Subject: DRAFT Phase II Environmental Site Assessment
1022-1060 La Cienega Boulevard
Los Angeles, California

Dear Mr. Tung,

Geosyntec Consultants, Inc. (Geosyntec) is pleased to submit this report to Carmel Partners, Inc. (CPI) summarizing the results of the Phase II Environmental Site Assessment (P2ESA) at the property located 1022-1060 La Cienega Boulevard (the Site). The P2ESA consisted of soil, soil vapor, and groundwater sampling performed in support of potential property redevelopment involving the approximately 1.8-acre Site comprised of five parcels (Los Angeles County Assessor Parcel Numbers: 5087-001-040, -041, -042, -023, and -024). This report was prepared in accordance with the scope of work described in Geosyntec's proposal dated 9 March 2022.

BACKGROUND

Phase I ESA

Geosyntec conducted a Phase I Environmental Site Assessment (P1ESA) dated 6 August 2021 in support of a potential property transaction of the Site. The P1ESA identified the following Recognizable Environmental Conditions (RECs) and Business Environmental Risks (BERs):

Recognized Environmental Conditions

- **Known Impacts on the Site – Former Auto Repair Shop:** The Site was occupied by an automotive repair shop from 1948 to 2007. An investigation conducted in the northern portion of the Site in 2012 and 2013 identified residual petroleum fuel-related and chlorinated volatile organic compounds (VOCs) in soil, soil vapor, and/or groundwater. The constituents detected in groundwater exceeded their most conservative screening levels.[1] The elevated concentrations in Site media and likelihood of a vapor intrusion condition for future residential or commercial Site buildings represent a REC.

[1] The screening levels included California Department of Toxic Substances Control (DTSC)-modified Human and Human and Ecological Risk Office (HERO) Note 3 Screening Levels, United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs; TR=1E-06; HQ=1), California Maximum Contaminant Levels (CA

- **Undocumented Fill Material:** A geotechnical survey conducted on the Site in 2012 identified fill material in the upper 3 feet to 5 feet below ground surface (ft bgs). Previous reports by others document the presence of sandy silts and sandy clays; no documentation was found to indicate the presence of refuse or manmade materials in the fill. Geosyntec did not encounter records showing the source of this material; therefore, it may be impacted with hazardous materials and is considered a REC.
- **Hydraulically Upgradient Properties:** An automotive service station has operated on the property approximately 100 feet north of the Site (1004 La Cienega Boulevard) since 1964, and a historical dry cleaner operated on the northwest-adjoining property (8500 West Olympic Boulevard) from at least 1984 to 2015. Subsurface investigations conducted on these properties have detected total petroleum hydrocarbons as gasoline (TPH-gasoline) and other fuel constituents and additives in groundwater samples and PCE in soil and soil vapor samples collected from these properties. Due to the historical service station and dry-cleaning operations, known impacts to the subsurface, proximity and hydraulically upgradient direction in relation to the Site, and shallow depth of groundwater, these properties are likely to have adversely impacted soil, groundwater, and/or soil vapor beneath the Site. These constituents have been detected in soil, soil vapor, and groundwater at/beneath the Site (as stated in the above REC) and may be from these off-Site sources. Therefore, these findings are considered a REC.

Business Environmental Risks

- **Engineering Controls for Possible Methane Mitigation and other Building Department Requirements:** The Site is located within a City of Los Angeles Methane Zone and recommended that a qualified professional be consulted to determine what mitigation measures might be required. Methane could pose a risk to the structure and building inhabitants, as build-up inside of structures can result in adverse conditions, including potential low-oxygen or explosive conditions, separate from what would be classified as a BER.

  According to a 2017 Phase I ESA report, the Site is planned to have a subterranean parking structure that will require dewatering and the proposed building will have a vapor barrier. An approval letter from the City of Los Angeles Department of Building and Safety (LADBS) had a list of requirements for the proposed redevelopment. These findings and features may require additional evaluations, inspections, mitigation, and maintenance, and are considered a BER.

