Comments for Public Posting: I STRONGLY oppose the vaccine passport/Pass required to have access to stores, gyms, theatres etc. Anyone vaccinated can still transmit the virus, in fact vaccinated have a higher viral load when they catch COVID than unvaccinated- professor Montagne, prix Nobel de médecine feels this vaccine needs more studying. - A reporter from the BBC died from COVID Vaccine complications as reported by the CORONER, and published by the Guardian newspaper this week- the British medical journal recently published an article about the fact that the Pfizer vaccine was given approval after 6 months when its safety protocol was based on TWO years! And scientists are concerned about it. They also published another article about how public comments were canceled as part of the fda approval process, effectively removing any chance to have a balanced conversation about the side effects reported by thousands of doctors about these vaccines. There are many people who are medically fragile and cannot be vaccinated, yet they cannot get a medical exemption due to the CDC's stringent contraindications. Just like the oral polio vaccine was removed from public use due to its devastating side effects (but was initially applauded just like the Covid vaccine currently is), the Covid vaccine may end up being a remedy that, with insights, leaders had wished they had paused before mandating it. Are you, council members, ready to be held responsible for any serious side effects and deaths resulting from this vaccine? If you mandate it, you should be liable.

Comments for Public Posting: Any type of discussion about vaccine passports, mandated vaccines, or anything related to this should be ended immediately. This will affect the majority of minorities because they have the least amount of vaccinations. This is due to distrust in the government, which we are very clearly seeing right now. There is no transparency whatsoever going on, and data is being cherrypicked to fit your agenda. I have worked with the public closely since this all started and I take care of my body naturally, why is there no discussion about getting Vitamin D, supplements, or exercise? You can't inject health and this is very unconstitutional since everyone has the choice to get a medical procedure if they want it. Many scientists and doctors from around the world have mentioned that mass vaccinating populations will lead to more harm than good. This will create more variants that are vaccine resistant, so when will this end? The goalposts keep being pushed back and we are not in a state of emergency for awhile now. Studies in Israel have shown that over 60% of the population is vaccinated, and yet they are seeing majority of vaccinated individuals in the hospitals. Why is there no discussion about natural immunity, which has been proven to be far more superior than vaccinated immunity? Dr. John Ioannidis from Stanford who is a Professor of Medicine, Epidemiology, and Population Health, and Biomedical Data Science came out with the infection survival rate for covid. For individuals between the ages of 30-39 years the infection survival rate is 99.969%, so why are we trying to vaccinate everyone when this is highly survivable? Why not follow the guidelines of Sweden, who never had lockdowns, mandates, and offered vaccines as a CHOICE and they have been doing well. Threatening to take away people's jobs, ability to go places will not have the desirable outcome that you might think it will-this will hurt our economy because people will not cave so easily.
