline station was also located at the adjoining property north of the Site. While USTs associated with the gasoline station are likely to been removed, it is unclear when USTs were removed. Based on the proximity to the Site and the lack of information regarding the USTs, the historic occupancy as a gasoline station represents a VEC concern. Based on the subsurface investigations conducted at the Site, the source of the detected benzene in soil vapor is possibly from the former adjoining gasoline station and represents a REC.

No evidence for designating the Site as a HREC or CREC from reviews of historical documents and present Site conditions was found. Based on the previous subsurface investigations, the Site has been impacted by PCE and benzene in the soil vapor. Citadel recommends the preparation of a HHRA to determine whether VOCs detected in soil vapor represents a threat to current and future human health and to determine whether risk-control strategies such as a vapor barrier could be required to protect future residents based on the planned residential development. Citadel also recommends the preparation and implantation of a SMP prior to construction activities at the Site that would require excavation of soil.

10.0 LIMITATIONS

The information and opinions rendered in this report are exclusively for use by the Client. Citadel will not distribute this report without the Client's written consent, except as may be required by law or court order. The recommendations expressed in this report took into consideration the purpose and scope of this limited assignment. We accept responsibility for the competent performance of our duties in executing the assignment and preparing this report in accordance

with the normal standards of our profession, but disclaim any responsibility for consequential damages resulting from inaccuracies in information provided by the Client, federal, state, county, or local regulatory agencies.

11.0 DISCLAIMER

The services performed by Citadel Environmental Services, Inc. ("Citadel"), d.b.a. Citadel EHS, in connection with this Report were performed in accordance with generally and currently accepted engineering practices and principles; provided, however, Citadel completed such services as directed by the Client and the recommendations described in this Report are therefore limited in purpose and scope. The procedures and methodologies used by Citadel in its performance of services, and the recommendations contained herein, are not intended to meet the requirements under any specific laws or regulatory guidelines unless expressly set forth in the Proposal.

The recommendations and conclusions set forth in this Report are based on information and data available to Citadel during the course of its performance of the services. Citadel relied on the information and data provided by or on behalf of Client, including, if applicable, historical and present operations, conditions and test data, and Citadel assumed all such information and data was correct and complete. Citadel shall not be liable for any damages or losses resulting from inaccuracies of, or omissions from, information or data provided by or on behalf of the Client, any interested third-parties, or any federal, state, county, or local governmental authority, or otherwise available in the public domain.

The information contained in this Report and conclusions resulting therefrom are based solely on information available to Citadel at the time of its performance of services, and from observations and perceived conditions and materials existing on the date of Citadel's limited survey of the site, if applicable. Citadel disclaims any inaccuracy in the Report as a result of any part or parcel of property to which Citadel was not provided access, or which was concealed, including, but not limited to, wall cavities/chases, ceiling plenums, below floor finishes, crawlspaces, below grade, beneath existing structures, or behind electrical panels.

The findings and recommendations presented in this Report are based upon observations of present conditions and may not necessarily indicate future conditions. No conclusions should be construed or inferred other than those expressly stated in this Report. EXCEPT FOR ANY WARRANTIES EXPRESSLY SET FORTH IN THE PROPOSAL OR OTHER WRITTEN AGREEMENT BETWEEN CITADEL AND CLIENT, CITADEL MAKES NO WARRANTIES HEREUNDER WITH RESPECT TO ANY INFORMATION CONTAINED IN THIS REPORT, EXPRESS OR IMPLIED, AND CITADEL HEREBY DISCLAIMS ALL OTHER WARRANTIES.

All testing and remediation methods have reliability limitations and no method nor number of sampling locations can guarantee that a hazard will be discovered if contamination or other evidence of the hazard is not encountered within the performance of the services as authorized. Reliability of testing or remediation varies according to the sampling frequency and other service variables that were selected by Client. Citadel shall not be at fault or liable for any such limitations.

The information and opinions rendered in this report are exclusively for use and reliance by the Client. The information contained herein may not be used, disclosed, or copied without written permission of the Client and may not be relied upon without the written permission of Citadel.