MCLs), and San Francisco Bay (SFB)-RWQCB Tier 1 ESLs for a residential scenario. The conservative attenuation factor of 0.03 was applied to ambient air screening levels to convert to soil vapor screening levels.

- **On-Site Well Abandonment:** Geosyntec observed seven groundwater monitoring wells on the Site during the reconnaissance. These wells are from prior subsurface investigations associated with the nearby service station nearby to the north and were observed to be in poor condition. If these wells are not anticipated to be used in the future, Geosyntec recommends proper abandonment per regulatory requirements.

Previous Environmental Site Assessments

National Environmental, Inc. (National) performed a P2ESA in 2007 consisting of 11 soil borings (B1 through B11) advanced to a maximum depth of 12 ft bgs at the former automotive repair facility located at the historical address of 1032 La Cienega Boulevard. Soil (Grids A3, B3, C3 – Figure 2). Soil samples collected during the investigation were analyzed for TPH and VOCs. Reported concentrations were all below laboratory reporting limits in the soil samples analyzed (National, 2007).

National performed another P2ESA in 2008 consisting of 9 additional soil borings and seven groundwater samples. The 9 soil borings (B1 through B9) were advanced to maximum depths of 10 ft bgs in the central portion of the Site (Grids A4, B4, C4 – Figure 2) and southern central portion of the Site (Grids D2 and E2 – Figure 2). Low concentrations of TPH-gasoline, ethylbenzene, and total xylenes were detected in one sample (B2; Grid A4 – Figure 2) at a depth of 10 ft bgs. TPH-gasoline and VOCs were also detected at low concentrations in groundwater samples collected from boring B4 and B5 (Grids C4 and A4 – Figure 2). National concluded that the residual TPH and VOC concentrations were not from a surface release and recommended installation of a groundwater monitoring network to monitor plume migration (National, 2008).

Leighton Consulting, Inc. (Leighton) performed a site assessment consisting of the installation of 12 soil vapor probes (SV-1 through SV-12_ and five clustered monitoring wells (MW-25 and MW-26) along the northern property boundary (Grids A1, B1, C1 – Figure 2). Soil samples collected during the investigation contained elevated concentrations of TPH-gasoline and gasoline/diesel related VOCs (benzene, toluene, ethylbenzene, xylenes and naphthalene) at depths ranging from 10 to 20 ft bgs. TPH-gasoline and gasoline/diesel related VOCs were also detected in soil vapor samples collected at depths from 5 ft to 13 ft bgs directly along the northern property boundary (SV-2, SV-3 and SV-11 – Figure 2). Leighton concluded that the concentrations of gasoline related Constituents of Concern (COCs) present in groundwater and soil vapor may impact sensitive receptors at the formerly proposed senior living community (Leighton, 2013).

OBJECTIVES AND SCOPE OF WORK

The objective of the P2ESA was to identify potential impacts to soil, soil vapor, and groundwater associated with the identified RECs at the Site. Geosyntec understands the proposed development at the Site will consist of 1-2 levels of below graded parking below a 28-story residential tower.

The P2ESA scope of work was developed to evaluate the presence of COCs in soil, soil vapor, and groundwater, including the following:

Soil Investigation: A total of twenty soil borings were advanced using a direct-push rig at the Site. The soil boring locations were selected based on a 50-foot by 50-foot grid superimposed in the northern half of the Site and 75-feet by 75-feet grid superimposed in the southern half of the Site (Figure 2). Soil samples were collected from the twenty soil borings at depths of 1 foot and at 5-foot intervals to the maximum depth explored (20 ft bgs). Samples were also collected at 17 and 19 ft bgs from boring location A2 based on field observations of stained soil. These soil samples were analyzed for the following:

- Title 22 Metals by EPA Method 6010B/7471A
- Total Petroleum Hydrocarbons (TPHs) by EPA Method 8015M

Upon receipt of the initial soil sample results additional analysis for the following COCs was performed:

- Volatile Organic Compounds (VOCs) by EPA Method 8260B
- Hazardous Waste Characterization for the following constituents:
    - Lead by Toxicity Characteristic Leaching Procedure (TCLP) and Soluble Threshold Limit Concentration (STLC)
    - Chromium by STLC

Methane Investigation: A total of seven dual nested soil vapor probes were installed with a direct push rig at 5 and 10 ft bgs throughout the Site (Figure 2). Two rounds of methane sampling was performed at a minimum of 24 hours between samples events in accordance with LADBS regulations. Methane samples were collected in Tedlar bags and analyzed by EPA Method TO-3. Pressure readings were recorded with a digital manometer.

