Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

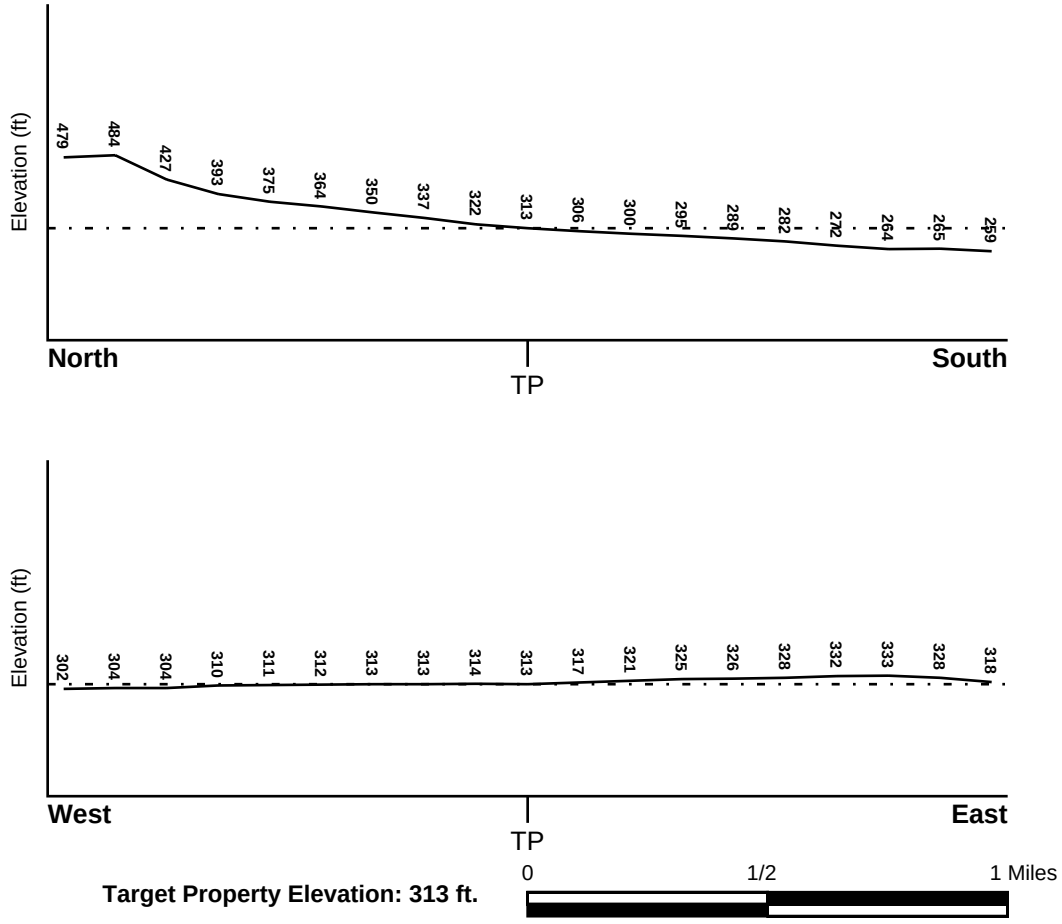
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

Re: Freedom of Information Act Request – EPA-2020-006564

Dear Angela Truong:

This letter concerns the above-referenced Freedom of Information Act (FOIA) request, received by the U.S. Environmental Protection Agency (EPA) on August 26, 2020. Your request is seeking records about a specific property: "1212 and 1218 Vine Street, Los Angeles, CA 90038".

The MyProperty database below will provide you with information concerning following website link: http://www.epa.gov/myproperty/.

Because the information on a specific address is publicly available, your FOIA request for this information will be closed. Agencies are not required to provide FOIA requesters with records that fall within the proactive disclosure provision of the FOIA, subsection (a)(2), and which are already made available to the public, typically on the agency's website. *See* 5 U.S.C. § 552(a)(3); 40 C.F.R. § 2.101(c).

If no responsive records are identified for a specific property address, MyProperty will generate a "No Records Certificate." If MyProperty identifies responsive records that you cannot retrieve through MyProperty or if you need help with the MyProperty website, please contact EPA's FOIA Public Liaison at hq.foia@epa.gov or (202) 566-1667.

This letter concludes our response to your request. You may appeal this response by email at hq.foia@epa.gov, or by mail to the EPA's National FOIA Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2310A), Washington, DC 20460 or through FOIAonline if you are an account holder. If you are submitting your appeal by hand delivery, courier service, or overnight delivery, you must address your correspondence to 1200 Pennsylvania Avenue, N.W., Room 7309C, Washington, DC 20460.

Your appeal must be in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90-calendar-day limit. Appeals received after 5:00 p.m. EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal."

Additionally, you may seek dispute resolution services from EPA's FOIA Public Liaison at hq.foia@epa.gov or (202) 566-1667, or from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8601 Adelphi Road, College Park, MD 20740-6001; email, ogis@nara.gov; telephone, (202) 741-5770 or (877) 684-6448; or fax, (202) 741-5769.

Public Records Request Number: PR1-082620-05
Location(s): 1212 & 1218 Vine St., Los Angeles, CA 90038

Dear Requestor:

On August 26, 2020 the Department of Toxic Substances Control (DTSC) received your email of the same date requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

However, DTSC's E-Waste unit may have records that pertain to 1218 Vine St., Los Angeles. "E-Waste" refers to any unwanted electronic device or Cathode Ray Tube (CRT) and is classified as universal waste. E-Waste frequently contains hazardous materials, predominantly lead and mercury, and is produced by households, businesses, governments, and industries. I have forwarded your Public Records Act request to that unit for further processing. Please contact them by email at electronicwaste@dtsc.ca.gov if you are interested in this information.

Many of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me via email at pubreqact@dtsc.ca.gov.

Sincerely,

Submittal Review

Submittal: U Permit, Ref No. 20180092296
Title: Excavation U-Permit Soil Boring Backfill Requirements
Received: September 14, 2018
Returned: September 18, 2018
Reviewer: Benjamin Moore, Geotechnical Engineering Division

In response to a request from Edward Arrington of the Wastewater Conveyance Engineering Division, GED has reviewed the referenced submittal for geotechnical content. As part of this review, GED has contacted the applicant, Noah Ramos of the Department of Water and Power to discuss the content of the submittal.

GED finds the submittal to be acceptable based on the following considerations and with the indicated conditions of approval.

1. The use of a bentonite additive in a water-cement backfill for borings is consistent with the recommendations of the California Department of Water Resources Well Standards, published under Bulletins 74-81 and 74-90. Per these standards, up to 5 percent of bentonite may be added to a neat cement mix to improve fluid characteristics and sealing capability.
2. An exploratory boring of 8 inches in diameter or less does not need to be considered as a ‘trench’ for the purposes of meeting Brown Book standard 201-6.1.1 compressive strength requirements for CLSM.
3. A stamped mix design and strength test results may be required at the determination of the reviewer based on other considerations.
4. The backfill mix should be prepared at the surface before placement in the boring hole using the tremie method, as recommended.
5. The proposed backfill material should not be placed to the ground surface. Standard requirements for resurfacing after backfilling of borings should apply.

For any questions in regards to this review, please contact:

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting, Inc. (Ramboll; formerly Ramboll US Corporation) was retained by Grubb Properties (Grubb, or the "Client") to perform a Phase I Environmental Site Assessment (ESA) of the properties located at 1212 and 1218 Vine Street in Los Angeles, California[1] (herein referred to as the "facility" or the "site;" see Figures 1 and 2).

Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in accordance with the scope and limitations of American Society for Testing and Materials (ASTM) International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard") and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312), and the scope of services identified in the August 19, 2021 Master Environmental Consulting Services Agreement (MSA) between the Client and Ramboll, was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard (see Section 8).

