1.0 EXECUTIVE SUMMARY

An Environmental Site Assessment - Phase I (PEA formatted) was prepared for the subject property located at 1400 and 1440 Vine Street, Los Angeles, California 90028. The scope of work for the Phase I meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments*. The purpose of the Phase I report is to provide information regarding the potential for hazardous material impacts to the soil and groundwater beneath the subject property. Such threats or material threats are identified in this report as Recognized Environmental Conditions (RECs). The presence of Historical Recognized Environmental Conditions (HRECs) and Controlled Recognized Environmental Conditions (CRECs) was also evaluated. The extent of this evaluation in conjunction with owner/client-supplied data is intended to satisfy the requirements of all appropriate inquiry into the previous ownership and uses of the property. The scope of the work included a site reconnaissance, research of land use records and other sources for preliminary indications of hazardous material use, storage, or disposal at the property and/or on contiguous parcels. Redevelopment of the property with a mixed-use structure that will include two levels of subterranean parking is proposed.

The subject property is located on the northeast corner of the intersection of Vine Street and De Longpre in the City of Los Angeles, California. The current street addresses for the property are 1400 and 1440 North Vine Street, Los Angeles. Historical addresses associated with the property include 6263-6279 De Longpre Avenue and 6262-6278 Leland Way. According to the Los Angeles County Tax Assessor's office, the Assessor's Parcel Number (APN) for the property is 5546-023-051.

The subject property consists of one (1) rectangular-shaped parcel of land that encompasses approximately 1.13 acres. The property is currently developed with two (2) single-story commercial structures. The 1400 Vine Street structure was constructed in 1979 and is occupied by K&L Wine Merchants, a wine and spirits retailer. The 1440 Vine Street structure was constructed in 1948 and is currently occupied by FedEx Office, who offer printing, packing, and shipping services. A trash bin enclosure is located along the central portion of the eastern property line. The remainder of the property is asphalt paved for parking. Access to the property is via Vine Street to the west, Leland Way to the north, and De Longpre Avenue to the south.

Historical site utilization research indicates that the subject property was developed with five (5) residential structures by at 1919. Sanborn Fire Insurance Map research indicates the 1440 Vine Street structure was constructed onsite by 1950. Historical site utilization research indicates a gas station was located on the property from at least 1933 through 1958. Aerial photographs indicate the 1400 Vine Street structure was constructed by 1979. The historical residential structure formerly located in the southeastern corner of the property was demolished prior to 2012. The property appeared in its current configuration in the 2016 aerial photograph.

Historical city directory research indicates that the 1440 Vine Street was occupied by a service station from at least 1933 to 1958, an automobile dealership from at least 1951 to 1971, a music store from at least 1976 to 1990, and a Kinko's copy center/FedEx Office center from at least 2000 until present. The 1400 Vine Street structure was occupied by a shoe store from at least 1981 through 1990, a banner shop and one-hour photo shop in 2000, and a wine shop from 2005 until present.

GSI Environmental Inc. (GSI) prepared a Phase II Environmental Assessment Report, *Limited Phase II Environmental Investigation Report, 1400 and 1440 Vine Street, Los Angeles, California*, dated June 28, 2016. The report summarizes the findings of the soil and soil vapor sampling activities performed at the subject property. The GSI Phase II report indicates that a limited Phase II subsurface investigation was performed at the site in 1998

by Clayton Environmental Consultants on behalf of GE Capital. Four soil borings were drilled and sampled to depths of approximately 25 feet below grade on the southwestern (boring B-1, B-2, and B-3) and southern (B-4) edges of the 1400 Vine Street building (southern building at the site). Soil was sampled at 5, 10, 15, 20, and 25 feet below grade from each boring and field screened with an organic vapor analyzer (OVA) for indications of volatile compounds in soil. The 5-foot and 10-foot samples from each boring (and the 15, 20, and 25-foot samples from B-4) recorded 0.0 parts per million (ppm) on the OVA. However, the 15, 20, and 25-foot samples from borings B-1, B-2, and B-3 had OVA readings of 50 to 150 ppm. The soil samples from 15 and 25 feet were analyzed for gasoline and diesel fuel constituents and the 25-foot samples were analyzed for organic lead and volatile organic compounds (VOCs). No target analytes were detected in any of the samples analyzed; however, the OVA readings (which do not identify specific compounds detected) from 15 to 25 feet suggest volatile compounds were present in vapor phase at these depths in the vicinity of borings B-1, B-2, and B-3.

GSI mobilized to the site on June 3, 2016 to conduct soil and soil vapor sampling activities. A total of six borings were drilled at the subject property (SV1-SV6). Three of the borings were located at the perimeter of the 1440 Vine Street structure. Two of the borings were located within the 1400 Vine Street structure, in the vicinity of the historical gas station. One boring was located on the exterior eastern wall of the 1400 Vine Street structure. Soil samples were collected from approximate depths of 5, 10, and 15 feet bgs for borings SV1, SV3, and SV5, and from 5, 10, 15, 20, 25, and 30 feet bgs for borings SV2, SV4, and SV6. The samples were analyzed for VOCs, gasoline range organics (GRO), diesel range organics (DRO), motor oil range organics (MORO), CAM-17 metals, and/or tetraethyl lead. VOCs, GRO, and DRO were not detected in the samples analyzed. Low concentrations of MORO were detected in four of the samples analyzed at concentrations ranging from 2.6 mg/kg to 14 mg/kg. Following completion of boring advancement, soil vapor probes were installed at approximate depths of 5 and 15 feet bgs in borings SV1, SV3, and SV5, and at approximate depths of 5, 15, and 25 feet bgs in borings SV2, SV4, and SV6. Low concentrations of BTEX compounds were detected in the soil gas samples analyzed. Benzene was detected in one of the samples analyzed at a low concentration of 0.027 µg/L. GRO was detected in two samples analyzed at concentrations of 3.2 µg/L and 4.6 µg/L.

Based on the limited Phase II activities conducted for this June 2016 investigation and in 1998, GSI concluded that significant subsurface impacts are not present at the property. GSI noted that the potential for abandoned-in-place USTs and localized soil impacts beneath the southern building and between sampling locations, remains a potential environmental issue. The 1998 and 2016 subsurface assessment data suggest significant impacts are not likely at the site and that petroleum hydrocarbon sources, if present, are not at concentrations that would pose a risk to occupants of the existing overlying buildings. GSI also noted, if abandon-in-place USTs are present, with or without localized soil impacts, their removal during redevelopment would be required under permit from the City of Los Angeles Fire Department, which serves as the local environmental oversight agency for UST removal and associated soil impacts.

GSI prepared a draft Phase I Environmental Assessment Report, *Phase I Environmental Site Assessment report, 1400 and 1440 Vine Street, Los Angeles, California*, dated June 29, 2016. The draft Phase I report revealed the recognized environmental conditions (RECs) in connection with the subject property. GSI concluded that the historical uses of the property for gasoline service and automotive repair represent an REC for the potential presence of abandoned-in-place USTs and localized soil impacts. However, GSI noted that based on the limited Phase II activities conducted in 1998 and in June 2016 by GSI, it does not appear that significant impacts are likely present at the site. GSI also noted, if abandon-in-place USTs are present, with or without localized soil impacts, their removal during redevelopment would be required under permit from the City of Los Angeles Fire Department, which serves as the local environmental oversight agency for UST removal and associated soil impacts.

The subject property is identified on the standard environmental government sources researched in this report. The property is listed on the RCRA-SQG, HAZMAT, ECHO, and FINDS databases. The listings are associated with Fromex One-Hour Photo, the historical occupant of 1412 Vine Street. The former occupant was a small quantity hazardous waste generator of photo processing chemicals (i.e. developers, stoppers, fixers). These listings are not considered an environmental concern.

