EXECUTIVE SUMMARY

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for Bow West Capital (Client) for a residential property located at 5607 West Carlton Way and 1655 North Saint Andrews Place, in Los Angeles County and the City of Los Angeles, California, Assessor's Parcel Numbers: 5544-026-010 and 5544-026-011. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

Site Description

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 5607 West Carlton Way and 1655 North Saint Andrews Place, Los Angeles, California. The subject property is located on the northwest corner of West Carlton Way and Saint Andrews Place, approximately 200-feet south of Hollywood Boulevard, in the City of Los Angeles. The subject property is approximately 17,856 square feet in size and is developed with a two-story apartment building and parking lot, which is approximately 0.40 acres in total size. The building is currently occupied for residential purposes. The remaining portions of the property consist of an asphalt-paved parking area on the west portion which is enclosed by a concrete block wall. The surrounding area is used for residential and commercial purposes. Groundwater is estimated to be approximately 70- to 90-feet below ground surface in the area of the site and is assumed to flow towards the west-southwest.

- Minor pavement staining was noted within the parking stalls of the parking lot. The staining is typical of minor drips and leaks of motor oil from parked automobiles and appears to impact only the surface of the asphalt-paved portions of the property. Therefore, the motor oil staining is considered a *de minimis* condition and does not represent a significant environmental concern for the subject property.
- No significant hazardous material storage or recognized environmental conditions were observed at the site. Those interviewed, as persons familiar with the site were not aware of any negative environmental conditions associated with the property.

Historical Land Use

According to EFI Global, Inc.'s interpretation of the historical research data, the subject property located at 5607 West Carlton Way was developed with a residential structure since 1913; the subject property located at 1655 North Saint Andrews Place was developed with a residential structure sometime prior to 1919. By 1956, the residential structure at 5607 West Carlton Way was demolished and redeveloped into a parking lot; the subject property located at 1655 North Saint Andrews Place was developed with the existing apartment structure since 1957. The subject properties have remained in this configuration to the present. The subject property has solely been utilized for residential purposes and an associated parking lot since development.

- The earliest historical resource obtained during this investigation was a building permit from 1919 which indicated development of the subject property for residential use. The lack of historical data sources for the subject property dating back to first developed uses represents historical data source failure. However, it is assumed that prior to 1919, the subject property would have been developed for residential use, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

Environmental Data Search

- The subject property is not listed on any of the regulatory databases researched.
- In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.
- The Los Angeles Regional Water Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), Southern Coast Air Quality Management District (SCAQMD), City of Los Angeles Building and Safety Division, Los Angeles County Fire Department of Health Hazardous Materials Division (LACFD HHMD), Los Angeles Fire Department Underground Storage Tank Unit (LAFD UST), Los Angeles Fire Department Hazardous Materials Division (LAFD HazMat), Los Angeles Fire Department Arson Division (LAFD AD), and the City of Los Angeles Bureau of Sanitation (LABS) were contacted regarding permits, site investigation files, hazardous materials, underground storage tank, and industrial waste discharge records for the subject property. Additionally, the State Water Resources Control Board's (SWRCB) GeoTracker, DTSC's Hazardous Waste Tracking System (HWTS) and EnviroStor, SCAQMD's Facility Information Detail (FIND), LAFD Certified Unified Program Agency (CUPA) online Active and Inactive CUPA Regulated Facilities and Underground Storage Tank databases which include active and inactive Aboveground Storage Tanks (AST), Inactive and Active Underground Storage Tanks, Inactive and Active Hazardous Materials Inventory, Underground Storage Tank Historical Files databases, and the LACFD HHMD Active CUPA Program Records, Inactive CUPA Program Records, Site Mitigation Unit (SMU) Case Records, and California Accidental Release Program (CalARP) databases were reviewed for information pertaining to the subject property.
- Utility substructure maps, provided by the City of Los Angeles Department of Public Work NavigateLA online mapping system, were reviewed for evidence of substructure features on or near the subject property. Based on our review of the maps, no underground storage tanks or other significant environmental concerns were identified.
- According to responses to our requests from LARWQCB, DTSC, SCAQMD, LACFD HHMD, LAFD UST, LAFD HazMat, and LABS, there are no files for the subject property. Furthermore, a review of the Geotracker, EnviroStor, HWTS, FIND, CUPA Active and Inactive Hazardous Materials (HazMat), UST and AST Inventory, and the LACFD HHMD Active CUPA Program Records, Inactive CUPA Program Records, SMU Case Records, and CalARP databases, found no files for the subject property.
- At the time this report was issued, no response has been received from the LAFD AD. Based on the quality of information obtained from other sources, this limitation is not expected to alter the conclusions of this report. Nonetheless, should relevant information be obtained from this agency subsequent to issuing this report, an addendum will be prepared and provided to the Client.
- The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property. No oil wells were identified within 500 feet of the subject property.
- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property.

An environmental lien search was not requested by the User; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified.

Additional Issues

- Based on the age of the onsite structure (1957), there is a potential for asbestos containing building materials (ACM) at the site, however, no testing was completed as part of this report. Suspect ACM observed during the site reconnaissance includes drop ceiling panels, stucco, and tile flooring and associate mastics, which appeared to be in good condition. An asbestos survey is recommended in the event the onsite structure is demolished or significantly renovated.
- Based on the age of the onsite structure (1957), there is a potential for lead-based paint at the site. All painted surfaces appeared in good condition to moderate condition, with no chipping or peeling observed. A lead based paint survey is recommended in the event that the onsite structure is demolished or significantly improved.
- Based on our research at the United States Environmental Protection Agency (USEPA), the average radon concentrations for Los Angeles County are between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L, below the 4.0 pCi/L action level set by the USEPA. However, according to the California Geological Survey *Radon Potential Radon Zone Map for Southern California*, dated January 2005, shows no concentrations of radon in the vicinity of the subject property. Site specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the radon levels at the subject property.
- EFI Global, Inc. did not observe visible or olfactory indications of the presence of mold, nor did EFI Global, Inc. observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.
- Based on our research, the property is not known to be located in proximity (within 1,000 feet) to any active or abandoned oil wells or landfills. Therefore, the potential for methane risk at the subject property is considered low.

CONCLUSIONS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 5607 West Carlton Way and 1655 North Saint Andrews Place, Los Angeles, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property except for the following:

Recognized Environmental Conditions (REC)

In our opinion, no RECs were identified during the course of this assessment.

Historical Recognized Environmental Conditions (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

Controlled Recognized Environmental Conditions (CREC)

In our opinion, no CRECs were identified during the course of this assessment.

De Minimis Conditions

The motor oil staining observed in the parking lot is considered a *de minimis* condition.

RECOMMENDATIONS

Based on the foregoing, no additional investigation is recommended at this time.

1.0 INTRODUCTION

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for the property located at 5607 West Carlton Way and 1655 North Saint Andrews Place, in Los Angeles County and the City of Los Angeles, California (Subject Property). This report has been prepared for the sole use of Bow West Capital (Client).

The research conducted for this study and the report prepared are in general conformance with the EPA “All Appropriate Inquiries” standard and the ASTM 1527-13 “Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process”. The primary purpose for performing a Phase I ESA is to “...permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Emergency Response Compensation and Liability Act (CERCLA) liability.” (ASTM, 2013) An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the User also has a “continuing obligation to not interfere with activity and use limitations associated with the property,” must take “reasonable steps to prevent releases” and must “comply with legal release reporting obligations.” (ASTM, 2013) Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

The goal of this process is to identify any (1) recognized environmental conditions (RECs), (2) historic recognized environmental conditions (HRECs), (3) controlled recognized environmental conditions (CRECs), and/or (4) *de minimis* conditions associated with the subject property.

- A **recognized environmental condition** is defined as “...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” This definition does not include *de minimis* conditions defined as “a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies” (ASTM, 2013).
- A **historical recognized environmental condition** is defined as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” (ASTM, 2013). The HREC designation requires the comparison of residual contamination concentrations, if any, to current regulatory standards.
- A **controlled recognized environmental condition** is defined as “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to

remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)" (ASTM, 2013).

- A ***de minimis condition*** is defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions" (ASTM, 2013).

In order to identify environmental conditions at the site, the Phase I ESA includes a site inspection, interviews with parties familiar with the property, historical research into the past uses of the property, and an environmental records search with regard to the subject property, adjoining and immediately surrounding properties, and the surrounding area. In addition, EFI Global, Inc. provides an opinion regarding the potential for asbestos containing materials, lead-based paints, mold, radon, oil and gas exploration, and methane as they relate to the subject property. Reviewing those documents that are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap.

1.1 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

1.2 Limitations and Exceptions

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM 1527-2013, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of EFI Global, Inc. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

1.3 Reliance

This report has been prepared for the sole use of Bow West Capital. The contents should not be relied upon by any other parties without the express written consent of Bow West Capital and EFI Global, Inc.

1.4 User Responsibilities

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM E 1527-13 Phase I Standards require that the User conduct independent research and consider certain information before purchasing a property:

- Obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations (AULs) with regard to the subject property. If environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (EFI Global, Inc.).
- The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.
- If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).
- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

2.0 SITE DESCRIPTION

EFI Global, Inc. has performed a Phase I for a residential property located at 5607 West Carlton Way and 1655 North Saint Andrews Place, in Los Angeles County and the City of Los Angeles, California. The subject property is approximately 17,856 square feet in size and is developed with a two-story apartment building and parking lot, which is approximately 0.40 acres in total size. The building is currently occupied for residential purposes. The remaining portions of the property consist of an asphalt-paved parking area on the west portion which is enclosed by a concrete block wall. The surrounding area is used for residential and commercial purposes. Groundwater is estimated to be approximately 70- to 90-feet below ground surface in the area of the site and is assumed to flow towards the west-southwest.

Natural gas is provided to the subject property by Southern Gas Company. Potable water, electrical and sewer services are provided by the Los Angeles Department of Water and Power.

2.1 Current and Historical Addresses

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 5601, 5601½, 5607, and 5607½ West Carlton Way and 1655 North Saint Andrews Place, Los Angeles, California.

2.2 Legal Description

According to the Los Angeles County Assessor's Office, the subject property is located in the City of Los Angeles, and is described by the Assessor's Parcel Numbers: 5544-026-010 and 5544-026-011.

2.3 Physical Setting

The elevation of the subject property is approximately 380-feet above sea level (United States Geological Survey Hollywood, California 7.5 minute topographic quadrangle). Based on our review of the GeoCheck Section of the Environmental Data Resources, Inc. (EDR) Radius report, the subject property is not situated within a 500-year Federal Environmental Management Agency (FEMA) Flood Zone. No wetlands were identified at the property or adjoining/immediately surrounding properties. Based on our review of groundwater data presented in the State Water Resources Control Board (SWRCB) GeoTracker website, groundwater was detected at a leaking underground storage tank site (5700 Hollywood Boulevard) approximately 560-feet west-northwest of the subject property at approximately 70- to 90-feet below ground surface. However, perched and semi-perched aquifers may be present beneath the site. Based on regional groundwater data, regional groundwater flow direction is estimated to be towards the west-southwest; however, local groundwater flow direction may vary.

3.0 SITE RECONNAISSANCE/INTERVIEWS

3.1 Site Reconnaissance

On April 27, 2018, Daniel Casas of EFI Global, Inc. conducted a site reconnaissance of the subject property. The site inspection was conducted to attempt to identify current site use(s), current hazardous materials storage, and evidence of past site uses and hazardous material storage and to identify evidence of other recognized environmental conditions. The following table summarizes our Site Reconnaissance observations:

Yes	No	Observed Feature(s)
✓		Hazardous Substances and Petroleum Products Containers
	✓	Underground and/or Aboveground Storage Tanks
	✓	Drains/Sumps/Clarifiers/Sewer Interceptors/Septic Systems
✓		Stained or Corroded Surfaces/Stained Soil or Stressed Vegetation
	✓	Pits/Ponds/Lagoons/Wetlands
✓		Electrical Equipment with the Potential to contain Fluids
	✓	Production or Monitoring Wells
	✓	Evidence of Solid Waste Disposal/Dumping/Fill Areas

3.1.1 Exterior Observations

The exterior portions of the site consist of concrete-paved driveways and parking areas on the east portions, access ways, and limited landscaped areas. A trash container was located on the northern portion of the subject property. A pole-mounted transformer was observed on the northern portion of the subject property. No evidence of spills or stains was observed in the vicinity of the trash container or pole-mounted transformer. Water boiler was observed on the western portion of the subject property which appeared to be in good condition.

EFI Global, Inc. also observed the subject property's parking area (5607 West Carlton Way) to the west of the residential structure, which was enclosed by a concrete masonry unit (CMU) retaining wall and gate. There was no significant evidence of dumping of debris; however some cardboard boxes and miscellaneous trash was observed in the northwestern and southern portions of the parking area.

Furthermore, minor pavement staining was noted within the parking stalls of the parking lot. The staining is typical of minor drips and leaks of motor oil from parked automobiles and appears to impact only the surface of the asphalt-paved portions of the property. Therefore, the motor oil staining is considered a *de minimis* condition and does not represent a significant environmental concern for the subject property.

No recognized environmental conditions were observed in the exterior portions of the subject property.

3.1.2 Interior Observations

The subject property was developed with a three-story apartment building which includes the tuck under parking area on the east portion, an electrical room and water boiler to the west portion. The concrete surfaces were in moderate condition with some cracking and staining. No spills or stains were observed in the vicinity of the water boiler.

The second- and third-floor consists of twelve residential units. Units 2 and 3, on the second floor were inspected as a part of the assessment. Building materials observed include drywall and wood partitions, drywall ceilings, ceramic floor tiles, carpeting, and laminate flooring. This units consisted of one bedroom and one bathroom. All other units consisted of one bedroom and one bathroom. The units are accessible through exterior walkways and stairs. No central air conditioning unit was observed.

No significant hazardous material storage or recognized environmental conditions were observed in the interior portions of the subject property.

3.1.3 Reconnaissance Limitations

EFI Global observed only two units out of the 12 total residential units, which constitutes a limitation. However, as the nature of the property is residential this limitation is not expected to significantly alter the conclusions of this report.

3.2 Adjoining and Immediately Surrounding Properties

The adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) were visually and physically observed from public right-of ways and the subject property in an attempt to identify recognized environmental conditions. Our observations are summarized in the following table:

Location	Address(es)	Uses/Observations
North	5606 Hollywood Boulevard 5600 Hollywood Boulevard	Automobile repair facility and vacant land
East	5555 West Carlton Way	Residential
South	1559 North Saint Andrews Place	Grant Elementary School (parking area)
West	5611 West Carlton Way	Residential

- The north adjoining and immediately surrounding property is an automotive repair facility; however, based on the lack of evidence of a documented release, this site is not expected to represent a significant environmental concern for the subject property.

3.3 Surrounding Area Observations

3.3.1 Surrounding Property Uses

The surrounding area is developed with commercial and residential structures.

3.3.2 Surrounding Geography

The surrounding area is mostly flat with a slight topographic slope to the southwest. No nearby hills or bedrock outcroppings were observed in the area of the site. No lakes, ponds, rivers or streams were observed in the surrounding area.

3.4 Interviews

3.4.1 Property Owner

Mr. Frank Evanisko, the property owner representative, completed the survey questionnaire dated April 25, 2018. Mr. Evanisko was unaware of any environmental conditions associated with the property.

3.4.2 Key Site Manager

Ms. Daisy (last name withheld), the site manager, was interviewed during the course of the site reconnaissance. Ms. Daisy was not aware of any environmental conditions at the subject property.

Mr. David Gutierrez, the site manager, was interviewed during the course of the site reconnaissance. Mr. Gutierrez was not aware of any environmental conditions associated with the property.

3.4.3 Property Occupants

No occupants were available for interview during the completion of this report.

3.4.4 Past Owners, Operators and Occupants

Past owners, operators and occupants were not able to be identified for an interview for this report.

3.4.5 Prospective Purchaser

As the User of this report is the owner of the property performing due diligence on the subject property in contemplation of a future sale or refinance, there is no prospective purchaser included in the transaction.

3.4.6 Neighboring Property Owners/Tenants

Per ASTM, an attempt to interview neighboring property owners/tenants should be conducted when the subject property is vacant and unsecured land. As the subject property is currently developed and utilized for residential purposes, no neighboring property owners/tenants were interviewed during this assessment.

3.5 User Provided Information

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM 1527-13 Phase I Standards require that the Report User conduct independent research and consider certain information before purchasing a property. EFI Global, Inc. recommends that the User documents completion of the following items:

3.5.1 Lien Search

The User is required to obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations with regard to the subject property. If environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (EFI Global, Inc.).

- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the User; however, based on our review of the DTSC EnviroStor Database, no environmental liens enforced by the DTSC were identified.

3.5.2 Specialized Knowledge

The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.

- The User has no specialized knowledge with respect to recognized environmental conditions in connection with the property.

3.5.3 Commonly Known or Reasonably Ascertainable Information

If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).

- The User is not aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions.

3.5.4 Property Valuation

If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

- As the User of this report is the owner of the property performing due diligence on the subject property in contemplation of a future sale or refinance, there is no prospective purchaser included in the transaction.

3.5.5 Purpose of Performing Phase I ESA

- According to the User, the User is the owner of the property performing due diligence on the subject property in contemplation of a future sale.

3.6 User Provided Documents

- No documents were provided to EFI Global, Inc. by the report User.

4.0 HISTORICAL LAND USE

A review of historical data derived from standard historical resources is provided in this section. The objective of consulting historical sources is to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. During our historical review, acute attention is paid to the subject property. Data relating to the adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the property itself.

4.1 Aerial Photography Review

Aerial Photography of many portions of the United States dates back to the 1920's. Items searched for in each photograph included, but were not limited to: evidence of tanks, gas stations, industrial site usage, water drainage pathways, areas which show evidence of drums or excessive debris, discolored or stained soils, areas of distressed vegetation, et cetera.

Aerial Photograph Coverage was available from EDR for the years: 1928, 1938, 1948, 1952, 1954, 1964, 1977, 1979, 1981, 1989, 1994, 2002, 2005, 2010, and 2014. A summary of our observations is presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1928, 1938, 1948, 1952, and 1954	The subject property appears to be developed with two residential structures.	North: Residential and commercial structures East: Residential South: Residential West: Residential	The surrounding area appears to be developed with residential and commercial structures.
1964,	The subject property appears to be developed with existing residential building and parking lot.	North: Residential and commercial structures East: Residential South: Residential West: Residential	The surrounding area appears to be developed with residential and commercial structures.
1977, 1979, and 1981	The subject property appears to be developed with the existing residential structure and parking lot.	North: Residential and commercial structures East: Residential South: Residential and parking lot West: Residential	The surrounding area appears to be developed with residential and commercial structures.
1989	The subject property appears to be developed with the existing residential structure and parking lot.	North: Residential and commercial structures East: Residential South: Parking lot and vacant land West: Residential	The surrounding area appears to be developed with residential and commercial structures.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1994	The subject property appears to be developed with the existing residential structure and parking lot.	North: Residential and commercial structures East: Residential South: Parking lot West: Residential	The surrounding area appears to be developed with residential and commercial structures.
2002, 2005, 2010, and 2014	The subject property appears to be developed with the existing commercial structure and parking lot.	North: Commercial and vacant land East: Residential South: Commercial and parking lot West: Residential	The surrounding area appears to be developed with residential and commercial structures.

4.2 Building Department Records Review

The addresses identified as current and historical addresses for the subject property were researched at the City of Los Angeles Building and Safety Department. Items considered in the course of the building permit review are previous site usage, previous ownership, and the construction or demolition of any structures that may have had a negative environmental impact on the property. The following table summarizes relevant building permits obtained and reviewed:

5607 West Carlton Way		
Date	Owner/Occupant	Purpose
04/22/1913	Louise W.C. Ochsner	Application for the construction of a one-story residential structure which includes six rooms.
04/22/1913	Louise Ochsner	Application for the construction of a garage.
05/11/1956	A.J. Sherman	Application to demolish residential building.

1655 North Saint Andrews Place		
Date	Owner/Occupant	Purpose
05/23/1957	Carlton Company	Application to construct building with 14 units and garage.
05/23/1957	Carlton Company	Plot plan for the construction of apartment building.
12/29/1972	William Fertig	Application to replace old railing on the 2nd and 3rd floor.

- There were no building permits identified for the other historical site addresses.
- The building permits obtained were for minor tenant improvements, construction of a new residential structure, or other permits which were not significant and did not represent a potential for recognized environmental conditions.

- Files provided by the City of Los Angeles Building and Safety Division indicated that former occupant at 5607 W Carlton Way applied for a building permit to construct a one-story residential structure which included six room and garage on April 22, 1913. The owner also applied for a permit to demolish the residential building on May 11, 1956. No violations were identified. Based on the foregoing, this current occupant is not expected to represent a significant environmental concern for the subject property.
- Files provided by the City of Los Angeles Building and Safety Division indicated that current occupant at 1655 North Saint Andrews Place applied for a building permit to construct a three-story residential structure which includes fourteen units on May 23, 1957. The owner also applied for a permit to replace old railing on December 29, 1972. No violations were identified. Based on the foregoing, this current occupant is not expected to represent a significant environmental concern for the subject property.

4.3 City Directory Review

City directories have been published since the 1800's and provide detailed occupant information for the property and its surrounding area at five-year intervals. The purpose of the City Directory research is to attempt to determine the businesses that historically occupied the subject property. Historical City Directories provided by EDR and reviewed by EFI Global, Inc. are listed below.

1655 North Saint Andrews Place	
Date	Listing
2000 - 2010	Residential

5607 West Carlton Way	
Date	Listing
1924 - 1951	Residential

- Additional City Directory research indicated that the adjoining property at 5604 Hollywood Boulevard was occupied by dry cleaning facilities from 1933 to 1942. For more information refer to Section 5.2.