1.1 Site Summary

The site is currently owned by 1200 Vine Street Properties LP, which is a commercial facility in Los Angeles, California. The approximately 0.96-acre site is improved with an approximately 13,475-square-foot building, located at 1212 Vine Street (herein referred to as the "1212 Building") and an approximately 13,536-square-foot building, located at 1218 Vine Street[2] (herein referred to as the "1218 Building"). The 1212 Building is currently occupied by Spirit as a pop-up store for a short period of time, while the 1218 Building is vacant.

Historically, the central-western and northern portions of the site were developed with a residential dwelling and an auto warehouse building, respectively, since at least 1919. The residential and warehouse buildings were demolished (dates unknown). The southeastern portion of the site was developed with the 1212 Building (which formerly was listed under 1200 and 1210 Vine Street and 6245, 6251, and 6259 Lexington Avenue addresses) in the 1920s and occupied by various entities for movie prop warehousing, plastic products assembly, auto services, auto sales, a private garage, and commercial/retail operations since its construction. It is noted that the 1212 Building was reconstructed in 1992 due to fire damage. The 1212 Building was vacant since December 2020 until September 2021, when Spirit began its occupancy of the building as a pop-up store (operating for short periods of time).

A building was present in the northern portion of the site, in the current location of the 1218 Building (formerly was listed under 1220 Vine Street address) between the mid-1950s and the mid-1970s; the building was used as a carwash during this time period and demolished sometime in the late 1970s. The 1218 Building was then developed in the northern portion of the site in 1980 and occupied by various entities for commercial/retail operations since its construction. Goodwill store occupied the 1218 Building from 1996 until June 2021, when they vacated the building. The 1218 Building has been vacant since June 2021.

[1] According to the Sanborn maps, the former site addresses include 1200, 1210, and 1220 Vine Street and 6245, 6251, and 6259 Lexington Avenue.

[2] According to the Sanborn maps, the former site addresses include 1200, 1210, and 1220 Vine Street and 6245, 6251, and 6259 Lexington Avenue. 1220 Vine Street address corresponds to the 1218 Building, while the remaining addresses corresponds to the 1212 Building.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA and Subsurface Investigation of the site located at 1212 and 1218 Vine Street in Los Angeles, California. The Phase I ESA portion of the scope was conducted in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Other Findings

Although not considered RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Historical Car Wash and Auto Fueling Station** - The northern portion of the site (1218 Building) was occupied by a car wash and an auto fueling station from the 1960s through 1970s. According to the City Fire – Haz Mat Division records, two USTs with capacities of 9,940-gallons and 4,000-gallons were installed to the south of the 1218 Building in 1968. In addition, the City Fire – Haz Mat Division records indicate that Rancho Car Wash obtained fire permits for the operation of an auto fueling station on the site between 1971 and 1976. Furthermore, the site (under 1218 North Vine Street address) is listed in the UST database with historical status. However, no further information is provided in the agency records and the UST database regarding the status of the USTs (e.g., if removed or closed in-place, if confirmatory samples were collected, regulatory involvement). The former car wash and auto fueling operations may have included the use of a clarifier, petroleum products, solvents, and other chemicals. Given the absence of information pertaining to the status of the USTs, the absence of information pertaining to a clarifier or an environmental release, and as a result of our past experience with similar facilities, the historical car wash and fueling station operations, as well as the historical usage of the USTs were considered issues warranting further investigation. Based on the findings of Ramboll's subsurface investigation and low concentrations of Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), and metals reported in shallow soil and soil vapor (see Section 6), the historical features and operations in the northern portion of the site did not significantly impact the site and it is unlikely that groundwater has been impacted by historical features and operations. Therefore, the historical car wash and auto fueling station is not considered to be a REC.
- **Industrial Operations at the Site.** Since the late 1920s, the southern portion of the site (1212 Building) has been used for various light industrial purposes, including auto services/repairs and auto sales. Although Ramboll identified no evidence of a release at the site, these former industrial operations may have included the use of petroleum products, solvents, paint, and other chemicals. Based on Ramboll's subsurface investigation, these former industrial operations have not resulted in significant or widespread contamination at the site. However, during future site redevelopment activities, Ramboll recommends implementing a soil management plan as part of any earth moving activities.

A discussion of *de minimis* conditions and non-scope considerations identified during this review, if any, is presented in Section 7.0 of this report.

2. INTRODUCTION

2.1 Scope of Work

Ramboll was retained by Rexford to conduct a Phase I ESA and subsurface investigation in connection with the above referenced site in Los Angeles, California. The Phase I ESA relied upon the references noted below and included the following tasks consistent with the ASTM Standard and the scope of services identified in the MSA between the Client and Ramboll:

- On October 5, 2021 Nazgol Zandipour of Ramboll conducted a site visit to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- During the site visit, Ramboll interviewed the following individual (year of initial hire at the site indicated in parentheses, if available): Howard Entin, Managing Partner of 1200 Vine Street Properties, LP, the site owner (1996). The aforementioned individual is referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR, Inc. (EDR; see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The USEPA's EnviroFacts database, which provides site information contained in multiple USEPA regulatory databases.
  - A review of the California Water Resources Control Board's GeoTracker website (GeoTracker), which provides information with respect to releases to soil and groundwater in the site vicinity.
  - A review of the California Department of Toxic Substances Control's EnviroStor (EnviroStor) website, which provides information with respect to property cleanups in the site vicinity.
  - A review of the California Geologic Energy Management Division (CalGEM) website, which provides information regarding the locations of oil and gas wells on and in the vicinity of the site.
- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
  - Historical and site-specific information for the 1212 and 1218 Vine Street addresses obtained from the Los Angeles County Assessor Portal; for the 1200, 1212, and 1218 Vine Street and 6245 Lexington Avenue addresses obtained from the City of Los Angeles Building Department (Building Department); and for the 1200 and 1218 Vine Street addresses obtained from the City of Los Angeles Fire Department – Haz Mat Division (City Fire – Haz Mat Division). Ramboll also requested information from the following local agencies for the current and former site addresses: the City of Los Angeles Fire Department - Plan Check/UG Tank Division (City Fire –

UG Tank Division), Los Angeles County Fire Department – Health Hazardous Materials Division (HMMD), and LARWQCB; however, these agencies reported having no records pertaining to the current and former site addresses.

- A review of the following documents provided to Ramboll by the Client (included in Appendix D):
  - *Asbestos Identification Survey, Dollar Tree Stores, Inc. 1212 Vine Street, Los Angeles, CA*, prepared by Vertex Companies, Inc. (VERTEX), dated August 5, 2014 (the "2014 Asbestos Survey report");
  - *Phase I Environmental Site Assessment, 1212 and 1218 Vine Street, Los Angeles, California*, prepared by Roux Associates, Inc. (Roux), dated October 30, 2020 (the "2020 Phase I ESA report"); and
  - *Pre-Demolition Asbestos and Lead-Based Paint and Lead-Glazed Ceramic Tile Survey Report, 1200-1218 Vine Street, Los Angeles, CA,* prepared by Masek Consulting Services, Inc. (Masek), dated October 11, 2021 (the "2021 Asbestos and LBP Survey report).
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, and/or hydrologic sources as provided in the EDR database report and the previous report, as listed above.
- A review of any information provided by the User of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report.

The Phase I ESA was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Grubb in a contract entered into in September 2021. Ramboll also contracted Masek Consulting Services, Inc. to conduct a survey for the presence of asbestos and lead-based paint. The potential for the presence of mold was evaluated by reviewing information provided during the site visit and the potential for the presence of radon was evaluated through a review of information provided in the EDR report.