The nearest listed contaminated site to the subject property is located approximately 550 feet to the south at 1310 Vine Street. This offsite property is occupied by Paragon Cleaners that operates an onsite dry-cleaning business. PCE impacts to soil gas and groundwater beneath this offsite property was discovered in 2005. Ongoing clean-up efforts under RWQCB supervision appear set to include soil vapor extraction and groundwater monitoring. Based on the 2016 soil vapor data collected onsite by GSI, this offsite release does not appear to have impacted the subject site.

California Environmental has prepared an Environmental Site Assessment - Phase I (PEA formatted) in conformance with the scope and limitations of ASTM 1527-13 for the property located at 1400 and 1440 Vine Street, Los Angeles, California 90028. Two (2) data failures were encountered during the preparation of this report. The owner and user questionnaires were not returned to CE. The data failures do not alter the conclusions or recommendations made in this report. Review of recorded Land Title Records and research of environmental liens were excluded from this report. These records should be obtained and reviewed by the user.

Historical site information indicates a gas station was located at 1400 Vine Street from at least 1933 through 1958. The LAFD does not maintain records for the UST(s) associated with the historical gas station. It is possible that USTs associated with the historical gas station are located on the subject property. This is considered a recognized environmental condition (REC). The current onsite structure covers the footprint of the former onsite service station rendering a geophysical evaluation ineffectual for identifying the suspect USTs. CE recommends a post-demolition geophysical survey to identify possible onsite USTs associated with the historical gas station. USTs identified on the subject property should be abandoned under permits issued by the LAFD. Additionally, due to the date of construction of the onsite buildings in 1948 and 1979, it is recommended that asbestos and lead surveys be conducted by certified asbestos and lead consultants prior to renovation or demolition of the subject buildings. No evidence of Historical Recognized Environmental Conditions (H-RECs) or Controlled Recognized Environmental Conditions (C-RECs) were identified in connection with the subject site. No additional investigation is recommended at this time.

2.0 INTRODUCTION

The following report presents the findings of the Environmental Site Assessment - Phase I prepared for the subject property located at 1440 and 1440 Vine Street, Los Angeles, California 90028. The scope of the Phase I study meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments* and included research of available land use records and other sources for preliminary indications of hazardous material use, storage or disposal at the property. The findings of this study are intended to provide information to the client regarding potential hazardous material impacts to the soil and groundwater beneath the site.

The scope of the investigation was conducted in general accordance with ASTM Standard Practice for Environmental Site Assessments – Phase I, Environmental Site Assessment Process ASTM E 1527-13. The report also follows the general report guidelines outlined in the Preliminary Endangerment Assessment Guidance Manual – CalEPA-DTSC, October 2015. The steps outlined in this ASTM process are intended to permit a user (client) to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide purchaser limitations on CERCLA liability. Specifically, this report along with certain obligations of the client, constitutes All Appropriate Inquiry (AAI) into the previous ownership and uses of the property consistent with the standard of care as practiced in this area by environmental professionals. A main component of the assessment is to identify recognized environmental conditions, controlled recognized environmental conditions, and historical recognized environmental conditions, as they may affect the subject property. As defined by ASTM E 1527-13, a recognized environmental condition (REC) means *“the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.”* A controlled recognized environmental condition (C-REC) is defined as *“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by*

regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” An historical recognized environmental condition (HREC) is defined as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

An important component of complying with the ASTM E 1527-13 Standard is information to be obtained or in the possession of the client and/or seller of the property. Such information includes obtaining and review of a recent title report, any specialized information regarding the site or surrounding area which may give rise to identification of a recognized environmental condition, and/or reasons given by the seller should the purchase price be significantly lower than what would be reasonably expected for a property of similar size and value. Often a real estate appraiser is commissioned to evaluate the purchase or sale price of a property. Such an appraisal is outside the scope of this Phase I Assessment report.

The independent conclusions represent California Environmental’s (CE) professional judgment based on the conditions that existed and the information and data available during the course of the study. Factual information regarding operations, conditions, and test data provided by the client, the owner or their representatives have been assumed to be correct and complete. This report includes **CONCLUSIONS AND RECOMMENDATIONS**, which together with the remainder of this report are subject to the **NOTICE** at the end of the report. **This report was prepared for the sole use and reliance by the client as identified on the title page of this report. Use of this report by other entities is expressly forbidden unless the client and CE grant permission.**

3.0 SITE DESCRIPTION

3.1 LOCATION AND LEGAL DESCRIPTION

The subject property is located on the east side of Vine Street at the intersection with De Longpre Ave. in the City of Los Angeles, California, see **FIGURE 1 - VICINITY MAP**. The current street addresses for the property are 1400 and 1440 North Vine Street, Los Angeles. Historical addresses associated with the property include 6263-6279 De Longpre Avenue and 6262-6278 Leland Way. According to the Los Angeles County Tax Assessor's office, the Assessor's Parcel Number (APN) is 5546-023-051.

3.2 DESCRIPTION OF PROPERTY / PROPOSED PROJECT

The subject property consists of one (1) rectangular-shaped parcel of land that encompasses approximately 1.13 acres. The property is currently developed with two (2) single-story commercial structures. The 1400 Vine Street structure was constructed in 1979 and is occupied by K&L Wine Merchants, a wine and spirits retailer. The 1440 Vine Street structure was constructed in 1948 and is occupied by FedEx Office, who offer printing, packing, and shipping services. A trash bin enclosure is located along the central portion of the eastern property line. The remainder of the property is asphalt paved for parking. Access to the property is via Vine Street to the west, Leland Way to the north, and De Longpre Avenue to the south. Redevelopment of the property with a mixed-use structure that will include two levels of subterranean parking is proposed.

3.3 GEOLOGY AND HYDROGEOLOGY

The subject property is located near the southern margin of the Transverse Ranges Geomorphic Province where the Santa Monica Mountains abut the Los Angeles Coastal Plain. The property is underlain by

recent and older alluvial deposits shed from the adjacent Santa Monica Mountains. The site is within the Hollywood Groundwater Basin. A prominent structural feature in the area is the Santa Monica/Hollywood (SMHF) Fault that is the bounding fault (located 1,500 feet to the north) on the southern edge of the Santa Monica Mountains. The alluvial deposits are underlain by Pliocene through Miocene sedimentary rocks. The sediments beneath the Salt Lake Oil Field (5,000 feet southwest) contain crude oil deposits.

Regional groundwater level data obtained from the RWQCB GeoTracker database suggest the depth to first groundwater in the vicinity of the subject property ranges from 40 to 50 feet below ground surface (bgs). A southwest to westerly groundwater flow direction was determined from the regional groundwater elevation data.

4.0 BACKGROUND INFORMATION

4.1 PREVIOUS WORK

GSI Environmental Inc. (GSI) prepared a Phase II Environmental Assessment Report, *Limited Phase II Environmental Investigation Report, 1400 and 1440 Vine Street, Los Angeles, California*, dated June 28, 2016. The report summarizes the findings of the soil and soil vapor sampling activities performed at the subject property. The Phase II report is included in **APPENDIX V**.

