Comments for Public Posting: Dear Council, Re: Carbon elimination Strategies. Yes. Please be leaders on this and set a national model for how cities CAN change to meet the crisis on climate. There is no question about it. We need to eliminate carbon emitting fuels. Let's do it. I support all efforts to go green and fossil free. At the same time, it makes no sense to electrify buildings and cars if the electricity is coming from coal or natural gas burning plants. We must go all-in on roof top solar. To address the equity issues, it is now possible for distributed community solar power. Organizations such as So Fi Stadium, Dodger Stadium, Staples Center, etc. and EVERY LAUSD school, Community College, government, and military building should now have roof top solar/battery backup and supply their local surrounding communities with distributed free electricity. Every parking lot can be shaded by solar shade structures. Everyone will have jobs to accomplish this. It won't work to import our electricity from miles around with heavy transmission lines through our tinderbox forests. There is no reason we can't do it right here. Full solar electricity ahead!