Soil Vapor Investigation: Soil vapor samples for vapor intrusion assessment were collected from soil gas probes at 10 ft bgs only at each location and were analyzed for the following:

- VOCs by EPA Method 8260B (in an on-Site mobile laboratory).
- TPH Gasoline by EPA Method 8260

Groundwater Investigation: Groundwater sampling was performed from four of the seven on-site monitoring wells (Figure 2). One additional grab groundwater sample was collected from boring B3 located in the central portion of the Site. These groundwater samples were analyzed for the following:

- TPHs by EPA Method 8015B
- VOCs by EPA Method 8260B

RESULTS

The soil, soil vapor, and groundwater sample locations are depicted on the attached Figure 2 – Site Location Map. A summary of the laboratory analytical results for the Site are provided in Tables 1, 2, and 3 and laboratory analytical reports are provided in Attachments A, B, and C. The results are briefly summarized below:

Soil Investigation Results

Soil sample analytical results were compared to the California Department of Toxic Substance Control Human and Ecological Risk Office Note 3 Screening Levels (DTSC-SLs), United States Environmental Protection Agency Regional Screening Levels (RSLs) and San Francisco Regional Water Quality Control Board Environmental Screening Levels (ESLs), where applicable. Based on the proposed soil export for the project, Waste Extraction Testing (WET) was also performed where total metal concentrations exceeded 10 times the STLC limit or 20 times the TCLP limit for Federal and California hazardous waste criteria. A summary of the laboratory analytical results are provided in Table 1 and laboratory analytical reports are provided in Attachment A.

Metals

- Detected concentrations of metals were all below their respective DTSC-SLs or RSLs for residential use with the exception of lead (Table 1).
    - Lead was detected in one sample (E4-1) at a concentration of 120 milligrams per kilogram (mg/kg), which exceeds the residential DTSC-SL of 80 mg/kg.
- The detected concentrations of chromium in seven samples (A4-5, B4-1, B4-5, C3-5, D1-5, D3-5, and E1-5) exceeded the STLC trigger value of 50 mg/kg. STLC analysis for chromium was performed and none of the samples exceeded California hazardous waste criteria of 5.0 milligrams per liter (mg/L).
- The detected concentrations of lead in two samples (D2-1 and E4-1) exceeded the STLC trigger value. STLC analysis for lead was performed and none of the samples exceeded California hazardous waste criteria of 5.0 mg/L.
- E4-1 also exceeded the TCLP trigger value for lead. TCLP analysis for lead was performed and the sample did not exceed Federal hazardous waste criteria of 5.0 mg/L.

TPHs

- The maximum detected concentration of TPH as diesel range organics (DRO [C10-C28]) of 430 mg/kg (D1-1), which is above the Tier 1 ESL of 100 mg/kg.
- The maximum detected concentration of TPH as oil range organics (ORO [C28-C44]) of 410 mg/kg (D1-1), which is below the Tier 1 ESL of 1,600 mg/kg
- Gasoline range organics (C8-C10) were not detected above the laboratory RLs.

VOCs

VOCs were not detected above the laboratory reporting limits in the soil samples collected during this investigation with the exception of methylene chloride. Methylene chloride detections ranged from 5.4 micrograms per kilogram ([µg/kg], D3-1) to 11 µg/kg (D1-1), which were significantly below the DTSC-SL for residential soil of 2,200 µg/kg.

Methane Zone Investigation Results

Results of the methane zone investigation are provided in Attachment B, LADBS Form 1 – Certificate of Compliance for Methane Test Data.

