APPENDIX N

Project Consistency with SCAG 2020-2045 RTP/SCS and Community Plan Mitigation Measures

Public Resources Code (PRC) Section 21155.2, which implements the Sustainable Communities Strategy requires that a Transit Priority Project incorporate all feasible mitigation measures, performance standards, or criteria from prior applicable Environmental Impact Reports (EIR), including the 2020-2045 RTP/SCS Program EIR (RTP/SCS PEIR), which was certified in September 2020. The RTP/SCS PEIR identifies mitigation measures that have been incorporated to avoid, reduce, and mitigate significant impacts of the RTP/SCS. In the RTP/SCS Mitigation Monitoring and Reporting Program (SCAG MMRP), the Southern California Association of Governments (SCAG) identified mitigation measures that are considered "SCAG Mitigation Measures" and "Project-Level Mitigation Measures". Project-Level Mitigation Measures are provided "as suggested approaches to help jurisdictions and project proponents achieve the collective goal of mitigating impacts at the project level". SCAG states that the identified Project-Level Mitigation Measures are not intended to be exclusive nor prescriptive in nature or application.

In accordance with the requirements set forth in PRC Section 21155.2, the Lead Agency, the City of Los Angeles, has reviewed all of the mitigation measures in the SCAG MMRP and the Community Plan MMP, and determined their applicability to the Project. For each such mitigation measure, the City considered whether to use the SCAG MMRP and/or the Community Plan MMP mitigation measure or an equally effective City mitigation measure or federal, state, regional, or City regulation. The City's applicability determination is provided in Table 1 below and is focused on the Project-Level Mitigation Measures as identified by the SCAG MMRP and the Community Plan MMP.

Project-Level Mitigation Measures				
Impacts	(Implemented by Lead Agency)	Project Applicability		
Aesthetics (AES)	(promoned by Loud 1 goney)	. roject ipplications,		
AES-1: Potential to have a	SCAG PMM-AES-1: In accordance with provisions of	Not Applicable. Senate Bill (SB) 743 sets forth		
substantial adverse effect on a	sections 15091(a)(2) and 15126.4(a)(1)(B) of the State	new guidelines for evaluating project		
scenic vista.	CEQA Guidelines, a Lead Agency for a project can and	transportation impacts under CEQA: "Aesthetic

	potential aesthetic impacts to scenic vistas, as	residential, or employment center project on an		
	applicable and feasible. Such measures may include	infill site within TPA shall not be considered		
	the following or other comparable measures identified	significant impacts on the environment." As		
	by the Lead Agency:	previously, discussed PRC Section 21099		
	 a) Use a palette of colors, textures, building 	defines "transit priority area" as an area within		
	materials that are graffiti-resistant, and/or	0.5 mile of a major transit stop, an "employment		
	plant materials that complement the	center project" as "a project located on property		
	surrounding landscape and development.	zoned for commercial uses with a floor area		
	b) Use contour grading to better match	ratio of no less than 0.75 and that is located		
	surrounding terrain. Contour edges of major	within a transit priority area, and an "infill site" as		
	cut-and-fill to provide a more natural looking	a lot located within an urban area that has been		
	finished profile.	previously developed, or on a vacant site where		
	c) Design new corridor landscaping to respect	at least 75 percent of the perimeter of the site		
	existing natural and man-made features and	adjoins, or is separated only by an improved		
	to complement the dominant landscaping of	public right-of-way from, parcels that are		
	the surrounding areas.	developed with qualified urban uses. This State		
	d) Replace and renew landscaping along	law supersedes the aesthetic impact thresholds		
	corridors with road widenings, interchange projects, and related improvements.	in the 2006 L.A. CEQA Thresholds Guide, including those established for aesthetics,		
	e) Retain or replace trees bordering highways,	obstruction of views, shading, and nighttime		
	so that clear-cutting is not evident.	illumination.		
	f) Provide new corridor landscaping that	The related City of Los Angeles Department of		
	respects and provides appropriate transition	City Planning Zoning Information (ZI) File ZI No.		
	to existing natural and man-made features	2452 provides further instruction concerning the		
	and is complementary to the dominant	definition of transit priority projects and that		
	landscaping or native habitats of surrounding	"visual resources, aesthetic character, shade		
	areas.	and shadow, light and glare, and scenic vistas		
	g) Reduce the visibility of construction staging	or any other aesthetic impact as defined in the		
	areas by fencing and screening these areas	City's CEQA Threshold Guide shall not be		

Project-Level Mitigation Measures			
Impacts	(Implemented by Lead Agency)	Project Applicability	
	with low contrast materials consistent with the surrounding environment, and by revegetating graded slopes and exposed earth surfaces at the earliest opportunity. h) Use see-through safety barrier designs (e.g., railings rather than walls)	considered an impact for infill projects within TPAs pursuant to CEQA." PRC Section 21099 applies to the Project. Therefore, the Project is exempt from aesthetic impacts. Regardless of PRC Section 21099, it is noted that there are no views of mountains, the beach or Pacific Ocean, or other such similar scenic vistas available from the Project Site or the streets immediately surrounding the Project Site. Therefore, the Project would result in less than significant impacts on scenic vistas. As such, the Project would have no impact with respect to aesthetics and therefore no mitigation measures are required.	
AES-2: Potential to substantially degrade the existing visual character.	SCAG PMM-AES-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to address potential aesthetic impacts that substantially degrade visual character, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Minimize contrasts in scale and massing between the projects and surrounding natural forms and development, minimize their intrusion into important viewsheds, and use contour grading to better match surrounding terrain in accordance with county and city hillside ordinances, where applicable. b) Design landscaping along highway corridors to add significant natural elements and visual interest to soften the hard-edged, linear transportation corridors. c) Require development of design guidelines for	Not Applicable. As described above, PRC Section 21099, enacted by Senate Bill 743, provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Regardless of PRC Section 21099, it is noted that the impact associated with AES-2 has been revised in the CEQA Guidelines Appendix G checklist since the RTP/SCS was published. The checklist now analyzes if, for projects in an urbanized area, the project would conflict with applicable zoning and other regulations governing scenic quality. The Project would not conflict with zoning, including the Westwood/Pico Pedestrian Oriented District overlay. Therefore, impacts would be less than significant and no mitigation measures are	