4.4 Sanborn Map Review

Originally compiled by the Sanborn Map Company of Pelham, New York for fire insurance companies to assess fire risks related to building materials and hazardous materials storage, today Sanborn Maps are an invaluable tool for Environmental Professionals in determining historical site use and the potential for environmental conditions. Sanborn Map Coverage is available from as early as 1867 in some cities. Although Sanborn maps were created for approximately twelve thousand cities and towns in the United States, Canada, and Mexico, Sanborn Map Coverage is not available in newer and more rural communities. Sanborn Map Coverage was available from EDR for the years: 1907, 1913, 1919, 1950, 1955, 1957, 1960, 1961, 1962, 1966, 1968, 1969, and 1970. A summary of our observations is presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1907 and 1913	Unmapped coverage of the subject property.	North: Unmapped coverage East: Unmapped coverage South: Unmapped coverage West: Unmapped coverage	The surrounding area is depicted with residential and commercial structures, and unmapped Sanborn coverage.
1919, 1950, and 1955	The subject property is depicted with two residential structures (5607 and 5601 West Carlton Way) with two automobile garages (5607½ and 5601½), respectively.	North: Residential and commercial structures East: Residential South: Residential West: Residential	The surrounding area is depicted with residential and commercial structures.
1957	The subject property is depicted with a residential structure (5601 West Carlton Way) with an automobile garage (5601½ West Carlton Way) and vacant land (5607 West Carlton Way).	North: Residential and commercial East: Residential South: Residential West: Residential	The surrounding area is depicted with residential and commercial structures.
1960, 1961, 1962, 1966, 1968, 1969, and 1970	The subject property is depicted with the existing apartment building (1655 North St. Andrews Place) and vacant land (5607 West Carlton Way).	North: Residential and commercial structures East: Residential South: Residential West: Residential	The surrounding area is depicted with residential and commercial structures.

- Sanborn maps indicate the following historical street addresses associated with the subject property: 5601, 5601½, 5607, and 5607½ W Carlton Way, and 1655 North Saint Andrews Place, Los Angeles, CA 90028. These addresses were researched during the completion of this report.
- Two adjoining properties located north of the subject property were occupied by clothes cleaning facilities in at least 1924 and 1942. For more information refer to Section 5.2.
- Two immediately surrounding properties located north-northeast of the subject property were occupied by a clothes cleaning and laundry facility in at least 1929 and from at least 1933 through at least 1937. For more information refer to Section 5.2.

4.5 Historical Summary

4.5.1 Subject Property

According to EFI Global, Inc.'s interpretation of the historical research data, the subject property located at 5607 West Carlton Way was developed with a residential structure since 1913; the subject

property located at 1655 North Saint Andrews Place was developed with a residential structure sometime prior to 1919. By 1956, the residential structure at 5607 West Carlton Way was demolished and redeveloped into a parking lot; the subject property located at 1655 North Saint Andrews Place was developed with the existing apartment structure since 1957. The subject properties have remained in this configuration to the present. The subject property has solely been utilized for residential purposes and an associated parking lot since development.

4.6 Historical Data Gaps

The earliest historical resource obtained during this investigation was a building permit from 1919 which indicated development of the subject property for residential use. The lack of historical data sources for the subject property dating back to first developed uses represents historical data source failure. However, it is assumed that prior to 1919, the subject property would have been developed for residential use, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

5.0 REGULATORY DATABASE REPORT

A radial database search was conducted in accordance with the specifications defined in ASTM E 1527-13 which sets the radial search distances for each regulatory database. The radial database search was conducted by EDR on April 23, 2018. A copy of the database report is presented in Appendix II of this report. The following table summarizes required databases reviewed, the approximate search distances, and indicates if the subject site, adjoining/immediately surrounding properties or surrounding sites are listed on the respective database.

Following the table are summaries of the information found in the relevant database listings and our opinion regarding the potential for the subject property to be impacted. Our opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E2600-15), and assumed groundwater flow direction. As discussed in Section 2.3, groundwater is estimated to be approximately 70- to 90-feet below ground surface in the area of the site and is assumed to flow towards the west-southwest.

DATABASE	Search Distance (Miles)	Subject Site (Yes/No)	Adjacent Site (Yes/No)	Total Listings (#)
Federal National Priorities List (NPL)	1.0	No	No	0
Federal De-listed NPL	1.0	No	No	0
Federal CERCLIS	0.5	No	No	0
Federal CERCLIS NFRAP	0.5	No	No	0
Federal RCRA CORRACTS	1.0	No	No	0

Federal RCRA Generators	0.25	No	No	7
Federal Institutional/Engineering Controls	0.5	No	No	0
Federal ERNS	Property	No	No	0
State/Tribal Equivalent NPL	1.0	No	No	0
State/Tribal Equivalent CERCLIS	1.0	No	No	21
State/Tribal Landfill	0.5	No	No	0
State/Tribal Underground Storage Tank (UST)	0.25	No	No	22
State/Tribal Leaking Underground Storage Tank (LUST/SLIC)	0.5	No	No	18
State/Tribal Institutional/Engineering Controls	0.5	No	No	0
State/Tribal Voluntary Clean-up Sites	0.5	No	No	0
State/Tribal Brownfield Sites	0.5	No	No	0

5.1 Subject Property

The subject property is not listed on any of the regulatory databases researched.

5.2 Adjoining and Immediately Surrounding Properties

Taylor Bennett (1679 North Saint Andrews Place) - The former adjoining property located approximately 90 feet north of the subject property (hydrologically up-gradient) is listed on the EDR Exclusive Historic

Dry Cleaners (EDR Hist Cleaner) database. According to the listing and the Los Angeles Public Library (ResCarta) database, the site operated as a “clothes cleaners and dyers” facility from at least 1924 through 1928. No further information was provided. Based on the lack of evidence of a documented release, relative distance from the subject property (in excess of 90-feet), and depth to groundwater (in excess of 60-feet), this former dry cleaning operation is not expected to represent a significant environmental concern for the subject property.

Yat Sun (5604 Hollywood Boulevard) - The former adjoining property located approximately 130 feet north of the subject property (hydrologically up-gradient) is listed on the EDR Hist Cleaner database. According to the listing, the site operated as a “laundry” facility in at least 1942. Laundry facilities most likely operated using only hand wash techniques. Additional research from newspaper.com database indicated that the site was occupied with a cafe in 1938 and a general store in 1948; therefore, the maximum period of occupancy for the laundry facility is 8 years (1939 to 1947). No further information is provided. Based on the lack of evidence of a documented release, lack of any documented dry cleaning operations onsite, relative distance from the subject property (in excess of 130-feet), and depth to groundwater (in excess of 60-feet), this former laundry operation is not expected to represent a significant environmental concern for the subject property.

5.3 Surrounding Area

In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

5.4 Orphan Sites

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. No orphan sites were identified in the Radius Map Report prepared for this site.

6.0 AGENCY FILE REVIEWS

6.1 State Agencies

The Los Angeles Regional Water Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), and Southern Coast Air Quality Management District (SCAQMD) were contacted regarding permits and site investigation files for the subject property. Additionally, the State Water Resources Control Board's (SWRCB) GeoTracker, DTSC's Hazardous Waste Tracking System (HWTS) and EnviroStor, and SCAQMD's Facility Information Detail (FIND) databases were reviewed for information pertaining to the subject property.

- According to responses to our requests from LARWQCB, DTSC, and SCAQMD, there are no files for the subject property. Furthermore, a review of the Geotracker, EnviroStor, HWTS, and FIND databases found no files for the subject property.

The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property.

- No oil wells were identified within 500 feet of the subject property.

6.2 City/County Agencies

The City of Los Angeles Building and Safety Division, Los Angeles County Fire Department of Health Hazardous Materials Division (LACFD HHMD), Los Angeles Fire Department Underground Storage Tank Unit (LAFD UST), Los Angeles Fire Department Hazardous Materials Division (LAFD HazMat), Los Angeles Fire Department Arson Division (LAFD AD), and the City of Los Angeles Bureau of Sanitation (LABS) were contacted regarding hazardous materials, underground storage tank, and industrial waste discharge records for the subject property. Additionally, the LAFD Certified Unified Program Agency (CUPA) online Active and Inactive CUPA Regulated Facilities and Underground Storage Tank databases which include active and inactive Aboveground Storage Tanks (AST), Inactive and Active Underground Storage Tanks, Inactive and Active Hazardous Materials Inventory, Underground Storage Tank Historical Files databases, and the LACFD HHMD Active CUPA Program Records, Inactive CUPA Program Records, Site Mitigation Unit (SMU) Case Records, and California Accidental Release Program (CalARP) databases were reviewed for information pertaining to the subject property.

- According to a response from LACFD HHMD, LAFD UST, LAFD HazMat, and LABS, there are no files for the subject property. Furthermore, a review of the CUPA Active and Inactive Hazardous Materials (HazMat), UST and AST Inventory, and the LACFD HHMD Active CUPA Program Records, Inactive CUPA Program Records, SMU Case Records, and CalARP databases, found no files for the subject property.
- Files provided by the City of Los Angeles Building and Safety Division were reviewed. For more information, please refer to the building permits portion of the historical summary found in Section 4.2 of the report.
- Files provided by the City of Los Angeles Building and Safety Division indicated that current occupant at 1655 North Saint Andrews Place applied for a building permit to construct a three-story residential structure which includes fourteen units on May 23, 1957. The owner also applied for a permit to replace old railing on December 29, 1972. No violations were identified. Based on the foregoing, this current occupant is not expected to represent a significant environmental concern for the subject property.

- Utility substructure maps, provided by the City of Los Angeles Department of Public Work NavigateLA online mapping system, were reviewed for evidence of substructure features on or near the subject property. Based on our review of the maps, no underground storage tanks or other significant environmental concerns were identified

6.3 Agency File Review Limitations

At the time this report was issued, no response has been received from the LAFD AD. Based on the quality of information obtained from other sources, this limitation is not expected to alter the conclusions of this report. Nonetheless, should relevant information be obtained from this agency subsequent to issuing this report, an addendum will be prepared and provided to the Client.

7.0 NON-SCOPE ENVIRONMENTAL RISKS

ASTM Standard E1527-13 identifies additional conditions which, should they exist at the subject property, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

7.1 Asbestos Containing Building Materials

Asbestos is a group of naturally occurring minerals used in many products, including building materials vehicle brakes, insulation and other products that require resistance to heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause cancer and other serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestos can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACM) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACM can be found in a multitude of building products which include decorative and acoustical plaster texture, fire-proofing (Monokote), joint compound, attic and wall insulation, resilient floor covering, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, pipe insulation, pipe gaskets, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, asphalt underlayment (Petromat) and plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- Based on the age of the onsite structure (1957), there is a potential for asbestos containing building materials (ACM) at the site, however, no testing was completed as part of this report. Suspect ACM observed during the site reconnaissance includes drop ceiling panels, stucco, and tile flooring and associate mastics, which appeared to be in good condition. An asbestos survey is recommended in the event the onsite structure is demolished or significantly renovated.

7.2 Lead-Based Paint

Although the use of lead-based paint in residential structures has been prohibited since 1978, it may still be used in commercial and industrial buildings. It is approximated that 80 percent of buildings built prior to 1978 contain lead paint. Even at low levels, lead poisoning can cause IQ deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity and other behavior problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around our homes and commercial buildings. Lead can be found in dust from friction surfaces of windows and doors that are

painted with lead-based paint and from building components coated with lead-based paint that has begun peeling, flaking and chalking. There is also the potential for soil to have elevated lead levels due to leaching from lead based paint on nearby structures and deposition of airborne lead when leaded fuel was in use prior to the 1976 ban and phase out.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Between the local, State and Federal agencies, including the Environmental Protection Agency (EPA), Department of Housing and Urban Development (HUD), Occupational Safety & Health Administration (OSHA) and the California Department of Public Health (CDPH), each state has various action limits that have been enacted with the intent to prevent human exposure and contamination of the surrounding environment.

- Based on the age of the onsite structure (1957), there is a potential for lead-based paint at the site. All painted surfaces appeared in good condition to moderate condition, with no chipping or peeling observed. A lead based paint survey is recommended in the event that the onsite structure is demolished or significantly improved.

7.3 Radon

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today after smoking.

Testing for the presence of radon is fairly inexpensive, simple and is the only way to be certain of the on-site concentrations. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on our research at the United States Environmental Protection Agency (USEPA), the average radon concentrations for Los Angeles County are between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L, below the 4.0 pCi/L action level set by the USEPA. However, according to the California Geological Survey *Radon Potential Radon Zone Map for Southern California*, dated January 2005, shows no concentrations of radon in the vicinity of the subject property. Site specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the radon levels at the subject property.

7.4 Wetlands

According to the Clean Water Act, a wetland is “those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.” Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- The U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory was reviewed to determine if the subject property is situated within an identified wetland. According to the USFWS, the subject property is not located within a wetland area.

7.5 Mold

Mold and mildew are simple, microscopic organisms in the Fungi kingdom that can grow virtually anywhere if they have adequate moisture, nutrients, air and appropriate temperatures. Depending on the particular mold or fungus, growing colonies can be almost any color. Most household molds and fungi (mildews) are white, black, grey, or brown colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials found within buildings. Many molds are not harmful and actually have a beneficial role in the environment and in living systems. In soil, molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

When mold and fungi (mildews) growth occurs in buildings, it can be very destructive to the materials on which they grow and cause high levels of airborne mold spores and volatile organic compounds associated with the characteristic musty / moldy odor. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

EFI Global, Inc. observed a limited amount of interior areas of the subject building in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the subject property. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, pipe chases, HVAC systems and within enclosed wall and ceiling cavities that may be present in the subject property. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the subject building are at levels acceptable by industry standards.

- EFI Global, Inc. did not observe visible or olfactory indications of the presence of mold, nor did EFI Global, Inc. observe obvious indications of significant water damage. No sampling was conducted as part of this assessment.

7.6 Methane Gas

In response to growing concern regarding methane intrusion into buildings and to the potential for methane build-up underneath buildings, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a subject property is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a subject property may be necessary.

- Based on our research, the property is not known to be located in proximity (within 1,000 feet) to any active or abandoned oil wells or landfills. Therefore, the potential for methane risk at the subject property is considered low.

8.0 FINDINGS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for Bow West Capital (Client) for a residential property located at 5607 West Carlton Way and 1655 North Saint Andrews Place, in Los Angeles County and the City of Los Angeles, California, Assessor's Parcel Numbers: 5544-026-010 and 5544-026-011. The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

8.1 CONCLUSIONS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 5607 West Carlton Way and 1655 North Saint Andrews Place, Los Angeles, California, the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property except for the following:

Recognized Environmental Condition (REC)

In our opinion, no RECs were identified during the course of this assessment.

Historical Recognized Environmental Condition (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

Controlled Recognized Environmental Condition (CREC)

In our opinion, no CRECs were identified during the course of this assessment.

De Minimis Condition

The motor oil staining observed in the parking lot is considered a *de minimis* condition.

8.2 RECOMMENDATIONS

Based on the foregoing, no additional investigation is recommended at this time.

9.0 SIGNATURES

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Prepared By:

Date: May 18, 2018

Daniel Casas
Project Manager

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA)

EXECUTIVE SUMMARY

of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
EXXONMOBIL OIL CORP.	5700 HOLLYWOOD BLVD	WNW 0 - 1/8 (0.119 mi.)	D28	23

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

EXECUTIVE SUMMARY

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 21 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

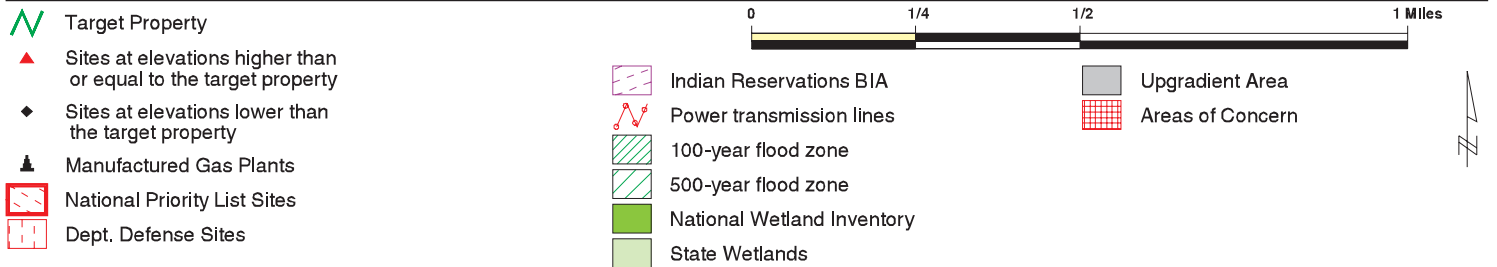

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 20 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 195

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110018989497

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 373

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 07/02/2002
Comments: DTSC has determined that all appropriate response actions have been completed, that all acceptable engineering practices were implemented and that no further removal/remedial action is necessary, specific only to the removal around the underground storage tank. Additional sampling will be conducted post- demolition near on-site hydraulic elevators and residential structures. For Arsenic only. FA for hydraulic elevators and lead

Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/12/2001
Comments: Approximately 136 cubic yards of soil were removed. Based on confirmation sampling, the estimated mean for surface soil based on 95% UCL was 0.860 mg/kg and for subsurface 1.91 mg/kg. Based on this, residual arsenic levels are below the cleanup goal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/07/2001
Comments: RAW/CEQA - DTSC approved the Removal Action Workplan for the removal

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Not reported
Potential Contaminants of Concern: Gasoline
Site History: Caltrans had maintained a 100-gallon gasoline UST for this stormwater pumping station for about 30 years until its removal in 1989. Gasoline was observed to be leaking from small holes in the bottom of the UST when it was removed. Soil sampling in September 1989 identified petroleum impacts directly beneath the UST, while three deeper soil borings in January 1990 detected petroleum impacts

especially at 15 feet below ground surface (bgs), which was just above the groundwater table of 16-17 feet bgs that was encountered when the three borings were drilled. The maximum concentrations of total petroleum hydrocarbons as gasoline (TPHG), benzene, toluene, ethylbenzene, and xylenes in the ten soil samples collected in September 1989 and January 1990 were 3,040 milligrams per kilogram (mg/kg) (TPHG), 55.7 mg/kg (benzene), 434 mg/kg (toluene), 120 mg/kg (ethylbenzene), and 740 mg/kg (xylenes), respectively. Caltrans and their consultant submitted a work plan in May 1990 for installation of three groundwater monitoring wells and associated soil sampling, and the Regional Board approved the work plan on June 1, 1990; however, Caltrans never installed these groundwater monitoring wells. The Regional Board closure form incorrectly stated that the soil contamination was highest at 5-10 feet bgs, but concentrations in soil at 15 feet bgs were higher than at 5 or 10 feet bgs. The Former Gas-To-Go UST case (1353 Western Ave) found free product in monitoring wells MW-23, located just 50 feet away from the former Caltrans pumping station, so this historical case was re-opened.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 04/06/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

UTM Y (Meters):	3773918.2
Elevation:	382 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1610F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06037C1605F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/2 - 1 Mile ESE	S
1G	1/2 - 1 Mile ESE	S

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Tertiary
Series: Miocene
Code: Tm (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types: loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types: fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types: stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EFI Global Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

PERMIT DEFINITIONS

Building Permit

A permit is required to build, remodel, repair, demolish, remove or move any building or structure. A separate permit is required for each separate building or structure. Examples of work that requires a permit: roofing, stucco, window, and door change-out, drywall replacement, installation of security bars, fire damage repairs, chimney repairs, and anchor bolting/bracing foundation (Los Angeles Municipal Code Section 91.106).

Certificate of Occupancy

A Certificate of Occupancy is issued pursuant to a building permit for new construction, additions, and changes of occupancy after all the necessary construction has been approved by the inspector. It is evidence that the Department of Building and Safety has determined that the construction was done according to the requirements of the code for the given occupancy to be housed in the building. Not all construction work receives a C of O, only when square footage is being added. For new construction, the C of O is automatically issued following the final inspection. For older construction, a C of O may not be on file and would require special attention (<http://www.ladbs.org/faq/faq.htm>).

Prior to 1930

Certificates were NOT issued for any structure or building

In 1930

The Department started issuing Certificates of Compliance for all theatres, hospital, schools, and garages.

In 1943

The Municipal Code was changed so as to require that a Certificates of Occupancy be issued for all categories with the exception of dwellings.

In 1946

In compliance with zoning regulations, the code was again changed to require all new buildings and existing buildings with new occupancy designation, except R-1 Occupancies & accessory buildings

Mechanical (HVAC) Permit*

An HVAC permit is required to install, alter, repair, relocate, replace or add any heating, ventilating, or air-conditioning equipment. A permit shall be obtained for all heating, ventilating, air-conditioning or refrigeration equipment or other miscellaneous heat-producing appliances moved with, or installed in, a relocated building in the City (Los Angeles Municipal Code Section 95.0112).

Electrical Permit*

An electrical permit is required for electrical wiring. No person shall install, alter, reconstruct or repair any electrical wiring unless a permit has been obtained from the Department except as provided by your local city code (Los Angeles Municipal Code Section 93.0201).

Plumbing Permit*

A plumbing permit is required to add, alter, construct, install, move, relocate, remove, reconstruct, repair, or replace any plumbing, rainwater piping, subsurface drainage piping, swimming pool piping, reclaimed, water piping, or greywater piping. A permit shall be required where the Department has determined that the gas piping shall be retested for the following:

1. The system has been out of service for a period of one year
2. Where the Department had determined there is system leakage creating an immediate hazard to persons or property (Los Angeles Municipal Code Section 94.103.1).

Sewer Permit

Sewer Permits are issued to private individuals or contractors to connect to an existing house connection sewer or to facilitate the construction of a house connection sewer.

There are two types of sewer connection:

1. Property Line Connection: (requires Building & Safety inspection). This may be a new connection or reconnection to a house connection sewer located at the property line.
2. Main Line Connection: (requires Public Works inspection). This type of connection is required when the house connection sewer extending to the property line does not exist. To extend a sewer line from the property line to the City's main sewer, a bonded sewer contractor must perform the work (Los Angeles City - Department of Public Works - Bureau of Engineering).