13.0 PROFESSIONAL CERTIFICATION

Citadel has completed a Phase I ESA of the property located at 6728 Sepulveda Boulevard, in the neighborhood of Van Nuys, City of Los Angeles, Los Angeles County, California. The Phase I ESA was performed at the Clients request in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-2013 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by the final All Appropriate Inquiry (AAI) Rule published in 40 CFR Part 312.10 (November 1, 2013). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting described in this Phase I ESA. I have developed and performed the AAI in conformance with the standard and care of this Rule.

EXPERIENCE

With over **35 years** of experience in environmental engineering, compliance, permitting and management projects, Mr. Drollinger has a strong working knowledge of EPA, DTSC, AQMD/APCD, OSHA and DOT regulations; and with local agencies, fire departments and public works. Mr. Drollinger has provided environmental engineering, assessment and compliance, safety management, and engineering construction management services on numerous projects for the US Navy, Veterans Administration, US Department of Agriculture, Cal Trans, EPA and numerous private projects throughout the western United States. In addition, Mr. Drollinger has developed and implemented programs to train managers and staff in storm water and NPDES compliance, soil and groundwater sample collection and data interpretation, Hazcomm, IIPP, and safe-work practices such as identifying and handling hazardous materials, fall protection, confined space, traffic control, LO/TO and ergonomics; and has conducted environmental and permitting audits of facilities including health and safety assessments.

ROLE

As Director of Environmental Geology & Engineering, Mr. Drollinger's primary responsibility includes developing and implementing health and safety protocols; safety training of management, staff and subcontractor personnel; establishing and managing budgets and personnel; negotiating with local, regional, state, and federal agencies; litigation support; and coordinating tasks with multi-discipline project teams.

Mr. Drollinger works closely with, and often develops protocols for conducting assessments related to Environmentally Regulated Materials Management (ERM), Industrial Hygiene (IH), and Occupational Safety and Training (OST) departments.

EDUCATION

Mr. Drollinger has a B.S. in Applied and Natural Sciences from the University of Alabama, and a M.Eng. in Advanced Safety Engineering and Management, University of Alabama, Birmingham.

Mr. Drollinger is also a certifying board member of the American Council of Accredited Certifications (formerly known as the American Indoor Air Quality Council), and is a member of the American Society of Safety Engineers, Board of Certified Safety Professionals, Institute of Hazardous Materials Management, Institute of Industrial Engineers and International Facilities Management Association.

EXPERIENCE

Ms. Lee has **12 years** of experience as an Environmental Specialist. Her responsibilities includes performing Phase I and Phase II Environmental Site Assessments, NPDES monitoring and permitting, groundwater monitoring, indoor air quality inspections, hazardous materials inventory, and preparation of health and safety plans and hazardous materials business and contingency plans.

ROLE

As an Environmental Specialist, Ms. Lee provides on-site organization, direction, control, and coordination necessary for the successful implementation, execution, and completion of environmental geology and environmental compliance-related projects awarded to Citadel. She also assists the Director of Environmental Geology and Engineering in the completion of all assigned projects so that the client is satisfied with the finished work product and the working relationship. Her assignments include a combination of field-based activities in a number of varying environments and office-based activities.

EDUCATION

Ms. Lee holds a Bachelor of Arts in Environmental Analysis and Design from the University of California, Irvine; with a minor in Urban and Regional Planning. Ms. Lee also holds a 40-hour HAZWOPER General Site Worker Certification. She has recently received her Environmental Management Certification from the University of California, Irvine.

User Questionnaire

DATE SENT: _____ DATE DUE: _____

HOW SENT (Circle): Fax / Email FAX / EMAIL: _____

User Questionnaire	
Client	6728 Sepulveda QOZB LLC
Contact Name	Mila Amparo
Contact Title	Project Management Specialist
Phone/Fax/Email	(818) 836-2363
Completed by?	Mila Amparo
Response Date	
Form of Response	
Current Use of the Property	Vacant land
Reason for Performing Phase I	Lender requirement

Please include the name of the Companies who provide your utilities, so we can contact each agency:

Utilities	
Electricity	N/A
Natural Gas	N/A
Sewage	City
Sanitary Sewerage	N/A
Solid Waste Removal	N/A
Fuel Oil	N/A
Steam	N/A