2020 2040 Regional Trans	Project-Level Mitigation Measures	
Impacts	(Implemented by Lead Agency)	Project Applicability
Impacts	projects that make elements of proposed	required.
	buildings/facilities visually compatible, or	roquirou.
	minimize visibility of changes in visual quality	
	or character through use of hardscape and	
	softscape solutions. Specific measures to be	
	addressed include setback buffers,	
	landscaping, color, texture, signage, and	
	lighting criteria.	
	d) Design projects consistent with design	
	guidelines of applicable general plans.	
	e) Require that sites are kept in a blight/nuisance-	
	free condition. Remove blight or nuisances that	
	compromise visual character or visual quality	
	of project areas including graffiti abatement,	
	trash removal, landscape management,	
	maintenance of signage and billboards in good	
	condition, and replace compromised native	
	vegetation and landscape.	
	f) Where sound walls are proposed, require	
	sound wall construction and design methods	
	that account for visual impacts as follows:	
	- use transparent panels to	
	preserve views where sound walls	
	would block views from	
	residences;	
	- use landscaped earth berm or a	
	combination wall and berm to minimize the apparent sound wall	
	height;	
	- construct sound walls of materials	
	whose color and texture	
	complements the surrounding	
	landscape and development.	
	g) Design sound walls to increase visual interest,	

	Project-Level Mitigation Measures	During Annual III
Impacts	(Implemented by Lead Agency)	Project Applicability
	reduce apparent height, and be visually	
	compatible with the surrounding area; and	
	landscape the sound walls with plants that	
	screen the sound wall, preferably with either native vegetation or landscaping that	
	native vegetation or landscaping that complements the dominant landscaping of	
	surrounding areas.	
AES-3: Potential to create a new	SCAG PMM-AES-3: In accordance with provisions of	Not Applicable. As described above, PRC

Impacts	(Implemented by Lead Agency)	Project Applicability
	supply, marketing, etc. that enhance the	
	commercial viability of retained agricultural	
	lands.	
	e) Minimize severance and fragmentation of	
	agricultural land by constructing underpasses	
	and overpasses at reasonable intervals to	
	provide property access.	
	f) Use berms, buffer zones, setbacks, and	
	fencing to reduce conflicts between new	
	development and farming uses and protect the	
	functions of farmland.	
	SCAG PMM-AG-3: Project level mitigation measures	
	can and should be considered by Lead Agencies as	
	applicable and feasible. Measures to reduce	
	substantial adverse effects, through the conversion of	
	Farmland to maximum extent practicable, as	
	determined appropriate by each Lead Agency, may	
	include the following, or other comparable measures:	
	a) Minimize construction related impacts to	
	agricultural and forestry resources by locating	
	materials and stationary equipment in such a way as to prevent conflict with agriculture and	
	forestry resources.	
	SCAG PMM-AG-4: Project level mitigation measures	
	can and should be considered by Lead Agencies as	
	applicable and feasible. Measures to reduce	
	substantial adverse effects, through the conversion of	
	Farmland, to the maximum extent practicable, as	
	determined appropriate by each Lead Agency, may	
	include the following, or other comparable measures:	
	a) Design proposed projects to minimize, to the	
	greatest extent feasible, the loss of the highest	
	valued agricultural land.	
	b) Redesign project features to minimize	

2020-2043 Regional Trail	Transportation Plan / Sustainable Communities Strategy and the Community Plan		
luunaata	Project-Level Mitigation Measures	Duningt Applicability	
Impacts	(Implemented by Lead Agency)	Project Applicability	
	fragmenting or isolating Farmland. Where a		
	project involves acquiring land or easements,		
	ensure that the remaining non-project area is		
	of a size sufficient to allow economically viable		
	farming operations. The project proponents		
	shall be responsible for acquiring easements,		
	making lot line adjustments, and merging		
	affected land parcels into units suitable for		
	continued commercial agricultural		
	management.		
	c) Reconnect utilities or infrastructure that serve		
	agricultural uses if these are disturbed by		
	project construction. If a project temporarily or		
	permanently cuts off roadway access or		
	removes utility lines, irrigation features, or		
	other infrastructure, the project proponents		
	shall be responsible for restoring access as		
	necessary to ensure that economically viable		
	farming operations are not interrupted.		
	SCAG PMM-AG-5: Project level mitigation measures		
	can and should be considered by Lead Agencies as		
	applicable and feasible. Measures to reduce		
	substantial adverse effects, through the conversion of		
	Farmland, to the maximum extent practicable, as		
	determined appropriate by each Lead Agency, may		
	include the following, or other comparable measures:		
	a) Manage project operations to minimize the		
	introduction of invasive species or weeds that		
	may affect agricultural production on adjacent		
	agricultural land. Where a project has the		
	potential to introduce sensitive species or		
	habitats or have other spill-over effects on		
	nearby agricultural lands, the project		
	proponents shall be responsible for acquiring		