Grading Permit

A grading permit is required to import or export any earth material to or from any grading site. A grading permit is also required to perform any grading within areas designated "hillside" (Los Angeles Municipal Code Section 91.106).

Plot Plans

A plot plan is a scale drawing of your property that shows the size and configuration of your property and the size and location of manmade features (building, driveways, and sidewalks) on the property. Plot plans show what currently exists on your property as well as physical changes you wish to make.

Who Governs Construction Standards?

The International Conference of Building Officials publishes a set of uniform codes to help assure that the buildings in which we live and work are built appropriately. These codes establish minimum standards to help safeguard life, limb, health and public welfare by regulating and controlling the design, construction, materials and location of buildings.

The previous sections contain some general background information on certain subjects that can help you better comprehend the process involved. Because the permit process varies among jurisdictions, the information provided is generalized and not specific to a particular situation.

Potential Limitations of Permits

There are hundreds of county and city level jurisdictions in California. Each tends to use slightly different methods of requiring, processing, storing, and making permits available. Jurisdictional records may be incomplete because permits were not obtained, are filed in a different department, were lost, misplaced or even discarded. Therefore, the absence of a building permit does not necessarily mean that construction was done without a permit. The mere presence of a building permit does not necessarily mean that construction took place or was properly accomplished either.

If permits are found, they must be examined and analyzed. It's not uncommon for property owners to obtain permits and then simply not build. Such permits may give the impression that remodeling or changes were made to property that was never done. Sometimes permits are obtained and owners do not have proper inspections. In some cases, permits are not "sign-offs". Sometimes a passing final inspection may be recorded on the back of the permit. When the permit is microfilmed for storage, the back of the permit may not be included. In those cases, we have no information as to whether the permit was finalized or not.

When analyzing a permit, remember that older homes may not "conform" to current codes and building requirements, but this does not necessarily mean that the home is in "non-compliance". Minimum building and construction standards are revised and changed over time as new information, materials, and methods of construction are developed. An older home, addition, or remodel may have been built in compliance with an older set of building standards. In this case, the home is said to be "non-conforming". It does not necessarily mean there is anything wrong with the quality of the home. If a construction project or home is said to be in "non-compliance", it means the work was not done according to the minimum code that was current when the work was undertaken.

Terms, Conditions and Limitations of Liability

The Permit Report ("Report") was prepared by The Permit Report, LLC., a California limited liability company solely for and may be used only in connection with the transaction presently contemplated between this buyer and this seller relating to the property address ("Property") and assessor's parcel number ("APN") furnished to The Permit Report as shown on page 1 of the Report. This Report is subject to these terms, conditions and limitations of liability. The Seller or seller's agent is responsible for verifying the accuracy of the property address and APN within five (5) days of receipt of this Report. Upon notification of an inaccurate address or APN within said 5-day period, The Permit Report will issue a replacement report. The information contained in this Report is based on those documents available on the date shown on page 1 of this Report and is valid only as of the date shown on page 1 of this Report. The Permit Report will not be liable for documents which are not contained in the governmental or public files and records for the Property on the date of the Report.

GOVERNMENTAL OR PUBLIC FILES MAY NOT CONTAIN ALL PERMITS PERTAINING TO THAT SUBJECT PROPERTY AT THE TIME OF THE SEARCH, THEREFOR THE PERMIT REPORT, INC. IS NOT RESPONSIBLE OR LIABLE FOR ANY PERMIT THAT CAN NOT BE FOUND AT THE TIME OF THE PERMIT SEARCH.

This Report is for the exclusive use and reliance of the buyer, seller, listing agent/broker and selling agent/broker, if any, involved in the current transaction. This Report is not intended to be and may not be used for any other purposes, including but not limited to appraisal or valuation of the Property or a certificate that the Property complies with current laws, statutes, regulations and codes. This Report may not be used by or relied upon by any other parties, including but not limited to lenders or subsequent buyers of the Property. There shall be no third party beneficiaries to this Report regardless of their relationship with or to the buyer, the seller, the listing agent/broker, the selling agent/broker or the Property. The Permit Report makes no representations, promises or covenants as to the Report's effect on the value of the Property as a result of the various items contained in this Report.

The information provided in this Report is time-sensitive and may be considered accurate only as of the date shown on page 1 of this Report. Governmental actions occurring after the date shown on page 1 of this Report are not disclosed. Additional items, including but not limited to permits, applications, violations and/or city approved changes, not available from governmental agencies or public records as of the date shown on page 1 of this Report are not disclosed. The Permit Report shall have no duty or obligation to inform the buyer, the seller or their respective agents/brokers of any changes or governmental actions pertaining to or affecting the Property which become effective after the date shown on page 1 of this Report.

The Permit Report has relied solely upon records, statutes and information specifically referred to in this Report for preparation of this Report. The records and information were supplied by various governmental or public agencies. The Permit Report has assumed that the records and information supplied by various governmental and public agencies are complete and accurate. Consequently, The Permit Report shall not be responsible for any inaccuracies or omissions in governmental or public records or in information reported by various governmental or public agencies. No physical inspection of the Property has been made for purposes of preparing this Report.

Under no circumstances will The Permit Report be responsible for errors in the data obtained from governmental or public agencies. The Permit Report recommends that if any party to this transaction has any concerns or questions regarding information contained in this Report, they contact the appropriate governmental, public, local or state agencies.

ACCEPTANCE OR USE OF THIS REPORT, OR EXECUTION BY THE BUYER, SELLER, OR THEIR RESPECTIVE AGENTS, CONSTITUTES APPROVAL AND ACCEPTANCE OF THE TERMS, CONDITIONS, AND LIMITATIONS STATED HEREIN. The Permit Report SHALL NOT BE LIABLE FOR LOST PROFITS, DIMINUTION IN PROPERTY VALUE OR ANY INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH, OR ARISING OUT OF, THE PREPARATION, ISSUANCE, OR USE OF THIS REPORT.

Application for the Erection of Frame Building

CLASS "D"

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be, prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

PAYS YOU \$500 A MONTH FOR LIFE

The future value of the income of a middle-aged business or professional man earning as much as \$8,000 a year is \$254,240.00. You can guarantee 75 per cent of that future income, payable at the rate of \$500 a month as long as you live, with our new Non-Cancellable Income Policy. For information telephone METROPOLITAN 1626.

☒ Please Reply

☐ For
Information

In preparation for a Phase I Environmental Site Assessment, I would like to request available records pertaining to industrial wastewater discharge, clarifiers, storm water/waste water, and inspection records for the following addresses:

5601, 5601½, 5607, and 5607½ W Carlton Way, Los Angeles, CA 90028

and

1655 N St. Andrews Place, Los Angeles, CA 90028

If permits are found for the aforementioned property, please fax the information to us, otherwise standard mailing is sufficient. We understand that a fax fee will be accrued for faxing the information.

Thank you.

Sincerely,

Daniel Casas

LACoFD Health Hazardous Materials Division Records Request Form

Requests must be submitted using the online request form below. HHMD will not accept any request submitted by fax, mail, or phone.

Be aware that each request form allows a search of addresses from only one zip code. A separate request must be completed for each different zip code. We will not accept an individual form with different zip codes listed. If no files are found, we will notify you via email that there are no records available. If there is a file found, you will be notified of the appropriate steps to retrieve or review the files. PLEASE MAKE SURE TO USE A VALID EMAIL ADDRESS SO WE CAN RESPOND TO YOUR REQUEST OR CONTACT YOU FOR ADDITIONAL INFORMATION

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, please fill out the form completely. Requests may also be submitted by phone at (909) 396-3700, by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.
 2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. The District is not required to create a new record in response to a request. The District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Documents will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.
 3. A search for facility records can only be conducted by one or all of the following:
 - a) Facility Name, Address, or Identification Number
 - b) Facility Application Number, or Permit to Operate Number; or
 - c) Facility Notice of Violation/Notice to Comply Number.
 4. You will be notified within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In some cases, the District may need an additional 14 days to respond. If so, you will be notified in writing. You will also be provided an estimated date of when the records will be made available.
 5. Communications regarding your request, and any records, will be provided by email, unless specified otherwise.
 6. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.
 7. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's Trade Secret process.
 8. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.
 9. The charge for the direct cost of duplication is as follows: Paper Copies, \$0.15/page each over 10 pages (first 10 pages are free); Copied CD's or flash drives, no charge; and Copied Audio Tapes, \$5.00 each. After a preliminary estimate, advance payment may be required.
 10. If the request is for information in an electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record, when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD, DVD or flash drive typically costs \$10.00 each. An invoice will accompany your records when completed.
- Note: For further information, please refer to the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.
- Note: If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, (909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.

INSTRUCTIONS FOR REQUESTING RECORDS

(California Public Records Act, Govt. Code Sections 6250-6276.48)

1. In order to expedite your request, please fill out the form completely. Requests may also be submitted by phone at (909) 396-3700, by facsimile to (909) 396-3330, or by email to PublicRecordsRequests@aqmd.gov.
 2. Requests must be for records prepared, owned, used, or retained by the District (Gov. Code Sec. 6252(e)). Requests should be for clearly identifiable records. The District is not required to create a new record in response to a request. The District will assist the requestor in making a request that describes reasonably identifiable records (Gov. Code Sec. 6253.1). Documents will not be provided if disclosure would infringe upon a copyright, trade secret, or is otherwise exempt in accordance with state law.
 3. A search for facility records can only be conducted by one or all of the following:
 - a) Facility Name, Address, or Identification Number
 - b) Facility Application Number, or Permit to Operate Number; or
 - c) Facility Notice of Violation/Notice to Comply Number.
 4. You will be notified within ten (10) days whether your request seeks copies of disclosable public records prepared, owned, used, or retained by this agency. In some cases, the District may need an additional 14 days to respond. If so, you will be notified in writing. You will also be provided an estimated date of when the records will be made available.
 5. Communications regarding your request, and any records, will be provided by email, unless specified otherwise.
 6. If the search for records finds the records voluminous, you will be notified of the approximate number of pages and/or length of time it will take to process your request.
 7. If the records you requested have been marked confidential by the source of the record, you will be notified and given the option of continuing with the District's Trade Secret process.
 8. If your request is to review records, rather than receive copies, the District will notify you once the records are gathered, and arrangements will be made for your review.
 9. The charge for the direct cost of duplication is as follows: Paper Copies, \$0.15/page each over 10 pages (first 10 pages are free); Copied CD's or flash drives, no charge; and Copied Audio Tapes, \$5.00 each. After a preliminary estimate, advance payment may be required.
 10. If the request is for information in an electronic format, the requestor shall bear the cost of producing a copy of the record, including the cost to construct the record and the cost of programming and computer services necessary to produce a copy of the record, when either of the following applies: (1) the District would be required to produce a copy of an electronic record and the record is one that is produced only at otherwise regularly scheduled intervals, or (2) the request would require data compilation, extraction, or programming to produce the record. (Gov. Code Sec. 6253.9(b)). The transfer of gathered electronic records onto CD, DVD or flash drive typically costs \$10.00 each. An invoice will accompany your records when completed.
- Note: For further information, please refer to the District's Guidelines for Implementing the California Public Records Act. The Guidelines are available in the lobby of the District Headquarters or on the District's web site at www.aqmd.gov.
- Note: If you have questions pertaining to the submittal of a Public Records Act request, you may contact the Public Records Unit, (909) 396-3700, Tuesday through Friday, 7:00 a.m. to 5:30 p.m. Our Fax number is (909) 396-3330. Our email address is PublicRecordsRequests@aqmd.gov.

VARIOUS SITES
PR3-042318-03

Dear Mr. Casas:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control. After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced below.

- 5601, 5601½, 5607, and 5607½ W Carlton Way, Los Angeles, CA 90028
- 1655 N St. Andrews Place, Los Angeles, CA 90028
- 1120 – 1124(even) North Citrus Avenue, Los Angeles, CA 90038
- 1120, 1120½, 1122, 1124, and 1140 Olive, Los Angeles, CA 90038
- 1140 and 1142 Orchid, Los Angeles, CA 90038

We would like to inform you about EnviroStor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: <http://www.envirostor.dtsc.ca.gov/public>. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions or would like further information regarding your request, please contact me at (818) 717-6522.

Sincerely,

Glenn Castillo /JVT
Regional Records Coordinator

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

Report Generation Date: 04/23/2018

Matthew Rodriguez
Secretary for
Environmental Protection

Department of Toxic Substances Control

Barbara A. Lee , Director
1001 I Street
P.O. Box 806
Sacramento , CA 958120806

Edmund G. Brown Jr.
Governor

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

Subject: Re: (1655 N ST ANDREWS PL LOS ANGELES 90028)

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: (1655 N ST ANDREWS PL LOS ANGELES 90028)

This search revealed that no records were found for the above noted address(es).

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destroyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at 310-348-1781.

Survey Questionnaire – Please Return to Fax Number Below

A. GENERAL

1. Subject Property Address 5607 Carlton + 1655 St. Andrews
2. Name of business(es) occupying the subject property Residential
3. Person completing this questionnaire:
- | | |
|--------------------------|-----------------------|
| <u>Frank Evanisko</u> | <u>(818) 945 9700</u> |
| Name | Telephone Number |
| <u>Owner Rep.</u> | <u>4/25/18</u> |
| Title | Date |
| <u>owner rep.</u> | <u>4 yrs.</u> |
| Relationship to Property | How Long? |
4. If you are the person who has ordered this report, what is the purpose of this report?
- | | | |
|----------|------|-----------|
| Purchase | Sale | Refinance |
|----------|------|-----------|

B. PROPERTY DESCRIPTION

1. Land
- A. What is the approximate square footage of the land? 17,150
- B. Were there any buildings or other improvements on the property prior to the existing improvements?
Yes ☒ No ☐ DK ☐
- If yes, what were the buildings used for? Res.
- C. Is or has there been a well on the subject property? Yes ☒ No ☐ DK ☒
- If yes, what type of well is it? ☐ Drinking Water, ☐ Irrigation, ☐ Monitoring, ☐ Dry Well
- D. Is or has there been a septic system on the subject property? Yes ☐ No ☐ DK ☒
- E. Has fill of unknown origin been imported onto the subject property? Yes ☐ No ☐ DK ☒
2. Improvements (Buildings) - This includes all buildings

E.**REGULATORY ACTION**

1. Has the subject property ever been subject to any environmental enforcement action by the local government, federal, or state entities? Yes No ☒ DK
2. Do you have any knowledge of pending or proposed environmental actions against the subject property or neighboring properties? Yes No ☒ DK
3. Have there been any formal or informal citizen or tenant complaints regarding environmental or health matters in connection with the Subject Property? Yes No ☒ DK
4. Are you aware of any releases of hazardous materials on the Subject Property? Yes No ☒ DK

F.**ADDITIONAL INFORMATION**

1. Do you have knowledge of any previous environmental reports conducted for the site such as Phase I ESA, Phase II ESA, Site Characterization, Removal or Remediation, Geotechnical Reports, Lead Based Paint or Asbestos Survey or Removal, or other relevant material?
Yes No ☒ If yes, please provide a copy.
2. Do you have a recent Title Report for the subject property?
Yes ☒ No If yes, please provide a copy.
3. Can you provide the contact information of the former owner/occupant of the property? Yes No ☒
If yes, please provide contact information below.

USER QUESTIONNAIRE

As part of the All Appropriate Inquiry (AAI) standard for conducting Phase I Environmental Site Assessments set by the Environmental Protection Agency (EPA), the following questions are to be asked of the prospective purchaser.

Please return to fax number below or e-mail to your project manager. Please also provide a Title Report, previous environmental reports including Phase I and Phase II, Site Characterization, Removal or Remediation, Geotechnical Reports, Lead Based Paint or Asbestos Survey or Removal, or other relevant material, as available.

A. GENERAL

1. Subject Property Address 5607 W. Carlton + 1655 N. St. Andrews.
2. Person completing this questionnaire:
Frank Ebanicko (818) 985-9700
Name Telephone Number
Seller/owner rep. 4/25/18
Relationship to Property Date
3. What is your intended use of the property?
☐ No Change ☒ Residential Development ☐ Commercial/Industrial Development
4. What is the purpose of ordering a Phase I ESA?
☒ Purchase ☐ Refinance ☐ Other (please specify) _____

B. AAI STANDARD QUESTIONS

1. Are you aware of any environmental liens or activity and use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have filed or recorded against the property under federal, tribal, state or local law? Yes ☐ No ☒ If Yes, Please Explain _____
2. Do you have any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property? Yes ☐ No ☒ If Yes, Please Explain _____
3. Are you aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property? Yes ☐ No ☒ If Yes, Please Explain _____
4. Is the purchase price of the property comparable to the fair market value of the property? Yes ☒ No ☐ N/A ☐
If the purchase price is significantly lower than the fair market value, the user must identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products. _____

- A. What is the approximate square footage of the onsite structure? 9,856
- B. What year was the onsite structure built? 940's - 1950's?
- C. Is there a heating system at the site? Yes ☒ No ☐ DK ☐
- If yes, what is it fueled by?: ☐ Natural Gas. ☐ Fuel Oil. ☐ Electricity. ☒ Solar DK
- D. Is there a boiler at the site? Yes ☐ No ☐ DK ☒
- If yes, what is it fueled by?: ☐ Natural Gas. ☐ Fuel Oil. ☐ Electricity. ☐ Solar
- E. Do you have copies of the Subject Property's construction, site, and/or "as-built" drawings and building specifications? Yes ☐ No ☒ If so, please provide copies of same.

C. STORAGE TANKS

1. Are there any registered or unregistered (active or inactive) Underground Storage Tanks ("UST") or Aboveground Storage Tanks ("AST") located on the premises? Yes ☐ No ☒ DK ☐
2. Do you have any knowledge of USTs or ASTs that once existed on the Subject Property and whether such tanks were removed or abandoned? Yes ☐ No ☒ DK ☐

D. HAZARDOUS MATERIALS

1. Are any regulated hazardous materials, chemicals, or waste stored/used on-site? Yes ☐ No ☒ DK ☐
- If "yes" please provide a copy of the chemical inventory.

2. To the best of your knowledge, do any of the following operations take place on the Subject Property or have ever taken place on the Subject Property:

Dry Cleaning:	Yes <input type="checkbox"/> No <input type="checkbox"/>	Battery Storage/Sales:	Yes <input type="checkbox"/> No <input type="checkbox"/>
Paint Storage/Sales:	Yes <input type="checkbox"/> No <input type="checkbox"/>	Petroleum Storage/Sales:	Yes <input type="checkbox"/> No <input type="checkbox"/>

Daniel_Casas@efiglobal.com

Professional Summary:

Daniel Casas has been in the environmental industry since 2016 and has been a professional consultant since 2017. Mr. Casas started his career in the environmental industry researching human impacts on climate change using remote sensing technologies. Currently, Mr. Casas conducts historical research and works with regulatory bodies to investigate historical and current uses of properties as part of the Phase I Environmental Site Assessment.

Licenses and Certifications:

OSHA 40-Hour Hazardous Waste Operations Certified, Safety Unlimited, CA #1709051193286

Professional Experience:

EFI Global, Inc., Los Angeles, CA, Environmental Specialist

2016 – Present

Education:

Bachelor of Arts, Geography and Environmental Studies, University of California,
Los Angeles, CA, 2015

Nicole J. Rivera, MS
Phase I Department Manager

5261 West Imperial Highway, Los Angeles, CA 90045

310-854-6300

Nicole_Rivera@efiglobal.com

Years' Experience: 11

Professional Summary:

Ms. Rivera has more than 11 years of experience in professional consulting services and meets the definition of an Environmental Professional (EP) as defined in the EPA All Appropriate Inquiry (AAI) regulations. Ms. Rivera's responsibilities include the overall management of the Environmental Due Diligence Phase I Department for EFI Global. Her duties include managing 15 technical staff members, managing client relations, business development, and employee development.

Ms. Rivera has worked directly with clients and regulatory bodies to investigate historical and current site use and assess environmental conditions of various residential, commercial, and light industrial and heavy industrial properties. Her experience includes all stages of environmental projects including Phase I environmental site assessments and Phase II soil testing and sampling. Specializing in high volume and large scale projects, she ensures the production of high quality products and individualized service through effective team management and quality control mechanisms.

Ms. Rivera is currently responsible for:

- Management of Phase I Department (15 technical staff members) that prepares Phase I Environmental Site Assessments typically involving retail, light industrial/warehouse, and industrial properties
- Field activities including soil, vapor, and groundwater sampling for Phase II Investigations including dry cleaning operations, gas stations and industrial facilities
- Communicating with regulatory agencies including DTSC, Los Angeles Regional Water Quality Control Board, Los Angeles County, Los Angeles City, and City of Santa Monica
- Training and education of employees and clients
- Marketing, client relations, business development

Licenses and Certifications:

OSHA 40-Hour Hazardous Waste Operations
California Registered Environmental Assessor (2010-2012), DTSC, CA, #30319
Environmental Professional, per the CFR Title 40, Chapter I, Subchapter J, Part 312, Subpart C, Section 312.21

Project Experience:**Lending Institutions, California
Environmental Site Assessment**

Ms. Rivera serves as department manager for lending sector projects which involve Phase I ESA, Property Condition Assessments, Seismic Risk Assessments, and ALTA Surveys for local, regional and national lenders. Projects include adaptive reuse of existing historical other structures for affordable and low income housing and ground up construction projects on previously undeveloped, commercial and industrial properties. Services also include client representation in CEQA and NEPA proceedings and public participation proceedings.

Historic Broadway Corridor, Los Angeles, California

Ms. Rivera conducted environmental due diligence of six private mid-rise buildings in the historic core of downtown Los Angeles on behalf of a major international bank. Hundreds of building permits and other historical research was reviewed and analyzed. Special challenges involved with the project included assessment of boiler related fuel tanks for each of the six properties. Geophysical methods and soil sampling was conducted in order to determine if the boiler related fuel tanks had leaked and caused the subsurface soils to be contaminated.

Affordable Housing Projects, Throughout California

Phase I Environmental Site Assessment Reports were conducted for various properties throughout the state of California for public agencies and private entities as potential sites for affordable housing projects. Special challenges involved with specific projects included soil sampling and pesticide testing for properties that were historically utilized for agricultural purposes.