Please include the Name and Company of Each of the following individuals:

User	Name	Company
Key Site Manager	**Idan Perlman**	**Uncommon Developers**
Current Property Owner	**c/o Leon Benrimon, Exec. PM**	**6728 Sepulveda QOZB LLC**
Current Property Owner Representative	**Leon Benrimon**	**Uncommon Developers**
Occupants	**None; vacant land**	
Major Occupants	**None**	
Current Operator Name	**None**	
Past Property Owner(s)	**Shea**	
Past Property Owner Representative(s)	**unknown**	
Other Past Property Owner(s)	**unknown**	
Past Operator Name(s)	**unknown**	
Past Occupant(s)	**unknown**	
Past Major Occupant(s)	**Adult Home Facility**	
Broker(s)	**N/A**	
Property Manager	**N/A**	
Building Engineer	**N/A**	
Other		

TITLE & JUDICIAL RECORDS

Per ASTM E 1527-13 Section 6.2, the User is required to provide and/or report to the environmental professional any title and/or judicial records so identified for the subject property.

Please provide any information on title and/or judicial records:

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

Per ASTM E 1527-13 the User is required to provide and/or report to the environmental professional any environmental liens or AULs so identified for the subject property. The environmental professional per the ASTM practice is not responsible to undertake a review of information to identify environmental liens or AULs.

Please provide any information on environmental liens or activity and use limitations (AULs):

SPECIALIZED OR ACTUAL KNOWLEDGE OF USER

Per the ASTM standard, it is the User's responsibility to communicate to the environmental professional any information that is material to recognized environmental conditions in connection with the subject property based on such specialized knowledge, actual knowledge, experience, or commonly known and reasonably ascertainable information within the local community.

Please provide any information of the following items:

ASTM Scope Item	Property Contact Aware of them (Y/N)	Comment
USTs		unkown
ASTs		unknown
PCB Electrical Equipment		unknown
Hydraulic Equipment		unknown
Chemicals, Hazardous Materials, and Raw Materials Storage and Usage		unknown
Waste Generation, Storage and Disposal		unknown
Wells, Sumps, Pits, and Floor Drains		unknown
Stormwater Runoff and Surface Water		unknown
Lagoons, Septic Systems, Wastewater Treatment, and Separators		unknown
Stressed Vegetation, Staining and Odors		unknown
Surficial Disturbances		unknown
On-Property Dry Cleaners		unknown
		Refer to prior Phase 1 and Limited Phase 2 reports provided

NON-ASTM Scope Item	Property Contact Aware of them (Y/N)	Comment
Asbestos Containing Materials		unknown
Radon		unknown
Lead-Based Paint		unknown
Lead in Drinking Water		unknown
Potable Well		unknown
Potential Wetlands		unknown
Air Emissions		unknown
Mold/Water Intrusion		unknown

Please refer to "Helpful Documents" section below to provide any relevant reports associated with the above items.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

(For Property Owner) Per the ASTM standard, in a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User should try to identify an explanation for a significantly lower price which does not reasonably reflect fair market value if the property was not contaminated, and make a written record of such explanation. The ASTM standard does not require that a real estate appraisal be obtained in order to ascertain fair market value of the property.

PROCEEDINGS INVOLVING THE PROPERTY

Per the ASTM standard, prior to the site visit, the User (if different from the property owner), Key site manager (if any is identified), and property owner shall be asked whether they know of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

- **Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, or from the property? Y / N**
  If yes, please explain:

- **Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? Y / N**
  If yes, please explain:

HELPFUL DOCUMENTS

Per the ASTM Standard, Prior to the property visit, the Property owner, key site manager (if any is identified), and User (if different from the property owner) shall be asked if they know whether any of the documents below exist and if so, whether copies can and will be provided within reasonable time and cost constraints:

	User		Key Site Manager		Property Owner

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/28/2022 has revealed that there is 1

RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 02/28/2022 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/24/2022 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/28/2022 has revealed that there are 29 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Cortese: The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

A review of the Cortese list, as provided by EDR, and dated 12/16/2021 has revealed that there are 3 Cortese sites within approximately 0.5 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 4 DRYCLEANERS sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SHAMAM SVC CTR	6759 SEPULVEDA BLVD	NW 0 - 1/8 (0.043 mi.)	B17	32
PATTERSON E E	15260 VANOWEN PL	N 0 - 1/8 (0.061 mi.)	C23	41
BRETTS INCORPORATED	6810 SEPULVEDA BLVD	NNW 0 - 1/8 (0.098 mi.)	F41	227

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	05-23-2019
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Your previous submittal is out of date. Submissions are due between January 1, 2019 and March 1, 2019. Please resubmit for the current year. When renewing, please be sure to include inventory, site map, and contingency/emergency response plan if your site stores hazardous material at or above specified thresholds.