In addition to conducting the Phase I ESA, Ramboll conducted a subsurface investigation at the site comprising the collection of soil and soil vapor samples. Details of the subsurface investigation are provided in Section 6.0.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered likely to represent an environmental concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of Grubb and may not be relied upon by any other person or entity without Ramboll's prior express written permission, except as set forth in the Master Services Agreement between Ramboll and the Client (the "MSA"). In the event of any conflict between the terms and conditions of this report and the terms and conditions of the MSA shall control.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, Ramboll can neither warrant nor guarantee the extent to which the information provided to Ramboll was accurate and complete; however, Ramboll evaluated the reliability and thoroughness of such information. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for the Phase I ESA did not include collecting samples of environmental media. In December 2021, Ramboll conducted a Phase II subsurface investigation at the site. Ramboll's subsurface investigation is further summarized in Section 6.

Other issues considered outside the scope of the ASTM Standard and this review include regulatory compliance, lead in drinking water, wetlands, polychlorinated biphenyls (PCBs) in building materials, cultural and historical resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

1200 Vine Street Properties LP currently owns the commercial facility located at 1212 and 1218 Vine Street in Los Angeles, Los Angeles County, California[3]. The approximately 0.96-acre site is located approximately 5.5 miles northwest of the City of Los Angeles (Figure 1).

According to the Los Angeles County Assessor Portal, the assessor's parcel numbers (APNs) for the site are 5534-002-023 (an 0.63-acre parcel, which occupies the southern portion of the site) and 5534-002-018 (an 0.33-acre parcel, which occupies the northern portion of the site).

The site is developed with the following structures:

- APN 5534-002-023 is developed with an approximately 13,475-square-foot building, which is located at 1212 Vine Street (herein referred to as the "1212 Building"). The 1212 Building is currently occupied by Spirit as a pop-up store for a short period of time.
- APN 5534-002-018 is developed with an approximately 13,536-square-foot building, which is located at 1218 Vine Street (herein referred to as the "1218 Building"). The 1218 Building is currently vacant.

The primary site access is via Vine Street at the western site boundary (Figure 2). Asphalt-paved parking areas are present to the west of 1212 Building and south of 1218 Building. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	Google Earth	Ranges from approximately 316 feet along the northeastern corner of the site to 309 feet in the southwestern corner of the site.
Topographic Gradient	USGS topographic map; Visual observations; Google Earth	Relatively flat on-site, with a gentle downward slope to the south. Regional topography slopes gently downward to the south.
Local Land Use	Visual observations	The facility is located in a predominantly residential and commercial land use area. See Section 3.3 for more information on adjacent properties.
Nearest Residence	Google Earth; Visual observations	Immediately east of the site.

[3] According to the Sanborn maps, the former site addresses include 1200, 1210, and 1220 Vine Street and 6245, 6251, and 6259 Lexington Avenue.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Hydrology		
Storm Water Runoff	Visual observations	Percolates into the ground surface at landscaped areas or enters drains on the roofs or along the streets discharging to the municipal storm water system.
Nearest Surface Water Body to the Site	Google Earth	Hollywood reservoir is located approximately 1.65 miles north-northwest of the site.
Flood Plain	FEMA*	Facility personnel reported no known occurrences of flooding at the site. The site is located within a 500-year flood zone but outside of a 100-year flood zone.
Wetlands	NWI*	There are no federally-designated wetlands on-site.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; GeoTracker webpage	Based on topography, groundwater flow direction is anticipated to flow to the south. Based on information provided in the GeoTracker webpage for a Paragon Cleaners property, located approximately 450 feet north of the site, groundwater flows to the southwest.
Depth to Groundwater	GeoTracker webpage	Information not readily available for the site. Based on information provided in the GeoTracker webpage for the Paragon Cleaners property, located approximately 450 feet north of the site, the groundwater was measured at depths ranging between 18 and 35 feet below top of casing (TOC) in June 2021.
On-site Wells	Visual observations; CalGEM; Database report	No oil and gas, production or monitoring wells.
Nearest Groundwater Supply Wells	Database report	No federally registered wells are present within one mile from the site. Numerous state registered private or municipal wells that may be used for water supply are located within one mile from the site.
Geologic Conditions	2020 Phase I ESA report	According to the 2020 Phase I ESA report, "*Subsurface soils consist primarily of interbedded fine-grained cohesive soils (silts and clays) with isolated lenses of sand to approximately 80 feet below ground surface. The soils exhibit the characteristics typical of alluvial fan deposits within the Bellflower Aquiclude, which are dominated by fine-grained sediments within which higher-permeability sand lenses have been deposited during times of high rainfall/high surface flow*."

Site Utility Information		
Heating and Cooling Equipment	Facility personnel; Visual observations	Natural-gas fired heating units supply buildings heat. The buildings are cooled with air conditioning units located on the buildings' roof.
Natural Gas Service	Facility personnel; Visual observations	The Southern California Gas Company provides the site with natural gas service.
Use of Fuel Oil for Building Heat	Facility personnel; Visual observations	No known current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	Visual observations	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	2021 Annual Water Quality Report[4]	The facility receives drinking water from the Department of Water and Power (DWP).
Sanitary Sewer	Facility personnel	According to facility personnel, the facility discharges sanitary wastewater to the municipal sanitary sewer system.
Septic Systems	Facility personnel	No current or former septic systems were observed on the site.

* - Source was provided in the environmental database report.

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.

3.2 Current Use of Site

3.2.1 Current Operations

The 1212 Building is temporarily occupied by Spirit as a pop-up store for Halloween costumes and decoration sales. No chemicals or raw materials, other than limited amounts of janitorial and cleaning supplies are stored in 1212 Building. The 1218 Building is currently vacant. Facility personnel knew of no use of chlorinated solvents by the former tenants. Facility personnel indicated that the site has been used solely for commercial/retail purposes since 1996, when the current owner acquired the site.

[4] *2021 Annual Water Quality Report*, prepared by the City of Santa Monica Water Resources Division, not dated.

3.2.2 Waste Management

Hazardous wastes are not routinely generated at the site other than the generation of limited amounts of universal wastes (e.g., fluorescent light bulbs, batteries). General facility trash and recycling materials are collected in on-site covered dumpsters for removal by a waste management company identified as *Recycla*.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which includes wastewater from bathroom and kitchen areas, is discharged to the municipal sanitary sewer system. The facility does not generate process wastewater.

Storm water percolates into the ground surface at landscaped areas or enters drains on the roofs or along the streets discharging to the municipal storm water system.

3.2.4 Air Emissions

Air emissions from the facility are limited to combustion products resulting from the operation of the site's natural-gas-fired comfort heating system.

3.3 Current Uses of Adjoining Properties

The site is located in a mixed residential and commercial land use area. The nearest residential areas are located adjacent to and east of the site. Based on Ramboll's visual observations from the site boundary and public rights-of-way, and a limited review of publicly available information, a general evaluation of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll's Observations
North	Hollywood Mental Health Center, followed by La Mirada Avenue. .	No apparent exterior manufacturing or chemical storage operations were observed. No environmental concerns were noted.
East	A multi-story apartment building.	
South	Lexington Avenue, followed by Taco Bell fast-food restaurant.	
West	Vine Street, beyond which is a vacant property under construction and Taglyan Complex (events venue)	

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the site. Ramboll did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in October 2021 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM Standard.[5] A copy of the EDR database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by EDR (see Appendix B) and also searched the California GeoTracker and EnviroStor databases. The Site is listed on several environmental databases, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
1218 N Vine Street is listed on the Los Angeles Underground Storage Tank (UST) database for a historical UST of unknown contents, that was last active in 1900. No further information is provided in the database.	This matter is further discussed in Section 7.1.
Dollar Tree #05859, listed at the 1200 Vine Street address, is listed on the following databases related to regulatory compliance: Hazardous Waste Tracking System (HWTS), Hazardous Facility and Manifest Data (HAZNET), California Environmental Reporting System (CERS), CERS Hazardous Waste (CERS HAZ WASTE), and Los Angeles Active & Inactive Hazardous Materials Inventory (Los Angeles HM). According to the HAZNET database, hazardous wastes generated at the site included off-specification, aged or surplus organics, unspecified solvent mixture, alkaline solution without metals with pH equal to or more than 12.5, and other organic solids between 2017 and 2019.	Listings on these databases, by themselves, do not suggest a contamination concern to the site.