Project-Level Mitigation Measures			
Impacts	(Implemented by Lead Agency)	Project Applicability	
AG-2: Potential to conflict with existing zoning for agricultural use, or a Williamson Act contract.	easements on nearby agricultural land and/or financially compensating for indirect effects on nearby agricultural land. Easements (e.g., flowage easements) shall be required for temporary or intermittent interruption in farming activities (e.g., because of seasonal flooding or groundwater seepage). Acquisition or compensation would be required for permanent or significant loss of economically viable operations. SCAG PMM-AG-2: Project level mitigation measures can and should be considered by Lead Agencies as applicable and feasible. Measures to reduce substantial adverse effects on Williamson Act contracts to the maximum extent practicable, as determined appropriate by each Lead Agency, may include the following, or other comparable measures: a) Project relocation or corridor realignment to avoid lands in Williamson Act contracts. b) Establish conservation easements consistent with the recommendations of the Department of Conservation, or 20-year Farmland Security Zone contracts (Government Code Section 51296 et seq.), 10-year Williamson Act contracts (Government Code Section 51200 et seq.), or use of other conservation tools available from the California Department of Conservation Division of Land Resource Protection.	Not Applicable. The Project Site is not zoned for agricultural use, nor are there any agricultural uses currently occurring at the Project Site or within the surrounding area. Additionally, according to the State's most recent Williamson Act land data, neither the Project Site nor surrounding area are under a Williamson Act contract. ² Therefore, no impacts would occur and no mitigation measures are required.	
Air Quality (AQ)	0040 0004 10 4 1

	or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet. k) Ensure that all construction equipment is properly tuned and maintained. l) Minimize idling time to 5 minutes—saves fuel and reduces emissions. m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway. n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators. o) Develop a traffic plan to minimize community impacts as a result of traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites. Project sponsors should consider developing a goal for the minimization of community impacts. p) As appropriate require that portable engines and portable engine-driven equipment units	excavation activities shall be discontinued during periods of high winds (i.e., greater than 15 mph), so as to prevent excessive amounts of dust. • All dirt/soil loads shall be secured by trimming, watering or other appropriate means to prevent spillage and dust. • All dirt/soil materials transported off-site shall be either sufficiently watered or securely covered to prevent excessive amount of dust. • General contractors shall maintain and operate construction equipment so as to minimize exhaust emissions. • Trucks having no current hauling activity shall not idle but be turned off. - In accordance with Sections 2485 in Title 13 of the California Code of Regulations, the idling of all diesel fueled commercial vehicles (weighing over 10,000 pounds) during construction shall be limited to five minutes at any location. - In accordance with Section 93115 in Title 17 of the California Code of Regulations, operation of any stationary, diesel-fueled, compression-ignition engines shall meet specified fuel and fuel additive requirements and emission standards. - The Project shall comply with South Coast Air Quality Management District Rule 1113 limiting the volatile organic compound content of architectural coatings. - The Project shall comply with South Coast Air Quality Management District Rule 1108		

	Project-Level Mitigation Measures	
Impacts	(Implemented by Lead Agency)	Project Applicability
	used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site. q) Require projects to use Tier 4 Final equipment or better for all engines above 50 horsepower (hp). In the event that construction equipment cannot meet to Tier 4 Final engine certification, the Project representative or contractor must demonstrate through future study with written findings supported by substantial evidence that is approved by SCAG before using other technologies/strategies. Alternative applicable strategies may include, but would not be limited to, construction equipment with Tier 4 Interim or reduction in the number and/or horsepower rating of construction equipment and/or limiting the number of construction equipment operating at the same time. All equipment must be tuned and maintained in compliance with the manufacturer's recommended maintenance schedule and specifications. All maintenance records for each equipment and their contractor(s) should make available for inspection and remain onsite for a period of at least two years from completion of construction, unless the individual project can demonstrate that Tier 4 engines would not be required to mitigate	limiting the volatile organic compound content from cutback asphalt. The Project shall install odor-reducing equipment in accordance with South Coast Air Quality Management District Rule 1138. New on-site facility nitrogen oxide emissions shall be minimized through the use of emission control measures (e.g., use of best available control technology for new combustion sources such as boilers and water heaters) as required by South Coast Air Quality Management District Regulation XIII, New Source Review. The mitigation measures related to airport projects, rail projects, port projects, and projects within 500 feet of freeways are not relevant to the Project as it involves a residential development. Furthermore, the Project cannot establish new regulatory standards or requirements, such as setting new engine standards or making improvements and enhancements to California's Smog Check Program.

luon a ata		Project-Level Mitigation Measures	Dunio et A
Impacts		(Implemented by Lead Agency)	Project Applicability
		emissions below significance thresholds.	
		Project sponsors should also consider	
		including ZE/ZNE technologies where	
		appropriate and feasible.	
	r)	Projects located within the South Coast Air	
		Basin should consider applying for South	
		Coast AQMD "SOON" funds which provides	
		funds to applicable fleets for the purchase of	
		commercially available low-emission heavy-	
		duty engines to achieve near-term reduction of	
		NOx emissions from in-use off-road diesel	
		vehicles.	
	s)	Projects located within AB 617 communities	
		should review the applicable Community	
		Emissions Reduction Plan (CERP) for	
		additional mitigation that can be applied to	
		individual projects.	
	t)	Where applicable, projects should provide	
		information about air quality related programs	
		to schools, including the Environmental	
		Justice Community Partnerships (EJCP),	
		Clean Air Ranger Education (CARE), and Why	
		Air Quality Matters programs.	
	u)	Projects should work with local cities and	
		counties to install adequate signage that	
		prohibits truck idling in certain locations (e.g.,	
		near schools and sensitive receptors).	
	v)	As applicable for airport projects, the following	
		measures should be considered:	
		 a. Considering operational improvements 	
		to reduce taxi time and auxiliary power	
		unit usage, where feasible.	
		Additionally, consider single engine	
		taxing, if feasible as allowed per

	guidelines.	
	 b. Set goals to achieve a reduction in 	
	emissions from aircraft operations over	
	the lifetime of the proposed project.	
	c. Require the use of ground service	
	equipment (GSE) that can operate on	
	battery-power. If electric equipment	
	cannot be obtained, require the use of	
	alternative fuel, the cleanest gasoline	
	equipment, or Tier 4, at a minimum.	
	w) As applicable for port projects, the following	
	measures should be considered:	
	a. Develop specific timelines for	
	transitioning to zero emission cargo	
	handling equipment (CHE).	
	b. Develop interim performance	
	standards with a minimum amount of	
	CHE replacement each year to ensure	
	adequate progress.	
	c. Use short side electric power for ships,	
	which may include tugboats and other	
	ocean-going vessels or develop	
	incentives to gradually ramp up the	
	usage of shore power.	
	d. Install the appropriate infrastructure to	
	provide shore power to operate the	
	ships. Electrical hookups should be	
	appropriately sized.	
	e. Maximize participation in the Port of	
	Los Angeles' Vessel Speed Reduction	
	Program or the Port of Long Beach's	
	Green Flag Initiation Program in order	
	to reduce the speed of vessel transiting