Site ID:	575584
Site Name:	CALIFORNIA HEALTH CARE
Violation Date:	07-25-2019
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Effective December 28, 2017, CalEPA has replaced the previously existing five federal hazard categories in CERS with twenty-four new federal hazard categories. The following federal hazard categories are now obsolete fire, reactive, pressure release, acute health, chronic health. A review of your submittal has determined that you still have the previous federal categories selected and/or have NOT selected any of the NEW federal hazard categories for your chemical inventory. Please review your hazardous material inventory and complete the following steps: 1) Deselect all of the five obsolete federal hazard categories for all chemical inventory listed under your facility. 2) Update your hazardous material inventory and select all applicable federal hazard categories from the 24 newly listed categories for all chemical inventory stored at your facility. You may refer to Section 2 of a current Safety Data Sheets (SDS) (previously called an MSDS) to determine which of the [Truncated]

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Effective December 28, 2017, CalEPA has replaced the previously existing five federal hazard categories in CERS with twenty-four new federal hazard categories. The following federal hazard categories are now obsolete fire, reactive, pressure release, acute health, chronic health. A review of your submittal has determined that you still have the previous federal categories selected and/or have NOT selected any of the NEW federal hazard categories for your chemical inventory. Please review your hazardous material inventory and complete the following steps: 1) Deselect all of the five obsolete federal hazard categories for all chemical inventory listed under your facility. 2) Update your hazardous material inventory and select all applicable federal hazard categories from the 24 newly listed categories for all chemical inventory stored at your facility. You may refer to Section 2 of a current Safety Data Sheets (SDS) (previously called an MSDS) to determine which of the [Truncated]

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

VALLEY PRESBYTERIAN HOSPITAL (Continued) **1000984874**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Name:	SPEEDWAY No. 5070 (USA)
Violation Date:	10-07-2019
Citation:	23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description:	Failure to retain a copy of the permit to operate at the facility.
Violation Notes:	Returned to compliance on 10/11/2019. OBSERVATION: Owner/Operator did not retain a copy of the permit to operate at the facility. CORRECTIVE ACTION: Retain a copy of the permit to operate at the facility. * To clear this violation: Email a current copy of your Consolidated Permit to Brian.Halley@lacity.org and post a copy on site for future inspections.
Violation Division:	Los Angeles City Fire Department
Violation Program:	UST
Violation Source:	CERS,
Site ID:	160352
Site Name:	SPEEDWAY No. 5070 (USA)
Violation Date:	11-01-2017
Citation:	HSC 6.7 25291(b) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(b)
Violation Description:	Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance into the secondary containment.
Violation Notes:	Returned to compliance on 11/01/2017. OBSERVATION: The 91 STP VR-208 sensor failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. CORRECTIVE ACTION: Correct immediately by having a properly licensed, trained, and certified contractor replace the failed component with a functional component (LG 113-x listed, if applicable) and obtain a permit within 1 business day from the CUPA. If the failed component can t be replaced immediately, there is a possibility that the 91 UST system may be red tagged to prevent fuel inputs. ** This sensor was replaced and tested 10/24/2017. A permit was applied for 10/31/2017. LAFD was able to grant this permit and retest during the annual monitor certification 11/1/2017. **