4.1.2 Database Review for Adjoining Properties

According to the environmental database search report, no adjoining sites are listed on databases that are indicative of a potential contamination concern.

4.1.3 Database Review for Other Surrounding Properties

Ramboll has identified the following non-adjoining property that represents a potential contamination concern to the site due to past releases on this property and possible migration onto the site, as indicated in Table 4.

[5] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Santa Monica/Vine Primary Site No.9 Fountain Avenue/ La Mirada Avenue (400 feet northeast)	The property is listed on the EnviroStor and School Property Evaluation Program (SCH) databases as a school investigation Department of Toxic Substances Control (DTSC) Site Cleanup Program with status denoting "Inactive – Withdrawn 8/20/2020."	Additional information reviewed on the EnviroStor database details potential lead-based paint and asbestos containing materials at the property, due to the age of the structures. Based on the lack of apparent soil or groundwater impacts, this off-site property is unlikely to pose a contamination concern to the subject site and is not discussed further herein.
Snow White Cleaners (also listed as Marquis Cleaners and Hollywood Dry Cleaners) 1246 North Vine Street (250 feet north)	The property is listed on the EnviroStor, Voluntary Cleanup Program (VCP), and Deed Restriction Listing (DEED) databases due to a voluntary cleanup program at the property with status denoting "Certified O&M – Land Use Restrictions Only" as of August 2013. The contaminant of concern is listed as tetrachloroethylene (PCE). Additional information reviewed on the EnviroStor webpage details historic dry-cleaning operations and PCE use at the property, dating back to 1984. Soil, soil gas, and groundwater sampling at the property in 2009 found concentrations of PCE in groundwater and soil gas to be above MCLs. Downgradient groundwater monitoring wells were installed in 2010, and as of 2012, PCE values were recorded at concentrations equal to or below the MCL at the time. In addition, the 2012 soil gas sampling results revealed the presence of PCE at a maximum concentration of 20.3 micrograms/liter (µg/l), which had reportedly dropped significantly since the 2009 sampling. A No Further Action Letter (NFA) was issued by the DTSC in 2013, based on the reduction of PCE contamination in soil gas and groundwater. A Land Use Covenant was filed at the property in 2013, limiting the property use to commercial or industrial only.	Because the matter has been granted a NFA status by the state agency, it is reasonable to assume that the matter was appropriately evaluated in accordance with regulations in place at the time, and that remaining contamination, if any, is unlikely to migrate at significant levels onto the subject site. Thus, this off-site listing, does not represent a significant concern to the subject site.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
Paragon Cleaners 1310 Vine Street (430 feet north)	The property is listed on the Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites, SPC-SLIC) and Waste Discharge Requirements (WDR) databases. The status of the property is listed as "Open – Remediation" as of August 2019 in the SPC-SLIC database. In addition, PCE, trichloroethylene (TCE), and benzene are listed as the potential contaminants of concern. Based on information provided in the GeoTracker webpage, groundwater has been impacted by PCE due to historical drycleaning operation, which was conducted at the property since 1963. Reportedly, the drycleaning operation has switched to "green" chemicals in 2006. Additional information reviewed on the GeoTracker webpage, including a 2020 Fate and Transport Study & Groundwater Plume Management Plan of the Paragon Cleaners property, describes PCE migration from the property, in the southwestern direction. Ramboll notes that the site is located directly south of the Paragon Cleaners property. During a recent sampling event in June 2021, PCE was detected at a concentration of 440 µg/l (above its MCL of 5 µg/l) in a closest groundwater monitoring well to the site (well W-7A), which is located approximately 300 feet west of the site. The remaining contaminants of concerns (TCE, cis-1,2- dichloroethylene [cis-1,2-DCE], 1,1-DCE, and vinyl chloride [VC]) were either not detected or detected well below their corresponding MCLs in well W-7A during the June 2021 sampling event. A plume map dated June 2021 depicts the boarder of the PCE plume to be located approximately 200 feet west of the site, and therefore does not appear to impact groundwater beneath the site. The 2020 Fate and Transport Study & Groundwater Plume Management Plan indicates that the PCE plume is relatively stable and it does not appear to be changing in size except in the vicinity of the Paragon Cleaners property, due to source area remediation, including Enhanced reductive Dichlorination (ERD) and Soil Vapor Extraction (SVE).	Plume maps contained on the GeoTracker webpage indicate that the extent of groundwater contamination has been delineated and the contamination does not appear to have migrated to the subject site. The contamination is being addressed with regulatory oversight. Thus, this matter is unlikely to present a concern to the subject site.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments

Notes:

[1] Ramboll's analysis of adjoining sites was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.

The database report indicates that poor or inadequate address information was available for several properties located in the vicinity of the site; therefore, these properties could not be readily mapped by EDR. Because the location of these properties with respect to the site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the site from these properties. It was beyond the scope of this review to accurately locate each of the unmapped properties identified by EDR; however, Ramboll reviewed the list of unmapped properties and verified that none appeared to be adjacent to the site.

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

Historically, the central-western and northern portions of the site were developed with a residential dwelling and an auto warehouse building, respectively since at least 1919. The residential and warehouse buildings were demolished in unknown dates. The southeastern portion of the site was developed with the 1212 Building (formerly was listed under 1200 and 1210 Vine Street and 6245, 6251, and 6259 Lexington Avenue addresses) in the 1920s and occupied by various entities for movie prop warehousing, plastic products assembling, auto services, auto sales, a private garage, and commercial/retail operations since its construction. It's noted that the 1212 Building was reconstructed in 1992 due to fire damage, which caused damage to the walls and roof of the building. Only the building footing and slab remained and used to support the new structure. The 1212 Building was vacant since December 2020 until September 2021, when Spirit began its occupancy at the building as a pop-up store.

A building was present in the northern portion of the site, in the current location of the 1218 Building (formerly was listed under 1220 Vine Street address) between the mid-1950s and the mid-1970s; the building was used as a carwash during this time period and demolished sometime in the late 1970s. The 1218 Building was then developed in the northern portion of the site in 1980 and occupied by various entities for commercial/retail operations since its construction. A Goodwill store occupied the 1218 Building from 1996 until June 2021, when they vacated the building. The 1218 Building remains vacant since June 2021. The site is currently owned by 1200 Vine Street Properties LP.

A summary of Ramboll's key observations from the available historical sources is presented in Table 5.

Table 5: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
Sanborn maps (1919, 1950, 1955, 1957, 1960, 1961, 1962, 1966, 1968, 1969, 1970)	The 1919 map depicts a dwelling in the center of the site, along with an outbuilding in the northernmost portion of the site. The remainder of the site appears vacant. The site address is listed as 1200 Vine Street. The 1950 map depicts the northern portion of the site to be utilized as parking lot (listed under 1220 Vine Street), the southwestern portion of the site to be utilized for used auto sales with two associated small structures, one of which is labeled as storage (listed under 1200 and 1210 Vine Street and 6251 and 6259 Lexington Avenue addresses), and the southeastern portion of the site to be developed with a building used for movie prop warehousing (listed under 6245 Lexington Avenue address). The 1955 map depicts the northern portion of the site to be vacant, the southwestern portion of the site to be unchanged from the 1950 map, and the building in the southeastern portion of the site is labeled as "Plastic Products Assembling". The site addresses remain unchanged. The 1957 map depicts the northern portion of the site to be developed with a building, labeled as "Auto Laundry," the southwestern and southeastern portions of the site appear unchanged from the 1955 map. The 1960 map depicts the building in the southeastern portion of the site as being vacant, while the northern and southwestern portions of the site appear unchanged from the 1957 map. The 1961, 1962, and 1966 maps depict the building in the southeastern portion of the site as being used as a private garage with a capacity of 60 cars. The northern and southwestern portions of the site appear unchanged from the 1957 map. The 1968, 1969, and 1970 maps depict the building in the southeastern portion of the site as being used for auto service, the northern and southwestern portions of the site appear unchanged from the 1957 map.
Aerial Photographs (1928, 1938, 1948, 1952, 1954, 1964, 1977, 1979, 1983, 1989, 2002, 2005, 2009, 2012, and 2016) Satellite Imagery [1] (1985-2021)	Site details are not ascertainable in the 1928 photograph, due to the poor quality of the photograph; however, it appears that a building is present in the southeastern portion of the site. The 1938 and 1948 photographs depict a structure in the southeastern portion of the site, while the northern portion appears as a vacant land. The 1952 and 1954 photographs depict two structures present in the southern portion of the site (the previously depicted structure in the southeastern corner and a structure in the southwestern portion of the sure). The northern portion of the site remains undeveloped in the 1952 and 1954 photographs. By 1964, a structure is depicted in the northern portion of the site. The structure in the southeastern portion remains in the 1964 photograph, although the structure in the southwestern portion of the site appears to be gone, and the area now appears to be used for car parking. There are no significant changes in the 1977 photograph. The 1983 and subsequent photographs show the site in its present configuration, with the current site buildings present in the northern and southeastern portions of the site and a parking area present in the southwestern portion of the site. No concerns are noted.
Topographic Maps (1894 to 2012)	No development is depicted on the maps; however, the site is depicted as an urban area.

