**Comments for Public Posting:** Who could not support this Motion - however the major concern here is if these grey water systems would require the removal of existing trees. I share this concern as I have seen it already happen with a 19-lot single family subdivision. These under ground grey water systems for SFD's are HUGE (approx. 30 feet long, 10 feet wide, 10 feet deep). They take up the entire front yard of each large SFD lot. What ever existing trees in these locations that were to be preserved have been removed because the root systems were cut beyond repair. And what is worse, there is little to no room to plant new trees in the same front yards. I don't know the size of the grey water system for street trees, but that would be important to know- and will these systems also require the removal of existing trees?