Violation Program:	UST
Violation Source:	CERS,
Site ID:	160352
Site Name:	SPEEDWAY No. 5070 (USA)
Violation Date:	12-10-2013
Citation:	23 CCR 16 2666(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2666(c)
Violation Description:	Failure of pump shut down when a leak is detected or when line leak detector is disconnected.
Violation Notes:	Returned to compliance on 01/09/2014. MC failed due to diesel fill sump sensor (208) not working. Also, overfill alarm light not working. Diesel sump had product in it from possible leaking turbine. Tester attempted to repair the turbine by tightening components, after, when the turbine turns on, the circuit breaker shuts off turbine. We were unable to see if the attempted repairs fixed the leak. Tank was closed until repairs can be verified.
Violation Division:	Los Angeles City Fire Department
Violation Program:	UST
Violation Source:	CERS,
Site ID:	160352
Site Name:	SPEEDWAY No. 5070 (USA)
Violation Date:	06-02-2016
Citation:	HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284
Violation Description:	Failure to obtain a valid permit to operate from the CUPA.
Violation Notes:	Returned to compliance on 06/23/2016. OBSERVATION: Owner/Operator did not obtain permit to install, replace, repair, or modify part of the UST system containment or leak detection equipment. CORRECTIVE ACTION: Obtain permit to install, replace, repair, or modify part of the UST system containment or leak detection equipment. ***** Diesel annular sensor replaced 12/30/2015 without permit. Permit and witnessed retest required. *****Per CALEPA, this violation was issued after the violation expiry date and had to be closed in order to be compliant with CERS. 07/21/2016 RTC Qualifier assigned to '1' for CME Upload by Sam Kim - Requested By Royce Long

Violation Date:	06-10-2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days

CHEVRON #9-0316T (FORMER) (Continued) **S102427076**

after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 08/21/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Failure to comply with one or more of the following overfill prevention equipment requirements: Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. **** Incomplete overfill inspection report dated 9/20/2018 indicate failure to your 87 and 91 fill tube shut off. Also indicated, was that the diesel fill tube shut off was not tested. No test results for your audio / visual overfill alarm. Test results indicate no ball float installed. ball floats are installed on your 87 , 91, and diesel USTs. These ball floats will need to be inspected to ensure they do not affect the fill [Truncated]

Violation Date: 12-10-2013
Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291
Violation Description: Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.
Violation Notes: Returned to compliance on 12/10/2013. MC failed due to diesel fill sump sensor (208) not working. Also, overfill alarm light not working. Diesel sump had product in it from possible leaking turbine. Tester attempted to repair the turbine by tightening components, after, when the turbine turns on, the circuit breaker shuts off turbine. We were unable to see if the attempted repairs fixed the leak. Tank was closed until repairs can be verified.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:

Site ID:	155033
Site Name:	Southern California Orthopedic Institute
Violation Date:	03-09-2021
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of

S.C. ORTHOPEDIC INS. (Continued) **S113101165**

hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 04/14/2021. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste off-site for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles). Observed 7 x 10-gal plastic containers of waste ethyl chloride in glass containers stored on-site over the allowable accumulation time limit based on discussion with the operators Mr. Jon DeWeil and Mr. Mike Ford and review of the most recent disposal manifest from 10/18/2019. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation to this division demonstrating that the violation has been corrected.

Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-10-2019
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into California Environmental Reporting System (CERS) is required between January 1 and March 1 of every year. Per L.A.M.C. 57.121.3.5, failure to submit the required hazardous material business plan (HMBP) information annually into CERS within the established reporting period, may result in a $500.00 late [Truncated]

Completed Document Type:	Phase 1
Completed Date:	05/22/1998
Comments:	Pursuant to the MOU, DTSC has reviewed a Phase I Preliminary Environmental Assessment for the San Fernando Valley Community Mental Health Center, Inc. (SFVCMHC). The subject property currently contains a one-story office building. SFVCMHC currently is leasing a major portion of the building which has been remodeled to accommodate their mental health clinic and administrative office. A portion of the building is presently vacant and will be remodeled to allow SFVCMHC to expand their clinic operations. SFVCMHC is proposing to purchase the subject property once the remodeling is completed. A Supplemental Phase I Environmental Assessment Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2019

