Comments for Public Posting: The Los Angeles City Council must immediately vote to end the feckless and unwarranted covid19 emergency. This is an absolute waste of taxpayer funds and a needless burden on thousands of employees. The covid19 vaccine has been proven ineffective and dangerous and will cost this city and its taxpayers, like me, hundreds of millions of dollars in potential liability. End this now.

Comments for Public Posting: Covid 19 is no longer an emergency and the city should not be treating it as such. It is no longer a threat to society and is the same as the common cold and flu. Extending the emergency would just be a power grab and unlawful.

Comments for Public Posting: I oppose extending the county state of emergency! End it now!
Also end the vaccine mandates and give first responders back their jobs!

Council File No: 20-0291

Comments for Public Posting: It is time to end the City's State of Emergency. There is no emergency anymore. The CDC says the Covid guidelines are now the same whether you are vaccinated or not and that people don't need to quarantine, distance, or wear masks anymore. Everyone in Los Angeles has been living and working as they did before the pandemic. People are attending sporting events, parties, graduations, and traveling. There is absolutely no reason to continue the State of Emergency. End it now!

Comments for Public Posting: Re Council File 20-0291, Declaration of Local "Emergency"... ENOUGH. Please see the CDC's updated (Aug. 11/19, 2022) COVID guidelines: "Summary of Guidance for Minimizing the Impact of COVID-19 on Individual Persons, Communities, and Health Care Systems — United States, August 2022"... https://www.cdc.gov/mmwr/volumes/71/wr/mm7133e1.htm?s_cid=mm7133e1_w Just one excerpt, under "COVID-19 Prevention Strategies: Nonpharmaceutical Interventions"... "CDC's COVID-19 prevention recommendations no longer differentiate based on a person's vaccination status because breakthrough infections occur, though they are generally mild (16), and persons who have had COVID-19 but are not vaccinated have some degree of protection against severe illness from their previous infection (17)."
