Comments for Public Posting: I have artificial grass and it's been the best investment and eco friendly move I have made. I am savings thousands of gallons of water, no need for gas powered heavy equipment's to trim and cut my grass. It is great for the environment, and contrary to what most believe I received a certificate that states there are no PFAS/Lead based materials. As for heat islands, it stays at the same heat as the concrete we have all over the city. We need facts and evidence not feelings when arguing.
