**Comments for Public Posting:** Dear City Council Members, I urge you to put a stop to the the Scattergood Gas Plant project. The Scattergood Gas Plant project is a thinly veiled attempt to continue the use of methane gas as an energy source, by mixing small amounts of hydrogen with methane, and describing the result as "green energy". This must not be allowed. It is also worth noting that hydrogen leaks are inevitable, and hydrogen is an indirect greenhouse gas and therefore contributes to global warming. This because of the role of hydrogen in atmospheric chemistry (see for example the research paper, "Climate consequences of hydrogen emissions" available at: <https://acp.copernicus.org/articles/22/9349/2022/> ). Thank you. David Klein (San Fernando Valley)