Gas Station Projects, Throughout California

Phase I Environmental Site Assessment Reports were conducted for gasoline service station properties throughout the state of California for lenders and private entities. Special challenges involved with specific projects included obtaining and reviewing tank fitness testing reports to comply with lender requirements and reviewing technical documents relating to prior UST removals, environmental sampling, remediation, and closure proceedings.

Public and Charter Elementary School Projects, Throughout California

Ms. Rivera has overseen the preparation of Phase I ESA reports for various public and charter elementary schools throughout the state of California for lenders and private entities.

Professional Experience:**Andersen Environmental, Los Angeles, CA 2007-Present**

Phase I Department Manager, 2010-Present

Project Manager, 2008-2010

Senior Environmental Specialist, 2007-2008

Education:

Bachelor of Science, Environmental Studies, University of Southern California, Los Angeles, CA, 2006

Master of Science, Environmental and Occupational Health, California State University of Northridge, Northridge, CA, 2013

Our partner firms include: Engineering services in North Carolina and New York/New Jersey provided by EFI Global of North Carolina, P.C. and EFI Global Engineering of New York, P.C. respectively.

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

EXECUTIVE SUMMARY

Western Environmental Engineers Company (WEECO) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by **Commonwealth Business Bank** for the property located at **5604-5610 Hollywood Boulevard, Los Angeles, California (the "subject property")**. The Phase I Environmental Site Assessment is designed to provide **Commonwealth Business Bank** with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

On February 5, 2018, WEECO investigator (Han sol Yoo) conducted a site investigation of the subject site.

Property Description:

The subject property located at 5604-5610 Hollywood Boulevard, in the City of Los Angeles, is legally described by the assessor's parcel numbers: 5544-026-007 and 5544-026-008. According to the Los Angeles County, Office of the Assessor, the subject site is an approximately 23,750 square foot total lot, and has been developed with two (2) commercial / residential buildings approximately 21,230 square feet in size total. The subject buildings were constructed in 1997 and 1948, respectively.

The subject property is currently occupied by "Precise Auto Body" and residential dwellings. The subject property consists of one (1) single-story commercial building being used as an auto body shop and one (1) two-story commercial / residential building being used as a vehicle storage garage and residential dwellings. In addition to the current structures, the subject property is also improved with a concrete paved vehicle storage lot. An automotive spray paint booth was observed inside the single-story subject building.

According to available historical sources, from 1960 to 1990, the subject property was occupied by various commercial tenants. From 2000 to 2017, the subject property has been occupied by an auto body shop.

The immediately surrounding properties consist of commercial development (Commercial Building / 5611-5623 W. Hollywood Boulevard) to the north across Hollywood Boulevard; residential developments (Residential Area / 5607-5617 Carlton Way) to the south; Vacant Land (5600 Hollywood Boulevard) to the east; and commercial development (Unmarked Building / 5620 Hollywood Boulevard) to the west.

The groundwater depth in the vicinity of the subject site is approximately 86.90 feet bgs (data obtained from GeoTracker from an open LUST site, 5700 Hollywood Boulevard). The regional groundwater flow is expected to follow the topographic gradient; which is towards the westerly.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

Federal and State Environmental Records Search Databases:

Two (2) active SCAQMD records were found for the subject site. According to the records, the company name that holds the records is "G&N Shop". No equipment is listed in the records, and there have been no notices of violation or notices to comply. According to the records, the company name that holds the records is "Precise Auto Body". The site was issued operating permits for automotive spray booths on November 6, 2003, and May 17, 1996. Operating permits are currently active. The site was issued a notice of violation due to installing and operating 2 paint spray booths without a permit to construct and/or operate; however, upon re-inspection, the case is currently closed. The site was issued notices to comply due to record keeping, and equipment repair; however, upon re-inspection, all notices are currently in compliance. Two (2) out of business and inactive records were found for the subject property. The site was issued operating permits for paint and solvent spray booth. All operating permits are currently inactive. There have been no notices of violation or notices to comply.

The current tenant, "Precise Auto Body", is listed in the HWIS regulatory database. The site disposed of: 0.95, 0.48, and 0.53 tons of aq sol with org residues >10% in 2010/2011, 2012/2013, and 2014/2015, respectively, 0.03 tons of unspecified solvent mixture in 2006/2007, and 0.05, 0.02, and 0.02 tons of other organic solids in 2008/2009, 2010/2011, and 2012/2013, respectively.

No reported properties within the specified search radii are identified to pose a significant environmental risk to the Property.

FINDINGS

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- ◆ WEECO investigator contacted the Los Angeles City Fire Department Hazardous Materials Division to search records of inventory lists of active and inactive hazardous materials facilities located within the city of Los Angeles. According to the LAFD, if the

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

address of the subject site does not appear in the lists of active or inactive Hazardous Materials facilities available to view via www.lafd.org/public-records, then the department does not have any documentation pertaining to the subject site. Records were found for the subject site. According to the records, the subject site stores: Argon/CO₂, Solvent, and Waste Paint/Thinner. See Appendix D.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by WEECO, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- ◆ Nine (9) 55-gallon industrial drums, some with secondary containment and some without, which were labeled as containing hazardous waste (paint waste, thinner, waterborne cleaning solution, waste, filters/rags/solids/debris) and coolant were observed at the subject site. Based on small quantities observed and the nature of the business, these materials are not expected to represent a significant environmental concern; however, WEECO recommends that secondary containment should be used to store the fluids and that better housekeeping measures be taken to prevent de minimis spilling.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

WEECO has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of **5604-5610 Hollywood Boulevard, in the City of Los Angeles, Los Angeles County, California** (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, WEECO recommends no further investigation of the subject property at this time.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

1.0 INTRODUCTION

Western Environmental Engineers Company (WEECO) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at **5604-5610 Hollywood Boulevard, in the City of Los Angeles, Los Angeles County, California** (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 PURPOSE AND OBJECTIVE

The purpose of this practice is to define good commercial and customary practice for conducting an *environmental site assessment* of a parcel(s) of *commercial real estate* with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and *petroleum products*. As such, this practice is intended to permit a *User (Client, Purchaser, Lender, Owner)* to satisfy one of the requirements to qualify for the *innocent landowner, contiguous property owner, or bona fide prospective purchaser* limitations on CERCLA liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"): that is, the practice that constitutes "*all appropriate inquiry* into the previous ownership and uses of the *Property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

Another purpose of this *ESA* is to assist the *Client*, in its underwriting of a proposed mortgage loan on the *Property*, if this *Report* is prepared as a part of a pre-financing environmental due diligence, and to identify *Recognized Environmental Conditions (RECs)* in connection with the *Property* described in this *Report*.

The ASTM Standard Practice E1527-13 defines a *Recognized Environmental Condition (REC)* as the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property*: (1) due to *release to the environment*; (2) under conditions indicative of a *release* to the *environment*; or (3) under conditions that pose a *material threat* of a future *release* to the *environment*. Conditions determined to be *de minimis* generally do not present a threat to human health or the *environment* and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not *Recognized Environmental Conditions* or *Controlled Recognized Environmental Conditions*. *De minimis conditions* are not *Recognized Environmental Conditions*.

Controlled Recognized Environmental Condition (CREC) is a *Recognized Environmental Condition* resulting from a past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

remain in place subject to the implementation of required controls (for example, *property use restrictions, activity and use limitations, institutional controls, or engineering controls*).

A Historical Recognized Environmental Condition (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the Property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

1.2 SCOPE OF WORK

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. WEECO contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, WEECO researched information on the presence of activity and use limitations (AULs) at these

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 LIMITATION

WEECO warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. WEECO believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, WEECO cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM, include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 7.3.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

1.4 USER RELIANCE

Western Environmental Engineer Company (WEECO) has performed a Phase I Environmental Site Assessment for the property located at **5604-5610 Hollywood Boulevard, Los Angeles, California (Subject Property)**. This report has been prepared for the sole use of **Commonwealth Business Bank (Client)**.

An environmental site assessment meeting or exceeding this practice and completed less than one (1) year prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the user also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligations." Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM E-1527-13, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of WEECO. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

This report has been prepared for the sole use of **Commonwealth Business Bank**. The contents should not be relied upon by any other parties without the express written consent of **Commonwealth Business Bank and WEECO**.

1.5 LIMITING CONDITIONS

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Information relative to deed restrictions and environmental liens, a title search, and a pre-survey questionnaire was not provided by the Report User.
- WEECO was unable to determine the property use at 5-year intervals, which constitutes a data gap. Information concerning historical use of the subject property was unavailable for various time frame intervals. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, WEECO reviewed all standard historical sources and conducted appropriate interviews.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

2.0 SITE DESCRIPTION

2.1 SITE LOCATION AND LEGAL DESCRIPTION

The subject site at **5604-5610 Hollywood Boulevard** is a commercial / residential property located on the south side of Hollywood Boulevard between Wilton Place and St. Andrews Place, in the City of Los Angeles, County of Los Angeles within the State of California. According to the Los Angeles County Assessor, the subject property is described as Assessor's Parcel Numbers (APNs): 5544-026-007 and 5544-026-008.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic & Aerial Photo Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 CURRENT PROPERTY USE

The subject property is currently occupied by "Precise Auto Body" and residential dwellings. The subject property consists of one (1) single-story commercial building being used as an auto body shop and one (1) two-story commercial / residential building being used as a vehicle storage garage and residential dwellings. In addition to the current structures, the subject property is also improved with a concrete paved vehicle storage lot. An automotive spray paint booth was observed inside the single-story subject building.

The subject buildings appear to be constructed of stucco and concrete block walls, composite roofs, and concrete slab floors. The building materials appeared to be in good condition at the time of visual inspection.

The subject property is designated for commercial development by the City of Los Angeles.

The subject property was identified in the HWIS regulatory database report, as further discussed in Section 5.0.

2.3 CURRENT USE OF ADJACENT PROPERTIES

During the Site Reconnaissance, WEECO's field assessor also visually inspected and documented the use of those properties, which adjoin the subject properties. The observations made by Mr. Hansol Yoo of the adjoining properties are as follows:

NORTH

- The property to the north of the subject site across Hollywood Boulevard is used for a commercial purpose (Commercial Building / 5611-5623 W. Hollywood Boulevard).

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

EAST

- The property to the east of the subject site is Vacant Land (5600 Hollywood Boulevard).

SOUTH

- The properties to the south of the subject site are used for residential purposes (Residential Area / 5607-5617 Carlton Way).

WEST

- The property to the west of the subject site is used for a commercial purpose (Unmarked Building / 5620 Hollywood Boulevard).

2.4 PHYSICAL SETTING SOURCES

2.4.1 USGS Topographic Map Review

The United States Geological Survey (USGS) *Hollywood, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA.

USGS topographic map indicates that the subject property and the vicinity had established medium duty and light duty roads in their current configurations. The ground elevation level at the subject site is approximately 390 feet above the mean sea level.

The slope in the general topographic region of the Project appears to be to the south.

The Source of these topographic maps is from the US Department of the Interior, Geological Survey.

The topography of the site area demonstrates a complex elevation contour. The topography of the local area can be useful in recognizing the direction in which surface runoff and groundwater will generally flow. However due to the creation of sewers, drains and other man made water canals, the flow of surface runoff is not necessarily the same as would be expected by the topography. The groundwater of the local area can also differ from the general topography due to a variation of depth of the ground water, the geology of the subsurface soil in the area.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Geology and Hydrogeology

The subject site is in the Los Angeles Forebay Area, located in the northern part of the Central Basin. In general, it is a free groundwater area; however, in the course of this investigation it became evident that the Bellflower aquiclude extends into the southerly portion of the forebay area. The aquiclude extends in this area contains a high percentage of sand, and vertical

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

percolation of water is apparently more rapid here than in other portions of the basin covered by it. Where the Bellflower aquiclude is missing within the forebay area, the aquifers are in direct hydraulic continuity with the surface.

The Los Angeles Forebay Area is overlain by parts of the La Brea, Los Angeles and Montebello Plains. The known water-bearing sediments extend to a depth of 1600 feet (1440 feet below sea level) and include recent alluvium, the Lakewood formation and the San Pedro formation. Some fresh water also may be present in the Pliocene and Miocene rocks underlying these formations in this area.

Recent alluvium in the Los Angeles Forebay Area is found on the Los Angeles Plain and in the Los Angeles Narrows. It attains a maximum thickness of 160 feet, and includes the western arm of Gaspar aquifer and the parts of the Semi-perched aquifer and Bellflower aquiclude lying west and south of the Los Angeles River.

The Semi-perched aquifer is defined as the area where sand and gravel overlying the Bellflower aquiclude is more than 20 feet in thickness. This semi-perched aquifer is also present in the Lakewood formation just south of the Repetto Hill. Although the aquifer can be defined in well logs, water levels in well indicate that it contains little or no water.

The groundwater depth in the vicinity of the subject site is approximately 86.90 feet bgs (data obtained from GeoTracker from an open LUST site, 5700 Hollywood Boulevard). The regional groundwater flow is expected to follow the topographic gradient; which is towards the westerly.

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

3.0 HISTORICAL INFORMATION

WEECO obtained historical use information about the subject property from a variety of sources.

3.1 HISTORICAL TENANT REPORT REVIEW

WEECO reviewed historical Tenant Report obtained from BBL (Environmental Record Search) on **February 7, 2018** for past names and businesses that were listed for the subject property and adjacent properties.

BBL's Historical Tenant Report was reviewed which identifies the tenants (be it the owner or lessee) of the subject site over the last 50 years. Sources for the research includes various city directories, street address directories and criss-cross directories published from 1920 forward. Based on the Historical Tenant Report, in 1956, the subject property had no listings. In 1960, the subject property was listed as having "Bruce Piano". From 1970 to 1980, the subject property was listed as having "Classroom Film Dist, and Coast Visual Ed". From 1985 to 1990, the subject property was listed as having "Lanna Trading Co". In 1994, the subject property was listed as having "Film City Loan & Jewelry Co, and Film City Pawnbrokers". In 1998, the subject property had no commercial listings. In 2000, the subject property was listed as having "Allstate Insurance, and Precise Auto Body". In 2004, the subject property was listed as having "Precise Auto Body". In 2006, the subject property was listed as having "Allstate Insurance Co, and Precise Auto Body". From 2008 to 2012, the subject property was listed as having "Precise Auto Body". In 2014, the subject property was listed as having "Emergency Silver Restoration, and Precise Auto Body". From 2016 to 2017, the subject property was listed as having "Precise Auto Body". Copies of select Historical Tenant Report are included in Appendix C of this report.

In addition to the actual site address the following neighboring addresses have been researched for commercial listings as well:

- **Data Gap and Data Failure**

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required, despite good faith efforts to gather such information. Data failure is one type of data gap. According to ASTM E1527-13 “data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met”. Pursuant to ASTM Standards, historical sources are required to document property use back to the property’s first developed use or back to 1940, whichever is earlier. However, pursuant to ASTM #1527-13, Section 8.3.2.1, if the specific use of the property appears unchanged over a period longer than five years, then it is not required by this practice to research the use during that period.

3.2 HISTORICAL AERIAL PHOTO MAP REVIEW

WEECO obtained available aerial photographs of the subject property and surrounding area from BBL (Environmental Record Search) on January 25, 2018 and NETR Online - Historical Aerial Photo. A historical map review was conducted to better understand the historical use of the subject site.

Map Date:	Description:

1948	Same as 1952 aerial photo map

Copies of select aerial photographs are included in Figure 3 of this report.

3.3 SANBORN FIRE INSURANCE MAP

The Sanborn map collection is a series of large-scale maps that depict the commercial, industrial and residential sections of some twelve thousand cities and towns in the United States. These specialized maps were prepared for the exclusive use of fire insurance companies and underwriters to provide accurate, current and detailed information about the buildings they were insuring. Sanborn maps show the size, shape and construction of dwellings, commercial buildings and factories, as well as indicate widths and names of streets, property boundaries, building use, and house and block numbers. D.A. Sanborn, a young surveyor from Somerville, Massachusetts, established the D.A. Sanborn National Insurance Diagram Bureau in New York City in 1867. With good managerial procedures and practices, Sanborn's company quickly became the premiere insurance map company, expanding coverage to all parts of the United States. In 1902, nineteen years after Sanborn passed away, the Sanborn Map and Publishing company became the Sanborn Map Company, the form which the company uses today. In 1905, the Sanborn Map Company published a manual for the guidance of its surveyors which read, "Our maps are made for the purpose of showing at a glance the character of the fire insurance risks of all buildings. Our customers rely upon the information supplied, incurring large financial risks without making personal examinations of the properties. The information reported", the Sanborn surveyor was advised, "is technical to the fire insurance industry, and you should master the technicalities and ever bear in mind the use to which the map you are producing will be applied." Accuracy and thoroughness were factors in the success the Sanborn Map Company would experience in the coming decades. By 1920, the Sanborn Map company virtually monopolized the insurance map industry, with production probably reaching a peak in the early 1930's. Following World War II, a period of which government restrictions were enforced on the publication of maps, the market for insurance maps experienced a slow and persistent decline. Today, inspection services maintained by fire insurance rating organizations and insurance companies now prove adequate in the light of modern building construction, better fire codes and improved fire protection methods. With the chronology of Sanborn Fire Insurance Maps in mind, a clear benefit of reviewing these maps is to analyze building and property use typically previous to 1950. The existence and location of fuel storage tanks, flammable or other potentially toxic substances is clearly noted.

No Fire Insurance Maps are available for the area surrounding the subject site. Lack of coverage of the site indicates an area of little commercial development prior to 1950.

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

4.0 GOVERNMENT RECORD SEARCH

4.1 FIRE DEPARTMENT

WEECO investigator contacted the Los Angeles City Fire Department Hazardous Materials Division to search records of inventory lists of active and inactive hazardous materials facilities located within the city of Los Angeles. According to the LAFD, if the address of the subject site does not appear in the lists of active or inactive Hazardous Materials facilities available to view via www.lafd.org/public-records, then the department does not have any documentation pertaining to the subject site. Records were found for the subject site. See Appendix D.

Chemical	Haz. Mat. Type	Max Qnt. On Hand	Physical State
Argon/CO ₂	Mixture	600	Gas
Solvent	Mixture	55	Gas
Waste Paint/Thinner	Waste	55	Gas

WEECO investigator contacted the Los Angeles City Fire Department Underground Tank Unit to search records of inventory lists of active and inactive underground tank facilities located within the city of Los Angeles. According to the LAFD, if the address of the subject site does not appear in the lists of active or inactive Underground Storage Tanks (USTs) facilities available to view via www.lafd.org/public-records, then the department does not have any documentation pertaining to the subject site. The subject site was not listed in any of these active or inactive facility lists. No records were found for the subject site.

4.2 SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT

WEECO investigator researched data from the South Coast AQMD Database to review any records regarding Hazardous Waste/Materials and violations for the subject property. Two (2) active records were found for the subject site. According to the records, the company name that holds the records is "G&N Shop". No equipment is listed in the records, and there have been no notices of violation or notices to comply. According to the records, the company name that holds the records is "Precise Auto Body". The site was issued operating permits for automotive spray booths on November 6, 2003, and May 17, 1996. Operating permits are currently active. The site was issued a notice of violation due to installing and operating 2 paint spray booths without a permit to construct and/or operate; however, upon re-inspection, the case is currently closed. The site was issued notices to comply due to record keeping, and equipment repair; however, upon re-inspection, all notices are currently in compliance. Two (2) out of business and inactive records were found for the subject property. The site was issued operating permits for paint and solvent spray booth. All operating permits are currently inactive. There have been no notices of violation or notices to comply. See Appendix D.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

4.3 REGIONAL WATER QUALITY CONTROL BOARD

The subject site was not listed as a LUST (Leaking Underground Storage Tank) site on the Geotracker – California State Water Resources Control Board’s sponsored website.

4.4 DEPARTMENT OF TOXIC SUBSTANCES CONTROL (ENVIROSTOR)

WEECO investigator contacted the Department of Toxic Substances Control, EnviroStor website to review any records pertaining to hazardous materials used or stored at the subject site and to review any records pertaining to aboveground/underground storage tanks at the subject site. No records were found for the subject site.

4.5 DEPARTMENT OF TOXIC SUBSTANCES CONTROL (HWTS)

WEECO investigator contacted the Department of Toxic Substances Control, Hazardous Waste Tracking System (HWTS) website to review the California and Non California Manifests Tonnage Total and Waste Code at the subject site. One (1) inactive record was found. See Appendix D.

The facility, “Precise Auto Body”, has an active transporter registration. California Manifest Counts and Total Tonnage records were found for the years 2007, 2009, 2010, 2011, 2012, 2013, 2014, 2015, and 2016. No records were found regarding Non-California Manifest Total Tonnage.

5604-5610 Hollywood Boulevard, Los Angeles, California 90028

4.6 OIL & GAS MAP

WEECO reviewed California Department of Conservation, Division of Oil, Gas & Geothermal Resources (DOGGR) maps for the Property and immediate vicinity via the DOGGR Online Mapping System (DOMS), but found no active or abandoned oil and/or gas wells on the Property or in the immediate vicinity.

Source: <http://www.conservation.ca.gov/dog/Pages/WellFinder.aspx>

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

7.0 SITE RECONNAISSANCE

A site reconnaissance of the subject property was conducted on February 5, 2018. Investigator(s) in attendance for the site reconnaissance included the following:

- ◆ Hansol Yoo, Project Engineer / WEECO

The site reconnaissance consisted of a visual inspection of the subject property. The following sections discuss the findings of the site reconnaissance.

7.1 GENERAL SITE CHARACTERISTICS

7.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial trash-bins. Independent solid waste disposal contractor, Athens Services, removes solid waste from the subject property. Two (2) trash-bins were observed at the subject site, and did not appear to contain any hazardous materials or waste.

7.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Los Angeles services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

7.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located in the public right of way. Site storm water from roofs, landscaped areas, and paved areas is directed to storm water drains in the public right of way. The subject property is connected to a municipal owned and maintained sewer system. The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

7.1.4 Sources of Heating and Cooling

Heating and cooling systems as well as domestic hot water equipment are fueled by electricity provided by the Los Angeles City Department of Water and Power, and SoCal Gas Company.