- Methane was detected at concentrations ranging from 0.68 parts per million by volume (ppmv) in sample C1-SV-10 to 4.7 ppmv in sample B1-SV-5.
- Pressure measurements were consistently 0.0 inches of water column throughout the Site.

Soil Vapor Investigation Results

Soil vapor analytical results were compared to DTSC-SLs for residential air (DTSC, 2020). If the DTSC-SL is not established, the USEPA Regional Screening Levels (RSLs) for industrial air were used instead (USEPA, 2021). The soil vapor screening levels were calculated based on the USEPA's default attenuation factor (0.03) and the DTSC's attenuation factor for new residential construction (0.001). For TPH gasoline detections, Tier 1 ESL for residential subslab/soil gas was used. A summary of the laboratory analytical results is provided in Table 2, and laboratory analytical reports are provided in Attachment A.

TPH Gasoline

- The maximum detected concentration of TPH gasoline (C4-C12) of 5,600 micrograms per cubic meter ([µg/m^3], D1-SV-10), which is significantly below the ESL for residential subslab/soil gas of 20,000 µg/m^3.

VOCs

- Toluene was detected at a maximum concentration of 20 µg/m^3, which is significantly below the screening level of 10,300 µg/m^3 calculated using DTSC-SL for residential air and the conservative USEPA default attenuation factor of 0.03.
- No other VOCs were detected above the laboratory reporting limit in the soil vapor samples collected during this investigation.

Groundwater Investigation Results

Groundwater sample analytical results were compared to Drinking Water Maximum Contaminant Levels (MCLs). A summary of the laboratory analytical results is provided in Table 3 and laboratory analytical reports are provided in Attachment A.

TPHs

- The maximum detected concentration of TPH gasoline (C4-C12) was 41,000 microgram/liter ([µg/L], MW-25U). MCLs for TPH gasoline have not been established.

VOCs

- Benzene was detected at a maximum concentration of 220 µg/L (MW-25U), which exceeds the MCL of 5.0 µg/L.
- Ethylbenzene was detected at a maximum concentration of 2,400 µg/L (MW-25U), which exceeds the MCL of 700 µg/L.
- No other VOCs were detected above the MCLs in the groundwater samples collected during this investigation.

CONCLUSIONS

Based on the results of the P2ESA performed at the Site, Geosyntec has the following conclusions regarding the RECs and BERs identified in the P1ESA prepared for the Site:

- **Known Impacts on the Site – Former Auto Repair Shop:** The results of soil, soil vapor and groundwater sampling in the vicinity of the former auto repair shop (Grids A3, B3, C3 – Figure 2) indicate concentrations of COCs are all below residential screening levels. Therefore, the former auto repair shop is not considered a REC for the Site.
- **Undocumented Fill Material:** Soil sampling conducted in undocumented fill materials throughout the Site indicates that concentrations of COCs exceeding residential screening levels are limited to the upper 1-2 ft bgs in grids D4 and E1 (Figure 2). While considered a REC for the Site, the limited impacts to undocumented fill can be effectively managed through soil management activities during the construction phase of the project.
- **Hydraulically Upgradient Properties:** An automotive service station has operated on the property approximately 100 feet north of the Site (1004 La Cienega Boulevard), and a historical dry cleaner operated on the northwest-adjoining property (8500 West Olympic Boulevard).
    - No dry cleaning related COCs were detected in soil, soil vapor or groundwater samples collected at the Site. Thus, the upgradient historical dry cleaner is not considered a REC for the Site.

- Based on current and historical data collected at the Site, impacts to soil, soil vapor and groundwater from the upgradient automotive service station appear to be limited to the northern margin (A1, B1, C1) and western margin (C1) of the Site. Impacted soil in this area of the Site will likely require segregation and offsite disposal as nonhazardous waste during the construction phase of the project. These findings are considered a REC; however, the limited soil impacts can be effectively managed with a soil management plan.
- Based on the detected concentrations of TPH-gasoline and VOCs in groundwater at the Site, if dewatering is contemplated for the project a dewatering treatment system will need to be designed to manage hydrocarbons and VOCs to meet limits for discharge (i.e., surface water or sanitary sewer).

