Comments for Public Posting: The primary weakness of our city's speed limit system is insufficient enforcement to affect driver behavior. It is not feasible for traffic officers to cite a meaningful number of infractions. Passive traffic calming devices like speed tables have proven to lower speeds where they are installed, improving the safety at critical intersections. I urge you to support the testing and implementation of speed tables. Thank you.

Comments for Public Posting: Hello, Speeding is a serious issue in Los Angeles and is THE most common cause of traffic fatalities here. Every 10 mph increase in speed significantly lowers the chance of survival if hit by a car. Speed table can help lower speeds throughout the city, making neighborhoods much safer for the people living in them. Please consider adding speed tables to the city. Thank you,
Markanday
