Comments for Public Posting: I think it despicable that the City allow the ongoing activity of oil drilling at West Pico Drill Sites... without EIR or review or study given current environmental issues in our neighborhoods, city and state. It is imperative for all members of this community that the City follow its own CEQA guidelines - it is the community members that pay the consequences, not the oil company. If home owners have to follow CEQA mandates when considering demolition of certain residential properties, then oil drilling most assuredly has to abide by intense study and review. Don't let the money drive this decision, our communities health, well being, beauty and environment are the priority.