The GSI Phase II report indicates that a limited Phase II subsurface investigation was performed at the site in 1998 by Clayton Environmental Consultants on behalf of GE Capital. Four soil borings were drilled and sampled to depths of approximately 25 feet below grade on the southwestern (boring B-1, B-2, and B-3) and southern (B-4) edges of the 1400 Vine Street building (southern building at the site). Soil was sampled at 5, 10, 15, 20, and 25 feet below grade from each boring and field screened with an organic vapor analyzer (OVA) for indications of volatile compounds in soil. The 5-foot and 10-foot samples from each boring (and the 15, 20, and 25-foot samples from B-4) recorded 0.0 parts per million (ppm) on the

OVA. However, the 15, 20, and 25-foot samples from borings B-1, B-2, and B-3 had OVA readings of 50 to 150 ppm. The soil samples from 15 and 25 feet were analyzed for gasoline and diesel fuel constituents and the 25-foot samples were analyzed for organic lead and volatile organic compounds (VOCs). No target analytes were detected in any of the samples analyzed; however, the OVA readings (which do not identify specific compounds detected) from 15 to 25 feet suggest volatile compounds were present in vapor phase at these depths in the vicinity of borings B-1, B-2, and B-3.

GSI mobilized to the site on June 3, 2016 to conduct soil and soil vapor sampling activities. A total of six borings were drilled at the subject property (SV1-SV6). Three of the borings were located at the perimeter of the 1440 Vine Street structure. Two of the borings were located within the 1400 Vine Street structure, in the vicinity of the historical gas station. One boring was located on the exterior of the 1400 Vine Street structure, near the eastern wall. Soil samples were collected from approximate depths of 5, 10, and 15 feet bgs for borings SV1, SV3, and SV5, and from 5, 10, 15, 20, 25, and 30 feet bgs for borings SV2, SV4, and SV6. The samples were analyzed for VOCs, gasoline range organics (GRO), diesel range organics (DRO), motor oil range organics (MORO), Cam-17 metals, and/or tetraethyl lead. VOCs, GRO, and DRO were not detected in the samples analyzed. Low concentrations of MORO were detected in four of the samples analyzed at concentrations ranging from 2.6 mg/kg to 14 mg/kg.

Following completion of boring advancement, soil vapor probes were installed at approximate depths of 5 and 15 feet bgs in borings SV1, SV3, and SV5, and at approximate depths of 5, 15, and 25 feet bgs in borings SV2, SV4, and SV6. Low concentrations of BTEX compounds were detected in the soil gas samples analyzed. Benzene was detected in one of the samples analyzed at a low concentration of 0.027 µg/L. GRO was detected in two samples analyzed at concentrations of 3.2 µg/L and 4.6 µg/L.

Based on the Phase II activities conducted for the June 2016 investigation and in 1998, GSI concluded that significant subsurface impacts are not present at the property. GSI noted that the potential for abandoned-in-place USTs and localized soil impacts beneath the southern building and between sampling locations, remain a potential environmental issue. The 1998 and 2016 subsurface assessment data suggest significant impacts are not likely at the site and that petroleum hydrocarbon sources, if present, are not likely at concentrations that would pose a risk to occupants of the existing overlying

buildings. GSI also noted, if abandon-in-place USTs are present, with or without localized soil impacts, their removal during redevelopment would be required under permit from the City of Los Angeles Fire Department, which serves as the local environmental oversight agency for UST removal and associated soil impacts.

GSI prepared a draft Phase I Environmental Assessment Report, *Phase I Environmental Site Assessment report, 1400 and 1440 Vine Street, Los Angeles, California*, dated June 29, 2016. The draft Phase I report revealed the recognized environmental conditions (RECs) in connection with the subject property. GSI concluded that the historical uses of the property for gasoline service and automotive repair represent an REC for the potential presence of abandoned-in-place USTs and localized soil impacts. However, GSI noted that based on the limited Phase II activities conducted in 1998 and in June 2016 by GSI, it does not appear that significant impacts are likely present at the site. GSI also noted, if abandon-in-place USTs are present, with or without localized soil impacts, their removal during redevelopment would be required under permit from the City of Los Angeles Fire Department, which serves as the local environmental oversight agency for UST removal and associated soil impacts.

4.2.3 Historical Fire Insurance Maps

The EDR Company was contacted to review historical fire insurance maps for the subject property. Maps covering the subject property for time periods between 1919 and 1970 were found. The map descriptions are summarized below in **TABLE III**. Copies of the fire insurance maps are attached in **APPENDIX II** of this report.

4.2.4 Historical Topographic Maps

Historical USGS topographic maps were provided by EDR Company and from online database sources. Maps covering the subject property for sixteen (16) time periods were found. The property appears located in an area of sparse development from at least 1894 through 1902. The property appears located in an area of dense urban development from since at least 1953.

4.3 RECORDS REVIEW INFORMATION

4.3.1 Building Information

The city of Los Angeles Building Dept. building permit records were researched. Permits included records for the service station building in the 1930s. The subject property is developed with two (2) single-story commercial structures and an adjacent parking lot. The approximately 6,000 square foot commercial

structure addressed as 1440 Vine Street occupies the northwestern portion of the property and was built in 1948. The structure was occupied by an automobile dealership from at least 1951 through 1971, a music store from at least 1976 to 1990, and a Kinko's copy center/FedEx Office center from at least 2000 until present. The approximately 9,000 square foot commercial structure addressed as 1400 Vine Street was built in 1979. The structure was occupied by a shoe store from approximately 1981 through 1990, a banner shop and one-hour photo shop in 2000, and a wine shop from 2005 until present.

4.3.2 Underground Storage Tank & Hazardous Materials Research

The City of Los Angeles Fire Department (LAFD) publishes lists of records for active and inactive underground storage tanks (USTs) and hazardous materials inventories within the City of Los Angeles. CE's review of the lists released by the LAFD indicate that 1412 North Vine Street, formerly Fromex One-Hour Photo (facility ID number FA0003190), is listed on the inactive hazardous materials records. However, when the files were request the LAFD indicated that no files were maintained for the subject property address. No other records were noted on the lists released by the LAFD.

Historical site information indicates a gas station was located at 1400 Vine Street from at least 1933 through 1958. As noted above, the LAFD does not maintain records for the UST(s) associated with the historical gas station. It is possible that USTs associated with the historical gas station are located on the subject property. Due to the footprint of the current onsite structure, a geophysical survey would cannot be used to identify potential USTs. CE recommends a post-demolition geophysical survey to identify possible onsite USTs associated with the historical gas station.

4.3.3 State Regulatory Agency File Review

Inquiry letters were sent to the State of California Department of Toxic Substances Control (DTSC) and the California Regional Water Quality Control Board – Los Angeles Region (RWQCB). Responses from the DTSC and RWQCB indicate that no files are maintained for the subject property's addresses. The agency inquiries and responses are included in **APPENDIX III**. CalEPA DTSC and RWQCB online databases were also reviewed. The subject property is not listed on the databases researched for this report.

4.3.4 SCAQMD File Review

The SCAQMD online FIND database was researched for any active or inactive records related to the subject property. A review of the SCAQMD Facility Information Detail (FIND) database indicates that no records are maintained for the subject property addresses.

4.4 SITE DRIVE-BY

A drive-by of the area within one-quarter mile of the property was conducted to help identify nearby sites that possibly use, store, or generate hazardous materials. The area surrounding the subject property consists of residential and commercial properties. No service stations are located on the properties adjacent to the subject property. A list of selected environmental risk sites identified within a one-quarter mile radius of the subject property is included in the **STANDARD ENVIRONMENTAL RECORDS SOURCES** section of this report.

5.0 SITE RECONNAISSANCE

The site conditions were observed during a reconnaissance conducted by Gregory Buensuceso of California Environmental on February 14, 2020. California Environmental completed a Field Reconnaissance Checklist during the site reconnaissance. Environmental Owner and User Questionnaires were provided to Lisa Gerhart of Eyestone Environmental for distribution. The Owner

and or User Questionnaires were not returned. The Environmental Field Reconnaissance Checklist is included in **APPENDIX I**. The features described below are shown on the enclosed **FIGURE 2 - PLOT PLAN**. Photographs of the subject property are attached in the **ILLUSTRATIONS** section of this report.