BIO 6: Potential to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.	SCAG PMM-BIO-6: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on HCPs and NCCPs, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Consult with the appropriate federal, state, and/or local agency responsible for the administration of HCPs or NCCPs. b) Wherever practicable and feasible, the project shall be designed to avoid lands preserved under the conditions of an HCP or NCCP. c) Where avoidance is determined to be infeasible, sufficient conservation measures to fulfill the requirements of the HCP and/or NCCP, which would include but not be limited to applicable authorization for incidental take pursuant to Section 7 or 10(a) of the federal Endangered Species Act or Section 2081 of the California ESA, shall be developed to support issuance of an incidental take permit or any other permissions required for development within the HCP/NCCP boundaries. The consideration of additional conservation measures would include the measures outlined in SMM-BIO-2, where applicable.	Not Applicable. The Project Site and its vicinity are not part of any draft or adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Therefore, impacts would be less than significant and no mitigation measures are required.

If the archaeologist determines that the discovery is significant, its long-term disposition should be determined in consultation with the affiliated tribe(s); this could include curation with a recognized scientific or educational repository, transfer to the tribe, or respectful reinternment in an area designated by the tribe.	avoidance measures recommended by the consultant and approved by the City must be followed unless avoidance is determined to be unnecessary or infeasible by the City. If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery, excavation) shall be instituted. Thus, Project impacts would be less than significant.	
CULT-2: Potential to disturb human remains, including those interred outside of formal cemeteries, including Native American Sacred Sites.	SCAG PMM-CULT-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to human remains, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) In the event of discovery or recognition of any human remains during construction or excavation activities associated with the project, in any location other than a dedicated cemetery, cease further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the coroner of the county in which the remains are discovered has been informed and has determined that no investigation of the cause of death is required. b) If any discovered remains are of Native American origin, as determined by the county Coroner, an experienced osteologist, or	Consistent. It is unknown whether human remains are located at the Project Site. Any human remains that may have existed near the site surface are likely to have been disturbed or previously removed. Even so, should human remains be encountered unexpectedly during grading or construction activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to PRC Section 5097.98. If human remains of Native American origin are discovered during Project construction, compliance with State laws, which fall within the jurisdiction of the Native American Heritage Commission (PRC Section 5097), relating to the disposition of Native American burials would be required. The regulatory compliance would ensure any found burials are treated in accordance with federal, State, and local	

Impacts (Implemented by Lead Agency) another qualified professional: Contact the County Coroner to contact the NAHC to designate a Native American Most Likely Descendant (MLD). The MLD should make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods. This may include obtaining a qualified archaeologist to properly excavate the human remains. In some cases, it is necessary for the Lead Agency, qualified archaeologist, or developer to also reach out to the NAHC to coordinate and ensure notification in the event the Coroner is not available. If the NAHC is unable to identify a MLD, or the MLD falls to make a recommendation within 48 hours after being notified by the commission, or the landowner or his representative rejects the recommendation of the MLD and the mediation by the NAHC falls to provide measures acceptable to the landowner, obtain a culturally affiliated Native American monitor, and an archaeologist, if recommended by the Native American human remains and any associated grave goods, with appropriate dignity, on the property and in a location that is not	2020-2043 Regional Trans	Project-Level Mitigation Measures	drategy and the community rian

	g) Advance notification to county and city emergency operations offices of all crude oil and hazardous materials shipments, including a contact number that can provide real-time information in the event of an oil train derailment or accident; h) Quarterly hazardous commodity flow information, including classification and characterization of materials being transported, to all first response agencies (49 Code Fed. Regs. 15.5) along the mainline rail routes used by trains carrying hazardous materials.	renovation or demolition activity, the Phase I ESA also recommended that a lead survey should be conducted of any suspected lead-containing materials (including paint) that are likely to be disturbed. To further minimize risks associated with ACMs and LBP, regulatory compliance would be implemented as part of the Project that would require that prior to demolition activities, an investigation for ACMs would be conducted and identified asbestos shall be abated in accordance with the SCAQMD's rule 1403, as well as other applicable City, State, and federal regulations. In addition, regulatory compliance would be implemented as part of the Project that would require that prior to demolition activities, an investigation for LBP would be conducted and any identified LBP would be abated in accordance with applicable City, State, and federal regulations.
HAZ-3: Potential to emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one quarter mile of an existing or proposed school.	SCAG PMM-HAZ-3: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to the release of hazardous materials within one-quarter mile of schools, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Where the construction and operation of projects involves the transport of hazardous materials, avoid transport of such materials	Not Applicable. As described above, during construction and operation, the Project would not emit or handle hazardous materials or substances other than those typically used in other residential developments.