- **Engineering Controls for Possible Methane Mitigation and other Building Department Requirements:** The Site is located within a City of Los Angeles Methane Zone and methane was detected on-Site at concentrations ranging from 0.68 ppmv to 4.7 ppmv. Positive pressures were not detected during the methane zone investigation. Based on the location of the Site within the Methane Zone, LADBS Methane Mitigation Site Design Level I will most likely be required for the project. Site Design Level I requirements are provided in Attachment B.
- **On-Site Well Abandonment:** Existing onsite monitoring wells and soil vapor probes should be properly destroyed prior to construction activities at the Site. Permits will need to be obtained from the Los Angeles Department of Public Health (LADPH) for the existing onsite wells MW-25, MW-25D, MW-25U, W-2 and W-5 (Figure 2).

RECOMMENDATIONS

Based on the data collected during this investigation, the Site appears suitable for the proposed residential redevelopment with the expectation that soil exceeding residential screening levels will be disposed offsite at a facility permitted to accept the waste. The remaining onsite soils appear suitable for offsite reuse.

Based on detections concentrations of lead and chromium and exceedances of residential screening levels for TPH in several shallow soil samples (0 to 5 ft bgs), a Soil Management Plan (SMP) should be prepared for the proposed construction activities. The SMP should describe the management of impacted soils which may be encountered during Site development, and outline health and safety procedures to minimize risk to onsite workers and personnel. In addition, the SMP should describe the procedures for export of inert soil for offsite reuse. It is anticipated that data collected during this investigation and additional confirmation samples collected during construction to facilitate the export of inert soil for offsite reuse.

Based on the groundwater data, the groundwater at the Site is impacted with constituents associated with gas stations (TPH gasoline, benzene, ethylbenzene). It appears the groundwater

contamination is attributable to the ongoing remediation at the gas station hydraulically upgradient and north of the Site. If building construction at the Site requires dewatering, a dewatering contractor should be retained to design a treatment system to discharge to groundwater during construction.

Based on the location of the Site within the Los Angeles Methane Zone, LADBS Methane Mitigation Site Design Level I will likely be required for the project. It is recommended that the civil design team confirm these requirements with LADBS prior to initiating the foundation design.

1 - Screening levels consist of California Department of Toxic Substances Control Screening Levels for Residential Soil (DTSC SLs, HHRA Note 3, June 2020). Where DTSC levels do not inlude a cancer endpoint, the non-cancer SLs were utilized. If DTSC-SLs (cancer or non-cancer) were not established, EPA Regional Screening Levels for Residential Soil (EPA RSLs, May 2021) were utilized.

2 - DTSC Southern California Regional Background Concentration (DTSC, 2008)

3 - San Francisco Regional Water Quality Control Board (SFRWQCB) Tier 1 Environmental Screening Levels (ESLs; January 2019)

4 - Hazardous waste characterization under California state regulations outlined in Title 22 of the California Code of Regulations.

5 - Hazardous waste characterization under Federal regulations defined in the Code of Federal Regulations (CFR); Resource Conservation and Recovery Act (RCRA) 40 CFR Part 261.

*The RL is greater than the SL, however, thallium is not a constituent of concern for historical land use.

Notes

Only constituents with one or more detections above the laboratory reporint limit (RL) are reported on this table.

"<" Not detected at concentrations greater than or equal to the RL.

-- = Not analyzed or not applicable

Bold - Value above screening level.

mg/L = milligram per liter

mg/kg = milligram per kilogram

STLC = Soluble Threshold Limit Concentration

TCLP = Toxicity Characteristic Leaching Procedure

1 - Screening levels consist of California Department of Toxic Substances Control Screening Levels for Residential Soil (DTSC SLs, HHRA Note 3, June 2020). Where DTSC levels do not inlude a cancer endpoint, the non-cancer SLs were utilized. If DTSC-SLs (cancer or non-cancer) were not established, EPA Regional Screening Levels for Residential Soil (EPA RSLs, May 2021) were utilized.