5.1 DESCRIPTION OF THE PROPERTY

The subject property consists of one (1) rectangular-shaped parcel of land that encompasses approximately 1.13 acres. The property is currently developed with two (2) single-story commercial structures. The 1400 Vine Street structure was constructed in 1979 and is occupied by K&L Wine Merchants, a wine and spirits retailer. The 1440 Vine Street structure was constructed in 1948 and is occupied by FedEx Office, who offer printing, packing, and shipping services. A trash bin enclosure is located along the central portion of the eastern property line. The remainder of the property is asphalt paved for parking. Access to the property is via Vine Street to the west, Leland Way to the north, and De Longpre Avenue to the south.

5.2 ADJACENT PROPERTIES

The subject property is bound to the north by Leland Way with commercial properties beyond, to the east by a community hospital with residential properties beyond, to the south by De Longpre Avenue with commercial and residential properties beyond, and to the west by Vine Street with commercial properties beyond.

5.3 TOPOGRAPHY AND DRAINAGE

The subject property has a gentle slope towards the south. The topographic elevation of the subject property is approximately 341 feet above mean sea level. Drainage from the site is by sheetflow and concrete swales towards the adjacent city streets. A catch basin was observed on the southern end of

the parking lot. No evidence of surface drains, sumps, or standing water was observed on the subject property at the time of the site reconnaissance.

5.4 PAST USES OF THE PROPERTY

No evidence of the past use, treatment, storage, disposal or generation of hazardous substances was observed on the subject property at the time of the site reconnaissance.

5.5 USE OF HAZARDOUS SUBSTANCES

No evidence of significant hazardous substance use was observed on the subject property at the time of the site reconnaissance.

5.6 STORAGE TANKS

No evidence of existing aboveground or underground storage tanks, clarifiers, sumps, or grease interceptors was observed on the subject property at the time of the site reconnaissance.

5.7 CONTAINERS OF HAZARDOUS OR UNIDENTIFIED SUBSTANCES

No evidence of containers of hazardous or unidentified substances was observed on the subject property at the time of the site reconnaissance.

5.8 SOLID WASTE DISPOSAL

Two (2) trash bins were observed in a gated and locked enclosure located in the central portion of the eastern property boundary. No evidence of spills or staining was observed on the pavement beneath the bins.

5.9 POLY-CHLORINATED BIPHENYL'S (PCBs)

No evidence of PCB containing transformers or equipment was observed on the subject property at the time of the site reconnaissance.

5.10 HEATING/COOLING EQUIPMENT

Heating and cooling equipment was not observed at the time of the site reconnaissance. Natural gas and electricity are the power sources for the heating and cooling equipment.

5.11 ASBESTOS CONTAINING MATERIALS (ACM)

Sampling of suspect asbestos containing material (ACM) was not included in the scope of work for this study. Due to the date of construction of the 1440 Vine Street building in 1948, it is recommended that an asbestos survey be conducted by a certified asbestos consultant prior to renovation or demolition of the subject building.

5.12 WASTEWATER TREATMENT AND DISPOSAL SYSTEMS

No evidence of wastewater treatment or disposal systems was observed on the subject property at the time of the site reconnaissance.

5.13 RADON

Radon hazard assessment was not included in the scope of this study. However, the EDR research report indicates the levels of radon at zero (0) of thirteen (13) sites located within the 90028 zip code in Los Angeles County exceeded four picoCurie per Liter (4 pCi/L), the Federal Action level.

5.14 LEAD

Sampling of suspect lead in paint was not included in the scope of work for this project. Lead content in paint was significantly reduced in 1977. Due to the date of construction of the subject buildings in 1948 and 1979, it is likely that lead based paint was utilized onsite. The paint coating of the structures appeared in good condition at the time of the site reconnaissance. It is recommended that a lead survey be conducted by a certified lead consultant prior to renovation or demolition of the subject buildings.

5.15 WELLS

No evidence of dry wells, irrigation wells, injection wells, abandoned wells, monitoring wells or other wells was observed on the subject property at the time of the site reconnaissance.

5.16 ODOR

No evidence of strong, pungent or noxious odors was noted on the subject property at the time of the site reconnaissance.

5.17 STRESSED VEGETATION

No evidence of stressed vegetation was observed on the subject property at the time of the site reconnaissance.

5.18 STAINING OR RESIDUE

No evidence of significant staining or residue was observed on the subject property at the time of the site reconnaissance.

5.19 PITS, PONDS, OR LAGOONS

No evidence of pits, ponds, and/or lagoons was observed on the subject property at the time of the site reconnaissance.

5.20 POTABLE WATER SUPPLY

Water is supplied to the subject property by City of Los Angeles Department of Water and Power.

5.21 SEWAGE DISPOSAL SYSTEM

The subject property is connected to the public sewage disposal system.

5.22 OTHER CONDITIONS OF CONCERN

No other conditions of environmental concern regarding potential sources for soil and groundwater contamination were observed on the subject property at the time of the site reconnaissance.

6.0 NEARBY CONTAMINATED SITES

6.1 LANDFILLS

The Major Waste System maps for Los Angeles County, the Solid Waste Information Systems (SWIS), and the Waste Management Unit Database (WMUD) were reviewed to identify landfills and transfer stations located near the property. Map no. 144-157 and the EDR database report indicate that there are no landfills or transfer stations located within a 2,000-foot radius of the subject property. No active hazardous waste landfills are located within Los Angeles County.

6.2 OIL FIELD MAPS/METHANE HAZARD ZONES

The California Geologic Energy Management Division's (CalGEM) online mapping system (Well Finder) was researched to determine if oil production occurred on or near the subject property. The CalGEM Well Finder database indicates no oil fields or oil wells are located within a 2,000-foot radius of the site. However, the Well Finder database indicates an exploratory core hole was drilled approximately 550 feet south of the subject property. The core hole was drilled to a maximum depth of 4,724 feet below ground surface between January and May 1969. The core hole was abandoned by under supervision of the Department of Oil and Gas during May 1969. The abandoned core hole is not considered an environmental concern.

The site is not located with a recognized Methane Hazard Zone as identified on the City of Los Angeles website (ZIMAS – Zone Information and Map Access System). Methane Hazard Zones and Methane Buffer Zones are identified by Division 71 of the City of Los Angeles Building Code.

6.3 STANDARD ENVIRONMENTAL RECORD SOURCES

In addition to the above records, agency database lists were reviewed for known or suspected contaminated sites and for sites which store, generate or use hazardous materials near the subject property. The subject property is identified on the standard environmental government sources researched in this report. The property is listed on the RCRA-SQG, HAZMAT, ECHO, and FINDS databases. The listings are associated with Fromex One-Hour Photo, the historical occupant of 1412 Vine Street. The former occupant was a small quantity hazardous waste generator of photo processing chemicals (i.e. developers, stoppers, fixers). These listings are not considered an environmental concern.

The nearest listed contaminated site to the subject property is located approximately 550 feet to the south at 1310 Vine Street. This offsite property is occupied by Paragon Cleaners that operates an onsite dry-cleaning business. PCE impacts to soil gas and groundwater beneath this offsite property was

discovered in 2005. Ongoing clean-up efforts under RWQCB supervision include soil vapor extraction and groundwater monitoring. Based on the 2016 soil vapor data collected onsite by GSI, this offsite release does not appear to have impacted the subject site. This offsite property is located down-gradient of the subject site.