Table 5: Summary of Key Observations from Historical Sources for the Site

City Directory Abstracts (1929, 1933, 1942, 1951, 1958, 1971, 1976, 1990, 1994, 1999, 2000, 2004, 2006, 2014)	The occupants of the 1200 Vine Street address are listed as American Church Western Diocese (1976), Ametron Electronic Supply, Inc. (1976, 1990, 1994), Ametron Audio Visual (1994, 1999, 2000), Goodwill Industry of Southern California, Hans Discount, and Vine Mart (2004), Goodwill Stores, Donation Center, Hans Discount, and Vine Mart (2006), and Giant Dollar (2014). The occupant of the 1212 Vine Street address is listed as Rancho Car Wash (1958, 1971, 1976). The occupants of the 1218 Vine Street address are listed as Rancho Car Wash (1958, 1971, 1976) and Vine St. Goodwill Store and Donation (2014). The occupants of the 6245 Lexington Avenue address (the former site address) are listed as Westby Bmer Auto Mech and Esse Clearance B Esta Garage (1929), Markowitz Sami Edith Garage (1933), General Communication Products Co., Robinson Sound Equipment (1942), Lexington Vibradamp Corp Vibration Engineering (1951), Ametron Audio Visual (1994), and Ametron American Electronic Supply (1999, 2000). The occupant of the 6251 Lexington Avenue address (the former site address) is listed as Showbiz Café (1990).
Assessor Portal	The Assessor portal records indicate that the site building located at 1218 Vine Street was constructed and/or renovated in 1980, and the building located at 1212 Vine Street was constructed and/or renovated in 1992.

Notes:

[1] In addition to aerial photographs provided by EDR, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site appear to have primarily been used for residential purposes since as early as the mid-1890s. By the mid-1950s, the properties in the vicinity of the site appear to have primarily been used for commercial purposes. Notable establishments include auto sales/service shops adjacent to the south and west, and a movie theater adjacent to the north.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the current and former site addresses. An overview of the findings of this review is presented in Table 6.

Table 6: Local and State Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
Los Angeles County Assessor Portal	The Assessor portal records indicate that the site is associated with APNs 5534-002-023 and 5534-002-018.

Table 6: Local and State Agency Information for the Site

Agency Contacted/ Document Reviewed	Information Obtained
Los Angeles County Fire Department – Health Hazardous Materials Division (HMMD)	Ramboll requested records from the HMMD related to the former and current site addresses. The HMMD reported no records on file for the current and former site addresses.
City of Los Angeles Building Department (Building Department)	Ramboll requested records from the Building Department related to the site addresses. The Building Department records for the 1200 Vine Street address include a building permit for signage dated 1966 (Hollywood Chrysler Plymouth is listed as the owner); a permit application to relocate pole signs dated 1968 (Mercedes-Benz Co. is listed as the owner); a building permit for signage dated 1969; a building permit for signage dated 1973; a building permit to install a metal facia dated 1973; a plot plan dated 1977 depicting the location of an existing building (the current location of 1212 Building) and the location of a new building (the current location of 1218 Building); a building permit to revise roof framing and floor plans (interior partitions) dated 1978 (the use of the building is listed as retail store); a building permit to "omit garage and use as storage" dated 1979; a Certificate of Occupancy for a one-story retail store building issued to M&M Rosenthal (the owner) in 1980; a building permit for seismic upgrade dated 1983 (the building usage is listed as retail store and the job addresses are listed as 1200 North Vine Street and 6245 Lexington Avenue); a building permit for demolition dated February 1991 (the demolition included removing the fire damaged roof and walls); a building permit for reconstruction the building, which was damaged by fire dated July 1991 (Maury and Mile Rosenthal is listed as the owner, the permit indicates that the existing footing and slab will be used to support new structure); a building permit for signage dated 1992; and several building permits for signage, tenant improvements, reroofing dated between 1999 and 2016. The Building Department records for the 1212 Vine Street address include a permit application to erect a building in 1947; a Certificate of Occupancy for a one-story office building dated February 1947; a permit to erect a new building as "Offices Apartment" in 1948; and an application for the sign inspection in 1970. The Building Department records for the 1218 Vine Street address include two permit applications for signage dated 1956 (the use of the building is listed as car wash); a permit application to construct a new building as a carwash in 1956; a Certificate of Occupancy for a one-story, irregular 45 feet by 150 feet auto laundry building issued in 1957; a permit application to change the address from 1251 Lexington Avenue to 1218 Vine Street (date is not visible); and a permit to demolish a building in 1970. The Building Department records for the 6245 Lexington Avenue address (former site address) include a permit application dated 1919 (no further details is ascertainable); a permit application to erect a building in 1925; a Certificate of Completion for a garage building in 1932; a request for the change of address from 4243 Lexington Avenue to 6245 Lexington Avenue dated 1943; a Certificate of Occupancy for one-story office and processing issued to Muller Bros., et al in August 1951, a permit application for change of use from auto storage to offices in 1951; a Certificate of Occupancy for a motor vehicle storage garage, which was converted from an existing one-story commercial building issued to Muller Holding and Investment Company dated 1961; a permit application for parapet modification dated 1961 (the use of the building is listed as shop); a permit application for

	change of occupancy from "Factory" to "Garage (auto storage)" I 1961; a permit application (for both 1200 Vine Street and 6245 Lexington Avenue addresses) for seismic upgrade in 1983; a permit application to provide ramp and landing at the main entrance dated 1992 (the use of the building is noted as warehouse and retail); and several tenant improvements in 2015. The Building Department reported no records on file for the remaining former site addresses.
City of Los Angeles Fire Department – Haz Mat Division (City Fire – Haz Mat Division)	Ramboll requested records from the City Fire – Haz Mat Division related to the former and current site addresses. The City Fire – Haz Mat Division records for the 1200 Vine Street address include an inspection report dated July 23, 2020, which indicates that the facility (Dollar Tree) received a notice of violation for failure to submit the Hazardous Material Business Plan. It is not clear if the violation was addressed. No other records were included. The City Fire – Haz Mat Division records for the 1218 Vine Street address include a permit to install two atmospheric tanks dated January 22, 1968; a permit application for installation of two new USTs in the capacity of 9,940-gallon and 4,000-gallon (unknown content) dated January 1968; a sketch, which depicts the location of two new USTs to the south of 1218 Building; and several fire permits for the operation of an auto fueling station issued to Rancho Car Wash in January and April 1971, February, March, and June 1969, and April 1976. The locations of the USTs and the dispenser islands is depicted in Figure 2. The City Fire – Haz Mat Division reported no records on file for the remaining current and former site addresses.
City of Los Angeles Fire Department – Plan Check/UG Tank Division (City Fire – UG Tank Division)	Ramboll requested records from the City Fire – UG Tank Division related to the former and current site addresses. The City Fire – UG Tank Division reported no records on file for the current and former site addresses.