	Project-Level Mitigation Measures	
Impacts	(Implemented by Lead Agency)	Project Applicability
	within one-quarter mile of schools, when school is in session, wherever feasible. b) Where it is not feasible to avoid transport of hazardous materials, within one-quarter mile of schools on local streets, provide notifications of the anticipated schedule of transport of such materials.	
HAZ-4: Potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment.	SCAG PMM-HAZ-4: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to projects that are located on a site which is included on the Cortese List, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) For any listed sites or sites that have the potential for residual hazardous materials as a result of historic land uses, complete a Phase I Environmental Site Assessment, including a review and consideration of data from all known databases of contaminated sites, during the process of planning, environmental clearance, and construction for projects. b) Where warranted due to the known presence of contaminated materials, submit to the appropriate agency responsible for hazardous materials/wastes oversight a Phase II Environmental Site Assessment report if warranted by a Phase I report for the project site. The reports should make recommendations for remedial action, if appropriate, and be signed by a Registered	Not Applicable: As part of the Phase I ESA, regulatory databases such as those required by California Government Code Section 65962.5 were reviewed for the Project Site and properties within the standard search radii. The databases searched as a result of Government Code Section 65962.5 are known as the "Cortese List" and include EnviroStor, GeoTracker, and other lists compiled by the California Environmental Protection Agency including Leaking Underground Storage Tank Sites, Solid Waste Disposal Sites, Active Cease and Desist Orders, and Cleanup and Abatement Orders. No hazardous materials that may pose a risk at or to the Project Site were listed in the databases. Therefore, construction and operation of the Project would not pose an environmental hazard to surrounding sensitive uses or the environment, and, this mitigation measure does not apply. As described under HAZ-2, potential risks to residents, visitors, and employees on the Project Site would be minimal during operation of the Project. However, to further minimize risks associated with ACMs and LBP, an investigation for ACMs would be conducted and

	and feasible.	
HYD-2: Potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level that would not support existing land uses or planned uses for which permits have been granted).	SCAG PMM-HYD-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects from violation of any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Avoid designs that require continual dewatering where feasible. For projects requiring continual dewatering facilities, implement monitoring systems and long-term administrative procedures to ensure proper water management that prevents degrading of surface water and minimizes adverse impacts on groundwater for the life of the project, Construction designs shall comply with appropriate building codes and standard practices including the Uniform Building Code. b) Maximize, where practical and feasible, permeable surface area in existing urbanized areas to protect water quality, reduce flooding, allow for groundwater recharge, and preserve wildlife habitat. Minimize new impervious surfaces, including the use of in-lieu fees and	Not Applicable. Operation of the Project would use a municipal water supply and does not propose the use of any wells or other means of extracting groundwater. The City imports the majority of its potable water supply from sources outside the Los Angeles Basin. The Project does not involve the extraction of groundwater and it would not result in a reduction in aquifer volume or lower the local groundwater table. Additionally, operation of the Project would not require continual dewatering or otherwise interfere with any groundwater recharge activities within the area. Under the Project, the amount of impermeable surface area would be increased comparatively. According to the Geotechnical Report (included as Appendix I to this document), the historically highest groundwater level recorded in this area of Los Angeles is 40 feet below the ground surface. Therefore, the construction and operation of the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge and the Project would not impede sustainable groundwater management of the West Coast groundwater basin.
	 off-site mitigation. c) Avoid construction and siting on groundwater recharge areas, to prevent conversion of those

regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.	substantial adverse effects that physically divide a community, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) When an inconsistency with the adopted general plan policy or land use regulation (adopted for the purpose of avoiding or mitigating an impact) is identified modify the transportation or land use project to eliminate the conflict; or, determine if the environmental, social, economic, and engineering benefits of the project warrant an amendment to the general plan or land use regulation.	designation. The Project would not involve a General Plan amendment or zone change. The Project is consistent with the existing General Plan designation of Neighborhood Commercial as it proposes a mixed-use project within close proximity to a variety of public transit options. The Project would include residential units that would provide much needed housing in a transit friendly location and ground floor commercial space. The Project would be consistent with the applicable objectives and policies set forth in the City's plans and zoning including the General Plan, Community Plan, Planning and Zoning Code, Los Angeles Green Building Code, and the Walkability Checklist. The Project would be consistent with all local plans and zoning while fulfilling regional priorities of developing residential uses in close proximity to high quality transit. Therefore, the Project would not result in a conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project and no mitigation measures are required.

j	Project-Level Mitigation Measures (Implemented by Lead Agency) of mineral resources that could be of value to the region, as applicable and feasible. Such measures may include the following or other comparable measures	Project Applicability activities, nor are any such activities presently occurring on the Project Site. Therefore, no
mineral resource recovery site.	of mineral resources that could be of value to the region, as applicable and feasible. Such measures may	activities, nor are any such activities presently
j	region, as applicable and feasible. Such measures may	•
	identified by the Lead Agency: a) Provide for the efficient use of known aggregate and mineral resources or locally important mineral resource recovery sites, by ensuring that the consumptive use of aggregate resources is minimized and that access to recoverable sources of aggregate is not precluded, as a result of construction, operation and maintenance of projects. b) Where avoidance is infeasible, minimize impacts to the efficient and effective use of recoverable sources of aggregate through measures that have been identified in county and city general plans, or other comparable measures such as: • Recycle and reuse building materials resulting from demolition, particularly aggregate resources, to the maximum extent practicable. • Identify and use building materials, particularly aggregate materials, resulting from demolition at other construction sites in the SCAG region, or within a reasonable hauling distance of the project site.	impact would occur and no mitigation measures are required.