Environmental risk sites listed on the databases researched for this report located within a one-half mile radius of the subject property are presented in **TABLE IV**.

Note: A search of public information databases may omit some nearby contaminated sites due to missing or inaccurate information in the public record.

None of these listed sites are considered likely to have impacted the subject site.

6.4 POTENTIAL VAPOR ENCROACHMENT CONDITION (p-VEC)

The State of California has adopted the Vapor Intrusion Guidance document issued by CalEPA DTSC in October 2011. Potential sources for vapor intrusion to indoor air include degassing of solvents and other compounds from contaminated soil and contaminated groundwater. Based on the results of the soil vapor survey conducted by GSI on June 3, 2016, there is no evidence that would suggest the potential impact of vapor encroachment into current and future onsite structures using current CalEPA-DTSC risk factors.

7.0 APPARENT PROBLEMS AND CONCERNS

- Historical site information indicates a gas station was located at 1400 Vine Street from at least 1933 through 1958. The LAFD does not maintain records for the UST(s) associated with the historical gas station. It is possible that USTs associated with the historical gas station are located on the subject property. This is considered a recognized environmental condition (REC). Due to the footprint of the current onsite structure, a geophysical survey would not be able to identify potential USTs. CE recommends a post-demolition geophysical survey to identify possible onsite USTs associated with the historical gas station. Any USTs identified on the subject property will need to be removed under permit of the LAFD.
- Due to the date of construction of the onsite buildings in 1948 and 1979, it is recommended that asbestos and lead surveys be conducted by a certified asbestos and lead consultants prior to renovation or demolition of the subject buildings.

8.0 CONCLUSIONS AND RECOMMENDATIONS

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-13 for the property located at 1400 and 1440 Vine Street, Los Angeles, California 90028. Two (2) data failures were encountered during the preparation of this report. The owner and user questionnaires were not returned to CE. The data failures do not alter the conclusions or recommendations made in this report. Review of recorded Land Title Records including environmental liens was excluded from this report. These records should be obtained and reviewed by the user.

Historical site information indicates a gas station was located at 1400 Vine Street from at least 1933 through 1958. The LAFD does not maintain records for the UST(s) associated with the historical gas station. It is possible that USTs associated with the historical gas station are located on the subject property. This is considered a recognized environmental condition (REC). The current onsite structure covers the footprint of the former onsite service station rendering a geophysical evaluation ineffectual for identifying the suspect USTs. CE recommends a post-demolition geophysical survey to identify possible onsite USTs associated with the historical gas station. USTs identified on the subject property should be abandoned under permits issued by the LAFD. Additionally, due to the date of construction of the onsite buildings in 1948 and 1979, it is recommended that asbestos and lead surveys be conducted by certified asbestos and lead consultants prior to renovation or demolition of the subject buildings. No evidence of Historical Recognized Environmental Conditions (H-RECs) or Controlled Recognized Environmental Conditions (C-RECs) were identified in connection with the subject site. No additional investigation is recommended at this time.

9.0 OPINION OF ENVIRONMENTAL PROFESSIONAL

All properties are subject to some element of environmental risk and the risk cannot be eliminated. Industrial and commercial properties developed prior to modern environmental laws are especially risk prone to environmental hazards which include, but are not limited to, wastes which may be toxic, ignitable, corrosive or reactive. The potential for these environmental hazards to impact the use of the property can be reduced by the identification and mitigation of the hazards prior to development or redevelopment of the property. Due to the difficulty in locating underground wastes, in some cases it is not always possible to ascertain that hazardous wastes are present on the property prior to development.

A Phase I environmental site assessment does not utilize subsurface exploration to check for the presence of hazardous wastes on the property. The experience of the assessor, along with the research of available reports, aerial photographs and land use records are used to evaluate the potential for hazardous wastes to occur on the site. Based on the information gained from the historical research, subsurface exploration may be recommended to check for the presence of hazardous wastes. Preexisting environmental problems such as the presence of hazardous wastes in the soil or groundwater, can be concealed by grading activities and site improvements. If such wastes are present these wastes cannot be observed.

The undersigned, Charles I. Buckley declares that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312 and I have the specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20.

This report was prepared with the skill and competence as commonly used by environmental professionals in this area. No warranty, expressed or implied, of any kind is made or intended in connection with this report, or by the fact you are being furnished this report, or by any other oral or written statement.

Should you have any questions or desire any additional information, please contact the undersigned.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 12 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are 22 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 8 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- Amount (Lbs): 416

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Site History: The Site was occupied by a motion picture post-production facility where titles, visual effects and special effects were applied onto motion picture film. The former Pacific Title and Art Studio (PTAS) was a post-production motion picture facility that operated from approximately 1946 to 2009. Operations in the main building included internal film developing and associated film cleaning and optical printing to support post-production processes. The main building housed office space, film developing, printing and film cleaning process units, studios and film viewing theaters. The garage-like structure in the southwest portion of the subject property was used for storage of equipment, paints, janitorial chemicals and other materials. In 2009, the Amidi Group acquired ownership of the property from PTAS for re- development of the main building into an executive office complex. The redevelopment was completed in June 2013.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

LIMITED PHASE II ENVIRONMENTAL SITE ASSESSMENT REPORT

1400 and 1440 Vine Street
Los Angeles, California

1.0 INTRODUCTION

GSI Environmental Inc. (GSI) has prepared this report to summarize the findings of soil and soil vapor sampling activities performed for the subject Site located at 1400 and 1440 Vine Street in Los Angeles, California (herein referred to as the "Site" or "subject property;" Figures 1 and 2). The soil and soil vapor sampling were conducted on behalf of Tooley Interests, LLC ("Tooley") to support Tooley's due diligence for its potential acquisition and redevelopment of the Site. We understand that Tooley is considering acquiring the subject property and that Tooley retained GSI to perform the sampling activities to evaluate subsurface environmental conditions for potential acquisition and redevelopment planning.

GSI understands that Tooley intends to continue to operate the site in its current configuration during redevelopment planning for approximately 1 to 2 years and will then excavate the site to approximately 30 feet below grade for the construction of two stories of underground parking with an overlying mixed use structure.

2.0 BACKGROUND

Tooley commissioned a Phase I Environmental Site Assessment (ESA) during its acquisition of the Site in 2016.¹ As described in the June 28, 2016 Draft Phase I ESA report, and shown on Figure 3, historical Site uses/features included:

- A gasoline service station on the southern portion of the site at 1400 Vine Street (circa 1931 to 1960 for service station and circa 1931 to 1976 for automobile service); and
- Automobile sales, and possibly service, on the northern portion of the site (circa 1948 to 1976).

The June 28, 2016 Draft Phase I ESA noted the following recognized environmental condition (REC) in connection with the Site:

The historical uses of the site for gasoline service and automotive repair represents an REC for the potential presence of abandoned-in-place underground storage tanks (USTs) and localized soil impacts.

As discussed in the June 28, 2016 Draft Phase I ESA, limited Phase II subsurface investigation was performed at the site in 1998 by Clayton Environmental Consultants on behalf of GE Capital.² Four soil borings were drilled and sampled to depths of approximately 25 feet below grade on the southwestern (boring B-1, B-2, and B-3) and southern (B-4) edges of the 1400 Vine Street building (southern building at the site). Soil was sampled at 5, 10, 15, 20, and 25 feet below grade from each boring and field screened with an organic vapor analyzer (OVA) for indications of volatile compounds in soil. The 5-foot and 10-foot samples from each boring (and the 15-, 20-, and 25-foot samples from B-4) recorded 0.0 parts per million (ppm) on the OVA. However, the 15-, 20-, and 25-foot samples from borings B-1, B-2, and B-3 had OVA readings of 50 to 150 ppm. The soil samples from 15 and 25 feet were analyzed for gasoline and diesel fuel constituents and the

25-foot samples were analyzed for organic lead and volatile organic compounds (VOCs). No target analytes were detected in any of the samples analyzed; however, the OVA readings (which do not identify specific compounds detected) from 15 to 25 feet suggest volatile compounds were present in vapor phase at these depths in the vicinity of borings B-1, B-2, and B-3.