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.
Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The Click here to access additional FINDS: detail in the EDR Site Report. database contains http://www.edrnet.com/srf2/FinalSiteReport.aspx?ID=252f5X16ft8HXfAW6M13tj38HH4Pfd6qWd2.MU2c3h2G5Z1YfD7rXF1L6c6xtn1YHz7jfp3lW53HMY2y5e29fU1pXV7i6nAatR8hH62JfY2dWN6xMp9Z350xjM388btEH62z5.2Dfq1EXp2h6L1etI3GH57Tfy8KWa8AMi4X3C73jN1r8SACH51 additional records for this site. Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Effective December 28, 2017, CalEPA has replaced the previously existing five federal hazard categories in CERS with twenty-four new federal hazard categories. The following federal hazard categories are now obsolete fire, reactive, pressure release, acute health, chronic health. A review of your submittal has determined that you still have the previous federal categories selected and/or have NOT selected any of the NEW federal hazard categories for your chemical inventory. Please review your hazardous material inventory and complete the following steps: 1) Deselect all of the five obsolete federal hazard categories for all chemical inventory listed under your facility. 2) Update your hazardous material inventory and select all applicable federal hazard categories from the 24 newly listed categories for all chemical inventory stored at your facility. You may refer to Section 2 of a current Safety Data Sheets (SDS) (previously called an MSDS) to determine which of the [Truncated]

Site ID:	160352
Site Name:	SPEEDWAY No. 5070 (USA)
Violation Date:	10-07-2019
Citation:	23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Description:	Failure to retain a copy of the permit to operate at the facility.
Violation Notes:	Returned to compliance on 10/11/2019. OBSERVATION: Owner/Operator did not retain a copy of the permit to operate at the facility. CORRECTIVE ACTION: Retain a copy of the permit to operate at the facility. * To clear this violation: Email a current copy of your Consolidated Permit to Brian.Halley@lacity.org and post a copy on site for future inspections.
Violation Division:	Los Angeles City Fire Department
Violation Program:	UST
Violation Source:	CERS,
Site ID:	160352
Site Name:	SPEEDWAY No. 5070 (USA)
Violation Date:	11-01-2017
Citation:	HSC 6.7 25291(b) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(b)
Violation Description:	Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance into the secondary containment.
Violation Notes:	Returned to compliance on 11/01/2017. OBSERVATION: The 91 STP VR-208 sensor failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. CORRECTIVE ACTION: Correct immediately by having a properly licensed, trained, and certified contractor replace the failed component with a functional component (LG 113-x listed, if applicable) and obtain a permit within 1 business day from the CUPA. If the failed component can t be replaced immediately, there is a possibility that the 91 UST system may be red tagged to prevent fuel inputs. ** This sensor was replaced and tested 10/24/2017. A permit was applied for 10/31/2017. LAFD was able to grant this permit and retest during the annual monitor certification 11/1/2017. **

Site Name:	SPEEDWAY No. 5070 (USA)
Violation Date:	12-10-2013
Citation:	23 CCR 16 2666(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2666(c)
Violation Description:	Failure of pump shut down when a leak is detected or when line leak detector is disconnected.
Violation Notes:	Returned to compliance on 01/09/2014. MC failed due to diesel fill sump sensor (208) not working. Also, overfill alarm light not working. Diesel sump had product in it from possible leaking turbine. Tester attempted to repair the turbine by tightening components, after, when the turbine turns on, the circuit breaker shuts off turbine. We were unable to see if the attempted repairs fixed the leak. Tank was closed until repairs can be verified.

Eval Type:	Other, not routine, done by local agency
Eval Notes:	Reviewed received annual Monitoring System Certification & spill bucket results for unwitnessed testing conducted on 11-7-2016 by Fastech. Results were scanned / downloaded and attached in Envision. No violations were noted on report. All sensors not tested but tested at a later date. No violation. From tech: We were not able to test the diesel annular sensor. The veeder root-420 sensor is stuck in annular space, we are not abel to take it out to test for positive shut down. No label was placed on this sensor, not certified. Per CE Thomas invoice on site, this contractor to return to install a VR 344 sensor.

Eval Notes:	MC failed due to diesel fill sump sensor (208) not working. Also, overfill alarm light not working. Diesel sump had product in it from possible leaking turbine. Tester attempted to repair the turbine by tightening components, after, when the turbine turns on, the circuit breaker shuts off turbine. We were unable to see if the attempted repairs fixed the leak. Tank was closed until repairs can be verified.