2 - DTSC Southern California Regional Background Concentration (DTSC, 2008)

3 - San Francisco Regional Water Quality Control Board (SFRWQCB) Tier 1 Environmental Screening Levels (ESLs; January 2019)

4 - Hazardous waste characterization under California state regulations outlined in Title 22 of the California Code of Regulations.

5 - Hazardous waste characterization under Federal regulations defined in the Code of Federal Regulations (CFR); Resource Conservation and Recovery Act (RCRA) 40 CFR Part 261.

*The RL is greater than the SL, however, thallium is not a constituent of concern for historical land use.

This data package contains sample and QC results for forty seven soil samples, requested for the above referenced project on 04/04/22. The samples were received cold and intact. Sample E2-15 was received on 4/5/22. Revised report to include additional test results requested on 4/12/22.

TPH-Extractables by GC (EPA 8015M):

- Sample numbers 460883-007, -010, -016, -019, -042 and -045 were diluted due to the dark color of the sample extracts. Elevated reporting limits were due to necessary dilutions.
- No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:

- Low recoveries were observed for barium and antimony in the MS/MSD for batch 286868; the parent sample was not a project sample, the LCS was within limits, and the associated RPDs were within limits. High recoveries were observed for lead and zinc; the LCS was within limits. High RPD was observed for lead.
- Low recoveries were observed for antimony in the MS/MSD of B1-1 (lab # 460883-001); the LCS was within limits, and the associated RPD was within limits.
- Low recoveries were observed for antimony in the MS/MSD of D3-10 (lab # 460883-018); the LCS was within limits, and the associated RPD was within limits. High recovery was observed for barium in the MS of D3-10 (lab # 460883-018); the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Subject: La Cienega Phase II (4/4/22) - Enthalpy Data (460883)

Hi Brian,

There are some Chromium and Lead results over 50 mg/kg so please let me know if you need STLC or TCLP testing. Unfortunately one of the samples is the one where we accidentally lost the remaining sample volume for B4-5. It had Chromium right at 50 mg/kg.

Data qualifiers and additional information necessary for the interpretation of the test results are contained in the PDF file and may not be included in the EDD.

Hi Patty,

Please run B4-10, B4-15, B4-20 and D3-10 for Title 22 Metals. Note that the additional requests can be analyzed on a 5-day TAT.

Thanks,

Got it. Thank you!

But I forgot to remind you that sample B4-5 was the one soil that we accidentally lost the remaining sample during metals prep. We won't be able to run STLC Cr for this sample.

This data package contains sample and QC results for thirty seven soil samples, fourteen air samples, and one water sample, requested for the above referenced project on 04/05/22. The samples were received intact and cold (if needed). Additional total metals and STLC Cr test results are included in this report as requested.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:

- DRO C10-C28 was detected above the RL in the method blank for water batch 286871; this analyte was not detected in the water sample at or above the RL.
- No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015M) Soil:
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:

- Samples A2-17 (lab # 460985-036) and A2-19 (lab # 460985-037) were diluted due to relatively high hydrocarbon concentrations.
- No other analytical problems were encountered.

Volatile Organics in Air GC (EPA TO-3M):
No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:

- Low recoveries were observed for antimony in the MS/MSD for batch 286966; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits.
- Low recoveries were observed for antimony in the MS/MSD of E1-5 (lab # 460985-007); the associated RPD was within limits.
- Low recoveries were observed for antimony in the MS/MSD of D3-10 (lab # 460883-018); the LCS was within limits, and the associated RPD was within limits. High recovery was observed for barium in the MS of D3-10 (lab # 460883-018); the LCS was within limits, and the associated RPD was within limits.
- No other analytical problems were encountered.

Metals (EPA 6010B) WET Leachate:
No analytical problems were encountered.

Subject: [EXTERNAL] RE: La Cienega Phase II (4/05/22) - Enthalpy Data (460985)

Hi Patty,

Let's go ahead and run STLC Cr for E1-5 and then E1-10 and E1-20 for Title 22 Metals.

Additional Title 22 metals:

C2-10, C2-15, B3-10 and B3-20

All additional analyses on 5-day TAT. I think this will be the last of it barring any STLC/TCLP needs.

Thanks,