3.0 OBJECTIVES

Based on the historical environmental assessment data presented in the June 28, 2016 Phase I ESA Report and our understanding of Tooley's proposed acquisition and redevelopment plans, the limited soil and soil vapor assessment described herein was completed by GSI to accomplish the following objectives:³

1. Assess the potential presence of VOCs and petroleum hydrocarbons (PHCs) in the gasoline range organics (GRO) in soil vapor; and VOCs, GRO, PHCs in the diesel range organics (DRO) and motor oil range organics (ORO) in soil in the vicinity of the historical gasoline service station and automobile service located at 1400 Vine Street, and automobile sales and possibly service located at 1440 Vine Street.
2. Assess soil in the vicinity of the historical gasoline service station for tetraethyl lead, an anti-knocking additive historically used in leaded gasoline.
3. Assess the potential presence and concentrations of VOCs, PHCs, and metals in soil for redevelopment planning and future excavated soil disposition (VOCs, PHCs, and metals are commonly minimum characterization requirements of potential soil receiving facilities in the Los Angeles Basin) by collecting soil samples from across the Site at varying depths between approximately 5 and 30 feet below grade, with analysis for VOCs, GRO, DRO, ORO, and California Title 22 (CAM-17) metals.

4.0 FIELD INVESTIGATION

GSI retained drilling, utility clearance, concrete coring, and laboratory subcontractors for the collection and analysis of soil and soil gas samples at six (6) locations (boring SV1 through SV6) to depths between approximately 15 and 30 feet below the surface (bgs) to evaluate the potential presence of VOCs and GRO in soil vapor, and VOCs, GRO, DRO, ORO, tetraethyl lead, and CAM-17 metals in soil at these locations as further described below. The completed soil and soil vapor sampling locations are shown on Figure 3.

GSI performed a Site visit on 10 May 2016 to observe Site conditions and 31 May 2016 to mark sample locations with white paint. Underground Services Alert (USA) was notified of the planned

³ The subsurface environmental investigation activities described herein are referred to as "limited" to due to the location of the samples collected with respect to historical features intended to be investigated. GSI initially recommended an investigation program that included sampling from inside the Site building closer to historical use areas; however, discussion between Tooley and the current owner and tenant indicated the testing would disrupt the tenant's business. In addition, geophysical investigation for potential USTs underneath the building would be constrained by interference from metal racks and rebar in the concrete slab. Tooley indicated the probable cost of removal of any USTs and localized soil impacts were not a significant concern if investigation activities could otherwise establish that there was not a significant area of contaminated soil or soil vapor and a low potential for groundwater contamination, therefore sampling was performed outside the buildings in the vicinity of historical use areas. As discussed herein and concluded in Section 6.0 below, there is the potential that USTs were abandoned in place and that some additional costs may be incurred during excavation for a new building. However, it does not appear that significant impacts are likely present at the Site and the low concentrations of few VOCs found in soil vapor are well below the residential and commercial/industrial soil vapor screening levels, and therefore not a concern to current or future building occupants with respect to current regulatory criteria.

subsurface exploration activities and a geophysical utility clearance survey was performed at each sample location to assess the presence of subsurface utilities or other obstructions.

On 3 June 2016, soil and soil vapor sampling activities were completed using a C-57 licensed direct push drilling subcontractor (Interphase Environmental [Interphase] of Los Angeles, CA) and a state certified mobile laboratory (American Analytics of Chatsworth, CA; a state Environmental Laboratory Accreditation Program (ELAP) certified laboratory). At each location, an approximately 2.25-inch diameter direct-push drive sampler was advanced to a target depth of 15.5 or 30 feet below ground surface (bgs).

4.1 Soil Sampling Procedures

Soil borings were advanced using the dual-cased macro-core soil sampling tooling system by Geoprobe so that a cased boring was maintained between sample retrieval depth intervals. Soil samples were collected in 4-foot long acetate liners inside the inner cased drive sampler core barrels. The acetate liners were cut in the field and soil samples were collected from approximate depths of 5, 10, and 15 feet bgs for borings SV1, SV3, and SV5, and from 5, 10, 15, 20, 25, and 30 feet bgs for borings SV2, SV4, and SV6 for potential analysis of VOCs, GRO, DRO, GRO, Cam-17 metals, and/or tetraethyl lead. Samples for VOCs and GRO were collected using EPA Method 5035 field preservation methods with a new disposable cut syringe for each sample set and placed into laboratory-provided 40-milliliter preserved vials. Samples for DRO, ORO, CAM-17 Metals, and tetraethyl lead were collected in laboratory-provided 8-ounce glass jars.

4.2 Soil Vapor Sampling Procedures

Following completion of boring advancement, soil vapor probes were installed at approximate depths of 5 and 15 feet bgs in borings SV1, SV3, and SV5, and at approximate depths of 5, 15, and 25 feet bgs in borings SV2, SV4, and SV6 to facilitate the collection of soil vapor samples. Borings that were advanced deeper than approximately 25.5 feet bgs were backfilled with #8 granular bentonite hydrated in lifts with potable water via a tremie pipe to 25.5 feet bgs. Soil vapor probes were constructed using approximately 1/4-inch diameter Teflon tubing connected to a 9-inch long porous Teflon soil vapor sample probe. 5-foot probes were each set within approximately 1 foot of washed #3 sand placed around the sample probe from approximately 4.5 to 5.5 feet bgs; deeper probes were constructed similarly with adjusted depths and backfilled with granular bentonite hydrated with potable water between probe depths. The remainder of the boring annular space was backfilled with granular bentonite hydrated with potable water via a tremie pipe to create a seal. After the probes had equilibrated for at least 2 hours, soil vapor samples were collected in glass bulbs and analyzed in a state ELAP certified on-Site mobile laboratory operated by American Analytics for VOCs using EPA Method 8260B (modified for soil vapor analysis) and GRO (C4-C12) using the California LUFT method. The soil vapor sampling and analysis was performed in accordance with the July 2015 California Environmental Protection Agency's Advisory – Active Soil Gas Investigations (Advisory), including performing shut-in tests of sampling equipment prior to each sample collection, and collection and analysis of blank and duplicate samples.

Following completion of sampling activities, the probe tubing was removed and the surface of each boring was patched with asphalt or concrete to match surrounding conditions.

4.2 Sample Documentation

Sample identifiers included a sample-specific identification code linking the sample to descriptive information recorded in field documents (including boring identification and sample depth). A

separate label was affixed to each sample container with a self-adhesive backing. All samples submitted to the laboratory were recorded on a chain-of-custody form.

4.3 Equipment Decontamination

All reusable sampling equipment used to collect samples was decontaminated between sample locations by washing with a plastic scrub brush using laboratory-grade detergent and potable water, followed by rinsing twice with potable water.

4.4 Equipment Calibration and Maintenance

GSI used a photoionization detector (PID) to screen recovered soil and to monitor the work area during investigation field activities for the presence of VOCs. GSI maintained and calibrated the PID according to manufacturer specifications. GSI calibrated the PID before starting work activities and verified PID calibration during the field activities.