4.4 Previous Environmental Assessments and Activities

4.5 Previous Environmental Assessments and Activities

Based on a review of historical site documents, a prior environmental assessment has been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.

- **Phase I ESA, Roux, 2020.** A Phase I ESA was conducted at the site by Roux in 2020. The 2020 Phase I ESA report did not identify any RECs with respect to soil and groundwater conditions. The 2020 Phase I ESA report identified two Other Findings associated with the site, namely the potential migration of contamination from two off-site properties (Snow White Cleaners and Paragon Cleaners). These properties are discussed in Section 4.1.3.

4.6 Interviews

An interview was conducted during the site visit with Howard Entin with AV Masters, Inc., Managing Partner of 1200 Vine Street Properties, LP, the site owner. Mr. Entin had no knowledge of the use, generation or disposal of hazardous waste at the site and was not aware of any environmental concerns or historical structures or features of environmental significance (e.g., USTs, clarifiers, etc.).

4.7 User-Provided Information

Ramboll provided Grubb with a User Provided Information document (consistent with Appendix X of the ASTM Standard) that requested information relating to environmental liens, AULs, specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. In the user questionnaire returned to Ramboll, the user did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on October 5, 2021. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if any RECs, as defined in Section 8, are present. Ramboll did not observe the roofs of the buildings due to safety constraints.

5.2 General Site Setting and Observations

Ramboll made observations concerning the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 7. Additional information regarding observed and historical items is provided in the sections following the table.

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Underground Storage Tank

No indications of past usage of former USTs were observed at the site, such as fill ports of vent pipes. However, the site (under the 1218 North Vine Street address) is listed in the UST database for formerly maintaining a UST(s). Additional information regarding the presence of historical USTs was obtained from the City Fire - Haz Mat Division and is provided in Section 4.3. The City Fire – Haz Mat Division records for the 1218 Vine Street address included a permit to install two atmospheric tanks dated January 22, 1968; a permit application for installation of two new USTs in the capacity of 9,940-gallon and 4,000-gallon (unknown content) dated January 1968; a sketch, which depicts the location of two new USTs to the south of 1218 Building; and several fire permits for the operation of an auto fueling station issued to Rancho Car Wash in January and April 1971, February, March, and June 1969, and April 1976. The locations of the USTs and the dispenser islands is depicted in Figure 2..

5.2.2 Polychlorinated Biphenyls

Facility personnel knew of no onsite equipment that is known to contain PCBs, and there are no transformers present on the site.

5.2.3 Pavement and Floor Staining

Ramboll observed heavy floor staining in the kitchen area of 1218 Building, where a refrigerator was formerly located. This staining did not appear to be indicative of widespread releases or losses. Floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking.

Ramboll observed evidence of minor pavement staining in the paved parking areas of the site. Based on the patterning and location, the staining appears to be drips from employee vehicles. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of cracking.

5.2.4 Asbestos-Containing Materials

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations[6] of

[6] Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

representative building materials in those areas accessed during the site tour to identify readily apparent PACM and suspect ACM. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981.

An asbestos survey was performed in the retail area of the 1212 Building in 2014. The survey included the collection and analysis of 17 samples for drywall and joint compound, ceiling tile, and linoleum on stairs from the sales floor, mezzanine, and stairs to mezzanine; none of which indicated the presence of asbestos. No other areas of the facility were surveyed.

In addition, an asbestos and lead-based paint survey was performed at the site by Masek in October 2021. Twenty-three (23) bulk samples were collected from nine homogeneous areas (HA) of suspect ACM within the 1218 Building, and twelve (12) bulk samples were collected from five HA of suspect ACM within the 1212 Building. Asbestos was detected in two (2) of the samples collected from an HA (vinyl floor tile in the utility room) in 1218 Building, and in one of the samples collected from a plastic roof cement spot (at the HVAC unit) in 1212 Building. The 2021 Asbestos and Lead Survey report indicated that "*Very little asbestos is present, so no pre-abatement notification to SCAQMD is needed*." However, prior to any building demolition, ACM should be removed.

5.2.5 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of the 1218 Building in 1980 and the reconstruction date of the 1212 Building in 1992, it is unlikely that lead-based paint was used historically on facility structures. Based on the Asbestos and Lead-based Paint Survey conducted by Masek in October 2021, lead was not detected above its laboratory method detection limit in twenty-two (22) samples collected from the 1218 Building and seventeen (17) samples collected from the 1212 Building. Based on the results of the recent sampling, lead-based paint is unlikely to be a concern.

5.2.6 Water Intrusion/Mold

Ramboll did not perform a mold survey at the site; however, no visual indication of flooding was identified. Facility personnel indicated that facility had experienced minor leaks from the roof during heavy rain events. Reportedly, the leaks were immediately addressed after the incidents.

5.2.7 Radon

Based on information included in the EDR database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, three properties in the same zip code as the site were surveyed, and radon levels did not exceed 4 pCi/L at any of the three properties. A USEPA survey conducted in the same zip code as the site found that the average radon levels of a first-floor room and a basement at 63 properties were 0.711 pCi/L and 0.933 pCi/L, respectively. Ramboll concluded that no additional investigation into radon is necessary at the Site.

6. SUBSURFACE INVESTIGATION

Ramboll conducted a subsurface investigation at the site that included collection of soil and soil vapor samples (see Figure 3). The scope of work conducted during the subsurface investigation focused on areas of concern identified by Ramboll during the site visit conducted on October 5, 2021 and based on review of historical documents. Ramboll's Phase I ESA did not identify any RECs but identified the following "other findings" or historical uses that warranted subsurface testing at the site and are described in detail in Section 1.2 and 1.3 above and included the following issues:

- Historical Car Wash and Auto Fueling Station.
- Industrial Operations at the Site.

A summary of Ramboll's sampling plan and rationale is summarized in Table 8 below.

Table 8: Sampling Rationale

Area of Concern	Boring Number	Sample Interval (feet bgs)	Contaminants of Concern

6.1 Objectives

The objective of the investigation was to evaluate the current subsurface soil and soil vapor conditions at the site near and in the vicinity of the RECs and/or historical features and uses from past operations.

Ramboll understands that Grubb intends to purchase the site and redevelop the property for residential use. In discussions with Grubb, the intended future use of the site will include a slab-on-grade 3-story parking structure with residential dwellings constructed over the parking structure.

In order to meet the objectives, Ramboll conducted the scope of work.

6.2 Scope of Work

The scope of work conducted during the investigations is presented below. Drilling and sampling activities were supervised by Ramboll field personnel working under the supervision of a California Registered Professional Geologist.

6.3 Pre-field Activities

As required by the Occupational Safety and Health Administration (OSHA), Ramboll prepared a Site-Specific Health and Safety Plan (HASP), designed to minimize exposure of Ramboll's field personnel and subcontractors to potentially hazardous materials. In addition, consistent with the Center for Disease Control (CDC) guidelines and applicable local regulations, Ramboll included COVID-19 precautionary measures in the HASP. All Ramboll field personnel involved in the project were required to review and implement the procedures presented in the HASP while conducting the planned field work.

On November 23, 2021, prior to implementation of the field work, Ramboll performed a site walk to clearly mark each proposed boring location in white paint, as required by Underground Service Alert (Dig Alert). Ramboll then notified Dig Alert of our intent to conduct subsurface activities.