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

7.1.5 Wells

No aboveground evidence of wells was observed during the site reconnaissance.

7.1.6 Septic Systems

No septic systems were observed or reported on the subject property.

7.1.7 Additional Site Observation

- Various auto body repair equipment were observed at the subject property.
- One (1) electric hoist was observed at the subject property.

7.2 POTENTIAL ENVIRONMENTAL HAZARDS

7.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

Nine (9) 55-gallon industrial drums, some with secondary containment and some without, which were labelled as containing hazardous waste (paint waste, thinner, waterborne cleaning solution, waste, filters/rags/solids/debris) and coolant were observed at the subject site. Based on small quantities observed and the nature of the business, these materials are not expected to represent a significant environmental concern; however, WEECO recommends that secondary containment should be used to store the fluids and that better housekeeping measures be taken to prevent de minimis spilling.

7.2.2 Underground & Aboveground Hazardous Substances and Petroleum Product Storage Tanks (USTs/ASTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

7.2.3 Evidence of Release

Minor spills, stains or other indications that a surficial release has occurred at the subject property were observed at the subject site. However, those stains could not impose a significant threat upon the environmental integrity of the subject site.

7.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

(ppm) of PCBs – “Non-PCB;” 2) 50 ppm-500 ppm – “PCB-Contaminated;” and, 3) Greater than 500 ppm – “PCB-Containing.” The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs.

No electrical transformers were observed at the subject site.

7.2.5 Drains, Sumps and Clarifiers

Drains were observed inside the subject building.

7.2.6 Pit, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

7.2.7 Additional Potential Environmental Hazards

- An automotive spray paint booth was observed inside the subject building.
- Automotive paint were observed inside the subject building.

7.3 NON-ASTM SERVICE

7.3.1 Asbestos-Containing Materials (ACMs) and Lead-Based Paint (LBP)

Since an asbestos survey and lead-based paint are not included in the current scope of services for Phase I ESA, WEECO did not test suspect asbestos-containing building materials (ACBM) and suspect lead-based paint (LBP) at the property.

Commercial use of ACM and lead-based paint as a building material was banned by the federal government in 1978. WEECO did not contract to conduct asbestos, lead-based paint inspection at the subject site. Since a subject building was built prior to 1978, asbestos containing materials can still be present. However, prior to renovation or demolition work which would disturb any potential asbestos containing materials or potential lead paint, they should be sampled by a California Certified Asbestos Consultant and lead paint consultant, who may also assist with proper removal of any materials containing asbestos or lead paint. Such materials must be removed by a properly licensed asbestos and/or lead paint abatement contractor. And oversight and monitoring of the work must be performed by a California Certified Asbestos/Lead consultant.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

7.3.2 Radon

Radon sampling and testing was not requested by the *User/Client* as part of this Phase I ESA.

Radon is a naturally-occurring, odorless, invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

A review of the EPA's Map of Radon Zones indicates that Los Angeles County falls within Zone 2, a zone of moderate radon potential. Counties located within Zone 2 have a predicted average indoor radon screening level between 2 and 4 picocuries per liter (pCi/L). A radon survey was not included in the current scope of services.

Source: <http://www2.epa.gov/radon/find-information-about-local-radonzones-and-radon-programs#radonmap>

It should be noted that site-specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the Property radon levels.

7.3.3 Lead in Drinking Water

Since a lead in drinking water survey is not included in the current scope of services for Phase I Environmental Site Assessment, WEECO did not test drinking water at the Property for lead content.

The major source of LIW is leaching of lead from household plumbing materials or water service lines used to bring water from the main to the building. Lead can leach into drinking water through contact with the plumbing, solder, fixtures and faucets (brass), and fittings. The amount of lead in drinking water will be influenced by the type and amount of minerals in the water, how long the water stays in the pipes, the amount of wear in the pipes, the water's acidity and its temperature.

8.0 FINDINGS AND CONCLUSIONS

FINDINGS

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- * WEECO investigator contacted the Los Angeles City Fire Department Hazardous Materials Division to search records of inventory lists of active and inactive hazardous materials facilities located within the city of Los Angeles. According to the LAFD, if the address of the subject site does not appear in the lists of active or inactive Hazardous Materials facilities available to view via www.lafd.org/public-records, then the department does not have any documentation pertaining to the subject site. Records were found for the subject site. According to the records, the subject site stores: Argon/CO₂, Solvent, and Waste Paint/Thinner. See Appendix D.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- ◆ WEECO did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by WEECO, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- * Nine (9) 55-gallon industrial drums, some with secondary containment and some without, which were labeled as containing hazardous waste (paint waste, thinner, waterborne

cleaning solution, waste, filters/rags/solids/debris) and coolant were observed at the subject site. Based on small quantities observed and the nature of the business, these materials are not expected to represent a significant environmental concern; however, WEECO recommends that secondary containment should be used to store the fluids and that better housekeeping measures be taken to prevent de minimis spilling.

CONCLUSIONS, OPINIONS AND RECOMMENDATIONS

WEECO has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of **5604-5610 Hollywood Boulevard, in the City of Los Angeles, Los Angeles County, California** (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions or environmental issues in connection with the subject property. Based on the conclusions of this assessment, WEECO recommends no further investigation of the subject property at this time.

9.0 REFERENCES

During the preparation of this Report, a number of sources were contacted, individuals were interviewed, and various federal, state, county or local municipal agencies were consulted. Documentation applicable to the Property in those departments and agencies was requested and reviewed when and where reasonably ascertainable, as detailed in ASTM Standard Practice E1527-13. Individuals listed without phone numbers were contacted in person or by e-mail. Reference sources for site-specific information, hydrogeologic setting, technical data, historical research data, environmental reports and other records used are identified throughout this Report in corresponding sections. Any additional reference sources not cited in each applicable section of this report, if applicable, are disclosed in this section.

INTRODUCTION

BBL has used its best effort but makes no claims as to the completeness or accuracy of the referenced government sources or the completeness of the search. Our records are frequently updated but only as current as their publishing date and may not represent the entire field of known or potential hazardous waste or contaminated sites. To ensure complete coverage of the subject property and surrounding area, sites may be included in the list if there is any doubt as to the location because of discrepancies in map location, zip code, address, or other information in our sources. For additional information call 858 793-0641.

In accordance with ASTM E-1527-13, the following government sources have been searched for sites within one mile radius, within the distances of the subject location as listed below.

FEDERAL SOURCES

NPL National Priority List

EPA has prioritized sites with significant risk to human health and the environment. These sites receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA).

No listings within 1 mile radius of the subject site.

SEMS Comprehensive Environmental Response, Compensation, and Liability Act

Superfund Enterprise Management System (SEMS) replaced CERCLIS in 2014. This database is used by the EPA to track activities conducted under the Comprehensive Environmental Response and Liability Act CERCLA (1980) and the amendment the Superfund Amendments and Reauthorization Act SARA (1986).

Sites to be included are identified primarily by the reporting requirements of hazardous substances Treatment, Storage and Disposal (TSD) facilities and releases larger than specific Reportable Quantities (RQ), established by EPA.

Using the National Oil and hazardous Substance Pollution Contingency Plan (National Contingency Plan) the EPA set priorities for cleanup.

The EPA rates National Contingency Plan sites according to a quantitative Hazard Ranking System (HRS) based on the potential health risk via any one or more pathways: groundwater, surface water, air, direct contact, and fire/explosion.

The EPA and state agencies seek to identify potentially responsible parties (PRP) and ultimately Responsible Parties (RP) who can be required to finance cleanup activities, either directly or through reimbursement of federal Superfund expenditures.

Any Institutional/Engineering controls issued under CERCLA are described in the status detail for each site. Sites delisted from the NPL list are included here.

No listings within half of a mile radius of the subject site.

NFRAP No Further Remedial Action Planned sites (CERCLIS)

As of February 1995, CERCLIS sites designated 'No Further Remedial Action Planned' NFRAP have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the site being placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

REPORT OF RELEASE OF SEWAGE DUE TO RECENT FLOOD WATERS IN THE AREA.
SECURED 1/11/2005 @ 0800.

HMIRS Hazardous Material Incident Report System

The Hazardous Material Report Incident Report Subsystem HMIRS of the Research and Special Programs Administration (RSPA) Hazardous Material Information System was established in 1971 to fulfill the requirements of the Federal hazardous material transportation law. Part 171 of Title 49, Code of Federal Regulations (49 CFR) contains the incident reporting requirements of carriers of hazardous materials. An unintentional release of hazardous materials meeting the criteria set forth in Section 171.16, 49 CFR, must be reported on DOT Form 5800.1. The data from the reports received are subsequently entered in the HAZMAT database.

No listings within the street address of the subject site.

TBA Targeted Brownfields Assessments

EPA's Targeted Brownfields Assessment (TBA) program is designed to help states, tribes, and municipalities (especially those without EPA Brownfields Assessment Pilots/Grants) minimize the uncertainties of contamination often associated with brownfields. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Program to promote the cleanup and redevelopment of brownfields. EPA's TBA assistance is available through two sources: directly from EPA through EPA Regional Brownfields offices under Subtitle A of the law, and from state or tribal voluntary response program offices receiving funding under Subtitle C of the law.

No listings within half of a mile radius of the subject site.

SETS Site Enforcement Tracking System (SETS)

When expanding Superfund monies at a CERCLA (Comprehensive Environmental Response, Compensation and Liability Act) Site, EPA must conduct a search to identify parties with potential financial responsibility for remediation of uncontrolled hazardous waste sites. EPA regional Superfund Waste Management Staff issue a notice letter to the potentially responsible party (PRP). The status field contains the EPA ID number and name of the site where the actual pollution occurred.

No listings within half of a mile radius of the subject site.

DO Enforcement Docket System (DOCKET)/Consent Decree Tracking System (CDETS)

DOCKET tracks civil judicial cases against environmental polluters, while CDETS processes court settlements, called consent decrees.

No listings within a quarter of a mile radius of the subject site.

CD Criminal Docket System (C-DOCKET)

The Criminal Docket System is a comprehensive automated system for tracking criminal enforcement actions. C-DOCKET handles data for all environmental statutes and tracks enforcement actions from the initial stages of investigations through conclusion.

No listings within a quarter of a mile radius of the subject site.

EPA has removed these NFRAP sites from CERCLIS to lift unintended barriers to the redevelopment of these properties. This policy change is part of EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens promote economic redevelopment of unproductive urban sites.

No listings within half of a mile radius of the subject site.

FEDFAC Federal Facilities

As part of the CERCLA program, federal facilities with known or suspected environmental problems, the Federal Facilities Hazardous Waste Compliance Docket is tracked separately to comply with a Federal Court order.

No listings within half of a mile radius of the subject site.

ERNS Emergency Response Notification System

The ERNS is a national computer database used to store information on unauthorized releases of oil and hazardous substances. The program is a cooperative effort of the Environmental Protection Agency, the Department of Transportation Research and Special Program Administration's John Volpe National Transportation System Center and the National Response Center.

There are primarily five Federal statutes that require release reporting the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) section 103; the Superfund Amendments and Reauthorization Act (SARA) Title III Section 304; the Clean Water Act of 1972 (CWA) section 311(b)(3); and the Hazardous Material Transportation Act of 1974 (HMTA) section 1808(b).

This list has been researched within a quarter of a mile radius of the subject site.

Site: ARCO FACILITY #1247
Address: 5777 HOLLYWOOD BLVD

Status: 0500747046

On 01/09/05 an incident involving 5857 gallon(s) of RAW SEWAGE & STORMWATER MIX, caused by flood, occurred.

ICIS Integrated Compliance Information System (ICIS)

ICIS is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

This list has been researched within half of a mile radius of the subject site.

Site: HOTEL HOLLYWOOD
Address: 5825 W SUNSET BLVD
City: HOLLYWOOD
Map Loc: 99 - about .3 mile SW of the subject
Status: Permit id# 110028070263

RCRA RCRA Violators List (CORRACTS)

The Resource Conservation and Recovery Act of 1976 provides for "cradle to grave" regulation of hazardous wastes. RCRA requires regulation of hazardous waste generators, transporters, and storage/treatment/disposal sites. Evaluation to potential violations, ranging from manifest requirements to hazardous waste discharges, is typically conducted by the US EPA. This database is also known as Corrective Action Report (CORRACTS)

If enforcement is required, it is typically delegated to a state agency.

Any Institutional/Engineering controls issued under CORRACTS are described in the status detail for each site

No listings within 1 mile radius of the subject site.

RCRA-D Resource Conservation and Recovery Information System - Treatment, Storage & Disposal

The Environmental Protection Agency regulates the treatment, storage and disposal of hazardous material through the Resource Conservation and Recovery Act (RCRA). All hazardous waste TSD facilities are required to notify EPA of their existence by submitting the Federal Notification of Regulated Waste Activity Form (EPA Form 8700-12) or a state equivalent form as well as part A (EPA form 8700-23) and Part B of their Hazardous Waste Permit Application.

Status Codes: I Incinerator
T Storage/Treatment facility other than Incinerator
D Land Disposal Facility

No listings within half of a mile radius of the subject site.

CDL Clandestine Drug Laboratories

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

This list has been researched within half of a mile radius of the subject site.

IDN Indian REservation LUST/VCP/UST

This database includes all environmental records from Indian Reservations such as Leaking Underground Tanks (LUST), Voluntary Cleanup Program (VCP) and Underground Storage Tanks (UST)

No listings within half of a mile radius of the subject site.

CALIFORNIA STATE SOURCES**FL State Response Sites - Federal Lead**

The Site Mitigation and Brownfields Reuse Database (SMBRD) identifies certain high priority hazardous waste sites. These are confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity and deemed generally high-priority and high potential risk.

No listings within 1 mile radius of the subject site.

SR State Response Sites

The Site Mitigation and Brownfields Reuse Database (SMBRD) identifies certain potential hazardous waste sites. These are confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity and deemed generally high-priority and high potential risk.

The information has been compiled into this database by the California Environmental Protection Agency, Department of Toxic Substance Control (DTSC) in accordance with Section 25359.6 of the California Health and Safety Code.

No listings within half of a mile radius of the subject site.

VCP Voluntary Cleanup Program

This category contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

No listings within half of a mile radius of the subject site.

FE Properties Needing Further Evaluation

This category of Envirostor, formerly The Site Mitigation and Brownfields Reuse Program Database SMBRPD, contains properties that are suspected, but unconfirmed, contaminated sites that need or have gone through an investigation and assessment process. If a site is found to have confirmed contamination, it will change from Evaluation to either a State Response or Voluntary Cleanup site type. Sites found to have no contamination at the completion of the investigation and assessment process result in a No Action Required (for Phase 1 assessments) or No Further Action (for Phase 2 assessments) determination.

This list has been researched within half of a mile radius of the subject site.

This list has been researched within half of a mile radius of the subject site.

Site: QUANTITY PHOTO'S, INC.
Address: 5432 HOLLYWOOD BLVD
City: HOLLYWOOD
Map Loc: 54 - about .2 mile E of the subject
Status: id: 71003286

The present status - was reported as of
The lead agency for this site is

EP Expedited Remedial Action Program

The Expedited Remedial Action Program is a pilot program limited to 30 sites. These are confirmed release sites worked on by Responsible Parties with oversight of the cleanup by DTSC. These confirmed sites are generally high-priority and high potential risk.

No listings within half of a mile radius of the subject site.

BZ Border Zone Properties

These sites went through the Hazardous Waste Property or Border Zone Property evaluation and formal determination process. (Chapter 6.5, Health and Safety Code section 25221.)

No listings within half of a mile radius of the subject site.

SCH School Property Evaluation Program Properties

This category the Site Mitigation and Brownfields Reuse Program Database (SMBRPD), contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. School sites are further defined as Cleanup (remedial actions occurred) or Evaluation (no remedial action occurred) based on completed activities. All proposed school sites that will receive State funding for acquisition or construction are required to go through a rigorous environmental review and cleanup process under DTSC's oversight.

This list has been researched within a quarter of a mile radius of the subject site.

Site: CENTRAL LOS ANGELES HIGH SCHOOL
Address: SUNSET BLVD & VAN NESS AVE
City: LOS ANGELES
Map Loc: 80 - about .3 mile SW of the subject
Status: id: 1889004 1 070202 NONCLASSIFIABLE ESTABLISHMENTS

Past use include * unknown. Potential contaminants of concern include Arsenic, TPH-diesel. The Soil is potentially affected. The present status - was reported as of 2002-07-02.
The lead agency for this site is SMGRP. Funding is provided by SCHOOL DISTRICT.

ME Military Evaluation Sites

This category the Site Mitigation and Brownfields Reuse Program Database SMBRPD, contains Formerly Used Defense Sites (FUDS) and Open or Closed military facilities with confirmed or unconfirmed releases and where DTSC is involved in investigation and/or remediation, either in a lead or support capacity. Sites with confirmed releases are generally considered high-priority and high potential risk.

Report
2001-12-12: Removal Action Completion Report. Approximate LAUSD MASTER OVERSIGHT AGREEMENT (DOCKET NO. HSA-A 99-00-051) EXECUTED that all appropriate response actions have been completed, that all acceptable engineering practices were implemented and that no further action is required. As part of the Master Oversight Agreement between City 130 cubic yards of soil were removed. Based on confirmation sampling, the estimated mean for surface soil based on 85% UCL was 0.8 mg/kg. Remedial action is necessary, specific only to the removal of TSC and the Los Angeles Unified School District (LAUSD). DTSC will go around the underground storage tank. Additional sampling will be 600 mg/kg and for subsurface 1.91 mg/kg. Based on this, residual area-wide oversight for a Preliminary Endangerment Assessment (PEA) for the proposed Central Los Angeles High School No. 1 site (aka Metroconducted post-demolition near on-site hydraulic elevators and residence levels are below the cleanup goal. 2001-12-07: Removal Action Workplan. RANWCEGA - DTSC approved the Removal Action Workplan for edia) rial structures. For Arsenic only. FA for hydraulic elevators and lead the removal of arsenic contaminated soil. CEQA completed.
2003-05-01: Supplemental Site Investigation Report.
2003-07-24: Supplemental Site Investigation Report. approved.
2002-11-21: Supplemental Site Investigation Workplan.
2003-08-07: Technical Report.

Site: CAHUENGA NEW ELEMENTARY SCHOOL
Address: WESTERN AVE & OXFORD AVE
City: LOS ANGELES
Map Loc: 110 - about .3 mile NE of the subject
Status: id: 19730195 120503 BUSINESS SERVICES

Actions:
PHASE 1 - CALMORTGAGE AND SCHOOL SITE PROPERTIES - completed on 04/18/01
PRELIMINARY ENDANGERMENT ASSESSMENT - completed on 03/20/02
SUPPLEMENTAL SITE INVESTIGATION (SCHOOLS ONLY) - completed on 12/05/03.
Used for commercial purposes since 1921, with some residential. Currently there are two auto service sites, a commercial printing facility, restaurants, retail shops, a clinic, an apartment building, and a YMCA on the site.

(02/10/00) LAUSD MASTER OVERSIGHT AGREEMENT (DOCKET NO. HSA-A 99-00-051) EXECUTED ON 2/10/00. As part of the Master Oversight Agreement between DTSC and the Los Angeles Unified School District (LAUSD), DTSC will provide oversight for a Preliminary Endangerment Assessment (PEA) for the proposed Calhuenaga New Elementary School #1 site.

(03/20/02) DTSC issued a Preliminary Endangerment Assessment determination, requiring further action at the proposed school site.

(04/18/01) Phase 1 - Pursuant to an agreement between the Department of Toxic Substances Control (DTSC) and the California Department of Education, DTSC's Site Mitigation Program completed review of a Phase I Environmental Assessment and has determined that a Preliminary Endangerment Assessment (PEA) is required. The PEA will be conducted under DTSC's oversight pursuant to an agreement between DTSC and the Los Angeles Unified School District (LAUSD). Any subsequent cleanup activities (if needed) after the PEA would be conducted pursuant to an agreement with DTSC and LAUSD.

(12/05/03) DTSC approved the Supplemental Site Investigation (SSI) and determined neither an actual or a potential release of hazardous material, nor the presence of naturally occurring hazardous material indicated at the site pose a threat to human health or the environment under any land use. Therefore, DTSC concurred that no further environmental investigation or cleanup was required at this site, and approved the SSI.

LUR Brownfields Reuse Program Facility Sites with Land Use Restrictions

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

No listings within half of a mile radius of the subject site.

DR Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction

The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous

substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

No listings within half of a mile radius of the subject site.

CA Hazardous Waste sites - Permitted and Corrective Action

Permitted and Corrective Action sites are RCRA-permitted facilities undergoing cleanup activities or permitted to handle Hazardous Waste.

No listings within half of a mile radius of the subject site.

HIS Historical Site

This category of The Site Mitigation and Brownfields Reuse Program Database (SMRPD), contains sites from an older database where no site type was identified. Most of these sites have a status of Referred or No Further Action. DTSC is working to clean up this data by identifying an appropriate site type for each Historic site.

No listings within half of a mile radius of the subject site.

CALS CALSITES - No Further Action

This section includes the sites on the CalSite list, which have been flagged for no further action by the California Environmental Protection Agency, Department of Toxic Substance Control (DTSC) in accordance with Section 25359.6 of the California Health and Safety Code.

This list has been researched within a quarter of a mile radius of the subject site.

CORTESE State of California Office of Planning and Research

This database is a consolidation of information from various sources. It is maintained by the State Office of Planning and Research and lists potential and confirmed hazardous waste or substances sites.

Facilities that have been reported elsewhere in this report will not be included in the listing below.

Status Codes:	WRCBT	Tank leaks:
	DHS1	Compiled by Water Resource Control Board
		Abandoned hazardous waste site
	DHS2	Compiled by Toxic Substance Control Div. of DHS
		Contaminated public water drinking wells serving less than 200 connections.
	DHS3	Compiled by Env. Health Div. of DHS
		Contaminated public water drinking wells serving more than 200 connections
	DHS5	Sites pursuant to section 25359 of the Health and Safety Code (see BEP)
	CWMB	Solid waste disposal sites with known migration of hazardous waste

No listings within half of a mile radius of the subject site.