Impacts	Project-Level Mitigation Measures (Implemented by Lead Agency)	Project Applicability
	 Avoid or reduce impacts on known aggregate and mineral resources and mineral resource recovery sites through the evaluation and selection of project sites and design features (e.g., buffers) that minimize impacts on land suitable for aggregate and mineral resource extraction by maintaining portions of MRZ-2 areas in open space or other general plan land use categories and zoning that allow for mining of mineral resources. 	
Noise		
NOISE-1: Result in exposure of persons to or generation of noise levels in excess of local standards; substantial permanent increase in noise level, substantial temporary increase in noise levels.	scag PMM-Noise-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects that physically divide a community, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Install temporary noise barriers during construction. b) Include permanent noise barriers and sound-attenuating features as part of the project design. Barriers could be in the form of outdoor barriers, sound walls, buildings, or earth berms to attenuate noise at adjacent sensitive uses. c) Schedule construction activities consistent with the allowable hours pursuant to applicable general plan noise element or noise ordinance. d) Post procedures and phone numbers at the construction site for notifying the Lead Agency staff, local Police Department, and construction contractor (during regular construction hours	Consistent. The Project conforms with this Mitigation Measure as it is subject to regulatory compliance measures as well as incorporation of PMs that avoid or reduce the significant effects of noise impacts that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. These Project Measures (PM) are as follows: PM-NOISE-1: Construction and demolition shall be restricted to the hours of 7:00 AM to 9:00 PM Monday through Friday, and 8:00 AM to 6:00 PM on Saturday, pursuant to LAMC Section 41.40. Construction staging areas for the Project Site shall be as far from sensitive receptors as possible. Hold a preconstruction meeting with the job inspectors and the general contractor/on-site project manager to

2020-2043 Regional Itali	sportation Plan / Sustainable Communities S	trategy and the community rian
	Project-Level Mitigation Measures	
Impacts		
Impacts	 (Implemented by Lead Agency) a further reduction of 5 dBA. Quieter procedures should be used, such as drills rather than impact equipment, whenever such procedures are available and consistent with construction procedures. i) Where feasible, design projects so that they are depressed below the grade of the existing noise-sensitive receptor, creating an effective barrier between the roadway and sensitive receptors. j) Where feasible, improve the acoustical insulation of dwelling units where setbacks and sound barriers do not provide sufficient noise reduction. k) Using rubberized asphalt or "quiet pavement" to reduce road noise for new roadway segments, roadways in which widening or other modifications require re-pavement, or normal reconstruction of roadways where re-pavement is planned. l) Projects that require pile driving or other construction noise above 90 dBA in proximity to sensitive receptors, should reduce potential pier drilling, pile driving and/or other extreme noise generating construction impacts greater than 90 dBA; a set of site-specific noise attenuation measures should be completed under the supervision of a qualified acoustical consultant. m) Use land use planning measures, such as zoning, restrictions on development, site design, and buffers to ensure that future development is compatible with adjacent 	Locate fixed/stationary equipment (such as generators, compressors, rock crushers, and cement mixers) as far as possible from noise-sensitive receptors. Impact pile drivers will not be used. Furthermore, Project-related operational noise sources such as roof-top air conditioning units, a ground-floor pad-mounted transformer, and ground floor parking structure vehicle movements will be required to comply with the City of Los Angeles' Building Code, Section 91.1207.14.2, which requires the Project to provide sufficient noise attenuation measures to achieve the 45 dBA CNEL interior noise level standard. Furthermore, the Project would be required to comply with LAMC Section 112.02's noise level standards, which restrict noise level increases from exceeding 5 dBA over the existing or presumed ambient noise level at an adjacent property line. In addition, LAMC Section 114.02 prohibits the operation of any motor driven vehicles upon any property within the City such that the created noise would cause the noise level on the premises of any occupied residential property to exceed the ambient noise level by more than five dB. Through required compliance with regulatory requirements, the Project will be consistent with this mitigation measure.
	transportation facilities and land uses.

	compliance measures are comprised of the	
vibration, such as blasting, determine the	following:	
	u) Construct sound reducing barriers between noise sources and noise-sensitive land uses. v) Stationary noise sources can and should be located as far from adjacent sensitive receptors as possible and they should be muffled and enclosed within temporary sheds, incorporate insulation barriers, or use other measures as determined by the Lead Agency (or other appropriate government agency) to provide equivalent noise reduction. w) Use techniques such as grade separation, buffer zones, landscaped berms, dense plantings, sound walls, reduced-noise paving materials, and traffic calming measures. x) Locate transit-related passenger stations, central maintenance facilities, decentralized maintenance facilities, and electric substations away from sensitive receptors to the maximum extent feasible. y) Consult the SCAG Environmental Justice Toolbox for potential measures to address impacts to low-income and/or minority communities. SCAG PMM-NOISE-2: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) For projects that require pile driving or other construction techniques that result in excessive	

2020 20 To Regional Trail	Sportation Plan / Sustainable Communities S	Triategy and the community rian
Impacts	Project-Level Mitigation Measures (Implemented by Lead Agency)	Project Applicability
	potential vibration impacts to the structural integrity of the adjacent buildings within 50 feet of pile driving locations. b) For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the threshold levels of vibration and cracking that could damage adjacent historic or other structure, and design means and construction methods to not exceed the thresholds. c) For projects where pile driving would be necessary for construction due to geological conditions, utilize quiet pile driving techniques such as predrilling the piles to the maximum feasible depth, where feasible. Predrilling pile holes will reduce the number of blows required to completely seat the pile and will concentrate the pile driving activity closer to the ground where pile driving noise can be shielded more effectively by a noise barrier/curtain. d) Restrict construction activities to permitted hours in accordance with local jurisdiction regulation. e) Properly maintain construction equipment and outfit construction equipment with the best available noise suppression devices (e.g., mufflers, silences, wraps). f) Prohibit idling of construction equipment for extended periods of time in the vicinity of sensitive receptors.	All new construction work shall be performed so as not to adversely affect the structural integrity of the adjacent buildings. Prior to commencement of construction, the applicant shall retain a qualified structural engineer to survey the existing foundations and structures of the adjacent buildings, and provide a plan to protect them from potential damage. The performance standards of the structure monitoring plan shall including the following: a) Documentation shall consist of video and/or photographic documentation of accessible and visible areas on the exterior and select interior facades of the buildings. A registered structural engineer shall develop recommendations for the adjacent structure monitoring program that will include, but not be limited to, vibration monitoring, elevation and lateral monitoring points, crack monitors and other instrumentation deemed necessary to protect the adjacent structures from construction-related damage. b) The monitoring program shall survey for vertical and horizontal movement, as well as vibration thresholds. If the thresholds are met or exceeded, or noticeable structural damage becomes evident to the project contractor, work