6.4 Geophysical Survey and Utility Clearance

On December 1, 2021, Ramboll contracted with Ground Penetrating Radar Systems (GPRS) of Toledo, Ohio, a private utility locator, to investigate each proposed boring location for obstructions or anomalies prior to boring advancement. Proposed sample locations were modified, as necessary, to avoid utilities or other obstructions, per the recommendations of Dig Alert and/or GPRS. In addition, a geophysical survey was conducted in the northern portion of the parking area in order to identify the approximate historical location of the former UST cavities south of 1218 Building, however, GPRS was unable to clearly determine the location of the former UST cavities via geophysical methods.

6.5 Advancement of Soil Borings and Soil Sampling

On December 1 and 2, BC2 Environmental, under Ramboll's oversight, advanced a total of 12 borings (RSB-1 through RSB-12) at the locations depicted on Figure 3. Boring RSB-10 was advanced to a depth of approximately 5.5 feet below ground surface (bgs) using a hand auger. Borings RSB-3 and RSB-4 were advanced to a maximum depth of approximately 20 feet bgs utilizing a hand auger down to approximately 5 feet bgs and then advanced to target depth utilizing a geoprobe direct push drill rig. Borings RSB-1, RSB-2, RSB-5 through RSB-9, RSB-11 and RSB-12 were advanced to a depth of approximately 15.5 feet bgs. During advancement, soil samples were collected at select depth intervals, depending on historical features, and ranged in depth between approximately 2, 5, 10, 15, and 20 feet bgs. Soil was logged in accordance with the Unified Soil Classification System (USCS), recorded in the field and screened for total VOCs using a photoionization detector (PID). Select soil samples were analyzed by a certified in-house laboratory, Eurofins Calscience of Irvine, California. Soil samples were selectively analyzed for VOCs in accordance with USEPA Method 8260B/035, TPH in

accordance with USEPA Method 8015M (carbon chain) and/or heavy metals in accordance with USEPA Method 6010/7000 Series. Deeper samples were placed on hold with the laboratory, pending analytical results of shallower samples.

6.6 Soil Vapor Probe Installation and Sampling

At the completion of soil sampling, dual-nested temporary soil vapor probes were constructed at depths of approximately 5 and 15 feet bgs. Due to limited vertical clearance, one temporary vapor probe was set at a depth of approximately 5 feet bgs in boring RSV-10. Vapor probes were installed and analyzed in accordance with the guidelines set forth by the "Advisory"[7]. Vapor probes were constructed with a 6-inch stainless steel screen and 1/8-inch tubing equipped with a valve at its termination. Each probe tip was set within a minimum of 18 inches of sand and topped with a minimum of 12 inches of dry granular bentonite, followed by hydrated bentonite to the ground surface or just below the shallower depth. Borings RSB-3 and RSB-4 were backfilled with hydrated bentonite to a depth of 15.5 feet bgs prior to constructing the dual-nested temporary soil vapor probes. Soil vapor probes located outside the building were secured with a traffic-rated well box to prevent tampering.

Following the minimum equilibration period of 48 hours, soil vapor samples were collected in accordance with the "Advisory." Soil vapor samples were analyzed by A&R Laboratories with the use of a California-certified mobile and/or fixed laboratory. Soil vapor samples were analyzed for VOCs in accordance with USEPA Method 8260.

Following the completion of soil vapor sampling activities, soil vapor probes were properly abandoned, and the borings were completed to match the existing surface grade.

6.7 Results

Analytical results are provided in Tables 9 and 10 (soil) and Table 11 (soil vapor) and summarized below. Laboratory analytical reports and chain-of-custody documentation are presented in Attachment F.

6.7.1 Soil

6.7.1.1 TPH

Concentrations of TPH as gasoline-range organics (C4-C12), diesel-range organics (C13-C22) and oil-range organics (C23-C40) were reported in at least one soil sample at maximum concentrations of 0.35 milligrams per kilograms (mg/kg), 94 mg/kg, and 460 mg/kg, all of which are below their commercial regulatory screening levels of 420 mg/kg, 440 mg/kg and 30,000 mg/kg, respectively (see Table 9).

6.7.1.2 VOCs

Tetrachloroethene (PCE), 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, benzene, toluene, ethylbenzene, xylenes, 2-butanone, and acetone were the only VOCs reported in at least one soil sample. None of these VOCs reported in soil exceeded their respective commercial regulatory screening level (see Table 9).

6.7.1.3 Metals

Antimony, arsenic, barium, beryllium cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, thallium, vanadium, and zinc were reported in at least one soil sample.

[7] Advisory Active Soil Gas Investigations - California Environmental Protection Agency Department of Toxic Substances Control Los Angeles Regional Water Quality Control Board San Francisco Regional Water Quality Control Board, July 2015.

Of the metals reported in soil, arsenic exceeded its commercial screening level of 0.36 mg/kg, with a maximum reported concentration of 4.6 mg/kg in sample RSB-12 at 2 feet bgs. However, arsenic is naturally occurring in California soil at concentrations that exceed commercial soil concentrations. Therefore, arsenic concentrations reported in soil were screened against the DTSC upper-bound arsenic screening level for southern California soil of 12 mg/kg and as such, arsenic is not a concern at the site. No other metals were reported above their respective commercial screening levels (see Table 10).

6.7.2 Soil Vapor

PCE, ethylbenzene, toluene, xylenes, 1,2,4 trimethylbenzene and 4-isopropyltoluene were reported in at least one soil vapor sample. Of the VOCs reported in soil vapor, PCE exceeded the respective commercial screening level of 0.067 micrograms per liter (µg/l) in samples RSV-1 through RSV-9, using a default attenuation factor (AF) of 0.03. PCE concentrations were not reported above the respective commercial screening level using an AF of 0.03 at locations RSV-10 through RSV-12. PCE was below the commercial screening level of 2 µg/l, using a default AF of 0.001, at all soil vapor boring locations.

Other VOCs reported in soil vapor were below their respective commercial screening levels using the default AFs of 0.03 and 0.001, respectively (See Table 11).

6.8 Lithology and Hydrogeology

The lithology encountered during Ramboll's investigation was predominantly fine-grained soils including clay, clay with sand from approximately 0.5 feet bgs to approximately 8 feet bgs, where silt with sand or sandy silt with gravel were encountered. Clay with sand and sandy silt were encountered from approximately 8 to 20 feet bgs, the maximum depth explored. Groundwater was not encountered during the investigation.

6.5 Investigative Derived Waste Disposal

Three 55-gallon drums of soil cuttings (referred to as investigation-derived waste [IDW]) were generated during the investigation, labeled and stored on-site pending waste characterization. Ramboll is in the process of contracting with a California-certified waste transporter and will coordinate the removal and disposal of IDW to an approved waste disposal facility.

6.6 Summary of Subsurface Investigation Results

- TPH, VOCs, and metal compounds were reported in soil at concentrations below their commercial regulatory screening levels, with the exception of arsenic. However, arsenic is consistent with natural background concentrations in California soil. Ramboll does not expect the soil, which contains very low concentrations of TPH, VOCs, and metals, to require special handling or disposal.
- In soil vapor, PCE was detected below the respective commercial screening level at all soil vapor boring locations using a default AF of 0.001. PCE concentrations exceeded the screening level using the highly conservative 0.03 AF (at 8 locations on the northern and western portions of the site, including the 1218 Vine Building). Three locations on the eastern portion of the site, at the 1212 Vine Building, did not exceed the regulatory screening level using the 0.03 AF.
- Although PCE was reported in soil vapor, there are no known sources of PCE at the site. Ramboll concludes that the PCE reported in soil vapor is likely off-gassing from a known groundwater contaminant plume from nearby sources (i.e., Paragon Cleaners), located approximately 430 feet to the north.

Based on the future intended use of the site, with a parking structure to be constructed slab-on-grade with residences above the parking structure, and concentrations of VOCs, specifically PCE, reported below commercial regulatory screening levels (0.001 AF), Ramboll recommends no further site investigations.