LUST Leaking Underground Storage Tanks - California State

The Leaking Underground Storage Tanks Information System is maintained by the State Water Resource Board pursuant to Section 25295 of the Health and Safety Code.

This section includes tank cases located on military installation.

Status Codes:		No action
	0	Leak being confirmed
	1	Prel site assessment workplan submitted
	3A	Prel site assessment underway
	3B	Pollution characterization
	5C	Remediation plan
	6R	Remedial action underway
	7	Post remedial action monitoring
	8	Case closed
	9	Case purged from agency list
	P

depth to gw: 100.67 - 100.67
Monitoring well: MW-4 active
lat/long: 34.1050457/-118.3112101
depth to gw: 100.36 - 100.36

Site: FIRE STATION #92
Address: 1800 N BRONSON AVE
City: HOLLYWOOD
Map Loc: 109 - about .3 mile W of the subject
Status: CLSD - Case Closed

Only the soil is impacted. The case, 03700758,

SOIL

Site: MOBIL #18-HYO
Address: 5857 W SUNSET BLVD
City: LOS ANGELES
Map Loc: 118 - about .3 mile SW of the subject
Status: REM - Remedial Action

The aquifer is potentially impacted. The case, 0374889, is managed by the Regional Water Quality Board.

AQUIFER USED FOR DRINKING WATER SUPPLY

Below, the latest and maximum analysis of contaminants are reported (only positive reading are included). MCL is the Maximum Contaminant Level or enforceable drinking water standard. RPHL is the Recommended Public Health Level. Additional information is available upon request.

No listings within half of a mile radius of the subject site.

REGIONAL SOURCES

NT Toxic Releases

The California Regional Water Quality Control Boards or local Department of Health Services keeps track of toxic releases to the environment. These lists are known as Unauthorized Releases, Spill, Leaks, Investigations and Cleanups (SLIC), Non-Tank Releases, Toxics List or similar, depending on the local agency.

This list has been researched within half of a mile radius of the subject site.

LD Land Disposal Sites

The Land Disposal program managed by the State Water Control Board, regulates the waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills. California Code of Regulations (CCR) Title 23, (Chapter 15) contains the regulatory requirements for hazardous waste. CCR Title 27, contains the regulatory requirements for wastes other than hazardous waste.

No listings within half of a mile radius of the subject site.

TPC Toxic Pits

The Toxic Pits Clean-Up Act (Katz Bill) places strict limitations on the discharge of liquid hazardous wastes into surface impoundment, toxic ponds, pits and lagoons. Regional Water Quality Control Boards are required to inspect all surface impoundment annually. In addition, every facility was required to file a Hydrogeological Assessment Report. Recent legislation allows the Department of Health Services to exempt facilities that closed on or before December 31, 1985, if a showing is made that no significant environmental risk remains (AB1046).

Special exemption provisions have been created for surface impoundment that receive mining wastes.

No listings within 1 mile radius of the subject site.

SWIS Solid Waste Information System

As legislated under the Solid Waste Management and Resource Recovery Act of 1972, the California Waste Management Board maintains lists of certain facilities, i.e. Active solid waste disposal sites, inactive or Closed solid waste disposal sites and Transfer facilities.

No listings within 1 mile radius of the subject site.

WIP Well Investigation Program

The Well Investigation Program (AB1803) identifies groundwater that is already contaminated and empowers the California Department of Health Services and local health officers to order ongoing monitoring programs. The focus of this program is to monitor and protect drinking water.

No listings within 1 mile radius of the subject site.

WQ Drinking Water Program

The California Health and Safety Code section 116275-116300 stipulates that it is the intent of the Legislature to improve laws governing drinking water quality to improve upon the minimum requirements of the federal Safe Drinking Water Act Amendments of 1986, to establish primary drinking water standards that are at least as stringent as those established under the federal Safe Drinking Water Act, and to establish a program under this chapter that is more protective of public health than the minimum federal requirements.

In order to provide for the orderly and efficient delivery of safe drinking water the State Department of Health Services collect information on the quality of public drinking water wells under the California Drinking Program.

SWAT Solid Waste Assessment Test - Regional

This program, provided for under the Calderon legislation (Section 13273 of the Water Code), requires that disposal sites with more than 50,000 cubic yards of waste provide sufficient information to the regional water quality control board to determine whether or not the site has discharged hazardous substances which will impact the environment.

Site operators are required to file Solid Waste Assessment Test reports on a staggered basis. Operators of the 150 highest ranking (Rank 1) sites were required to submit Solid Waste Assessment Tests by July 1, 1987, Rank 2 in 1988 and so on.

Operators submit water quality tests to the Regional Water Quality Control Board, describing surface and groundwater quality and supply; and the geology within 1 mile of the site. Air quality tests are submitted to the local Air Quality Management District or Air Pollution Control District.

This program is currently not funded and thus not updated.

Status Codes: Facilities or sites are ranked within each region on a scale 1-15 according to priority.

No listings within 1 mile radius of the subject site.

OPERATING PERMITS

Various agencies issue operating permits or regulate the handling, movements, storage and disposal of hazardous materials and require mandatory reporting. The inclusion in this section does not imply that an environmental problem exists presently or has in the past.

RCRA-G Resource Conservation and Recovery Information System - Generators

The Environmental Protection Agency regulates generators of hazardous material through the Resource Conservation and Recovery Act (RCRA). All hazardous waste generators are required to notify EPA of their existence by submitting the Federal Notification of Regulated Waste Activity Form (EPA Form 8700-12) or a state equivalent form. The notification form provides basic identification information and specific waste activities.

Status Codes: L - Generators who generate at least 1000 kg/mo of non-acutely hazardous waste
(or 1 kg/mo of acutely hazardous waste)
S - Generators who generate 100 kg/mo but less than 1000 kg/mo of non-acutely haz waste.
T - Transporter

This list has been researched within a quarter of a mile radius of the subject site.

SARA Title III, section 313 (TRIS)

Title III of the Superfund Amendments and Reauthorization Act, Section 313, also known as Emergency Planning and Community Right-to-Know Act of 1986 requires owners or operators of facilities with more than 10 employees and are listed under Standard Industrial Classification (SIC) Codes 20 through 39 to report the manufacturing, processing or use of more than a threshold of certain chemical or chemical categories listed under section 313. This database is also known as Toxic Release Information System (TRIS).

Below summary information for the last five year period is reported grouping the releases into air, water, underground injection, land, public offsite treatment (potw) and transportation offsite.

No listings within a quarter of a mile radius of the subject site.

NC Nuclear Regulatory Commission Licensees

The Nuclear Regulatory Commission, Office of Nuclear Material Safety and Safeguards has been mandated (10 CFR Ch 1.42) to protect the public health and safety, the common defense and security, and the environment by

licensing, inspection, and environmental impact assessment for all nuclear facilities and activities, and for the import and export of special nuclear material.

No listings within a quarter of a mile radius of the subject site.

PCB PCB Waste Handlers Database

The U.S. Environmental Protection Agency tracks generators, transporters, commercial stores and/or brokers and disposers of PCB's in accordance with the Toxic Substance Control Act. x

PCS Permit Compliance System

PCS is a database that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS was developed by The U.S. Environmental Protection Agency to meet the information needs of the NPDES program under the Clean Water Act. PCS tracks permit, compliance, and enforcement states of NPDES facilities.

No listings within a quarter of a mile radius of the subject site.

AFS AIRS Facility System

AFS contains emissions and compliance data on air pollution point sources tracked by the U.S. EPA and state and local environmental regulatory agencies. There are seven "criteria pollutants" for which data must be reported to EPA and stored in AIRS: PM10 (particulate matters less than 10 microns in size), carbon monoxide, sulfur dioxide, nitrogen dioxide, lead, reactive volatile organic compounds (VOC), and ozone.

AFS replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aromatic Data (SAROAD).

No listings within a quarter of a mile radius of the subject site.

PE Section Seven Tracking System (SSTS)

SSTS evolved from the FIFRA and TSCA Enforcement System (FATES). SSTS tracks the registration of all pesticide producing establishments and tracks annually the types and amounts of pesticides, active ingredients, and devices that are produced, sold or distributed each year.

No listings within a quarter of a mile radius of the subject site.

FIFRA FIFRA/TSCA Tracking System/ National Compliance Database (FTTS/NCDB)

NCDB supports implementation of the Federal Insecticide, Fungicide and Rodenticide Control Act (FIFRA) and the Toxic Substance Control Act (TSCA).

This list has been researched within a quarter of a mile radius of the subject site.

Site: SEVAK PREPARATORY SCHOOL

FINDS FINDS EPA Facility Index System

The U.S. Environmental Protection Agency maintains an index system of all facilities which are regulated or have been assigned an identification number for other purposes.

Facilities that have been reported elsewhere in this report will not be listed under this category.

No listings within a quarter of a mile radius of the subject site.

HWIS Hazardous Waste Information System

The Department of Toxic Substance Control, California Environmental Protection Agency, maintains a data base keeping track of the movement and disposal of hazardous waste. The data is used to support the Tanner legislation, AB 2948.

Status Codes: EPA Facility Permit Number
CAL - State permanent number
CAC - State provisional or emergency number
CAH - State prov or perm number for household hazardous waste collections
CAL - State permanent number for exotic pest detection
CAS - State permanent number issued by county for emergency response
CAE - State prov number for hazardous waste removal caused by natural disasters
CAV - State permanent or provisional number issued prior to 1987. No longer used.
CLU - State permanent number issued by county for clandestine lab cleanup
CAR - Federal permanent number
CA - Federal permanent number
CAD - Federal permanent or provisional number. State provisional before 1988.
CAT - Federal permanent number
CAP - Federal provisional or emergency number

UST	Permitted Underground Storage Tanks - State Water Quality Control Board
The Cortes Bill (AB2013), enacted in 1983, required registration of all underground storage tanks (UST) with the State Water Quality Control Board by July 1, 1984. About 176,000 tanks and surface impounds were registered between 1984 and 1987. An amendment (AB 1413) was passed in 1987, effectively removing the State Board from the registration process starting January 1, 1988. The data reflects the information collected by the state between 1984 and 1987 as well as recent time and includes all tanks and surface impounds in use or closed after 1974.	
Home and farm heating fuel tanks with capacities of 1,100 gallons or less and "structures such as sumps, separators, storm drains, catch basins, oil field gathering lines, refinery pipelines, lagoons, evaporation ponds, well cellars, separation sumps, lined and unlined pits, sumps and lagoons" except those defined as UST under HSWA or may be regulated to protect water quality under the Porter-Cologne Water Quality Control Act are excluded.	
This list has been researched within a quarter of a mile radius of the subject site.

HISTORICAL TENANT REPORT

INTRODUCTION

The purpose of this Historical Tenant Report is to identify the tenants (be it the owner or lessee) of 5610 HOLLYWOOD BOULEVARD, LOS ANGELES over the last 50 years.

Sources for the research includes various city directories, street address directories and criss-cross directories published from 1920 forward. The actual site address as well as neighboring addresses on the same block are also investigated for informational purposes, and to cover a potential address change of the subject site.

BBL has used its best effort but makes no claims as to the completeness of the referenced sources or completeness of the search. For additional information call (619) 793-0641.

DIRECTORY INFORMATION

The three general types of directories researched for the Historical Tenant Report are the 1) city directory, 2) street address directory, and 3) criss-cross directory. All three either are devoted to or have sections that list the Tenant and telephone number of given street addresses by their street name and address. These telephone directories, not as readily available to the public as white pages or yellow pages, are excellent for uncovering names, business names and the nature of businesses as listed by street address.

In addition to the actual site address the following neighboring addresses have been researched for commercial listings as well:

5566 HOLLYWOOD BLVD
5601 HOLLYWOOD BLVD
5604 HOLLYWOOD BLVD
5606 HOLLYWOOD BLVD
5611 HOLLYWOOD BLVD
5613 HOLLYWOOD BLVD
5615 HOLLYWOOD BLVD
5617 HOLLYWOOD BLVD
5619 HOLLYWOOD BLVD
5620 HOLLYWOOD BLVD

The actual site address, as it is known presently, is marked by blue text in the findings of the search as reported on the following pages.

5.0 FEDERAL, STATE AND REGIONAL RECORDS SEARCH

Information from standard federal, state, regional environmental record sources was provided by BBL (Environmental Data Resources). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses.

Using the ASTM definition of migration, WEECO considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

5.1 FEDERAL SOURCES

♦ NPL – National Priority List	no sites	within 1 mile radius
♦ SEMS - Comprehensive Environmental Response, Compensation, and Liability Act	no sites	within ½ mile radius
♦ NFRAP	no sites	within ½ mile radius
♦ Federal Facilities	no sites	within ½ mile radius
♦ Emergency Response Notification System	2 sites	within ¼ mile radius
♦ Hazardous Material Incident Report System	no sites	subject
♦ Targeted Brownfields Assessments	no sites	within ½ mile radius
♦ Site Enforcement Tracking System	no sites	within ½ mile radius
♦ Enforcement-Docket	no sites	within ¼ mile radius
♦ C-Docket	no sites	within ¼ mile radius
♦ Integrated Compliance Information System	1 site	within ½ mile radius
♦ CORRACTS	no sites	within 1 mile radius
♦ RCRA – TSD Facilities	no sites	within ½ mile radius
♦ Clandestine Drug Laboratories	no sites	within ½ mile radius
♦ Indian LUST/VCP/UST	no sites	within ½ mile radius

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

5.2 CALIFORNIA STATE SOURCES

♦ Federal Lead	no sites	within 1 mile radius
♦ State Response Sites	no sites	within ½ mile radius
♦ Voluntary Cleanup Program	no sites	within ½ mile radius
♦ Properties Needing Further Evaluation	3 sites	within ½ mile radius
♦ Military Evaluation Sites	1 site	within ½ mile radius
♦ Expedited Remedial Action	no sites	within ½ mile radius
♦ Border Zone Properties	no sites	within ½ mile radius
♦ School Property Evaluation Program	no sites	within ¼ mile radius
♦ SMBRPD Land Use Restrictions	no sites	within ½ mile radius
♦ HWMP Deed/Land Use Restrictions	no sites	within ½ mile radius
♦ Corrective Action	no sites	within ½ mile radius
♦ Historical Sites	no sites	within ½ mile radius
♦ CALSITES-No Further Action	6 sites	within ¼ mile radius
♦ CORTESE	no sites	within ½ mile radius
♦ LUST – Leaking Underground Storage Tanks	13 sites	within ½ mile radius
♦ Solid Waste Information System	no sites	within 1 mile radius
♦ Well Investigation Program	no sites	within 1 mile radius
♦ Drinking Water Program	no sites	within ½ mile radius

5.3 REGIONAL SOURCES

♦ Toxic Releases	1 site	within ½ mile radius
♦ Land Disposal Site	no sites	within ½ mile radius
♦ Toxic Pits	no sites	within 1 mile radius
♦ Solid Waste Assessment Test – Regional	no sites	within 1 mile radius

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

5.4 OPERATING PERMITS

♦ RCRA Generators	13 sites	within ¼ mile radius
♦ SARA Title III, section (TRIS)	no sites	within ¼ mile radius
♦ Nuclear Regulatory Commission Licensees	no sites	within ¼ mile radius
♦ PCB Waste Handlers Database	1 site	within ¼ mile radius
♦ Permit Compliance System (PCS)	no sites	within ¼ mile radius
♦ AIRS Facility System (AFS)	no sites	within ¼ mile radius
♦ Section Seven Tracking System	no sites	within ¼ mile radius
♦ FIFRA/TSCA tracking System	1 site	within ¼ mile radius
♦ Federal Facilities Information System (FFIS)	no sites	within ¼ mile radius
♦ Chemicals in Commerce Information System	no sites	within ¼ mile radius
♦ FINDS EPA Facility Index System	no sites	within ¼ mile radius
♦ Hazardous Waste Information System	68 sites	within ¼ mile radius
♦ Underground Storage Tanks	14 sites	within ¼ mile radius

ON-SITE:

Due to the former or/and current businesses, the subject site is listed as having one (1) operating permit in the list of 50 government databases reviewed in this report. See Appendix B.

-HWIS Hazardous Waste Information System

The Department of Toxic Substance Control, California Environmental Protection Agency, maintains a data base keeping track of the movement and disposal of hazardous waste. The data is used to support the Tanner legislation, AB 2948.

Site: PRECISE AUTO BODY

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

OFF-SITE:

- ◆ **Thirty-Seven (37)** environmental concerns are listed in the government databases, which are located within a ½ mile radius from the subject site. The neighborhood sites up to 1.00-mile distance have been investigated by government agencies to determine if any hazardous chemical spills occurred in the past. See Appendix B for further details.

- ◆ **NPL - National Priority List**

EPA has prioritized sites with significant risk to human health and the environment. These sites receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA).

No listings within a 1 mile radius of the subject site.

- ◆ **SEMS Comprehensive Environmental Response, Compensation, and Liability Act**

Superfund Enterprise Management System (SEMS) replaced CERCLIS in 2014. This database is used by the EPA to track activities conducted under the Comprehensive Environmental Response and Liability Act CERCLA (1980) and the amendment the Superfund Amendments and Reauthorization Act SARA (1986).

Sites to be included are identified primarily by the reporting requirements of hazardous substances Treatment, Storage and Disposal (TSD) facilities and releases larger than specific Reportable Quantities (RQ), established by EPA.

Using the National Oil and hazardous Substance Pollution Contingency Plan (National Contingency Plan) the EPA set priorities for cleanup.

The EPA rates National Contingency Plan sites according to a quantitative Hazard Ranking System (HRS) based on the potential health risk via any one or more pathways: groundwater, surface water, air, direct contact, and fire/explosion.

The EPA and state agencies seek to identify potentially responsible parties (PRP) and ultimately Responsible Parties (RP) who can be required to finance cleanup activities, either directly or through reimbursement of federal Superfund expenditures.

Any Institutional/Engineering controls issued under CERCLA are described in the status detail for each site. Sites delisted from the NPL list are included here.

No listings within a ½ mile radius of the subject site.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

♦ **NFRAP - No Further Remedial Action Planned sites (CERCLIS)**

As of February 1995, CERCLIS sites designated 'No Further Remedial Action Planned' NFRAP have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the site being placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

EPA has removed these NFRAP sites from CERCLIS to lift unintended barriers to the redevelopment of these properties. This policy change is part of EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens promote economic redevelopment of unproductive urban sites.

No listings within a ½ mile radius of the subject site.

♦ **LUST - Leaking Underground Storage Tanks – California State**

The Leaking Underground Storage Tank (LUST) database is maintained by the Water Resources Control Board and their regional branches, and tracks sites contaminated by releases from underground storage tanks pursuant to Section 25295 of the Health and Safety Code.

Thirteen (13) Leaking Underground Storage Tank (LUST) Sites were identified within a ½ mile of the subject property. However, because of the distance from the subject site, the nearby leaking site could not have adversely impacted subsurface soil and/or groundwater at the subject site. If indeed, soil and/or groundwater at the subject site have been adversely impacted, the ultimate responsible party of remediation costs will be the LUST site. See Appendix B.

- **FEDFAC-Federal Facilities**

As part of the CERCLA program, federal facilities with known or suspected environmental problem, the Federal Facilities Hazardous Waste Compliance Docket is tracked separately to comply with a Federal Court Order.

- **ERNS-Emergency Response Notification System**

The ERNS is a national computer database used to store information on unauthorized releases of oil and hazardous substances. The program is a cooperative effort of the Environmental Protection Agency, the Department of Transportation Research and Special Program Administration's John Volpe National Transportation System Center and the National Response Center. There are primarily five Federal statutes that require release reporting: the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) section 103, the Superfund Amendments and Reauthorization Act (SARA) Title III Section 304; the Clean Water Act of 1972 (CWA) section 311 (b) (3); and the Hazardous Material Transportation Act 1974 (HMTA section 1808) (b).

- **HMIRS-Hazardous Material Incident Report System**

The Hazardous Material Incident Report System (HMIRS) of the Research and Special Programs Administration (RSPA) Hazardous Material Information System was established in 1971 to fulfill the requirements of the Federal hazardous material transportation law. Part 171 of Title 49, Code of Federal Regulations (49 CFR) contains the incident reporting requirements of carriers of hazardous materials. An unintentional release of hazardous materials meeting the criteria set forth in Section 171.16, 49 CFR, must be reported on DOT Form 5800.1. The data from the reports received are subsequently entered in the HAZMAT database.

- **TBA-Targeted Brownfields Assessments**

EPA's Targeted Brownfields Assessment (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Pilots/Grants—minimize the uncertainties of contamination often associated with brownfields. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Program to promote the cleanup and redevelopment of brownfields. EPA's TBA assistance is available through two sources: directly from EPA through EPA Regional Brownfields offices under Subtitle A of the law, and from state or tribal voluntary response program offices receiving funding under Subtitle C of the law

- **SETS-Site Enforcement Tracking System**

When Expanding Superfund Monies at a CERCLA site, EPA must conduct a search to identify parties with potential financial responsibility for Remediation of uncontrolled hazardous waste sites. EPA regional Superfund Waste Management Staff issue a notice letter to the potentially responsible party (PRP). The status field contains the EPA ID number and name of the site where the actual pollution occurred.

- **DO-Enforcement Docket System/Consent Decree Tracking System**

DOCKET tracks civil judicial cases against environmental polluters, while CDETS processes court settlements, called consent decrees.

- **CD-Criminal Docket System (C-Docket)**

The Criminal Docket System is a comprehensive automated system for tracking criminal enforcement actions. C-Docket handles data for all environmental statutes and tracks enforcement actions from the initial stages of investigations through conclusion.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

- **ICIS-Integrated Compliance Information System (ICIS)**

ICIS is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

- **RCRA Violators List (CORRACTS)**

The Resource Conservation and Recovery Act of 1976 provides for "cradle to grave" regulation of hazardous wastes. RCRA requires regulation of hazardous waste generators, transporters, and storage/treatment/disposal sites. Evaluation to potential violators, ranging from manifest requirements to hazardous waste discharges, is typically conducted by the US EPA. This database is also known as Corrective Action Report (CORRACTS). If enforcement is required, it is typically delegated to a state agency.

