**Comments for Public Posting:** I'm in favor of accelerating the design, construction, and implementation of transportation infrastructure projects. This motion is needed as it takes too long to put into effect new infrastructure projects in the city (ex: crosswalks, bike lanes, and bus lanes). Cyclists and people walking are getting injured and dying on our streets while our city delays critical safety improvements. We need to do everything to speed up the infrastructure projects in our city.

**Comments for Public Posting:** Having better coordination between departments and bureaus who build and maintain public infrastructure seems like a no-brainer and crazy that it isnt already set up this way. Lets get out of the 19th C and into the 21st. Likewise, the amount of time it takes to build the tiniest of public infrastructure is maddening. Streamlining this redtape nightmare makes so much sense. We need to build if we dont want to wither and die.

**Comments for Public Posting:** My last two cars were destroyed while parked in overnight hit and runs, and I bike, walk, and rely on transit to get around LA. But our streets still are not pedestrianize and disabled friendly; is not safe to bike in much of the city; traffic is heavy, damaging our lungs and environment; and transit is not abundant enough. Please work to coordinate implementation of more transit/bike/pedestrian options to make LA streets safer, healthier, and happier.

**Comments for Public Posting:** I fully support the motion to accelerate the implementation of infrastructure projects. Improving safety conditions for pedestrians, bicyclists, and those taking public transportation will save lives and help reduce carbon emissions.