4.5 Sample Packaging, Shipment and Chain-of-Custody

Soil samples were placed in resealable plastic bags and stored in an ice-filled cooler until transportation by GSI to Test America in Irvine, California, a state ELAP certified laboratory. Chain-of-custody procedures were followed to ensure field sample integrity and tracking of sample custody. GSI completed chain-of-custody records for each sample. Chains-of-custody for soil samples are included with the laboratory analytical report presented in Appendix A.

4.6 Sample Analysis

The results of soil and soil vapor analyses are discussed in the following subsections.

4.6.1 Soil

One soil sample from each of the borings at SV1, SV3, and SV5, and three soil samples from each of the borings at SV2, SV4, and SV6 were analyzed by Test America for VOCs using EPA Method 8260B. One soil sample from each of the borings at SV1 and SV5, and three soil samples from each of the borings at SV2, SV4, and SV6 were analyzed for total petroleum hydrocarbons (TPH) using U.S. EPA Method 8015B for GRO (C4-C12), DRO (C13-22), and ORO (C23-C40). One soil sample from SV5 and three soil samples from each of the borings at SV4 and SV6 were analyzed for tetraethyl lead by McCampbell Analytical, Inc. using Cal/EPA Department of Toxic Substances Control (DTSC) Method 939-M. One soil sample from each of the borings at SV1, SV3, and SV5, and three soil samples from each of the borings at SV2, SV4, and SV6 were analyzed for CAM-17 Metals using EPA Method 6020.

4.6.2 Soil Vapor

Soil vapor samples were analyzed by American Analytics for:

- VOCs using EPA Method 8260B (modified for vapor analysis), and
- TPH for GRO (C4-C12) using CA LUFT/U.S. EPA Method 8015B.

4.7 Data Quality Summary

The field and laboratory quality control results indicate that the sampling and analyses performed in generating the data for this investigation were consistent with the analytical methods and provided data suitable for project objectives. No target analytes were detected in method blank samples, and the large majority of surrogate recoveries were within laboratory limits. The percent recovery for a few CAM-17 Metals in soil was slightly low in the matrix spike (MS) and/or matrix spike duplicate (MSD) sample; however, they were within 1-2% of the acceptable range and

therefore, acceptable for the purposes of this investigation. However, the percent recovery for Antimony (55 and 57%) is well below the acceptable range (80-120% recovery), producing a potential low reporting bias. Although these values are biased low, they are also well below the residential and industrial risk-based screening levels and hazardous waste classification criteria, and therefore, are considered reasonable for the purposes of this report. In addition, antimony is not considered a likely chemical of concern for the site based on historical site use information and is also not commonly present above risk-based screening criteria or hazardous waste limits at background levels in Southern California soil. Overall, the data generated during the sampling are acceptable, are suitable for use in assessing subsurface soil conditions at the site, and can be used for decision-making purposes.

5.0 RESULTS

This section presents the results of the site investigation, including a presentation of the analytical results from soil and soil vapor sampling, and a comparison of analytical results to risk-based screening levels and hazardous waste classification criteria. The analytical results are summarized in Tables 1, 2 and 3, and the laboratory analytical reports are provided in Appendices A and B.

5.1 Soil Lithology

Soil recovery during drilling generally was good, with few intervals of no recovery, which primarily appeared to be associated with zones of coarser-grained sediments. Soil types encountered to 30 feet bgs varied from clays to clayey sands with fine gravels present in some units. Lithologic descriptions of each boring were made in accordance with the Unified Soil Classification System on boring logs, included as Appendix C. Intervals of recovery and PID core head space screening results are also shown on the soil boring logs in Appendix C.

No groundwater was encountered during the site investigation to the maximum explored depth of 30 feet bgs. The depth to groundwater at a dry cleaner property located two blocks to the south at 1310 Vine Street has varied between approximately 27 and 35 feet below grade between 2008 and 2015, and the groundwater flow direction at this property during this time period was toward the southwest.⁴

5.2 Soil Analytical Results

During this site investigation, a total of 27 soil samples were collected from depths between 5 and 30 feet bgs and submitted to Test America on hold for potential chemical analysis. Selected soil samples were analyzed for VOCs, TPH, tetraethyl lead, and CAM-17 Metals. The soil sample results from this investigation are presented in Tables 1 and 2. Laboratory analytical reports are provided in Appendix A.

Only trace to very low concentrations of ORO were detected in four samples (Table 2). ORO was reported at an estimated concentration of 2.6 J milligrams per kilogram (mg/kg) in the 10-foot sample from boring SV1 (sample "SV1-10", identified in the analytical laboratory report [Appendix A] as "J-qualified." This indicates the reported concentration is below the laboratory reporting limit, or RL, but above the method detection limit, or MDL). ORO was also reported at an estimated concentration of 2.7 J mg/kg for SV4-25, 4.0 J mg/kg for SV5-15, and 14 mg/kg for SV6-20. No GRO, DRO, or VOCs were detected in any of the soil samples analyzed.

⁴ Murex Environmental, Inc. 2015. Site Investigation Report, Paragon Cleaners, 1310 Vine Street, Los Angeles, California. October 15.

Relatively low concentrations of CAM-17 metals were reported in twelve samples: SV1-10, SV2-10, SV2-15, SV2-23, SV3-15, SV4-5, SV4-15, SV4-25, SV5-15, SV6-10, SV6-20, and SV6-30. The results are summarized in Table 1. Concentrations of metals are reasonably consistent, varying only slightly between sample locations and depths. Seven of these twelve samples were also analyzed for tetraethyl lead (Table 1). No tetraethyl lead was detected in these seven samples (SV4-5, SV4-15, SV4-25, SV5-15, SV6-10, SV6-20, and SV6-30).

The analytical results of soil samples were compared to risk-based screening levels to evaluate potential human health risks and to define the extent of potential impacts at the site. Screening levels (SLs) for soil, which include U.S. EPA Regional Screening Levels (RSLs)⁵ and DTSC-modified SLs, were selected in accordance with recommendations from DTSC HHRA Note 3⁶. RSLs and DTSC-modified SLs are generic screening levels derived by U.S. EPA and DTSC using standard default exposure assumptions that represent reasonable maximum exposure (RME) conditions and U.S. EPA- or DTSC-recommended toxicity values. These screening levels correspond to concentrations in soil that are not expected to pose a significant human health risk. In general, generic screening levels are more stringent (i.e., more likely to significantly overstate actual risks) than site-specific screening levels, due to the conservative nature of the assumptions used. Thus, when contaminant concentrations are below generic U.S. EPA RSLs and DTSC-modified SLs, no further action or study is typically warranted. Further, U.S. EPA emphasizes that these screening levels are not cleanup standards; however, additional evaluation may be warranted to further evaluate potential health risks of concentrations exceeding screening levels.

All concentrations of ORO and CAM-17 Metals found in soil are well below U.S. EPA and DTSC residential screening levels and/or typical background concentrations (arsenic was reported between 1.9 and 4.1 mg/kg, which is well within background concentrations [upper bound of 11 mg/kg] in California soils⁷ and less than 6 mg/kg, the background concentration established by DTSC for Los Angeles Unified School District [LAUSD] school sites).⁸ Reported concentrations of metals are also well below the total threshold limit concentrations (TTLCs) established for hazardous waste classification purposes (compared for the purpose of potential future soil excavation and disposition planning).

5.3 Soil Vapor Analytical Results

During this site investigation, a total of 15 soil vapor samples (and one duplicate soil vapor sample) were collected and analyzed in an on-site mobile laboratory for VOCs and GRO. Soil vapor samples were collected from approximately 5 and 15 feet bgs at each of the SV1, SV3, and SV5 boring locations, and approximately 5, 15, and 25 feet bgs at each of the SV2, SV4, and SV6 boring locations. Laboratory analytical results are summarized in Table 3 and laboratory reports are included as Appendix B.