Project-Level Mitigation Measures	
Impacts (Implemented by Lead Agency)	Project Applicability
Impacts (Implemented by Lead Agency)	Project Applicability 2035, and approximately 0.05 percent of the Citywide total growth for the period of 2018 to 2040. This increase would not be considered a substantial increase for the area and is within the anticipated SCAG forecast for population. With respect to housing, the Project would introduce 92 new apartment units including 8 affordable units set aside for Very Low Income Households. According to SCAG data, the City of Los Angeles subregion had 1,480,426 total housing units in the City in 2018. Estimates extrapolated from SCAG data projects the Citywide housing supply to increase by 138,474 units between 2018 and 2035, and by 209,874 units between 2018 and 2040. The 92 housing units proposed would be within the growth anticipated based on SCAG projections, representing approximately 0.08 percent of the Citywide total housing growth for the period of 2018 to 2035, and approximately 0.05 percent of the Citywide total growth for the period of 2018 to 2040. This increase would not be considered a substantial increase in housing for the area as the addition of 92 new affordable residential units is within the anticipated housing increases based on SCAG projections for housing. The Project would not require the extension of roadways or other infrastructure (e.g., water facilities, sewer facilities, electricity transmission lines, natural gas lines, etc.) into undeveloped areas. Conversely, the Project is

Project-Level Mitigation Measures				
Impacts	(Implemented by Lead Agency)	Project Applicability		
·		maximize the efficiency of existing infrastructure by developing housing in established communities. As such, the Project would not induce substantial population growth, either directly or indirectly and impacts would be less than significant; no mitigation measures are required.		
Public Services (PS)				
PSP-1: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection and emergency response services.	SCAG PMM-PSP-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of constructing new emergency response facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Coordinate with emergency response agencies to ensure that there are adequate governmental facilities to maintain acceptable service ratios, response times or other performance objectives for emergency response services and that any required additional construction of buildings is incorporated in to the project description. b) Where current levels of services at the project site are found to be inadequate, provide fair share contributions towards infrastructure improvements, as appropriate and applicable, to mitigate identified CEQA impacts. c) Project sponsors can and should develop traffic control plans for individual projects. Traffic	Consistent. The fire station with the nearest engine company is Fire Station No. 59, located at 11505 Olympic Boulevard, approximately 1.0 roadway mile to the west from the Project Site. 24 Therefore, the Project Site is within the 2-mile response distance standard of a station with a truck engine. LAMC Section 57.507.3.1 identifies a fire flow requirement of 4,000 gallons per minute (gpm) flowing from 4 hydrants simultaneously for high density residential and commercial neighborhood land uses such as the Project. The adequacy of existing water pressure and availability in the Project area with respect to required fire flow would be confirmed by LAFD during the plan check review process. As part of the normal building permit process, the Project would be required to upgrade water service laterals, meters, and related devices, as applicable, in order to provide required fire flow; however, no new water facilities are anticipated. Moreover, such improvements would be conducted as part of the Project either on-site or off-site within the right-of-way, and as such, the construction

	Project-Level Mitigation Measures		
Impacts	(Implemented by Lead Agency)	Project Applicability	
	improvements, as appropriate and applicable, to mitigate identified CEQA impacts. c) Project sponsors can and should develop traffic control plans for individual projects. Traffic control plans should include information on lane closures and the anticipated flow of traffic during the construction period. The basic objective of each traffic control plan (TCP) is to permit the contractor to work within the public right of way efficiently and effectively while maintaining a safe, uniform flow of traffic. The construction work and the public traveling through the work zone in vehicles, bicycles or as pedestrians must be given equal consideration when developing a traffic control plan.	lighting in parking areas, pathways, and facing the adjacent alleyway to enhance public safety and minimizing visually obstructed and infrequently accessed "dead zones" reduce the demand for police services. These preventative and proactive security measures would decrease the amount of service calls that LAPD would otherwise receive. In light of these features, it is anticipated that any increase in demands upon police protection services would be relatively low, and not necessitate the construction of a new police station. Thus, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection. Impacts related to police protection would be less than significant and no mitigation measures are required.	
PSS-1 Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service	SCAG PMM-PSS-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects of constructing new or physically altered school facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:	Consistent. The Leroy F. Greene School Facilities Act of 1998 ("SB 50") sets a maximum level of fees a developer may be required to pay to address a project's impacts on school facilities. SB 50 is deemed to fully address school facilities impacts, notwithstanding any contrary provisions in CEQA or other State or local law. For the Project, the affordable family units would get a partial waiver of school fees.

deterioration of recreational facilities.	sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects on the use of existing neighborhood and regional parks or other recreational facilities, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, consider increasing the accessibility to natural areas and lands for outdoor recreation from the proposed project area, in coordination with local and regional open space planning and/or responsible management agencies. b) Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, encourage patterns of urban development and land use which reduce costs on infrastructure and make better use of existing facilities, using strategies such as:	new residents to the area. The Project would provide common open space in conformance with LAMC Section 12.21G and would provide a variety of active and passive open space and recreational amenities to serve the needs of Project residents and visitors. Furthermore, the following parks and recreational facilities are available to serve the Project Site: Palms Recreation Center, Los Angeles National Veterans Park, Stoner Park, and Westwood Park. Each of these facilities is within 2 miles of the Project Site. In adopting Ordinance 184505 (the most recent amendments to LAMC 12.33 C), the City determined to exempt affordable housing from park fees as a matter of policy. The Project applicant would be required to pay Quimby/Finn fees to the City to satisfy its obligations under the Quimby Act and/or payment of a Dwelling Unit Construction Tax to reduce impacts on park facilities, as necessary for 84 units. The 8 Very Low Income units would be exempt. Project development would not diminish the quality or

established measures of	sections 15091(a)(2) and 15126.4(a)(1)(B) of the State	addresses the overarching policy goal of
offortiveness for the performance of	CEOA Cuidolinos, a Load Aganay for a project can and	reducing VMT related emissions by

TRA-1: Potential to conflict with the established measures of effectiveness for the performance of the circulation system, by increasing the daily Vehicle Miles Traveled (VMT), taking into account all modes of transportation including mass transit and nonmotorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.