- **Resource Conservation and Recovery Information System--Treatment, Storage & Disposal (RCRA-D)**

The Environmental Protection Agency regulates the treatment, storage and disposal of hazardous material through the Resource Conservation and Recovery Act (RCRA). All hazardous waste TSD facilities are required to notify EPA of their existence by submitting the Federal Notification of Regulated Waste Activity Form (EPA Form 8700-12) or a state equivalent form as well as part A (EPA form 8700-23) and Part B of their Hazardous Waste Permit Application.

- **CDL-Clandestine Drug Laboratories**

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

- **INDN-Indian Reservation LUST/VCP/UST**

This database includes all environmental records from Indian Reservations such as Leaking Underground Tanks (LUST), Voluntary Cleanup Program (VCP) and Underground Storage Tanks (UST)

- **FL-State Response Sites - Federal Lead**

The Site Mitigation and Brownfields Reuse Database (SMBRD) identifies certain high priority hazardous waste sites. The U.S. EPA is the lead agency. These sites are typically proposed, on or delisted from the National Priority List.

- **SR-State Response Sites**

The Site Mitigation and Brownfields Reuse Database (SMBRD) identifies certain potential hazardous waste sites. These are confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity and deemed generally high-priority and high potential risk.

The information has been compiled into this database by the California Environmental Protection Agency, Department of Toxic Substance Control (DTSC) in accordance with Section 25359.6 of the California Health and Safety Code.

- **VCP-Voluntary Cleanup Program**

This category contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

- **FE-Properties Needing Further Evaluation**

This category of The Site Mitigation and Brownfields Reuse Program Database (SMBRPD) contains properties that are suspected of being contaminated. These are unconfirmed contaminated properties that need to be assessed using the PEA process.

- **ME-Military Evaluation Sites**

This category the Site Mitigation and Brownfields Reuse Program Database SMBRPD, contains Formerly Used Defense Sites (FUDS) and Open or Closed military facilities with confirmed or unconfirmed releases and where DTSC is involved in investigation and/or remediation, either in a lead or support capacity. Sites with confirmed releases are generally considered high-priority and high potential risk.

- **EP-Expedited Remedial Action Program**

The Expedited Remedial Action Program is a pilot program limited to 30 sites. These are confirmed release sites worked on by Responsible Parties with oversight of the cleanup by DTSC. These confirmed sites are generally high-priority and high potential risk.

- **BZ-Border Zone Properties**

These sites went through the Hazardous Waste Property or Border Zone Property evaluation and formal determination process. (Chapter 6.5, Health and Safety Code section 25221.)

- **SCH-School Property Evaluation Program Properties**

This category of The Site Mitigation and Brownfields Reuse Program Database (SMBRPD) contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the Calsites category depending on the level of threat to public health, safety or the environment they pose.

- **LUR-Brownfields Reuse Program Facility Sites with Land Use Restrictions**

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

- **DR-Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction**

The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

- **CA-Hazardous Waste sites - Permitted and Corrective Action**

Permitted and Corrective Action sites are RCRA-permitted facilities undergoing cleanup activities or permitted to handle Hazardous Waste.

- **HIS-Historical Site**

This category of The Site Mitigation and Brownfields Reuse Program Database (SMBRPD) contains sites from an older database where no site type was identified. Most of these sites have a status of Referred or No Further Action. DTSC is working to clean up this data by identifying an appropriate site type for each Historic site.

- **CALSITES-No Further Action**

This section includes the sites on the CALSITE list which have been flagged for no further action by the California Environmental Protection Agency, Department of Toxic Substance Control (DTSC) in accordance with Section

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

25359.6 of the California Health & Safety Code.

- **CORTESE-State of California Office of Planning and Research**

This database is a consolidation of information from various sources. It is maintained by the State Office of Planning and research and lists potential and confirmed hazardous waste or substances sites.

- **SWIS-Solid Waste Information System**

As legislated under the Solid Waste Management and Resource Recovery Act of 1972, the California Waste Management Board maintains lists of certain facilities, i.e. active solid waste disposal sites, inactive or closed waste disposal sites and transfer facilities.

- **WIP-Well Investigation Program**

The Well Investigation Program (AB 1803) identifies groundwater that is already contaminated and empowers the California Department of Health Services and local health officers to order ongoing monitoring programs.

- **WQ-Drinking Water Program**

The California Health and Safety Code section 116275-116300 stipulates that it is the intent of the Legislature to improve laws governing drinking water quality to improve upon the minimum requirements of the federal Safe Drinking Water Act Amendments of 1986, to establish primary drinking water standards that are at least as stringent as those established under the federal Safe Drinking Water Act, and to establish a program under this chapter that is more protective of public health than the minimum federal requirement. In order to provide for the orderly and efficient delivery of safe drinking water the State Department of Health Services collect information on the quality of public drinking water wells under the California Drinking Program.

- **NT-Toxic Releases**

The California Regional Water Quality Control Boards or local Department of Health Service keeps track of toxic releases to the environment. These lists are known as Unauthorized Releases, Spill Leaks, Investigations and Cleanups (SLIC), Non-Tank Releases, Toxics List or similar, depending on the local agency.

- **TPC-Toxic Pits**

The Toxic Pits Clean-Up Act (Katz Bill) places strict limitations on the discharge of liquid hazardous wastes into surface impoundment, toxic ponds, pits and lagoons. Regional Water Quality Control Boards are required to inspect all surface impoundment annually; in addition, every facility was required to file a Hydrogeological Assessment Report. Recent legislation allows the Department of Health Services to exempt facilities that closed on or before December 31, 1985, if a showing is made that no significant environmental risk remains (AB1046). Special exemption provisions have created for surface impoundment receives mining wastes.

- **SWAT-Solid Waste Assessment Test-Regional**

This program, provided for under the Calderon legislation (Section 13273 of the Water Code), requires that disposal sites with more than 50,000 cubic yards of waste provide sufficient information to the regional water quality control board to determine whether or not the site has been discharged hazardous substances which will impact the environment.

Site operators are required to file Solid Waste Assessment Test report on staggered basis. Operators of the 150 highest ranking (Rank 1) sites were required to submit Solid Waste Assessment Tests by July 1, 1987, Rank 2 in 1988 and so on.

Operators submit water quality tests to the Regional Water Quality Control Board, describing surface and groundwater quality and supply; and the geology within 1 mile of the site. Air quality tests are submitted to the local Air Quality Management District/Air Pollution Control District.

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

5.5 VAPOR ENCROACHMENT SCREENING

ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions (VES) was used as guidance for conducting a VES for the Subject Property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC) that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the Subject Property. This standard replaces E 2600-08 published in March of 2008.

The newly revised standard focuses solely on screening for the likelihood of migrating vapors volatilized from a contaminated source the encroach upon the subsurface of a property involved in a real estate transaction and create a vapor encroachment condition (VEC). Two tiers for screening are included in the practice. The first tier is based upon the existence of known or suspect contaminated sites in the area. The second tier is more comprehensive and investigates specific characteristics associated with the contaminated plumes from these sites, or if no plume information is available, relies on sampling. If the likelihood exists for vapors to reach the subsurface of the property, further investigation that is beyond the scope of this practice would be necessary to determine if vapor intrusion is occurring into any buildings on the property. Of particular note in the standard is the completely revised Legal Appendix that discusses the relationship between this standard and the E 1527-13 Phase I ESA standard. In simple terms, the E 1527-13 standard (which complies with AAI) includes in its REC definition the Environmental Professional's (EP's) need to consider hazardous substances and petroleum products on the target property or migrating to the target provides a methodology for the EP to accomplish this for vapors. If vapors can reach the target property (thereby creating a VEP), the EP conducting the E 1527-13 Phase I would then have to decide whether or not the VEC constitutes an REC. This would be analogous to the EP finding in the Phase I investigation the potential for a contaminated groundwater plume to reach the target property. The EP would then have to determine if this situation is a REC.

The purpose of this practice is to define good commercial and customary practice in the United States of America for determining if a vapor encroachment condition (VEC) on a property parcel involved in a real estate transaction with respect to chemicals of concern (COC) that may migrate as vapors into existing or planned structures on a property due to contaminated soil and groundwater on the property or within close proximity to the property. For the purpose of this Report, this practice is used as a voluntary supplement to Practice E 1527 and does not alter or in any way define the scope of that practice. In addition, performance of this standard is not a requirement of and does not constitute, expand, or in any way define "all appropriate inquiry" as defined or approved by U.S. EPA under CERCLA and the regulations thereunder, including 40 CFR Sec. 312.11.

In defining a standard of good commercial and customary practice for determining a VEC on a parcel of property, the goal of the process established by this practice is to identify whether or not a VEC exists or is likely to exist on the property. The term VEC means the presence or likely

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

presence of any COC in the indoor air environment of existing or planned structures on a property caused by the release of vapor from contaminated soil or groundwater either on the property or within close proximity to the property, at a concentration that presents or may present an unacceptable health risk to occupants. The term is not intended to include de minimis conditions that do not normally represent an unacceptable health risk to occupants that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. A condition determined to be de minimis does not represent a VEC.

The screening involves a two tiered approach to assessing VEC risk as described below.

VES TIER I - SEARCH DISTANCE TEST/CHEMICALS OF CONCERN TEST

The search distance test involves a review of the regulatory database report (see Section 5) and available historical records to make a determination if any *known or suspect potentially contaminated* properties exist within the Area of Concern (AOC). High risk sites are typically current and former gas stations, former and current dry cleaners, manufactured gas plants, and industrial sites. The AOC is defined as any up gradient sites within the ASTM Practice E1527-13 standard search distances and any cross or down gradient sites within 1/3 mile for solvents and petroleum products.

If the contamination at the known or potentially contaminated site within the AOC consists of COCs, then a potential Vapor Encroachment Condition (pVEC) exists and Tier II screening is recommended. If no known or potentially contaminated sites with COCs exist within the AOC, no further inquiry is necessary.

No release sites were identified in the BBL Radius Map Report (see Section 5) within the AOC that are considered to pose a pVEC at the Subject Property based on the Tier I evaluation.

VES TIER II - PLUME TEST

The Plume Test assesses whether or not a plume is close enough to the property to result in a VEC.

1. Critical Distance Determination - Determine distance from property to edge of plume in any direction (vertical, horizontal, lateral).
2. A VEC exists if there is a plume of VOCs, semi-volatile organic compounds (SVOCs), Volatile Inorganic Compounds (VICs), or free petroleum product have accumulated above a water table within 100 feet of the Subject Property or if a plume of dissolved volatile petroleum hydrocarbons is present within 30 feet of the property.

The sites were manually mapped to determine the location of the Subject Property and any potential plumes of contamination relative to the Subject Property and groundwater gradient. In addition, the case information for each site was reviewed.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

Based on WEECO's review of the historical and current usage of the Subject Property as well as our review of the Federal, State, and Regional databases discussed in Section 5.5 for onsite and adjacent properties of potential concern for vapor encroachment, no pVEC (potential Vapor Encroachment Condition) was identified in connection with the Property, and it is WEECO's professional opinion that a VEC is not suspected of having encroached into the Subject Property.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

6.0 USER PROVIDED INFORMATION AND INTERVIEWS

6.1 USER PROVIDED INFORMATION

The purpose of this section is to describe tasks to be performed by the *User*. The “All Appropriate Inquiries” Final Rule (40 CFR Part 312) requires that these tasks be performed by or on behalf of a party seeking to qualify for an *landowner liability protections (LLP)* to CERCLA liability. While such information is not required to be provided to the *environmental professional*, the *environmental professional* shall request that the *User* provide the results of these tasks as such information can assist the *environmental professional* in identifying Recognized Environmental Conditions.

In order to qualify for one of the *Landowner Liability Protections (LLPs)*¹⁸⁷ offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the “*Brownfields Amendments*”), the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that “*all appropriate inquiries*” is not complete.

User Questionnaire	
Questions	User to Answer
(1) Environmental liens that are filed or recorded against the property (40 CFR 312.25). Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local?	An environmental cleanup lien/AUL search is not required from WEECO as part of this Phase I ESA.
(2) Activity and use limitations (AULs) that are in place on the site or that have been filed or recorded in registry (40 CFR 312.26). Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?	An environmental cleanup lien/AUL search is not required from WEECO as part of this Phase I ESA.

Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028

<p>(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).</p> <p>As the User of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?</p>	<p>The User has not informed WEECO of any specialized knowledge or experience related to the Property or nearby properties.</p>
<p>(4) Relationship of the purchase price to the fair market value of the Property if it were not contaminated (40 CFR 312.29).</p> <p>Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?</p>	<p>The User has not informed WEECO of any information pertaining to the purchase price with respect to the fair market value of the Property.</p>
<p>(5) Commonly known or reasonably ascertainable information about the Property (40 CFR 312.30).</p> <p>Are you aware of commonly known or reasonably ascertainable information about the Property that would help the Environmental Professional (EP) to identify conditions indicative of releases or threatened releases? For example, as User,</p> <p>(a) Do you know the past uses of the property?</p> <p>(b) Do you know of specific chemicals that are present or once were present at the property?</p> <p>(c) Do you know of spills or other chemical releases that have taken place at the property?</p> <p>(d) Do you know of any environmental cleanups that have taken place at the property?</p>	<p>The User has not informed WEECO of any commonly known or reasonably ascertainable information about the Property that would identify conditions indicative of releases or threatened releases.</p>
<p>(6) The degree of obviousness of the presence of likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).</p> <p>As the User of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the Property?</p>	<p>The User has not informed WEECO of any obvious indicators that point to the presence or likely presence of contamination at the Property.</p>

**Phase I Environmental Site Assessment
5604-5610 Hollywood Boulevard, Los Angeles, California 90028**

6.2 INTERVIEWS

6.2.1 Interview with Owner (or Property Manager)

On February 5, 2018, WEECO investigator conducted a field interview with Mr. Avo Papazian, the owner of the subject property to inquire about hazardous materials and USTs/ASTs. According to Mr. Papazian, the subject site is an auto body shop, no motor repair work is done on site. The paint waste is stored in 55-gallon drums. No USTs or ASTs are present at the subject site. Mr. Papazian stated that the second floor of the subject building 5604 Hollywood Boulevard is occupied by apartments.

6.2.2 Interview with Current Property Occupant

The occupant of the subject property was not available to be interviewed at the time of the assessment.

6.2.3 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

6.3 PREVIOUS REPORTS OR OTHER PROVIDED DOCUMENTATION

No previous reports or other pertinent documentation was provided to WEECO for review during the course of this assessment.

PUBLIC AGENCY RECORDS / OTHER RELEVANT RECORD

Hansol Yoo

From: Hansol Yoo <yoo.hansol@weeco.net>
Sent: Friday, February 2, 2018 12:16 PM
To: 'Jonathan Park'
Subject: 5610 W. Hollywood Boulevard Phase I Inspection
Attachments: User Questionnaire.pdf

Good Afternoon Mr. Park,

I will be going to the site 5610 W. Hollywood Boulevard for the Phase I Inspection on Monday, February 5th, sometime between 9am to 11am.

I will need to go inside of the subject building because it is a motor repair facility. please let the appropriate person know.

Please send me a confirmation email or text letting me know I am good to go on Monday.

I have attached the User Questionnaire to this email.

Please have the appropriate person fill it out, and send it back to me.

Thank you and if you have any questions or concerns, please feel free to contact me.

EXECUTIVE SUMMARY

This Preliminary Endangerment Assessment (PEA) has been prepared for the City of Los Angeles' Department of City Planning for the 5600 Hollywood Boulevard Project described herein. The developer proposes to redevelop four contiguous parcels (project site; see **Figure 1**). In order to facilitate the redevelopment of the properties, a cumulative assessment for information regarding known hazardous materials and the potential for adverse effects on people or the environment is necessary.

The purpose of this PEA is to identify whether a release or threatened release of hazardous materials exists at the project site and to evaluate the potential human health risks. Objectives of the PEA were to evaluate available information and identify chemicals of potential concern (COPCs), estimate potential future human health impacts as a result of exposure to identified COPCs, and if potential impacts exceed thresholds, provide recommendations to reduce human health impacts below thresholds. This PEA was performed in accordance with the Department of Toxic Substances Control (DTSC) PEA Guidance Manual (DTSC, 2015).

The four parcels that comprise the project site are located in the City of Los Angeles as listed below:

TABLE 1
PROJECT SITE ADDRESSES AND PARCELS

Address	APN	Current Use
5600 Hollywood Boulevard	5544-026-009	Vacant
5604-5606 Hollywood Boulevard	5544-026-008	Precise Auto Body Shop
1655 North Saint Andrews Place	5427-006-010	Apartment building
5607 West Carlton Way	5427-006-011	Parking lot for apartments

Phase I environmental site assessments (Phase I assessments) were conducted for all parcels except at the vacant 5600 Hollywood Boulevard parcel. However, information regarding the 5600 Hollywood Boulevard parcel was acquired by reviewing the historical aerial photographs and Sanborn fire insurance maps from the adjacent Phase I assessment report conducted for 1655 North Saint Andrews Place (apartment building) and 5607 West Carlton Way (parking lot). The Phase I assessments concluded that none of the parcels have known contaminants and no further evaluation (i.e., sampling of soil) of the parcels was necessary.

The 5604-5606 Hollywood Boulevard parcel (Precise Auto Body) is known to have permitted spray booths where hazardous materials (e.g., paints and thinners, cleaning solvents) are used, but has no recorded spills or violations. The 5600 Hollywood Boulevard parcel reportedly had a dry cleaner that operated from 1924 to 1928, which predates the modern use of chlorinated hydrocarbons, which did not come into use until 1930. Gasoline was the major dry cleaning solvent until 1928, after which Stoddard solvent, a less flammable petroleum hydrocarbon was used. Given the time period of this dry cleaner, it is assumed that gasoline and possibly Stoddard solvent were used. Petroleum hydrocarbons (e.g., gasoline, Stoddard solvent) naturally degrade faster than chlorinated hydrocarbons (e.g., TCE and PCE) because they lack chlorine. The four years of dry cleaning operations ended in 1928, about 92 years ago. Over this time period, it is anticipated that if any gasoline and Stoddard solvent that had been spilled, the spilled materials would have degraded to inert carbon, carbon dioxide, and water by now. No Phase II investigations (i.e., soil, soil gas, or groundwater sampling) are known to have been conducted for any of the parcels.

From the discussion above, none of the parcels that make up the Project Site are known to contain COPCs and, therefore, the site would not result in human health impacts for potential future receptors. No further investigation is necessary.

5600 Hollywood Boulevard Preliminary Endangerment Assessment

Figure 1
Site Map

1. Introduction

This Preliminary Endangerment Assessment (PEA) has been prepared for the City of Los Angeles' Department of City Planning for the 5600 Hollywood Boulevard project described herein.

1.1 Purpose and Objectives

The purpose of this PEA is to consolidate the information from various available reports into a PEA using guidance from the Department of Toxic Substances Control (DTSC) PEA Guidance Manual (DTSC, 2015). The objective is to facilitate the redevelopment of the parcels. The focus of this effort is on information regarding known hazardous materials and the potential for adverse effects on people or the environment. The focus does not include repeating all details provided in the Phase I Environmental Site Assessments (Phase I assessments) or geotechnical investigation report conducted for the parcels. The reader is referred to the reference documents cited herein for site details not relevant to the risk analyses provide herein.

Overall objectives of this report include the following:

- Evaluate the results of the Phase I assessments with a focus on identifying chemicals of potential concern (COPCs);
- Estimate the human health impacts from exposure to identified COPCs;
- Provide recommendations to reduce risk and determine if further action/investigation is needed.

1.2 Scope of Work

BWC/St. Andrews, LP (Applicant) has provided proposed plans and Phase I assessments for three of the four parcels, which are herein evaluated to identify COPCs. Note that the Phase I assessment conducted for the parcel with an apartment building includes information (regulatory records, historical aerial photographs, and Sanborn fire insurance maps) that informs conditions at the fourth vacant parcel. The consultants for the Phase 1 assessments concluded that Phase 2 sampling investigations were unnecessary. In addition, a geotechnical investigation was conducted for all four parcels. The existing information was used to prepare this PEA using guidance from the DTSC PEA Guidance Manual dated October 2015.

Based on the project-specific information, a Conceptual Site Model (CSM) was prepared to identify pathways that could represent a potential route of human exposure. Since the Phase I's did not identify any COPCs at any of the parcels a characterization of potential human health risks was not necessary as all pathways were considered incomplete.

1.3 Assumptions and Exclusions

It is assumed that the existing Phase 1 assessments and conclusions are sufficient to support the PEA, including the human health and ecological screening evaluation. As the project site is not a suitable habitat for ecological receptors, an ecological risk assessment was not conducted. It is assumed that public participation would occur separately through the California Environmental Quality Act (CEQA) process as a result of this PEA.

No environmental assessment can wholly eliminate uncertainty regarding the potential for COPCs in connection with a property. Conformance of this assessment with DTSC guidance reduces, but does not eliminate, uncertainty regarding the potential for COPCs in connection with the subject property. While ESA has made every effort to discover and interpret available historical and current information on the properties within the time available, some potential always remains for undiscovered contamination to be present. ESA's report is a best-efforts collection and interpretation of available information, and cannot be considered wholly conclusive. This report and the associated work were provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all warranties, expressed or implied. No other warranty is expressed or implied. Information Provided from User/Owner/Landowner.

2. Site Description

This section describes the physical setting of the four parcels, collectively referred to as the project site, and the relation to surrounding areas.

2.1 Site Identification

The project site consists of four contiguous parcels. The site and parcel information is listed below in **Table 2** and shown on **Figure 1**.