Low, estimated concentrations of GRO were detected in the 15- and 25-foot bgs range of boring SV6 (3.2 J and 4.6 J [$\mu\text{g/L}$], respectively). Low concentrations of 4-isopropyltoluene were detected in boring SV6 at 5, 15, and 25 feet (0.038 J, 0.34, 0.48 [$\mu\text{g/L}$], respectively). A low concentration of benzene was detected in SV6-25, and ethylbenzene was detected in SV6-15 and SV6-25. Concentrations of toluene were reported in all samples except for SV5-5. O-xylene

was detected only in SV6-15 and m,p-xylene was detected in 10 of the 15 samples (SV1-5, SV1-15, SV2-15, SV3-15, SV4-5, SV4-25, SV5-15, SV6-5, SV6-15, and SV6-25). SV6-15 had the only detection of 1,2,4-trimethylbenzene.

The analytical results for soil vapor samples were compared to risk-based screening levels to evaluate human health risks associated with potential exposure to VOCs migrating from the subsurface into indoor air of a residential or commercial building. Risk-based screening levels for VOCs in soil vapor were derived using residential and industrial air screening levels recommended in DTSC HHRA Note 3⁹ and the DTSC default attenuation factor (AF) for an existing residential (0.002) and commercial building (0.001) and future residential (0.001) and commercial building (0.0005)¹⁰. Concentrations of GRO reported in soil vapor were compared to Regional Water Quality Control Board, San Francisco Region (SFRWQCB) environmental screening levels (ESLs) for TPH gasoline in soil vapor.¹¹ As shown in Table 3, the reported low concentrations of all VOCs found in soil vapor are well below the residential and commercial/industrial soil vapor screening levels.

Consistent with U.S. EPA petroleum vapor intrusion (PVI) guidance,¹² available site characterization data and historical site information were considered to evaluate whether the distance between potential PHC sources at the Site and overlying buildings may be within the vertical separation distances established by U.S. EPA. When the distance between a known or suspected PHC source and an overlying building is greater than the vertical separation distances established by U.S. EPA, vapors associated with the PHC source are not likely to intrude into the building or pose a health threat to the building occupants. For dissolved PHC sources that are separated from overlying buildings by more than 6 feet of clean, biologically active soil, the potential threat of PVI is negligible and further investigation for PVI is generally unnecessary. If the distance separating an LNAPL (light non-aqueous phase liquid) source of PHC vapor and the overlying building is greater than 15 feet, additional investigation is not typically warranted.

Sampling activities at the site in 1998 and 2016 to depths of approximately 30 feet below grade did not encounter shallow groundwater or PHC sources in soil. Based on consideration of the U.S. EPA PVI vertical separation distances, the depth to groundwater, the proximity of the sampling locations to the historical gasoline service station, and the results of the sampling activities described herein, the potential threat of vapor intrusion into the overlying site buildings is negligible and further investigation is not warranted.

6.0 CONCLUSIONS

Based on the limited Phase II activities conducted for this June 2016 investigation and in 1998, it does not appear that significant impacts are likely present at the Site. No chlorinated VOCs (commonly used in cleaning solvents) were identified in soil in 1998 on the southern portion of the site or in soil or soil vapor samples collected in June 2016 on the northern and southern portions of the site. Low concentrations of few volatile fuel constituents and/or aromatic hydrocarbon solvents were detected in soil vapor samples from approximate depths of 5, 15, and/or 25 feet below grade, primarily in the soil vapor samples collected on the southern portion

of the site, along the general western and eastern boundaries of historical gasoline service station and automotive repair facilities, respectively. The few low concentrations of VOCs, however, are below current U.S. EPA and Cal/EPA screening criteria for both existing and future residential land use. In addition, in soil samples collected from depths between 5 and 30 feet in June 2016, VOCs, GRO, and DRO were not detected at reporting limits well below current U.S. EPA and Cal-EPA screening levels for residential/unrestricted land use. Only low concentrations of ORO were detected in a few soil samples, all of which are several orders of magnitude below current SFRWQCB ESLs for residential land use. In addition, concentrations of metals in soil are within background concentrations and below TTLCs established for hazardous waste classification purposes (compared for future soil excavation and disposition planning).

In our opinion, however, the potential for abandoned-in-place USTs and localized soil impacts beneath the southern building and between sampling locations, remains a potential environmental issue. The 1998 and 2016 subsurface assessment data suggest significant impacts are not likely at the site and that PHC sources, if present, are not likely within distances that would pose a risk to occupants of the existing overlying buildings. However, if abandon-in-place USTs are present, with or without localized soil impacts, their removal during redevelopment would be required under permit from the City of Los Angeles Fire Department, which serves as the local environmental oversight agency for UST removal and associated soil impacts.

GSI understands that Tooley intends to continue to operate the site in its current configuration for approximately 1 to 2 years during planning for redevelopment and will then excavate the site to approximately 30 feet below grade for the construction of two stories of underground parking with an overlying mixed use structure. Project planning and redevelopment activities should consider the potential presence of historical abandoned USTs and/or localized soil impacts, which could be addressed during site excavation.

1 Volatile organic compounds (VOCs) reported in at least one sample above the method detection limit are presented in Table 2. Non-detects are reported as less than the method detection limit (for example, <0.050 µg/L). All VOCs were analyzed by U.S. Environmental Protection Agency (EPA) Method 8260M.

2 J = Estimated concentration below the laboratory reporting limit. **Bold** indicates detected compounds.

Sample Identification	Sample Depth (feet below grade)	Purge Volume	Units	Total Petroleum Hydrocarbons (TPH) Gasoline Range Organics (GRO)	4-Isopropyltoluene	Benzene	Ethylbenzene	Toluene	o-Xylenes	m,p-Xylenes	1,2,4-Trimethylbenzene

³ With the exception of TPH (GRO), the commercial soil vapor screening levels (SLs) were calculated using the more conservative (lower) of the DTSC (Cal/EPA 2016)-recommended commercial air SL or USEPA (2016) regional screening levels (RSLs) for commercial air and the DTSC (Cal/EPA 2011) default attenuation factors (AFs) for an existing (0.001) and future (0.0005) commercial building. DTSC SLs and USEPA RSLs in air are not available for 4-isobutyltoluene. Isopropylbenzene was identified as a surrogate for isopropyltoluene based on structural similarity; therefore, the USEPA air RSLs for isobutylbenzene were combined with default AFs to develop the soil vapor screening levels for 4-isobutylbenzene shown in this table. For TPH (GRO), the SFRWQCB (2016) Environmental Screening Levels (ESLs) were selected as soil vapor screening levels.

⁴ The residential soil vapor screening levels (SLs) were calculated using the more conservative (lower) of the DTSC (Cal/EPA 2016)-recommended residential air SL or USEPA (2016) regional screening levels (RSLs) for residential air and the DTSC (Cal/EPA 2011) default attenuation factors (AFs) for an existing (0.002) and future (0.001) residential building. DTSC SLs and USEPA RSLs in air are not available for 4-isobutyltoluene. Isopropylbenzene was identified as a surrogate for isopropyltoluene based on structural similarity; therefore, the USEPA air RSLs for isobutylbenzene were combined with default AFs to develop the soil vapor screening levels for 4-isobutylbenzene shown in this table. For TPH (GRO), the SFRWQCB (2016) Environmental Screening Levels (ESLs) were selected as soil vapor screening levels.