SCAG MM-TRA-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to transportation-related impacts, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency:

- a) Transportation demand management (TDM) strategies should be incorporated into individual land use and transportation projects and plans, as part of the planning process. Local agencies should incorporate strategies identified in the Federal Highway Administration's publication: Integrating Demand Management into the Transportation Planning Process: A Desk Reference (August 2012) into the planning process (FHWA 2012). For example, the following strategies may be included to encourage use of transit and non-motorized modes of transportation and reduce vehicle miles traveled on the region's roadways:
 - include TDM mitigation requirements for new developments;

Not Applicable. The nature of the Project addresses the overarching policy goal of reducing VMT-related emissions by encouraging the use of public transit through compliance with development standards that prioritize residential development in close proximity to the transit system and infrastructure. The Project would incorporate project design features that avoid or reduce the potential for conflicts with the established measures of effectiveness for the performance of the circulation system that are within the jurisdiction and responsibility of Lead Agencies:

- As an infill mixed-use development in an urban area, the Project is expected to have a higher percentage of internal and pass-by trips. Furthermore, because of its proximity to public transit a number of Project trips would be expected to be walk or transit trips rather than vehicle trips.
- The Project would include 88 on-site bicycle parking spaces, which is pursuant to the standards and

		based treatment control design or both,
		to mitigate (infiltrate, filter or treat) storm water runoff.
		As such, stormwater runoff from the Project Site
		would not exceed the capacity of the existing or
		planned stormwater drainage systems and
		would not be expected to require the
		construction of new facilities. Therefore, the
		Project would not result in significant
		environmental effects related to the construction

2020 20 10 Hogieriai Haii	Project-Level Mitigation Measures			
Impacts	(Implemented by Lead Agency)	Project Applicability		
USWS-1: Have sufficient water supplies available to serve the project from existing entitlements and	SCAG PMM-USWS-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and	of new stormwater drainage facilities. Accordingly, impacts would be less than significant and no mitigation measures would be required. Not Applicable. As shown in Table 1, Estimated Daily Water Consumption (found in Appendix K), the Project would consume		
resources or will require new or expanded entitlements.	should consider mitigation measures to ensure sufficient water supplies, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Reduce exterior consumptive uses of water in public areas, and should promote reductions in private homes and businesses, by shifting to drought-tolerant native landscape plantings, using weather-based irrigation systems, educating other public agencies about water use, and installing related water pricing incentives. b) Promote the availability of drought-resistant landscaping options and provide information on where these can be purchased. Use of reclaimed water especially in median landscaping and hillside landscaping can and should be implemented where feasible. c) Implement water conservation best practices such as low-flow toilets, water-efficient clothes washers, water system audits, and leak detection and repair. d) For projects located in an area with existing reclaimed water conveyance infrastructure and excess reclaimed water capacity, use reclaimed water for non- potable uses, especially landscape irrigation. For projects in	approximately 12,814 gpd (14 af/y). LADWP's 2015 Urban Water Management Plan (UWMP) projects a supply of 642,400 AF/Y in 2020, 676,900 AF/Y in 2025, and 709,500 AF/Y in 2040. This amount would represent approximately 0.002 percent of the water supply in 2020, 2025, and 2040. Compliance with LAMC Sections 122.00 - 122.10 and the City's Green Building Code Section 99.4.304.2 governing water efficiency and water conservation measures, including Title 20 and 24 of the California Administrative Code, would further reduce the above projected water demand below the sewage generation factors assumed by the City's Bureau of Sanitation. As such, the Project would comply with the mitigation measure through compliance with existing regulatory requirements. Sufficient water supplies would be available to serve the Project and reasonably foreseeable future. Accordingly, impacts would be less than significant and no mitigation measures would be required.		

	Project-Level Mitigation Measures	
Impacts	(Implemented by Lead Agency)	Project Applicability
Wildfire (WF)	a location planned for future reclaimed water service, projects should install dual plumbing systems in anticipation of future use. Large developments could treat wastewater onsite to tertiary standards and use it for non-potable uses onsite.	
WF-1: Have sufficient water supplies available to serve the project from existing entitlements and resources or will require new or expanded entitlements.	SCAG PMM-WF-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to wildfire risk, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: a) Launch fire prevention education for local cities and counties such that local fire agencies, homeowners, as well as commercial and industrial businesses are aware of potential sources of fire ignition and the related procedures to curb or lessen any activities that might initiate fire ignition. b) Ensure structures in high fire risk areas are built to current state and federal standards which serve to greatly increase the chances the structure will survive a wildfire and also allow for people to shelter-in-place. c) Improve road access for emergency response and evacuation so people can evacuate safely	Not Applicable. The Project Site is not located in or near a State Responsibility Area (SRA) or a Very High Fire Hazard Severity Zone (VHFHSZ). 33,34 Furthermore, although the Project Site is located on a selected county- and City-designated disaster routes, neither construction nor operation of the Project would impair or physically interfere with an adopted emergency response plan. Access for emergency service providers and evacuation routes would be maintained during construction. Partial lane closures, if determined to be necessary, would not greatly affect emergency vehicles, the drivers of which normally have a variety of options for avoiding traffic, such as using their sirens to clear a path of travel or driving in the lanes of opposing traffic. Additionally, if there are partial closures to streets surrounding the Project Site, flagmen would be used to facilitate the traffic flow until construction is complete. In addition, operation