TABLE 2
PROJECT SITE DESCRIPTIONS

Address	APN	Current USEPA or Other Agency Identification Number, if any	Zoning	Land Use Designation
5600 Hollywood Boulevard	5544-026-009	None	[Q]R5-2	High Density Residential
5604 Hollywood Boulevard	5544-026-008	CAL000144464		
1655 North Saint Andrews Place	5427-006-010	None		
5607 West Carlton Way	5427-006-011	None		
SOURCE: City of Los Angeles, 2020; WEECO, 2018				

2.1.1 Contact Person

The main contact person and mailing address for the 5600 Hollywood Boulevard Project is listed below.

Mr. Sean Beddoe
BWC/St. Andrews, LP

2.1.2 General Property Location and Description

The project site consists of four contiguous parcels along Hollywood Boulevard, North Saint Andrews Place, and West Carlton Way (see **Figure 1**). The parcels are located within the completely developed urban area of City of Los Angeles. Three of the four parcels are currently entirely developed with the uses identified in **Table 1**. The fourth parcel is currently vacant but was previously developed with commercial stores and residences in the past. Other than minor landscaping, the parcels have no natural habitat or streams. Chapter 3 provides details regarding the current and previous uses of each parcel. The project site's latitude, longitude, and elevation are listed below in **Table 3**.

TABLE 3
SITE LOCATION AND ELEVATION

Latitude	Longitude	Approximate Elevation (feet)
34.101082	-118.311725	385 to 388

NOTES:

Latitudes and longitudes are from Google Earth, which uses World Geodetic System WGS84.

Elevations are from Google Earth, which uses the WGS84 EGM96 Geoid vertical datum.

The DTSC PEA Guidance Manual suggests coordinates and elevations use NAD83 and NAVD88, respectively. The WGS84 and WGS84 EGM96 datum are considered sufficient for the purpose of this PEA.

SOURCE: City of Los Angeles, 2016; Google Earth, WGS84 EGM96 Geoid.

2.2 Site Geology and Hydrogeology

The regional and site-specific geology and hydrology information summarized below is adapted from the geotechnical investigation for the project site (Langan, 2020), which also incorporated information from various investigations.

2.2.1 Regional Geology

The project site is located at the northwestern end of the Peninsular Ranges Geomorphic Province within the Los Angeles Basin area of southern California. This geomorphic province consists of a series of mountain ranges separated by northwest trending valleys that are subparallel to faults that branch from the San Andreas Fault.

More specifically, the site is within the Central Block of the Los Angeles Basin, an extensive sediment-filled depression bound by the San Gabriel Mountains on the north, Santa Monica Mountains and the Pacific Ocean on the west, the Palos Verdes Peninsula on the southwest, the Santa Ana Mountains on the southeast, and the Puente, San Jose, and Chino Hills on the east. The basin's structural history includes extension and strike-slip faulting, followed by oblique contraction via thrusting and strike-slip faulting. Regional geologic maps indicate that the area of the project site is underlain by Quaternary¹ alluvial fan deposits, about 2,000 feet south of foothills at the base of the Santa Monica Mountains and the Santa Monica-Hollywood-Raymond Fault System.

2.2.2 Site Geology and Hydrogeology

The geotechnical investigation conducted for the project site consisted of drilling three borings to depths ranging from 76½ to 151½ feet below the ground surface (bgs) and one percolation test boring to 47½ feet bgs. In addition, the geotechnical investigation incorporated the results of five previous borings.

Asphalt concrete 2- to 3.5- inches in thickness was encountered in each of the borings where pavement is present. Aggregate base was not encountered within the borings. Artificial fill, approximately five to six feet in thickness, was encountered in each of borings consisting of loose, predominately sandy material with various amounts of silt and clay, and stiff sandy silt. The underlying native materials consist of old alluvial fan deposits, generally consisting of

¹ Quaternary time is from the present to 1.6 million years before present time.

alternating layers of medium dense to very dense, predominately sandy material with various amounts of silt and clay, and stiff to hard predominately silty and clayey material with various amounts of sand. Groundwater was encountered at varying depths between 69 and 75 feet bgs. One perched zone was encountered at 50 feet bgs.

3. Background

3.1 Site Status/Historical Site Information

The current and historical uses of each parcel are summarized below.

5604 Hollywood Boulevard, Precise Auto Body

The following information on current and historical uses at 5604-5606 Hollywood Boulevard is from a 2018 Phase I Environmental Site Assessment (WEECO, 2018) and information retrieved from the South Coast Air Quality Management District's (SCAQMD) (SCAQMD, 2020).

The 5604-5606 Hollywood Boulevard is currently developed with one two-story, approximately 4,188 square foot building that occupies the majority of this 0.2-acre parcel on the northern portion. The southern portion of this parcel is a paved parking lot with a parking canopy on a smaller portion of the parking lot. The lower floor is used for vehicle storage and the upper floor is used for residences. At the time of the site reconnaissance, various vehicles and auto body repair equipment were observed at the parcel. The business uses paints, thinners, cleaning solvents, and CO₂/argon gas. Nine 55-gallon industrial drums, some with secondary containment and some without, which were labeled as containing hazardous waste (paint waste, thinner, waterborne cleaning solution, waste, filters/rags/solids/debris) and coolant were observed, along with minor spills and stains. Based on small quantities of observed hazardous materials, the de minimus nature of stains, the site is completely paved, and the nature of the business, the Phase I assessment consultant concluded these materials are not expected to represent a significant environmental concern.

Based on a review of historical information, this parcel was developed with one residence and a smaller outbuilding labeled "Auto" as of 1919. Sometime before 1948, the residence and outbuilding had been removed and replaced with the current building. Between 1960 and 1994, the commercial occupants included a piano company, a film and visual aid distribution company, a trading company, a loan and jewelry company, and a pawnbroker. None of these uses are anticipated to have used significant quantities of hazardous materials or resulted in recognized environmental issues. From 2000 to 2006, the parcel was listed as "Allstate Insurance and Precise Auto Body." Since 2006, the parcel has been listed as "Precise Auto Body." However, spray booth permits obtained from the SCAQMD indicates the site could have been used as an auto body shop as far back as 1996. There are no violations recorded by the SCAQMD (SCAQMD, 2020). The Phase I assessment is unclear as to when the second floor was initially used for residential. The apartments are assumed to use small quantities of typical household cleaning solutions that are not expected to represent a significant environmental concern.

The records indicate that this parcel has been utilized for commercial/industrial (currently auto body repair) and residential purposes.

5600 Hollywood Boulevard, Vacant Lot

A site-specific Phase I assessment has not been prepared for the vacant 5600 Hollywood Boulevard parcel. However, information regarding this parcel is available through review of the aerial photographs in the Phase I assessment for the adjacent parcel located at 1655 North St. Andrews Place and 5607 West Carlton Way (EFI Global, 2018).

The 5600 Hollywood Boulevard is currently a 0.2-acre vacant lot with pieces of foundations or sidewalks remaining from the previous two buildings located at 1655 North Saint Andrews Place noted below. The locations of the former buildings and unpaved areas are comprised of weeds, trees, and dirt. Although a formal site reconnaissance has not been conducted for this specific parcel, a review of aerial photographs and the street views from Google Earth did not show any visible significant hazardous material storage, previous structures that would indicate hazardous material uses, or recognized environmental issues at this parcel.

Based on a review of regulatory records, aerial photographs, and Sanborn fire insurance maps, this parcel was developed with one residence as of 1919. Sometime before 1928, the parcel was redeveloped with one commercial structure subdivided into six stores on the northern part facing Hollywood Boulevard and one residential structure subdivided into three residences on the southern part facing St. Andrews Place until at least 1994. As of 2002, the residential structure had been removed. The regulatory records, aerial photographs, and Sanborn fire insurance maps indicate that this parcel has been utilized for residential and commercial purposes.

Regulatory records indicate that one of the commercial businesses on this parcel was a dry cleaners and dyers business from at least 1924 through 1928. The Sanborn fire insurance maps identify the commercial stores as facing Hollywood Boulevard; therefore, the general location of the dry cleaners is assumed to have been at the location identified on Figure 1. Note that gasoline was the major dry cleaning solvent until 1928, after which Stoddard solvent, a less flammable petroleum hydrocarbon was used (Kirk and Othmar, 1979). Chlorinated hydrocarbons such as trichloroethene (TCE) and perchloroethene (PCE) did not come into use until 1930 and 1934, respectively (State Coalition for Remediation of Drycleaners, 2007). Given the time period of this dry cleaner, it is assumed that gasoline and possibly Stoddard solvent were used. Petroleum hydrocarbons (e.g., gasoline, Stoddard solvent) naturally degrade faster than chlorinated hydrocarbons (e.g., TCE and PCE) because they lack chlorine. The four years of dry cleaning operations ended in 1928, about 92 years ago. Over this time period, it is anticipated that if any gasoline and Stoddard solvent that had been spilled, the spilled materials would have degraded to inert carbon, carbon dioxide, and water by now.

1655 North Saint Andrews Place, Apartment Building

The following information on current and historical uses at 1655 North Saint Andrews Place are from a 2018 Phase I Environmental Site Assessment (EFI Global, 2018).

The 1655 North St. Andrews Place is currently developed with a two-story, 5,572 square-foot residential apartment building that occupies the majority of the 0.2-acre parcel. Some minor landscaping is present along the south side of the building. At the time of the site reconnaissance,

no significant hazardous materials storage or recognized environmental conditions were observed at this parcel. Persons familiar with the parcel were interviewed and stated that they were not aware of any negative environmental conditions associated with the parcel.

Based on a review of historical information, this parcel was developed with a residential structure sometime before 1919. The current apartment building was constructed in 1957. The records indicate that this parcel has been utilized solely for residential purposes.

5607 West Carlton Way, Parking Lot

The following information on current and historical uses at 5607 West Carlton Way are from a 2018 Phase I Environmental Site Assessment (EFI Global, 2018).

The 5607 West Carlton Way parcel is currently developed as a paved parking lot for the 1655 North Saint Andrews Place apartment building discussed above. Minor landscaping is present along the south side of the parking lot. At the time of the site reconnaissance, no significant hazardous material storage or recognized environmental conditions were observed at this parcel. Persons familiar with this parcel were interviewed and stated that they were not aware of any negative environmental conditions associated with the parcel.

Based on a review of historical information, this parcel was originally developed with a six-room one-story residence with a garage in 1913. This residence was demolished in 1956 and converted into the present-day parking lot. The records indicate that this parcel has been utilized solely for residential and parking purposes.

3.2 Hazardous Material/Substance/Waste Management Information

5604 Hollywood Boulevard, Precise Auto Body

As previously discussed, the Precise Auto Body facility uses hazardous materials that include paints, thinners, cleaning solvents, and CO₂/argon gas. The residences on the second floor are assumed to use typical household cleaning solutions not anticipated to result in hazardous materials issues. Based on the results of the Phase 1 assessment, the consultant concluded this parcel has no recognized environmental conditions and recommended that soil and groundwater sampling was not warranted (WEECO, 2018).

5600 Hollywood Boulevard, Vacant Lot

A site-specific Phase I assessment, has not been conducted for this parcel. Information regarding this vacant parcel is from the Phase I assessment conducted for the adjacent parcel located at 1655 N. St. Andrews Place and 5607 West Carlton Way (GFI, 2018). This parcel is currently undeveloped with no hazardous materials use.

As previously discussed, this parcel had a dry cleaning facility from at least 1924 through 1928. Gasoline and possibly Stoddard solvent were likely used as the cleaning agent (Kirk and Othmar, 1979). Chlorinated hydrocarbons such as TCE and PCE did not come into use until 1930 and

1934, respectively (State Coalition for Remediation of Drycleaners, 2007). Given the time period of this dry cleaner, it is assumed that gasoline and possibly Stoddard solvent were used. Petroleum hydrocarbons (e.g., gasoline, Stoddard solvent, which are composed of carbon, oxygen, and hydrogen) naturally degrade faster than chlorinated hydrocarbons (e.g., TCE and PCE) because gasoline and Stoddard solvent lack chlorine (TCE and PCE contain chlorine) whose chemical bonds are more difficult to break. The four years of dry cleaning operations ended in 1928, about 92 years ago. Over this time period, it is anticipated that if any gasoline and Stoddard solvent had been spilled, the spilled materials would have degraded to inert carbon, carbon dioxide, and water by now.

1655 North Saint Andrews Place, Apartment Building

The residences are assumed to use typical household cleaning solutions not anticipated to result in hazardous materials issues. Based on the results of the Phase 1 assessment, the consultant concluded this parcel has no recognized environmental conditions and recommended that soil and groundwater sampling was not warranted (GFI, 2018).

5607 West Carlton Way, Parking Lot

Based on the results of the Phase 1 assessment, the consultant concluded this parcel has no recognized environmental conditions and recommended that soil and groundwater sampling was not warranted (GFI, 2018).

3.3 Current and Historical Use(s) of Surrounding Properties

The project site is located in an area that is primarily comprised of residential and commercial land uses (GFI, 2018; WEECO, 2018). Properties in the vicinity of the project site include single family homes, apartments, and commercial buildings. The adjacent property to the south is a public school, Grant Elementary School and Early Education Center. The properties to the southwest and southeast are apartments and condominiums. Along Hollywood Boulevard, the Precise Auto Body shop also operates the building to the immediate west and other commercial enterprises are located to the east. Various commercial businesses are located north of the project site across Hollywood Boulevard. None are known to use significant quantities of hazardous materials or have environmental issues.

The Phase I assessments concluded that none of the nearby properties, including adjacent properties, have hazardous materials issues that have the potential to affect the project site.

3.4 All Appropriate Inquiries Required Information

3.4.1 Fair Market Value

The Phase I assessments concluded that none of the parcels have any suspected hazardous materials or environmental issues. Based on this, the property value of the project site would not be impacted and the evaluation of the relationship of the purchase price to the fair market value is not warranted.

3.4.2 Commonly Known or Reasonably Ascertainable Information about the Property

Phase I assessments conducted for the project site included extensive and recent reconnaissance, which included interviews of individuals with knowledge of the site's conditions. These individuals consisted of site owners and managers. Based on this, all known or reasonably ascertainable information about the properties was acquired.

3.4.3 Records Review Information

The relevant results of the records review were incorporated into the previous sections and are described in further detail in the Phase I assessments included in Appendix A.

3.4.4 Site Reconnaissance

The relevant results of the site reconnaissance conducted by various consultants were incorporated into the previous sections and are described in further detail of the Phase I assessments in Appendix A.

3.4.5 Interviews

The relevant results of interviews conducted by various consultants were incorporated into the previous sections and are described in further detail of the Phase I assessments in Appendix A.

4. Apparent Problem

As previously discussed, historical land uses on the sites included some activities that included the use of hazardous materials, and in the case of the Precise Auto Body operations, still do. The Phase I assessments did not identify releases of hazardous materials or environmental issues.

5604-5606 Hollywood Boulevard, Precise Auto Body

The 5604-5606 Hollywood Boulevard parcel is currently being used as an auto body repair facility that has occupied this parcel since at least the year 1996. The facility consists of a spray booth that uses paints, thinners, cleaning solvents, as well as CO₂/argon gas used at the site. Nine 55-gallon industrial drums, some with secondary containment and some without, which were labeled as containing hazardous waste (paint waste, thinner, waterborne cleaning solution, waste, filters/rags/solids/debris) and coolant were observed during the Phase I assessment, along with minor spills and stains. Based on small quantities of observed hazardous materials, the de minimus nature of stains, and the nature of the business, the Phase I assessment consultant concluded these materials are not expected to represent a significant environmental concern, and sampling was not needed. Consequently, soil has not been sampled beneath the foundation of the parking lot or the building on this parcel.

5600 Hollywood Boulevard, Vacant Lot

As previously discussed, this parcel had a dry cleaning facility from at least 1924 through 1928. Gasoline and possibly Stoddard solvent were likely used as the cleaning agent; chlorinated hydrocarbons such as TCE and PCE did not come into use until 1930 and 1934, respectively. Petroleum hydrocarbons (e.g., gasoline, Stoddard solvent, which are composed of carbon, oxygen, and hydrogen) naturally degrade faster than chlorinated hydrocarbons (e.g., TCE and PCE) because gasoline and Stoddard solvent lack chlorine (TCE and PCE contain chlorine) whose chemical bonds are more difficult to break. The four years of dry cleaning operations ended in 1928, about 92 years ago. Over this time period, it is anticipated that if any gasoline and Stoddard solvent had been spilled, the spilled materials would have degraded to inert carbon, carbon dioxide, and water by now. Soil and groundwater sampling has not been conducted for this parcel.

1655 North Saint Andrews Place, Apartment Building

The residences are assumed to use typical household cleaning solutions not anticipated to result in hazardous materials issues. Based on the results of the Phase 1 assessment, the consultant concluded this parcel has no recognized environmental conditions and recommended that soil and groundwater sampling was not warranted.

5. Conceptual Site Model

The Conceptual Site Model depicts the potential primary and secondary chemical sources present, transport mechanisms, exposure mediums, and exposure routes to potential receptors. It includes the potential sources of contaminants, such as the auto body and former drycleaners. However, based on project-specific information within the Phase I's, no COPCs for any of the parcels were identified therefore a CSM was not prepared for the Site.

5.1 Factors Related to Soil and Air Pathways

The 0.2-acre site at 5604-5606 Hollywood Boulevard is currently developed with an auto body repair facility, residential uses, and associated paved parking lots. In addition, there is undeveloped dirt lots present where a former dry cleaning facility operated from 1924 to 1928. There have been no known reportable spills and, therefore, no soil, groundwater, or soil vapor sampling completed at any of the parcels that makeup the site. Since there are permitted spray booths located at the 5604-5606 Hollywood Boulevard parcel and a former dry cleaner on a portion of the 5600 Hollywood Boulevard parcel these uses would be the primary source of contaminant. However, as previously mentioned, there have been no known reportable spills; therefore, the pathway to soils or any other secondary source is incomplete and no further action is necessary.

6. Sampling Activities and Results

6.1 Summary of Activities

Since no RECs were associated with the Site, soil or groundwater sampling was not warranted.

6.2 Sample Collection

No sampling activities were performed on any of the four parcels within the Site.

6.3 Discussion of Results

No COPCs were identified nor suspected at the Site. No further investigation is necessary.

7. Human Health Screening Evaluation

7.1 Risk Characterization Summary

Based on the results of Phase I assessments conducted for the Project Site, COPCs were not identified at any of the sites and a human health screening evaluation was not warranted.

8. Ecological Screening Evaluation

8.1 Biological Characterization

The Project Site is proposed for residential development. The proposed development would not maintain or be suitable for wildlife habitat.

8.2 Ecological Pathway Assessment

The Project Site would not have significant amounts of wildlife based on the proposed development, therefore, an assessment of potential exposure to sensitive ecological receptors is unnecessary.

8.3 Ecological Screening Evaluation Summary

Based on the development being located in a highly urbanized area that is highly disturbed, the proposed land uses would not support or be suitable for wildlife, therefore, an ecological screening evaluation was not conducted.

9. Community Profile

The City of Los Angeles conducted public participation activities as part of the 2016 Draft EIR for the Hollywood Community Plan Area, Silver Lake – Echo Park – Elysian Valley Community Plan Area, Sunset-Silver Lake Project (City of Los Angeles, 2016). It is assumed that further public participation would occur separately through the CEQA process, in the event that a RAP, RAW, or similar document would be needed as a result of this PEA.

10. Opinion of Environmental Professional Conclusions and Recommendations

10.1 Summary and Conclusions

5604-5606 Hollywood Boulevard, Precise Auto Body

No COPCs were identified at the Project Site. No further investigation is necessary.

5600 Hollywood Boulevard, Vacant Lot

No COPCs were identified at the Site. No further investigation is necessary.

1655 North Saint Andrews Place, Apartment Building

No COPCs were identified at the Site. No further investigation is necessary.

5607 West Carlton Way, Parking Lot

No COPCs were identified at the Site. No further investigation is necessary.

10.2 Recommendations

As previously discussed, the Phase I assessments identified previous and current uses of the property that include(d) the use of hazardous materials. Although no spills of hazardous materials have been documented, undocumented spills may have occurred. Consequently, the excavation activities that would be conducted during development of the property have the potential to encounter hazardous materials. To mitigate for this potential and protect worker health and safety, the applicant would prepare a Soil Management Plan (SMP) prior to the issuance of the grading permit. SMPs are a common element of development projects where soil conditions are uncertain. Soil management procedures shall be described so that any unidentified hazardous soil can be separated from non-hazardous soil during excavation tasks. Soil management procedures outlined in the SMP shall be followed during the Project's excavation and development phases to properly manage the various classes of soil and to minimize risk to workers and the public to potentially unidentified contaminated soils during construction.

10.3 Data Gaps

A formal Phase I was not completed for the parcel located at 5600 Hollywood Boulevard, however information for this parcel was obtained from a Phase I completed at the adjacent parcels located at 1655 North Saint Andrews Place and 5607 West Carlton Way. Information regarding prior land uses at 5600 Hollywood Boulevard was contained in the Phase I for 1655 North St. Andrews Place and 5607 West Carlton Way, therefore sufficient information regarding the parcel at 5600 Hollywood Boulevard was assessed. Since information was available for all parcels that comprise the project site, the fact that a formal Phase I was not completed for one of the four parcels does not constitute a data gap. Therefore, no data gaps were identified.

12. Signatures and Qualifications of Environmental Professionals

This section includes qualification statements of the environmental professionals responsible for conducting the PEA.

Mr. Michael Burns, PG, CEG, CHG, of ESA conducted the Phase I Environmental Site Assessment portion of this PEA. Mr. Burns has over 30 years of experience in environmental site investigations, characterizations, and assessments, including Phase I Environmental Site Assessments.

Ms. Heidi Rous, CPP, of ESA conducted the Risk Assessment portion of this PEA. Ms. Rous has over 25 years of experience in conducting Risk Assessments.

Mr. Burns and Ms. Rous declare that, to the best of their professional knowledge and belief, they meet the definition of Environmental Professional as defined in 40 CFR §312.10. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Geologist:

Michael G. Burns, PG #4532, CEG #1846, CHG #280

September , 2020

Risk Assessor:

Heidi Rous, CPP