7. FINDINGS, OPINIONS, CONCLUSIONS AND RECOMMENDATIONS

Ramboll performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 at the site located at 1212 and 1218 Vine Street in Los Angeles, California in October 2021. The objective of the Phase I ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Section 8 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 7.2. Based on the information obtained by Ramboll's Phase I ESA, Ramboll conducted a subsurface investigation to evaluate subsurface conditions near RECs and/or historical site uses.

7.1 Findings, Opinions, and Conclusions

7.1.1 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site located at 1212 and 1218 Vine Street in Los Angeles, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.5 of this report. This assessment has revealed no RECs in connection with the site.

7.1.2 Other Findings

Although not considered to be RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Historical Car Wash and Auto Fueling Station** - The northern portion of the site (1218 Building) was occupied by a car wash and an auto fueling station from the 1960s through 1970s. According to the City Fire – Haz Mat Division records, two USTs with capacities of 9,940-gallons and 4,000-gallons were installed to the south of the 1218 Building in 1968. In addition, the City Fire – Haz Mat Division records indicate that Rancho Car Wash obtained fire permits for the operation of an auto fueling station on the site between 1971 and 1976. Furthermore, the site (under 1218 North Vine Street address) is listed in the UST database with historical status. However, no further information is provided in the agency records and the UST database regarding the status of the USTs (e.g., if removed or closed in-place, if confirmatory samples were collected, regulatory involvement). The former car wash and auto fueling operations may have included the use of a clarifier, petroleum products, solvents, and other chemicals. Given the absence of information pertaining to the status of the USTs, the absence of information pertaining to a clarifier or an environmental release, and as a result of our past experience with similar facilities, the historical car wash and fueling station operations, as well as the historical usage of the USTs were considered issues warranting further investigation. Based on the findings of Ramboll's subsurface investigation and low concentrations of constituents reported in shallow soil and soil vapor (see Section 6), it does not appear that the historical features and operations in the northern portion of the site significantly impacted the site and it is unlikely that groundwater has been impacted form historical features and operations. Therefore, the historical car wash and auto fueling station is not considered to be a REC.
- **Industrial Operations at the Site.** Since the late 1920s, the southern portion of the site (1212 Building) has been used for various light industrial purposes, including auto services/repairs and auto sales. Although Ramboll identified no evidence of a release at the site, these former industrial operations may have included the use of petroleum products, solvents, paint, and other chemicals. Based on Ramboll subsurface investigation, these former industrial operations have not resulted in

significant or widespread contamination at the site. However, during future site redevelopment activities, the owner/contractor should be prepared to encounter "pockets" of potentially impacted soil, therefore, Ramboll recommends implementing a soil management plan as part of any earth moving activities.

Based on the future intended use of the site, with a parking structure to be constructed slab-on-grade with residences above the parking structure, and concentrations of VOCs, specifically PCE, reported below commercial regulatory screening levels (0.001 AF), Ramboll recommends no further site investigations. However, as part of redevelopment activities and based on the historical use of the site involving the presence of USTs and likely clarifiers, Ramboll recommends implementation of a soil management plan as part of future ground disturbing activities, particularly in the vicinity of the 1218 Building.

7.1.3 De Minimis Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Pavement and Floor Staining.** Ramboll observed heavy floor staining in the kitchen area of 1218 Building, where a refrigerator was formerly located. This staining did not appear to be indicative of widespread releases or losses. Floors in the vicinity of the staining appeared to be in good condition, with no evidence of cracking. In addition, Ramboll observed evidence of minor pavement staining in the paved parking areas of the site. Based on the patterning and location, the staining appears to be drips from employee vehicles. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of cracking.

7.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the Phase I ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the Phase I ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain current contact information for representatives of former site owners/occupants, but it was not otherwise readily available. However, Ramboll conducted interviews with the site owner with tenure at the site dating back to 1996 and reviewed other historical sources regarding former uses of the site.
- During the site visit, Ramboll did not observe the roofs of the buildings due to access and safety constraints.
- Historical information, such as aerial photographs, was not readily available to characterize the site from the present back to the site's obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a Sanborn map dated 1919, which shows that at least a portion of the site was already developed for a residential dwelling and a warehouse building.

- Ramboll did not conduct a specific search for environmental liens and activity and use limitations. However, based on information obtained from the User and the Environmental Data Resources (EDR) Radius Map Report, no evidence of environmental liens recorded against the subject Property was found. In addition, according to the EDR-provided information for the subject Property, no evidence of institutional controls, land use restrictions and/or engineering control requirements recorded against the subject Property was reported.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps. The effect of this significant data gap on Ramboll's conclusions with respect to conditions at the site is discussed in Section 7.1.

8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap/Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

Soil vapor screening levels are the ratio of the screening level for indoor air to the corresponding default attenuation factors as recommended by Cal/EPA (2011) for commercial existing building scenario (AF = 0.03).

Value above the commercial screening level using an AF of 0.03.

ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

EDR conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

EDR conducted the search of environmental databases in October 2021. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 19 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 25 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 15 SWEEPS UST sites within approximately 0.25 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that

there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 38 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 25 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Under Investigation
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Benzene
Site History: Paragon cleaners is located on the northeast corner of the intersection of Vine Street and Fountain Avenue. Ground water has been impacted by the contaminant PCE due to operations at the dry cleaners. The dry cleaner has been in operation since 1961, and in 2006, switched to "green" chemicals. The site owner has been issued a Cleanup and Abatement Order (CAO) from the state for assessment and cleanup.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern: * Chlorinated Hydrocarbons, Tetrachloroethylene (PCE)
Site History: The Site was occupied by a motion picture post-production facility where titles, visual effects and special effects were applied onto motion picture film. The former Pacific Title and Art Studio (PTAS) was a post-production motion picture facility that operated from approximately 1946 to 2009. Operations in the main building included internal film developing and associated film cleaning and optical printing to support post-production processes. The main building housed office space, film developing, printing and film cleaning

process units, studios and film viewing theaters. The garage-like structure in the southwest portion of the subject property was used for storage of equipment, paints, janitorial chemicals and other materials. In 2009, the Amidi Group acquired ownership of the property from PTAS for re- development of the main building into an executive office complex. The redevelopment was completed in June 2013.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

inspection. Consent to enter and inspect was given by MICHAEL FINKELSTEIN - OWNER. Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)within 30 days of the change.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 04/15/2019. "NOT ACCEPTED: Effective December 28, 2017, CalEPA has replaced the previously existing five federal hazard categories in CERS with twenty-four new federal hazard categories. The following federal hazard categories are now obsolete G fire, reactive, pressure release, acute health, chronic health. A review of your submittal has determined that you still have the previous federal categories selected and/or have NOT selected any of the NEW federal hazard categories for your chemical inventory. Please review your hazardous material inventory and complete the following steps: 1) Deselect all of the five obsolete federal hazard categories for all chemical inventory listed under your facility. 2) Update your hazardous material inventory and select all applicable federal hazard categories from the 24 newly listed categories for all chemical inventory stored at your facility. You may refer to Section 2 of a current Safety Data Sheets (SDS) (previously called an MSDS) to determine [Truncated]

Potential Media Affected:	Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	1,1,1-Trichloroethane (TCA), Acetone, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	The site, located at the northwest corner of Seward Street and Barton Avenue in Hollywood, was formerly used for film processing activities from 1926 until 2002. The site was occupied by approximately eleven structures (Buildings 1 through 11), parking lots, and an interior courtyard. Film processing and associated activities were conducted in three main buildings; Buildings 1, 2 and 3. The majority of the chemicals that had been used in film processing were stored in the basement of Buildings 2 and 3. Historically, the chemicals used for film processing included isopropyl alcohol, acetone, 1,1,1-Trichloroethane (1,1,1-TCA), Perchloroethlylene (PCE), ammonium thiosulfate, and proprietary development solutions. The remaining buildings were used as offices and for other purposes, such as general storage, a maintenance shop, an electrical shop, and for archiving films. Buildings 1 through 11 were demolished between April and August of 2005. The site is presently vacant and awaiting commercial redevelopment.
