

MOTION

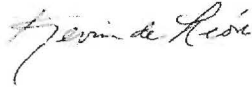

Illegal dumping is a major issue for Los Angeles residents. However, illegal dumping is not spread out equally across neighborhoods or even individual streets within a neighborhood. Some parts of the city have higher concentrations of illegal dumping and resources must be deployed adequately in order to address these problem locations. Moreover, the city should look at ways to stop the dumping such as by the installation of cameras or environmental design techniques.

I THEREFORE MOVE that the Bureau of Sanitation report back with an update on the CleanStat Street Indexing System and the street segments in the city that have the highest rate of illegal dumping in each Council District.

I FURTHER MOVE that this report includes data on MyLA311 requests, calls for service, actions taken to identify who is doing the dumping, frequency and response time of Bureau of Sanitation cleanups, tonnage collected, and the type of debris picked up.

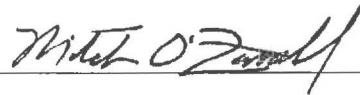

I FURTHER MOVE that the Bureau of Sanitation report on what resources need to be deployed in order to stop illegal dumping at these locations including but not limited to more frequent cleanups, enforcement, and environmental design techniques such as additional lighting.
